For these reasons we cannot urge too strongly the necessity of reconsidering your decision. In the interest of the millions of the nation's farm families and in the interest of the nation's total economy, we deem new farm legislation of such importance that every effort should be made to clear the legislative decks for its passage before adjournment. If, despite every effort passage of a new farm bill cannot be accomplished, the irreducible minimum for this session is that reenactment for one year of Title I of the 1948 farm act, extending the 90% of parity price supports.

May I remind you that to let the 1948 farm act become law would also be politically disastrous for this administration. Aside from the economic necessity of formulating and passing a new farm bill immediately, guaranteeing farm families parity income, the 81st Congress and its administration is morally committed, by the campaign pledges and the results of the election, to enact new farm legislation to replace the 1948 farm act which was clearly repudiated by the farmers of the nation on November 2, 1948."

Subject - Family cotton farmers

WASHINGTON - Denouncing attempts of a "coalition of the big cotton planters of the Mississippi Delta regions and those of the newer cotton regions of the West" to write new cotton quota and allotment legislation in their own interest, President James G. Patton of the National Farmers Union today urged Agriculture Committee members to hold hearings on the protection of family farmers in such legislation.

Patton called for "an entirely different, more human approach" in a letter directed to Chairman Stephen Pace, Ga., of the subcommittee on revision of general agricultural programs. The text of his letter was as follows:

"This is to urge that your subcommittee conduct hearings in the immediate future on the methods to be used in legislation and administration to protect the interest of medium- and small-sized family farm operators, particularly growers of cotton.

"My attention has been called to proposals now being put forward by a coalition of the big cotton planters of the Mississippi Delat regions and those of the newer cotton regions in the West.

"As I read the legislation suggested by this group following its recent conference in Memphis, Tenn., such bills would strike a serious blow at the family-farm pattern of the South. The National Farmers Union, as you know, has based its entire agricultural program and approach upon the encouragement of family farms. We therefore hope that action will be taken now by your subcommittee to give this subject close and special attention.

"Such hearings, it seems to me, should give representatives of others than the large growers to present their views on the historical base to be used, and indeed on alternatives to the historical base, the question of minimum acreage allotments, the protection of small- and medium-sized farmers in the operation of marketing quotas, if and when they are invoked, and such other pertinent matters as bear upon this question.

"We feel very strongly that the legislation being pushed by the large planter group will be highly detrimental to the public interest. For one thing, the proposals in their present form would aggravate one of the worst evils of the old acreage allotment system by freezing an individual's allotments forever. For another, the proposed language and formulae are extremely cumbersome and confusing and would have the tendency to encourage over-personalized administration because of lack of general understanding of the provisions.

"Most important, however, the restriction of the base for acreage allotments to the last five years and the failure to provide a reasonable minimum acreage allotment to protect small farmers would be disastrous for thousands of family farmers.

"We remain convinced that a better way of adjustment can be found than pure relaince upon such controls as allotments, through the use of an interchangeable commodity unit. But if allotments and quotas are to be used, they must not be used in such a way as to curtail drastically the opportunity and living levels of thousands of family farmers.

"Furthermore, if the aim of such legislation as this is to promote the transfer of human and mechanical resources from the production of cotton to other farm products in some areas, then an entirely different, more human approach should be used.

"This approach resembles that in Title II of the Agricultural Act of 1948, where the attempt is to be made to force farmers out of production by cutting their incomes to below-minimum levels. The National Farmers Union never has and never will condone such cruel methods.

"For all of these reasons, we strongly hope that your subcommittee will give this whole question a thorough airing."

STATEMENT OF ANGUS MCDONALD, ASSISTANT LEGISLATIVE SECRETARY NATIONAL FARMERS UNION, BEFORE HOUSE LABOR AND EDUCATION COMMITTEE ON FEDERAL AID TO EDUCATION, JUNE 1, 1949

Mr. Chairman and members of the Committee, I am here to present the position of the National Farmers Union in regard to federal aid to education. We strongly urge your committee to report out favorably the federal aid to education bill. It has long been the position of our organization that federal aid to education for rural areas was necessary. We have appeared at a number of hearings when bills similar to S.236 and HR4643 were considered.

Furthermore, our organization both in state and national conventions has strongly endorsed the principle of federal aid to education for rural areas. I quote from the resolution passed at our last convention in Denver, Colorado, in March 1948:

> "Rural children and young people do not have equality in opportunity in education, in comparison with children and young people of the cities. They do not have even one-half of equality. The educational facilities for rural youth are in a shocking condition. There is a lack of qualified teachers, a lack of good school buildings, a lack of money to go ahead.
>
> "We are in favor of a greatly expanded federal aid appropriation, with an accent on help for rural areas, in order to supply money for improvement of rural schools."

It is easy to understand why the National Farmers Union whose membership consists predominantly of small and family-type farmers has always consistantly supported federal aid to education legislation. In rural areas the pay of teachers is approximately half of that of salaries of teachers in urban areas. The nature of education in rural areas makes it necessary in many instances for aid to come from the outside. Population in most rural areas has been declining for many years. Population shifts and the changing economic patterns of American agriculture have brought about a highly unstable condition in rural schools. Consequently, it has been necessary to consolidate many schools and even to close down schools because of land abandonment and shifts in population. These conditions have contributed to the crisis in rural education.

Another reason why schools in agricultural areas constitute a special problem is that many states lack the necessary tax resources to properly finance their schools. For example, in South Carolina, the taxable resources per capita are about one-third of those in Connecticut. Yet in the former state there are 282 children per thousand population and in the latter only 174. The South especially has suffered from lack of funds to properly finance the educational system. The South, as is well known, has a higher birth rate and consequently produces a higher proportion of children than the North and West. However, the per capita income of the South is only about one-third of that of the rest of the country. As ex-Senator Josh Lee of Oklahoma once said: "It looks like the kids are where the money ain't." But the need for federal assistance to education is not limited to Southern areas or the so-called poor states. There are many areas in states of high average per capita income that needs some assistance. In Michigan in rural areas taxable income per capita is only about one-fourth of the taxable income in urban areas.

We in the National Farmers Union therefore favor a federal aid to education bill which will equalize and raise educational opportunity throughout the 48 states and territories. We, therefore, favor the principle set forth in the Barden Bill (HR.4643) which would set aside specifically $300 million for the states and lesser sums for Alaska, Hawaii, Puerto Rico and the Virgin Islands. We wish to especially commend Congressman Barden for increasing the amount which would be directly available for education as compared to S.236. However, we have one criticism to make of Representative Barden's bill. It is our understanding that the bill is so worded that federal money may be substituted for money which is now obtained from state taxation sources. We do not feel that any federal legislation should give any states or counties opportunity to renege on their responsibilities to the children.

While we feel that this situation is not apt to occur in many instances we feel that federal legislation should be used to raise educational standards wherever federal money is used.

Although we in the National Farmers Union feel very strongly about this point, we hope that no differences of opinion will hamper or delay favorable approval of a federal aid to education bill by this Committee. We therefore strongly urge the Committee to report out immediately some kind of a federal aid to education bill which will contribute substantially to state educational funds and thus alleviate the situation brought about by the tremendous increase in birth rate during the war period so that all of the Nation's children will at least have an opportunity for a common school education. This is a fundamental right which belongs to every American and which is necessary to the life of our democratic institutions.

FU LEADERS CONDEMN DROPPING BRANNAN PLAN FROM "MUST" LIST

Three Farmers Union state presidents took the lead this week in condemning the plan of the Truman Administration to drop the new farm bill from the "must" legislation list. In a telegram released simultaneously in Washington and Jamestown, North Dakota, state presidents Paul Opsahl, Don Chapman and Glenn Talbott joined in urging that a new federal farm program embodying the principles of the Brannan plan be given top priority consideration.

IT WAS POINTED OUT IN THE STATEMENT that the need for a new federal farm program was more urgent than ever. "Farm income," said the statement, "is presently down to a critical point. Further farm deflation means certain disaster.....we are convinced that Title 2 of the 1948 farm act is totally inadequate to cope with the urgency of the problems now facing agriculture." The Farmers Union leaders emphasized the fact that not only enactment of the Brannan program is necessary for the prosperity of the Nation's farmers but for the prosperity of the Nation's total economy. The statement also pointed out that if the 1948 farm act became law the result would be a political disaster and that the Truman Administration "is morally committed, by the campaign pledges and the results of the election, to enact new farm legislation to replace the 1948 farm act which was clearly repudiated by the farmers of the nation on November 2, 1948."

NFU VIEWS PRESENTED TO THIRTY NATIONS AT INTERNATIONAL MEETING

President Patton and several Farmers Union state presidents this week at the conference of the International Federation of Agricultural Producers at Guelph, Ontario, Canada, presented to the delegates of the 30 nations assembled there the Farmers Union position on international and national legislation as it relates to agriculture.

SPECIFICALLY, THE NATIONAL FARMERS UNION urged that the member countries of IFAP study closely the proposals recently laid before Congress by Secretary of Agriculture Charles F. Brannan. It was pointed out in the FU statement that the Secretary had tackled boldly the most pressing problem of United States agriculture. This problem -- affording cheap food to consumers -- it was proposed to solve by a system of production payments which would maintain the income of farmers while at the

same time allowing prices to seek their own levels in a free market. The FU statement concluded by saying that "it is the conviction of the National Farmers Union that the United States has nothing to fear from the use of its government to correct manifest inequities so long as that government itself rests upon a thoroughly democratic base."

* * *

PATTON ATTACKS AIKEN LAW
IN LETTER TO COMMITTEE HEAD

President Patton this week attacked again the Aiken law in a letter to Steven Pace, chairman of the Subcommittee on Agriculture, which is considering cotton quotas and allotment legislation. Patton said that the attempt of big cotton growers to write new legislation in their own interests resembles the approach made in the Aiken law "where the attempt is to be made to force farmers out of production by cutting their incomes to below minimum levels. The NFU never has and never will condone such cruel methods." The Patton letter was precipitated by a conference of big cotton planters in Memphis, Tennessee, where plans were being made to bring about the enactment of acreage allotment systems which would wipe out small and medium-size farmers.

PATTON POINTED OUT the proposals put forward at the conference would aggravate one of the worst evils of the old acreage allotment systems by freezing individual allotments forever. "While," Patton said, "it might be necessary to use allotments until a better way of adjustments can be found, if allotments are to be used, they must not curtail drastically the opportunity and living levels of thousands of family farmers."

The Patton letter was favorably received by Representative Pace. In his reply Pace stated that his committee was "deeply concerned with the welfare of those who would receive small allotments of cotton acreage.....I am impressed with the merit of your request and will be glad to ask the subcommittee to arrange a hearing as you suggest."

* * *

USDA, BUREAU OF RECLAMATION
REPORTS KNIFE CVA, MVA

There were two important developments on the Valley Authority front this week. One was the release of the report by the Department of Agriculture on the Missouri River Basin which was characterized by Ben Stong, of the Regional Committee for an MVA, as a "teaspoon approach to the biggest soil job of all history," and the other was the complete unveiling of the Newell-Weaver plan (see newsletter May 27) in hearings before the Senate Public Works Committee.

THE USDA REPORT ON THE MISSOURI BASIN WAS SHARPLY CONDEMNED in a press release of the Regional Committee for an MVA. Ben Stong, in the release, pointed out that the report completely substantiated charges by the Hoover Commission that the Missouri River Development "is a major mess." The report calls attention to the numerous matters which were left out of consideration by the Pick-Sloan Plan which was rushed through in order to beat MVA. "The taxpayers," according to the release, "are now told belatedly that there must be $3 billion dollars added to the $6 billions already programmed." However, the report does condemn all of the Bureau of Reclamation's guesses about irrigation when it proposes that USDA should take over all land work from the Bureau.

BUT UNFORTUNATELY, THE PROGRAM DOES NOTHING about the botch job that the Army Engineers are doing and does not consider the all-important problem of ground water, even though it suggests that the ground water table be further depleted by the digging of 100,000 wells. Furthermore, no provision is made for the building of much-needed fertilizer plants, although the basin adjoins the major phosphate beds in the nation. It seems clear that this report was rushed through and probably lacks the approval of Secretary of Agriculture Brannan who is known to strongly favor the Valley Authority idea.

The other bad news concerned the Administration's plan for the establishment of a Columbia River Valley Authority. As a result of a CVA Administration Bill, hearings were held this week at which Mike Strauss, head of the Bureau of Reclamation, and others testified. These hearings revealed the perfection of a tactic designed to beat the Valley Authority.

ENCOURAGED BY THE RESULTS OF THEIR SO-CALLED SHOTGUN WEDDING, the Bureau and the Army put their heads together again in order to dynamite the bill which will provide for a Valley Authority. This new up-to-date Pick-Sloan Plan which was presented to the Committee by Strauss, is known as the Newell-Weaver plan. It, according to Strauss, is the last word in planning. All differences between the Army and the Bureau have been resolved by this plan. Everything has been worked out for 50 years.

IMMEDIATELY FOLLOWING STRAUSS on the stand came Secretary of Interior J. A. Krug who contradicted substantially these statements. Krug said he did not indorse the Newell-Weaver plan, that differences had not been resolved with the Army and that he favored a Valley Authority. Significantly, Senator Cain, long time enemy of power authorities and public power, seemed to favor the Newell-Weaver plan. He indicated that the plan obviated the necessity for having any Valley Authority at all. Strauss seemed loathe to attack Valley Authorities although he insisted that the Newell-Weaver plan covered every aspect of soil, water, power and resources development. Senator Sparkman in a series of pointed questions, forced Strauss to admit there had been major conflects in the shift between his agency and the Army and that in all probability there would be in the future. Sparkmen cited several projects which had been needlessly delayed because of the feud between the two agencies.

* * *

FU REPRESENTATIVES TO TESTIFY ON HEALTH BILLS

Considerable attention this week in both House and Senate Committees was devoted to the President's National Health Insurance bill and other health proposals. Last week, Donald Kingsley, assistant administrator of the Federal Security Administration, appeared to point out that delaying approval of the President's Health Insurance bill might make socialized medicine inevitable. This week several alternative proposals were put forward by those seeking to defeat the national health insurance bill. These proposals are included in two bills introduced by Senator Hill (D.Ala.) and Senator Taft (R. Ohio), are "Charity" bills in that those unable to pay for medical care would be subsidized by the federal treasury.

FU OFFICIALS AND MEMBERS WHO ARE INTERESTED IN GETTING THE POINT OF VIEW of the National Farmers Union on this legislation before Congress should send telegrams and letters immediately to the Washington Office. It cannot be too strongly emphasized that the President's Bill (S.1679), briefly analyzed in previous newsletters (see newsletter May 13) is the only worthwhile general health proposal before the Congress. FU representatives are scheduled to testify before the Senate Labor and Education Committee on June 29. It is important therefore, for you to write soon so that your letters may be inserted in the Record.

PATTON ACCLAIMS ACTION OF HOUSE SUBCOMMITTEE IN APPROVING PART OF BRANNAN PLAN

The National Farmers Union won a smashing victory this week when the Pace Subcommittee of the House Agriculture Committee approved out without substantial changes the draft of a bill which incorporates substantial portions of the Brannan plan. Immediately following the action of the committee President Patton released a statement in which he stated that the action of the subcommittee represented not only a victory for the National Farmers Union and the people that it represented but all family-type farmers throughout the Nation. Patton said that he favored in particular the part of the proposal which would substitute for the existing parity formula Mr. Brannan's formula which is based on the average purchasing power for farmers during the first ten of the last twelve years.

PATTON ALSO COMMENTED ON THE PARTS OF THE BILL which include protection for the basic commodities as well as hogs, milk, butterfat and shorn wool. Especially, Patton praised the action of the committee in approving in principle the production payment plan whereby payments on perishables would be made directly to farmers in instances where market prices fell below the parity level. The bill gives the Secretary discretion to apply the production payment plan to any three perishable commodities he chooses.

A weakness in the legislation, concluded Patton, is the omission of Mr. Brannan's unit system which would provide a differential in support between large and family-type farmers. He urged Farmers Union members to redouble their efforts to obtain passage, as a minimum, of the Pace Subcommittee bill and at the same time to continue their work on behalf of a full Brannan program and the principles advocated by the Farmers Union in its own proposals.

FU MARSHALS FORCES IN FIGHT TO DEFEAT HOUSE COMMITTEE APPROVED MONOPOLY BILL

The fight to preserve our basic antitrust laws went into another phase this week when President Patton in a letter to congressmen known to be friendly to small business and agriculture called to their attention the nature of a bill approved by the House Judiciary Committee. In his letter to Congressman John Carroll and others, Patton pointed out that the bill S.1008, as approved by the committee, would repeal the Robinson-Patman act by legalizing discrimination. "It would mean," said Patton, "the end of our free competitive system. This is the most dangerous bill that has ever been considered by the Congress in our entire history." In his letter, Patton reviewed the entire campaign to repeal our antiturst laws which started last year when the Supreme Court outlawed the base point pricing system as a monopolistic practice.

PATTON POINTED TO THE FACT THAT AS A MEMBER of Senator Capehart's Advisory Council he had fought against this campaign to undo the Supreme Court decision. He also discussed the various legislative attempts of Senator Johnson and Myers to bring about nullification of antitrust laws. His letter concluded by discussing the present measure which grew out of the abortive attempts on the Senate side to weaken our antitrust laws and pointed to the fact that the Judiciary Committee had taken out the only clauses in S.1008, the so-called O'Mahoney Bill, which would protect competition. "Under the bill as now framed," said Patton, "freight absorption is legalized even if it puts every small business out of business."

"THIS BILL," SAID PATTON, "SOUNDS THE DEATH KNELL for the hom-town merchant, will adversely affect agriculture and ultimately doom our free competitive system. I therefore urge you as a member of Congress to do your utmost to bring about defeat of this vicious legislation when it is voted on. I also urge you to call to the attention of other congressmen the facts of the situation as I have outlined them to you."

* * *

HOUSING BILL ON EVE OF PASSAGE

Results of the Farmers Union victory of last week in helping to free the housing bill from the tenacious grasp of the Rules Committee became apparent this week when the measure was called out for debate. At a preliminary caucus held earlier in the week the Democrats voted 147-8 in favor of the housing bill. This was a highly significant vote in view of the fact that a number of southern Democrats are bitter enemies of public housing. Also significant is the fact that many Republicans are ardent advocates of the housing bill even though it is sponsored by the Administration.

AMONG THESE IS USHER BURDICK, representative from North Dakota, who took an active part in the debate, made several speeches and inserted material into the Record. The housing bill will in all probability become law very shortly and the great housing program which includes a quarter of a million dollars for rural construction will begin. It is expected that when this program gets fully underway it will alleviate the unemployment situation which is becoming critical and is now occupying the attention of the so-called "Fair Dealers."

Among those who are urging that something be done about the growing unemployment situation is Dr. Dewey Anderson, head of the Public Affairs Institute, a non-profit research organization. Anderson this week released a study called "Unemployment if Here. Let's Stop it Now." Anderson is one of the first economists to realize that the current unemployemtn problem is not seasonal and that the unemployment problem will increase if something is not done about it.

* * *

FARMERS UNION WITNESS BACKS COLUMBIA VALLEY ADMINISTRATION

Truman Styner, a farmer and FU member from Burley, Idaho, was the first of the Farmers Union witnesses to appear at the CVA hearings this week. Ben Stong, from the Washington office, and President Patton will testify on this legislation later. Only government witness and people from the area were heard by Senate and House Public Works Committee which are both now conducting hearings.

STYNER CONDEMNED THE ARMY-BUREAU PLAN for the Columbia Basin as wholly inadequate because it fails to do anything about the watershed, restoration of forests, replanting of grazing lands and soil conservation. He insisted that plans for land and water should proceed at the same time.

The FU witness urged that the development of phosphate fertilizer production in the South Idaho phosphate beds be a mandate on the new CVA. He showed that withdrawal of phosphate from the soil by crops in the area is double the replacement by use of fertilizer. He testified that triple superphosphate costs $31 per ton more in Idaho than in the Tennessee Valley, where TVA makes it.

Styner emphasized that FU people are overwhelmingly FOR the CVA and MVA and that the battle is between a small vested interest group and the great mass of people. Other FU witnesses are to appear later.

* * *

MIDWEST DEMOCRATS ENDORSE VALLEY AUTHORITIES

The big midwest conference of Democrats from 16 states in Des Moines last week not only gave a rousing endorsement to the Brannan farm plan, it came out for the "integrated development of our great rivers, patterned on the Tennessee Valley Authority."

CHARLEY BRANNAN WAS THE LION OF THE MEETING of national committeemen, national committeewomen, state chairmen and state vice chairmen. The resolutions gave him a big play. More than 4000 farm people, including scores of Farmers Union members from Wisconsin, Minnesota, the Dakotas, Nebraska, Kansas and Oklahoma, attended the big open sessions.

The valley authority endorsement came as a surprise to many, but was unanimously adopted after a discussion as to whether or not MVA should be specifically named. Authors of the resolutions assured the group that the wording covered the MVA so it was adopted as quoted above.

The fall meeting of the Demo group in Twin Cities may be devoted to public power and the valley authority issue. Many Demo leaders think that they should emphasize that issue second only to the Brannan plan.

* * *

FB-EXTENSION DIVORCE UNDER CONSIDERATION

The bill to separate the Farm Bureau and Extension Service is kicking around. A House subcommittee has reported it to full committee, which is planning hearings. Meantime, however, there has been talk with the Farm Bureau about a compromise measure. The bill, as drafted, required immediate separation of the agency and the private organization. FB has been offered some time to get relationships cleaned up before the bill goes into effect provided agreement can be reached on the terms of a measure and passage is assured without opposition.

RURAL PHONE BILL MOVING IN SENATE

The Senate Agriculture Commitee has held one day of hearings on the rural telephone bill and will hear more witnesses next week. Only administration (government) witnesses have been heard. NFU and numerous other groups are to be heard on the measure within a week or ten days. The hearings are now scheduled for early the week of June 27 but it is already known that other hearings will conflict so a few days postponement is expected.

The phone bill may get to the floor of the House June 27 or 28. Notice has been filed with the Rules Committee that the Bill will be called for from the floor on one of those dates if the Rules Committee doesn't report it sooner. This may result in the first test of the "liberalized" House rule which permits calling bills to the floor against Rules Committee wishes. In the past, the Rules group were dictators of what came to the floor. Now, however, if the committee doesn't act on a measure, the chairman of the legislative committee concerned may give 21 days notice and then ask the House, by majority vote, to take up the measure regardless.

* * *

NFU FULL EMPLOYMENT ACT SPURS ACTION ON JOBLESSNESS

The Farmers Union Washington Office this week participated actively in steps both in Congress and in the Executive Branch to obtain consideration in this session of congress of legislation designed to deal with rising unemployment and a generally restless economic situation. In the background was the NFU "Full Employment Act of 1950", introduced in January by Senator Murray and Sparkman and by Representative Patman.

Prominent among the week's developments was the establishment by interested House members of a Steering Committee of five members to take charge of the fight on the floor for such legislation. Representative Biemiller of Wisconsin was chairman and the other members are Patman, Mrs. Douglas of California, Carroll of Colorado, Mrs. Woodhouse of Connecticut and Buchanan of Pennsylvania. Present plans call for introduction of an economic expansion bill as a substitute for the original Farmers Union proposal.

RECEIVED
JUL 13 1949
Southern Regional Council

TESTIMONY OF MRS. JEROME EVANSON, DIRECTOR OF EDUCATION, NORTH DAKOTA FARMERS UNION, ON S.1697, A BILL WHICH PROVIDES FOR A PROGRAM OF NATIONAL HEALTH INSURANCE, BEFORE THE SENATE LABOR AND PUBLIC WELFARE COMMITTEE, JUNE 29, 1949

I am Mrs. Jerome Evanson of Jamestown, North Dakota, Director of Education for the North Dakota Farmers Union. As a rural school teacher, and a farm mother I speak from the standpoint of farm mothers. As Director of Education for the North Dakota Farmers Union I speak for over 37,000 farm families. I speak out of my experience on the land and experiences with my neighbors.

We, in the rural areas of America, represent the areas of greatest need in the way of health facilities and services. We are lacking in all phases of a health program. We need doctors, dentists, specialists, nurses, technicians. We need hospitals, health centers, clinic and mobile units for isolated areas. We should have full coverage of Public Health services. There is a great need for sanitation around the average farm home, better housing with modern conveniences, running water, indoor toilets, sanitary water and milk supply - all the things that you who live in the cities take for granted but that few farm families have. We need to give more consideration to our handicapped in rural areas, to the chronically ill and the aged. We need to give more consideration to maternal and child care - to the health of our school children.

We need more information on soil analysis and the relation of soil to good health. We need to train more of our rural boys and girls in the medical profession.

Now let us say that doctors, nurses, dentists, specialists were provided for the agricultural areas - that we had hospitals within easy reach of every farm home - that we had all of the modern medical equipment to care for our every need that would guarantee adequate health care - it would still be out of reach for most of us under the present system of paying for medical care - medical and hospital care today is prohibitive - a serious illness means the loss of savings, too often the loss of income and a home. Coupled with these facilities and services must be a way of making these services available to all people in the area.

It is a habit of Americans to boast about our high standard of living, our cars and refrigerators, the best medical care and facilities in the world, but what do all these things mean to those millions of Americans who do not have them, or having them available cannot afford them. Health care too often means the sacrifice of a life's savings or years of debt burden - the loss of a home because of

the debt, and loss of earning power. Too many homes today are lost because of excessive medical bills, too many people must make too great a sacrifice for health care. Typical is this couple in their early fifties. They were not interested in a National Health Plan. They were in good health. She was associate professor at the University. He had a good position. They owned their home, they had a nice savings account of six or seven thousand dollars. They had health and security. Then very suddenly the husband was stricken. Two years later he was beginning to walk again. Their savings were gone, their house was mortgaged. The wife, a nervous wreck from anxiety over her husband, and worry over their insecurity. It was doubtful that she could continue teaching. These were good substantial citizens. They deserved more than this in their middle age. Voluntary health insurance did not provide them with health care and security. National Health Insurance would have provided this care and security. Typical is this family man with a good paying job - good for our area. He makes from $250 to $300 per month. Working evenings on a modest home he was building for his family of five, he was injured in a fall from a ladder. His hospital bill for 9 days was $468. This did not include $30 a day for special nurses for five days. Hospital and nurses was $69 per day. His salary is less than $10 per day. Now this did not include the doctor bill. Yes, he had voluntary insurance. It did not pay the complete hospital bill. It did not pay for blood transfusions, or for penicillin, sulpha, and continued treatments for he will be a long time under the doctors care. Worry has brought his wife on the verge of a nervous breakdown. It means not only staggering debts but loss of income to provide for his family and great mental strain that threatens the health of the entire family.

Medical care has become a luxury, few can afford. I have spoken to many young married couples who want to have families but can't afford them. One mother said "This baby cost us $384, we just can't afford to have another." She had wanted a family of four. "We had voluntary insurance that paid $25 of the $384". Another said, "I should go to the clinic but I just can't afford it" or "I don't dare go to the doctor. I was feeling ill for several days and consulted my doctor. He sent me to the hospital. I was there for three or four hours. It cost us eighty some dollars. All I had was summer flu. I'll never dare to go back to the doctor again. No matter how ill I may be, we just can't afford it."

There are people who want to have families - who want medical care but find they simply can't afford either. Then there are those who are indifferent and will not spend money to improve the health of their children. The county nurse at our rural school said that little Mary had every indication of T.B. in the

glands of her neck and should be taken to the doctor. The mother said "oh silly, she'll out-grow it." A boy needed glasses badly. When the parents were notified the mother said "no, Carl will finish the eighth grade in two months and then he won't need glasses" inferring he would not be reading any more books. Are these children of indifferent parents to be denied good health care because their parents think it is a waste of money to provide health care for them? These are the people who will never subscribe to voluntary health insurance and their name is legion. We must have aplan whereby these people must participate and provide health care for their children. They pay their share for public schools - and use them - they pay for roads , the courthouse, police protection, fire protection - why not for health protection.

We are grateful to the American Medical Association for the publicity they have given to National Health Insurance. They with their publicity experts have reached millions of people who would otherwise not be aware of the National Health Program. The A.M.A. has made millions of Americans health conscious and has made them aware that efforts are being made to provide ways and means of meeting their health needs but that the A.M.A. is opposed to such plans. The A.M.A.'s 3½ million slush fund and propaganda experts are doing a complete job and we do appreciate it. We only regret the tactics they are using to spread misinformation. It is unethical and unwise. However, the medical association is kidding no one but themselves. They are too well known for their blocking tactics in every state. The Medical Association has stated they are whole heartedly for Public Health Services but our farmers remember well that when North Dakotans introduced enabling legislation to permit the setting up of Public Health District Units to provide Public Health services in rural areas, there was only one group that fought the bill and that was the Medical Association. In the past two sessions of the legislature in Minnesota and South Dakota, we have the same story of blocking attempts to get enabling legislation to provide for Public Health services in rural areas. The A.M.A. today whole heartedly endorses voluntary health insurance programs - so they say, but they have succeeded in passing laws in more than twenty states that prohibits local groups to organize voluntary health insurance programs. Why dont they pass laws to prohibit lay people from building hospitals? Could it be the cost involved in building hospitals might have something to do with it. These lay controlled hospitals have a fine record of hospital standards and administration - a much better record than doctor owned hospitals. If lay people have such a fine record building and maintaining hospitals why the A.M.A. concerted effort to restrict their attempts to provide health insurance to maintain these hospitals? Could it be that fees for service

are involved? Or non-profit health services for people vs. health services for profit?

The A.M.A. is flooding the country with literature and cartoons against a National Health Insurance program. From the past record the farmers conclude that if the A.M.A. is against it, it must be good because when a bill eventually becomes law the A.M.A., (from our past experience, will eventually endorse it, possibly to the extent of taking credit for the act. As an example I quote from a propaganda sheet written by Dr. Elmer Henderson, President of the A.M.A., "The doctors of America, in cooperation with the prepaid medical and hospital care plans and the many splendid voluntary health Insurance Systems have made great progress in achieving that objective"(the objective being adequate health services within reach of all people). "American medicine is proud of the part it has played in building the Voluntary Health Insurance to meet that need." But we have not forgotten the old cry of socialism, communism, regimentation - when voluntary insurance was proposed to meet the need. Let us see how voluntary insurance is meeting the need. Less than 3% of the rural population are included in this "great achievement." The A.M.A. may be proud of this achievement - we are not. "Within reach of all people" does not make it available to all people. The statement that National Health Insurance is "the discredited system of decadent nations which are now living off the bounty of the American people" is a vicious unwarranted misstatement against the courageous thrifty people of the Scandinavian countries, New Zealand and Australia, who are far from decadent, whose health standards are higher than those of the United States - and such devasted countries as Holland, and Belgium who had National Health Insurance long before the German, and later the American bombers devastated those small countries - American bombers? yes - with a promise to rebuild their cities. And the doctor has the effrontry to call them decadent countries living off the bounty of the American people - a most shameful below-the-belt statement from the President of a one highly respected American institution.

Dr. Henderson also states "President Truman makes the amazing assertion that adequate medical care is now beyond the means of all but the upper income groups. On the contrary any family which can afford a package of cigarettes a day or a weekly movie, can afford the finest kind of prepaid medical and hospital protection - the cost is the same." I am thinking of the young mother who said "We can't have any more babies-this baby cost us $384. Voluntary insurance paid $25 of that amount; or the mother of twins whose hospital bill for 8 days was $244.77 and they received $56 through their voluntary insurance policy on the hospital bill. Is that Dr. Henderson's idea of the finest kind of prepaid hospital

protection? his idea of a great achievement? A package of cigarettes a day - he didn't say for how many years.

Dr. Henderson states further regarding the President's message on National Health Insurance "the most serious misstatement in the president's message is the repetition of that now completely discredited statement that tens of thousands of persons die needlessly in this country due to lack of medical care. The President in this instance as in others undoubtedly based his statement on the distorted report of the Federal Security Administration whose listing of needless deaths included 40,000 deaths from accidents and 115,000 from cancer and heart disease." Dr. Henderson poo-poos the many many deaths from accidents in rural areas because of the lack of doctors and hospital facilities to care for the injured. Farming is becoming highly mechanized - North Dakota is the most highly mechanized agricultural state in the union, consequently we have a high rate of accidents and in many instances no doctors or hospitals to care for them. This map shows 26 counties out of 53 in North Dakota without hospitals - many people hesitate to put money into the building of a hospital when they are not sure they can afford to use it after it is built. In the Slope country, if they are too badly injured to be taken by car to a hospital 80 miles away they must be taken on a stretcher by train 185 miles to Miles City, Montana, or 230 miles to Aberdeen, South Dakota. Yes, many, too many, die needlessly from accidents, Dr. Henderson. He scoffs at the statement that death from cancer and heart disease is needless. Yet Canada has cured an estimated 40% of their cancer patients because when a patient is suspected of having cancer -- all costs are immediately taken over by the government and the patient is given treatment by a specialist without cost to the individual - countless numbers are restored to good health. Death from cancer needless? Yes. We also know that if children were given proper health care and there was a preventative and contagious disease control program available to all children, heart disease would not be the number one cause of death among our people. Scarlet fever, bad tonsils and adenoids, bad teeth - all these effect the heart. Yes we have 325,000 needless deaths each year, too many of them victims of an inadequate health program.

The A.M.A. is proud of their record of 37 or 55 million under a very limited voluntary hospital program. They do not say how many of these dropped their insurance policy. Records show that there is a marked dropping of voluntary insurance after the third year. They do not give the figures of the millions that do not carry insurance. It is this group that we are concerned about. We often wonder how much money there would be for public schools if it was voluntary for people

to pay the school tax - and would we be proud to say that 37 million were getting an education but 80 million were not getting an education because they could not pay the tax. No we cannot share the pride of Dr. Henderson and the A.M.A.

We want a strong America and we want a free Amrica. We want an America whose people can walk upright, proud, that they are stockholders of a great democracy - stockholders because they are contributing to the general welfare of its citizens, not accepting charity offered begrudgingly in the Taft Bill and the Hill bill - controlled and administered by organized medicine. Charity? Paupers Oath? We prefer sickness - death. When will you who sit in power in Washington, you who represent us back home -- When will you understand? What must we do to get you to see, to know the needs and the aspirations of we whom you represent. It is a travesty on American justice - on the rights of people that you even dare suggest that we submit to such indignity. Can't you see that we are trying to make health services available to millions who have never been able to afford medical care - that voluntary health insurance cannot reach. We want to eliminate in the services the 40% rejections, the 76% rejections. We want to cut down the billions spent for feeble-minded institutions , asylums, reform schools - all of whose inmates have handicaps, physical and mental.

How can any upstanding citizen representing a free people ask us to accept the humiliation of a means test that we and our children may get health care. Free people? A paupers oath denies freedom.

How long do you expect us to accept the philosophy that mothers shall be proud to raise their children to provide battalions for war and destruction and that we shall accept the paupers oath if necessary in order to provide healthy specimens for your war machine. 76% of our government's income for war. Paupers oath for the pawns of this war machine.

Yes, we mothers and dads are angry. We still remember the hungry thirties - all too well. We remember the humiliation - the indignities that people, good people, a proud people, were subjected to, to get food for their children - surely that is not to become a part and parcel of the American way of life. We saw what it did to one generation - We will have no more of it. How many of the rejections of our farm boys in the service, are related to the lack of food in the thirties will never be accurately determined but I well remember children coming to school day after day with lunch pails containing plain bread with black molasses, no butter, on their bread, no fruit - no other food - because their parents refused to accept charity and all the humiliation that went with it. I saw children's health being undermined because of an inadequate diet - because they could not get health care. There was one pitiful case for which we were able to get help but it was

rejected by the parents because it was charity, and we saw that child grown to manhood rejected for the armed services when his country needed him - also rejected was the boy on the black molasses diet. Is that economy? I call it a terrible waste of our greatest asset, human resources. A shameful waste of human resources. We the mothers challenge the A.M.A., and their great achievements involuntary health insurances. We challenge their broken promises, their delaying tactics, the hiring of professional blockers of progress with their phoney propaganda and manufactured public sentiment.

The medical association seems to know what they don't want but they are very vague about what they do want. They don't want a National Health Insurance Program to provide for the health needs of people. What do they want? They say they want voluntary health insurance yet they fight a National plan of voluntary health insurance. They keep telling us they are formulating a plan - we have waited long and patiently - we are still waiting, but not so patiently. Now on the other hand we know what we do not want and we know very clearly what we do want. We do not want needless suffering, needless crippling illnesses, needless deaths because of inadequate health care. Nor do we want the worry of finding the where - with-all to pay for health care if it is available. We don't want charity and a paupers oath in order to get health care. We do want our children all of them - to have the right to good health as they have the right to an education, to an orderly system of government. We want every mother to have good prenatal care, hospital care in childbirth and post-natal care for herself and child. This is one of our greatest needs in rural areas where over 50% of the babies are born.

We want adequate health services and hospital facilities available to all through a national plan of complete health insurance, not 10% parity of health offered us through the Taft bill and the Hill bill. We want local control of programs with lay representation. We want more research - more preventative work. We want more doctors, dentists, nurses, technicians. We, the people, want to share the cost of providing good care to all regardless of their income and lastly we want the A.M.A. to quit stalling and come forward with a <u>sound plan</u> to meet the medical needs of our people today - to quit dealing in generalities and deal realistically with the health problems of people. We do not want to stop the propaganda job of the A.M.A. They are doing a good job for us. They say that "without compulsion we have created the best medicine in the world". All right - now let's make it available for that is the only reason for its creation.

This quote from Human Conservation by the National Resources Planning Board expresses the needs and goals we must reach to meet these needs.

"Health care organized to protect and care for all members of the family with a cleared realization of how health and family life are inextricably related

calls for an orchestration of medicine, psychiatry, dentistry, nursing, public health, social work, education and recreation to foster saner, healthier living as well as to provide needed medical treatment and care for illness and disorders, and for the critical events of life. If the family is as important as is publicly proclaimed - and it is - then it merits more well-planned effectively administered guidance and coordinated assistance. For many of these advances, professional knowledge and skills, organized facilities and equipment must be provided by the community since they are wholly beyond the resources of most families. The outline of a broad national policy of family aid guidance, housing, nutritional and health care can now be formulated. The adoption of any such policy for the family will be governed by the extent to which we recognize that family conservation and protection are no less legitimate public responsibilities than the government aid and protection given for years to agriculture, business and industry. Today we see that by building dams, reforesting the land, conserving the soil and otherwise husbanding our precious natural heritage, we can avoid the disastrous floods, the dust bowls, the soil erosion, and fire blackened cut over lands. So equally are we realizing what human loss means and what it costs, not only in money but in needless suffering, misery, and unhappiness. We are ready for human conservation to replace the tremendous expenditures of time, energy and funds now spent to patch up, repair, and barely keep alive the many victims of our present social economic life. Human conservation is an invitation to think and act as the custodians of the precious heritage of human life and fertility, the on-going stream of life moving toward the future now entrusted to our care."

The National Health Insurance and Public Health Act S 1679 provides no half-way plan, but a plan for a total program of health for people. The Farmers Union is happy and proud to endorse S 1679 and to actively participate in forwarding this program to give people the right to good health. We call on all men of good will who have a vision of our great potentialities to make S 1679 a reality.

26 — National Farmers Union

PRESS RELEASE

NATIONAL FARMERS UNION, 300 B St. S.E., Washington 3, D.C.
ATlantic 9647-9648-9649

National Headquarters
3501 East 46th Avenue
Denver, Colorado
Keystone 7268

TESTIMONY OF ANGUS MCDONALD, ASSISTANT LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION, ON S.1679, A BILL WHICH PROVIDES FOR A PROGRAM OF NATIONAL HEALTH INSURANCE BEFORE SENATE LABOR AND PUBLIC WELFARE COMMITTEE, JUNE 29, 1949.

Mr. Chairman and members of the Committee, as a representative of the National Farmers Union I am here to state the position of my organization in regard to S.1679 which provides for a program of national health insurance and public health and which will assist in increasing the number of adequately trained professional personnel and in the building of new hospitals and other health facilities. Before I comment on the specific provisions of the bill I would like to make a few remarks in regard to rural health conditions in order to indicate that there is a great need in rural areas for a general insurance health plan. I would also like to read a few excerpts from communications I have received within the last week from Farmers Union leaders and rank and file members.

It is generally agreed that people in rural areas suffer greatly because of the lack of doctors, nurses, hospitals and other health facilities. Before the war large cities averaged one doctor to every 650 persons. Predominantly rural counties averaged about one doctor to 1700 persons and this proportion has grown even greater during the last few years. Doctors generally tend to locate in towns and cities not only because the remuneration is much greater in areas of relatively dense population but because a well-trained doctor simply does not have adequate hospital and other medical facilities in rural areas to efficiently carry on his profession. All evidence points to the fact that the more rural an area is the fewer the doctors, hospitals and other health services.

This lag in the development of health services has been felt for many years. Fifty years ago, the urban death rate was 50% higher than the rural rate. But since that time the rural death rate has fallen so slowly that the urban rate has now overtaken it. The lowest infant death rates are found in the larger cities. Sixty percent of the Nation's children live on farms and in towns less than 10,000 but only 4 percent of the pediatricians live in such areas.

The existence of such conditions has long been known to the members of the National Farmers Union. Their realization of the need for some kind of federal action has translated itself into resolutions adopted by local, county, state and national bodies of the National Farmers Union. Let me read to you an extract from the resolution on health adopted at our last national convention held in Denver, Colorado, March 1949:

"A. HEALTH INSURANCE. Universal health insurance legislation should be enacted by Congress. Each person should be covered by health insurance, either in a federal plan locally administered, a co-operative plan, or a private plan of the family's choice. There is no other way to underwrite the costs of medical service.

"B. FEDERAL AID IN HOSPITAL CONSTRUCTION. The corporations of the cities siphon wealth out of the rural country-side. Some of this money should be put back into rural communities in the form of money to build hospitals. The location of hospitals should be according to a sound over-all plan. The plan should include local health centers, general hospitals, and large medical centers.

"C. PUBLIC HEALTH SERVICE. The work of the Public Health Service should be greatly expanded. We favor the spending of $2 per person per year to prevent illness and disease, for health education and for sanitation.

"THE MEDICAL MONOPOLY. We condemn those medical associations, national and state, which constitute a monopoly thru the practice of restricting the supply of doctors and opposing necessary public measures to improve medical and hospital service. We believe the medical affairs in each state should be guided by a State Health Council, composed of laymen and doctors.

"AID TO MEDICAL STUDENTS. We recommend aid thru scholarships or otherwise to medical students who will agree to at least five years of service in areas where the number of doctors is deficient. This same method should be used to secure additional nurses in areas where needed."

Somewhat similar resolutions have been adopted by Farmers Union delegates at state conventions. The attitude of the membership of the National Farmers Union toward national health insurance, as far as I have been able to ascertain, has not changed since any of these resolutions were adopted. This is evident from a number of letters which reached the Washington office in the last few days after it became known that Farmers Union witnesses were scheduled to appear before this committee.

Here is a quote from a letter dated June 23, written by Mrs. Esther Harbo, Director of Education, Rocky Mountain Farmers Union:

"I have found sentiment rapidly increasing in favor of President Truman's Health Insurance Proposal (S.1679). Members of our organization, and their farmer friends, too, feel that a program which will include everyone is most desirable. Support of the system by deductions from the income of employees and employers is viewed as the fairest and most logical method."

Here is another quote from a letter received from Paul Opsahl, president of the South Dakota Farmers Union:

"I understand you soon will be before the Senate Labor and Public Welfare Committee to testify on the Administration's health bill, S.1679.

"I want to refresh your memory on the fact that the South Dakota Farmers Union is strong for health insurance legislation. One of our greatest handicaps out in this country is the lack of health facilities. Beyone that, many of our people find the burden of medical costs too heavy to bear, and I can cite many cases where people have lost their home and farm due to emergency illness in the family.

"As we see it there is no other way to solve this situation on a long range basis, except the use of some form of health insurance administered on a national basis."

And here is another from Aubrey Williams, president of the Alabama Farmers Union which says:

"The Administration's overall health bill, S.1679, is of very great importance to the rural areas in the South. In Alabama, for example, there are hundreds of communities with no clinics or hospitals; with the nearest doctor, ten, twelve and fifteen miles away.

"A great number of farm families cannot use the facilities we have because they do not have the money to pay. Any plan which hopes to provide adequate medical care must include compulsory health insurance. The existing voluntary group health plans are completely inadequate for the majority of farm families.

"The Alabama Farmers Union strongly endorses S.1679."

Among other officials in the Farmers Union who have written us in the last week urging us to support S.1679 are: Mrs. Dora Barney, Director of Education, Oklahoma Farmers Union; Lyle Thomas, Secretary, Oregon State Farmers Union; Mrs. Frances Leber, Director of Education, Eastern Division Farmers Union; Myles Horton, Regional Representative National Farmers Union for Tennessee and Virginia.

Now I come to the consideration of the bill itself. As indicated, my organization and its members are heartily in favor of the purposes of the bill. Moreover, we believe that S.1679 provides the best practical method to bring an adequate comprehensive medical system to our people. We note with approval that provisions are made not only for a method of financing it by setting up an insurance fund by means of deductions from salaries and wages similar to the social security fund but because the bill provides for the expansion of medical facilities including the training of doctors, the building of hospitals and other health facilities. It seems to us in the Farmers Union that the simple way to finance a health plan is to deduct from each pay check a small amount by the employers and that the Government should take this money, set it aside and make it available for use by the contributor when the inevitable sickness comes.

We do not believe that voluntary plans will work because many of the young and healthy and the well-to-do will not join in with any general plan. Only those persons who are relatively bad health risks will enter. And while we realize that those with a relatively high income must at least in part contribute to the health fund which is used for the indigent and those in the very low income groups we feel the taxpayer has to pay a part of the health expenses of such people anyway.

Furthermore, we feel that this proposed legislation has several advantages over some of the substitute plans before this committee. Individuals participating in the health insurance plan proposed here will not be required to take a humiliatin means test for the simple reason that practically everybody will be included in the plan.

We also approve the provisions in Section 703 which provides: "Every individual eligible for personal health services available under this title may freely select the physician, dentist, nurse, medical group, hospital, or other person of his choice to render such services, and may change such selection: Provided, That the practitioner, medical group, hospital, or other person has agreed under part C to furnish the class of services required and consents to furnish such services to the individual." We take this provision to guarantee not only free choice of the patient but the right of the doctor to reject any patient that he chooses.

We believe that this bill will not weaken the high standards of the various medical associations. As we understand this legislation, doctors still decide strictly medical matters. Naturally we feel that all medical matters should be determined by the members of the medical profession. All courses of treatment, all requirements as to which individuals are qualified to carry on a medical practice should continue to be determined by members of the medical associations. People whose money will be spent under such a program should have a voice in determining how it is to be spent. Well-qualified physicians and surgeons in many cases would probably not make good administrators . There is a tendency for some doctors to feel that if lay people have a voice in the administration of health plans that it will in some way interfere with their efficiency as doctors. They therefore work to prevent any plan from going into effect which is promoted by lay people. We feel that doctors are mistaken in this view and that they would be left free under this bill to fully carry on their medical practices as they have in the past. Furthermore, in all probability, many doctors would receive, especially those in the lower brackets, a far greater compensation than they do now because this bill would bring medical service to many millions of additional people who are now unable to pay for it.

We note with special approval a provision in the bill which provides for assistance for farmers experimental health cooperatives. Due to lack of health services and to the sparseness of population, there is a great need for health cooperatives in rural areas. Many rural people are vitally interested in the setting up of such projects and I am sure would welcome enthusiastically this proposal of the federal government to assist farmers in selected areas to initiate and carry out experimental plans for providing medical care for the members of the cooperatives. Farmers Union officials and members have had much experience over the years in setting up cooperatives and many of them feel that this experience will be valuable in aiding the building of health cooperatives.

In conclusion, I would like to urge members of this committee to give favorable consideration to S.1679. As stated above, we believe that it is needed, that it is practical and that it would not interfere with the freedom of the medical profession or patients. We likewise feel, as we also have pointed out, that it would not undermine the high standards of the American medical profession.

NFU NEARS GREATEST TRIUMPH ON HOUSING AS HOUSE VOTES

As this issue of NFU in Washington went to press, it appeared certain that NFU had scored the greatest victory in the history of its long fight for a large-scale governmental housing program. Administration forces had beaten off successive attacks by opponents of the measure who had sought either to whittle it down or to insert in it revisions so obnoxious so as to insure its defeat. The bill already has been passed by the Senate by an over-whelming vote, hence if it passes the House in substantially the form in which it stands at this writing, then a good big housing program is assured.

Two of the major issues involved were those concerned with direct federal aid for public housing and with farm housing. The former provision permits the federal government to subsidize urban housing units for low income families so as to make it practicable to obtain better housing than they now have. Without such aid, slum clearance in the main will be defeated because low income families will not possess the income to maintain living quarters even after they are built. The farm housing program was threatened by a Democratic-Republican Coalition which sought to convert it primarily to an insured loan program that would have transfered a considerable part of the benefits from the borrowers and farmers to banks and building associations.

IN ADDITION TO ITS PURELY SOCIAL ASPECTS, NFU REGARDS THE HOUSING BILL as a major bulwark against a depression. Experts have forecast that expenditures under the housing program will become significant by mid-winter, at about the time when unemployment is expected to become an acute problem if present trends continue. Thus, the bill would afford a powerful weapon against further declines in business activity.

MRS. JEROME EVANSON PRESENTS FU VIEWS ON HEALTH LEGISLATION TO SENATE COMMITTEE

Mrs. Jerome Evanson, director of education of the North Dakota Farmers Union, appeared this week before the Senate Labor and Public Welfare Committee which is holding hearings on President Truman's general health insurance bill S.1679. Mrs. Evanson was followed by a representative of the Washington office who presented the point of view of the national organization.

In her testimony Mrs. Evanson pointed up the need for general health insurance legislation by describing health conditions that exist in North Dakota and in other areas. She indicated that the shortage of doctors, nurses and health facilities had reached a critical point and that this shortage together with the lack of financial ability of those in the low income groups to pay for health services meant the sacrifice of many lives and prevented young married couples from having a family. Here are a few quotes from the Evanson statement:

"I have spoken to many young married couples who want to have families but can't afford to have them. One mother said 'This baby cost us $384.00, we just can't afford to have another.' She had wanted a family of four. 'We had voluntary insurance that paid $25.00 of the $384.00.' Another said 'I should go to the clinic but I just can't afford it' or 'I don't dare go to the doctor, I was feeling ill for several days and consulted my doctor. He sent me to the hospital. I was there for three or four hours. It cost us eighty some dollars. All I had was summer flu. I'll never dare to go back to the doctor again. No matter how ill I may be, we just can't afford it.'

"The county nurse at our rural school said that little Mary had every indication of T.B. in the glands of her neck and should be taken to the doctor. The mother said 'oh silly, she'll outgrow it.' A boy needed glasses badly. When the parents were notified the mother said 'No, Carl will finish the eighth grade in two months and then he won't need glasses' inferring he would not be reading any more books. Are these children of indifferent parents to be denied good health care because their parents think it is a waste of money to provide health care for them? These are the people who will never subscribe to voluntary health insurance and their name is legion. We must have a plan whereby these people must participate and to provide health care for their children."

MRS. EVANSON ALSO SHARPLY ATTACKED THE OBSTRUCTIONIST TACTICS of the American Medical Association and state and county medical associations and centered her attacks on a number of statements of Doctor Elmer Henderson, president of the A.M.A. Dr. Henderson, said Mrs. Evanson, "poo-poos the many many deaths from accidents in rural areas because of the lack of doctors and hospital facilities to care for the injured... He scoffs at the statement that death from cancer and heart disease is needless. Yet Canada has cured an estimated 40% of their cancer patients because when a patient is suspected of having cancer - all costs are immediately taken over by the government and the patient is given treatment by a specialist without cost to the individual and countless numbers are restored to good health."

Mrs. Evanson concluded her testimony by pointing out that the enactment of S.1679 would not only save 325,000 needless deaths each year but prevent much needless suffering. We know, said Mrs. Evanson, if children were given proper health care and there was a preventive and contagious disease control program available to all children, heart disease would not be the number one cause of death among our people. Many millions of individuals in this Nation which claims to have the highest standard in the world are victims of an inadequate health program.

THE REPRESENTATIVE FROM THE WASHINGTON FU OFFICE stated the general position of the national organization on S.1679 and called the attention of the committee to the fact that not only had the national organization of the Farmers Union at its conventions endorsed the principles of health insurance but that state, county and local organizations had called for enactment of such a program and that letters, telegrams and statements from state presidents, state educational directors, other officials and dirt farmers had been pouring into the office during the past week. All of these communications, said the FU representative, urged the immediate enactment of S.1679 and called attention to the completely inadequate medical facilities that exist in rural areas. Among those urging enactment of the President's program was Mildred Stoltz, director of education Montana Farmers Union; Einar Kuivinen, president of Minnesota Farmers Union; Ken Hones, president Wisconsin Farmers Union; Myles Horton, representative of NFU for Tennessee and Virginia; Mrs. Frances Leber, director of education Eastern Division FU; Lyle Thomas, secretary Oregon FU; Dora Barney, director of education Oklahoma FU; Aubrey Williams, president Alabama FU; Paul Opsahl, pres. South Dakota FU; Esther Harbo, director of education Rocky Mountain FU; Alice Van Dyke, director of education Minnesota Farmers Union. Among the farmers writing in were: F. M. Harrison, Greenville, Tenn.; Earl Gobble, Abingdon, Va.; E. H. Thomsen, Huntington, Tenn.; H. N. Hatley, Baileyton, Tenn.; A. C. Lange, Huntington, Tenn.; C. W. March, Abingdon, Va.; H. D. Cobb, Red Level, Alabama; F. H. Franklin, Dozier, Alabama; H. R. Owens, Andalusia, Alabama. Also, H. H. Mathews, president of board of directors Farmers Union Fertilizer Coop, Dozier, Alabama and J. D. Mott, Andalusia, Alabama.

CORRECTION

Due to an error in the newsletter of last week, Mr. George J. Burger of the National Federation of Independent Business, Inc., was reported to have reversed his position in regard to the so-called O'Mahoney amendment which weakens our anti-trust laws. This was a typographical error resulting from the fact that the name Bergson and Burger have a similar spelling. Herbert A. Bergson is the assistant attorney general. He is the individual who reversed his decision, not Mr. Burger.

We are happy to make this correction. Mr. Burger's organization has taken in the past and is taking now the same position in this matter as that of the National Farmers Union.

PATTON ACTION FREES HOG SERUM CO-OPS FROM USDA THREAT

President Patton late last week at a dramatic meeting in the Secretary of Agriculture's office charged that the Hog Serum Control Agency of USDA had "the hearse backed up against the door of cooperatives who were handling hog serum ready to cart their bodies away." The meeting was followed almost immediately by an order from Secretary Charles Brannan holding in abeyance orders of the Control Agency which had pronounced the sentence of death on hog serum cooperatives. Among those others present at the meeting was Albert Goss, master of the National Grange, Allan B. Kline, president of the Farm Bureau Federation and numerous state and cooperative leaders. Farmers Union was represented by William Korstad, attorney

NATIONAL FARMERS UNION

Atlanta 3, Georgia

for the Farmers Union Central Exchange, St. Paul, and Chris Milius, president of the Nebraska Farmers Union. One by one, representatives of the Farmers Union and other organizations told their story to Secretary Brannan. Although there were variations, in practically every instance where the cooperative had come in conflict with the Hog Serum Control Agency it was obvious that the agency was following a general pattern in attempting to destroy the cooperatives. Hearings held in Kansas City, Mo., and other points were a mockery. Members of the Control Agency did not even listen to representatives of the cooperatives. Orders which would in effect have destroyed the cooperatives in 90 days were written out even before representatives of the cooperatives had an opportunity to present their case.

SECRETARY BRANNAN OBVIOUSLY WAS IMPRESSED WITH WHAT PRESIDENT PATTON and others of the delegation told him. He listened sympathetically and asked several of the attorneys, including the one representing the Farmers Union, to stay in Washington a few days and assist him in ironing out the situation. The meeting was followed, as stated above, by an order of the Secretary holding in abeyance the orders of the Control Agency which would destroy the hog serum cooperatives.

BRANNAN-PACE BILL REPORTED BY HOUSE AGRICULTURE COMMITTEE

The House Agriculture Committee this week, as predicted, reported HR.5345 which provides for a new parity formula based on the purchasing power of farmers for the first ten of the last twelve years and for production payments on any three agricultural commodities except milk and butterfat. This bill, as pointed out last week, represents a major victory for the National Farmers Union. NFU has cleared the first hurdle in getting a part of the Brannan plan enacted.

Attention now will be directed to the Senate Agriculture Committee which is considering a bill providing production payments for hogs. Members of NFU are urged to write or wire Senator Elmer Thomas to exert his influence for the passage of this bill now being considered by his committee.

Subject - Housing bill

WASHINGTON - Hailing passage of the General Housing Bill by the House as one of the Farmers Union's "major legislative victories", President James G. Patton of the Farmers Union today emphasized the importance of the farm housing section of the bill and at the same time called the bill as a whole an attack on "a root cause of depression and unemployment".

Text of Patton's statement was as follows:

"The National Farmers Union salutes the House of Representatives upon passage of the General Housing Bill. The vote was a genuine victory for the people as against a selfish, special-interest lobby that, as President Truman has pointed out, had gone to extreme lengths to defeat the measure.

"The Farmers Union regards passage of the bill by the House in the approximate form by which it passed the Senate as one of its major legislative victories.

"No other farm organization supported the bill, either in this Congress or in previous Congresses.

"Farmers should realize that only the Farmers Union fought the battle that ultimately resulted in the approval of a $262,000,000 farm and rural housing program. Those who benefit through the years from this great step forward will come to realize that other farm organizations actively sought the defeat not only of the bill as a whole but of any proposal for bringing to farmers the advantages of improved housing that city dwellers enjoy or will enjoy as a result of the enactment of this measure.

"But for the efforts of the Farmers Union over nearly a decade the issue of farm housing would have been by-passed.

"For this reason we are deeply grateful to those members of the House who stuck by their guns and by President Truman, ignoring the powerful pressures of the real estate lobby, and voted for a real and effective federal housing program.

"Moreover, we are grateful for the activity of the host of public-spirited citizens and organizations who have worked so tirelessly through the years to obtain this result, in particular the National Public Housing Conference and its able staff. Only through their devotion has it been possible to bring to this conclusion the movement for a housing bill, which in turn made it possible to obtain specific action for agriculture and people in agriculture.

"The farm housing section, Title IV of the bill, provides $262,500,000 for improving farm housing, including loans to farmers who are unable, by the thousands, to obtain adequate credit now for bettering their dwellings, and including grants, in limited cases, that are the equivalent in rural areas to the slum clearance funds provided in the bill for cities.

"But the Farmers Union rejoices not alone at the fact that a good farm housing program now appears near reality. The adoption of a bill providing millions of dollars for home construction and slum clearance is one of the best available means of warding off general economic depression.

"By stimulating construction expenditures and in turn plant and factory expansion and replacement, such a bill attacks a root cause of depression and unemployment. In this period when many economic indicators have turned downward, we should be doubly grateful for the wisdom and statesmanship exhibited by Congress in the adoption of this measure.

"With really vigorous and effective administration, this expenditure will begin to rake effect next midwinter and can be of very great service in preventing further downturns."

Subject - Brannan program in the House

WASHINGTON - Hailing the bill reported by the Pace subcommittee of the House Agriculture Committee today as a "smashing victory" for the farm program proposals of Secretary Brannan and for National Farmers Union principles, President James G. Patton of the Farmers Union today said the action indicates the "enormous strength of the grass-roots support" of the program.

The text of Patton's statement was as follows:

"The action taken today by the Pace subcommittee of the House Agriculture Committee constitutes a smashing victory for the farm program proposals of Secretary of Agriculture Brannan and for principles long advocated by the National Farmers Union.

"The Farmers Union congratulates the subcommittee on the excellent job it has done in holding out to farmers the hope that final action will be taken by this Congress to forestall the disastrously low income levels that await them otherwise.

"At the same time we call upon the full committee, the House of Representatives, and indeed Congress in general to push, as a minimum the Pace subcommittee's bill to early adoption. Such action will remove the worst of the cloud of fear and depression that now hangs over farmers.

"Most farmers view with the greatest apprehension the prospect that on January 1, 1950, Title II of the present Hope-Aiken Act will become effective, barring some action by this session of Congress. They can see only seriously declining price levels in store for them if this comes about. At the same time they will apparently be paying prices just as high as now for everything they use. The result will be a severe squeeze on the farm population.

"The House subcommittee's action will assure the adoption of the Secretary's new minimum normal income standard, based on a moving average reflecting farm buying power over 10 of the last 12 years. More important, it will give farmers 100% price support on the six basic crops, and on hogs, milk, butterfat, shorn wool and mohair. Furthermore, it will give the Secretary discretion to try out his production payment program on any three non-storable products, except only milk.

"If these elements are all added together, then it is clear that the subcommittee has given the Secretary more than three-quarters of his original proposals.

"This is cheering evidence of the enormous strength of grass-roots support that has developed for the Brannan program. Some farm organization heads may not support the program, but the action of the subcommittee shows clearly enough that the rank and file of farmers do not agree with them. It shows, too, that the essential soundness of the Secretary's proposals has made a deep impression on Congress.

"We hope for early action by both houses on such a measure as this.

"At the same time Farmers Union members will continue to emphasize in Congress and elsewhere the importance of including ultimately in farm legislation some type of unit system which will (1) have an interchangeable commodity unit value and thus render voluntary crop adjustment easy to obtain, and (2) give definite preference to family-type farmers."

STATEMENT OF ANGUS MCDONALD, ASSISTANT LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION, ON S.1008, AN ACT TO DEFINE THE APPLICATION OF THE FEDERAL TRADE COMMISSION ACT AND THE CLAYTON ACT TO CERTAIN PRICING PRACTICES, TO THE SELECT COMMITTEE ON SMALL BUSINESS, HOUSE OF REPRESENTATIVES, JULY 1, 1949.

Mr. Chairman and members of the committee, as a representative of the National Farmers Union I am here to state the position of my organization in regard to S.1008 which amends the Clayton Act in regard to price discrimination and freight absorption. In our view, this amendment cuts the heart out of our antitrust laws, repeals section 2 of the Clayton Act, which contains the revisions of the Robinson-Patman anti-discrimination act, and legalizes the old Pittsburgh Plus practices which, it was proved in 1924, cost American farmers hundreds of millions of dollars.

Before I proceed to a consideration of the several discrimination cases and our analysis of S.1008, I would like to explain why our organization, as well as American farmers in general, has been traditionally opposed to basing point price systems and to any kind of price discrimination which gave to the seller a varying mill net return. Agriculture is the most highly competitive group in our economy and, therefore, farmers have no means of engaging in price discrimination or setting up pricing systems with varying mill net returns except under very exceptional and temporary circumstances.

A farmer cannot set up a price system under which he charges one customer more than another for the simple reason that as soon as he started discriminating, farmers in competition would undersell him as soon as the discrimination became known. Therefore, the farmer in his business has no interest in seeking to exact from the general public charges for for phantom freight or charges which would result from any other monopolistic practice.

The farmer, however, does have an interest in seeking to prevent price systems and monopolistic practices which extract from him charges which are in excess of those existing in a free competitive system. In the past, farmers have been cheated out of billions of dollars because they had to pay excessive prices resulting from Pittsburgh Plus and other basing point price systems. The record is clear that the farmer has nothing to gain and much to loose by the existence of so-called uniform pricing systems. Let me quote briefly from a decision of the U. S. Supreme Court, 1924. This opinion outlawed the Pittsburgh Plus prices because it was proved that farmers and others paid many million dollars because of

the operation of this monopolistic price system:

"Deere & Company, farm implement manufacturers, pay $488,400 annually as imaginary freight, while the farmers who purchase their implements must pay over double this amount, or over $1,000,000 annually, as extra prices for Deere & Company's implements, because of this imaginary-freight item. In other words, for every dollar which the farm implement companies pay as Pittsburgh Plus, the farmers must pay more than double every such dollar, because to the actual Pittsburgh Plus paid by the farm implement manufacturer must be added the vari us percentages of overhead, selling expenses and profits which are borne in the ordinary course of business. The figures are undisputed in the record. As the president of the American Farm Bureau Federation, representing more than a million and a quarter farmers, testified, the double Pittsburgh Plus imaginary freight thus paid by the farmers in only eleven middle western States amounted to around $30,000,000 annually. The farmers in the other States would use even more steel than those in the 11 States figured in the calculations. The Emerson-Brantingham Company, a farm implement manufacturing company pays around $100,000 annually as Pittsburgh Plus imaginary freight, which means that its customers must pay around $200,000 annually more than they would have to pay if the Chicago district mills eliminated Pittsburgh Pittsburgh Plus as hereinabove mentioned. The Litchfield Manufacturing Company, a farm implement manufacturing company, pays $68,000 annually as imaginary freight, and its customers pay twice that amoung. Pittsburgh Plus resulted in an addition to the list prices of J. I. Case Threshing Machine Company, an agricultural implement manufacturing company, in the year 1920, of $509,033, which amount the farmers would have been saved if Pittsburgh Plus had not been charged. A Minneapolis manufacturer pays $84,000 annually as Pittsburgh Plus, and so on."

Successive cases have indicated that such excessive charges are the inevitable result of such monopolistic systems. There have, of course, been many variations in the methods devised by greedy groups and unscrupulous attorneys when they sought to evade our anti-trust laws. But there is one characteristic common to all of these methods, and that is that they all employed price discriminations. That is, they did not sell to all customers at the same price but picked out a favorite few so that the rest would go out of business. This was the tactic employed in the recent Standard Oil case. The Standard Oil Company selected out of 357 customers four big concerns who acted both as wholesalers and retailers. At the time of the action these four big concerns were systematically putting out of business the other 353.

Now we are told by experts who have made a life-time study of such practices that this legislation S.1008 legalizes such practices and not only undoes the work of the United States Court of Appeals in the 7th Circuit — that is, the recent Standard Oil case — but actually makes legal Pittsburgh Plus, multiple basing point price systems, price discrimination of every kind, including that involving freight absorption, unless some element of conspiracy can be proved.

Now I would like to discuss S.1008 in detail. Section 1 says nothing about protecting competition and it ties the hands of the Federal Trade Commission in looking into monopolistic situations where uniform delivered prices or freight absorption is involved. Section 2 goes even further. It provides that "sellers may absorb freight to meet the low price of a competitor in good faith" no matter if this so-called meeting of competition is such as in the Standard Oil case, which could have resulted in the complete destruction of competition. The way this particular section was amended makes me suspect that the authors were actually working to design a bill which would injure competition. This is indicated by the deletion of the

phrase "except where effect of such absorptions will be to substantially lessen competition." If the authors of this legislation did not want to injure competition why did they delete this phrase? But this section goes even further. The authors of the bill are anxious that the sky should be the limit in raising or lowering prices to bring about the destruction of competition. Significantly, this phrase is added: "this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains."

Section 3 of S.1008 is even more far-reaching than Section 2. It not only legalizes discriminations which result from freight absorption, phantom freight, etc., but it legalizes price discriminations where no element of transportation costs are involved. Again in this section the authors of the bill struck out any language which would safeguard competition. The opening paragraph, particularly the words "Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price the effect of which upon competition may be that prohibited by the preceding subsection" is nonsensical. It doesn't make sense because the words "except where the effect of such absorption of freight will be to substantially lessen competition" were stricken from the bill. In this section, also, the authors seem to feel that they might have over-looked some discrimination or other that wasn't legalized so they added, and I quote, the words in itallics in the bill: "...and this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains."

In the fourth section there is also an attempt to weaken the Robinson-Patman act by substituting reasonable probability for the words "substantial and probative evidence."

In conclusion, I would like to refer briefly to the arguments which the proponents of this legislation has put forward. They contend that sellers meeting competition in good faith is made a complete defense that this will result in lower prices to consumers and in so-called "hard" competition." They also say that if sellers are not allowed to cut prices and discriminate against various buyers that the result would be "soft" competition.

This is a curious argument. It seems that what we have always considered as fair competition, that is, that a seller always sell to everybody at the same price, is now considered "soft" and that what we had considered as unfair competition, that is, practices which operated by means of discriminations to destroy competition by the sellers' customers is now considered "hard." This argument, of course, is not new. It has always been used when sellers were engaging in monopolistic practices with adverse affects on competition. This was pointed out recently in the

Standard Oil case referred to above. I quote from the opinion of the Circuit Court:

"Now as to the contention that the discriminatory prices here complained of were made in good faith to meet a lower price of a competitor. While the Commission made no finding on this point, it assumed its existence but held contrary to the petitioner's contention, that this was not a defense.

"Prior to June 19, 1936, when the Robinson-Patman Act went into effect, the Clayton Act, Section 2, provided:

'That it shall be unlawful for any person engaged in commerce,...either directly or indirectly to discriminate in price between differenct purchasers of commodities...where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce: Provided, That nothing herein contained shall prevent discrimination in pride between purchasers of commodities on account of differances in the grade, quality, or quantity of the commodity sold, or that makes only due allowance for difference in the cost of selling or transportation, or discrimination in price in the same or different communities made in good faith to meet competition...'

"Thus it will be seen that a discrimination in price made in good faith to meet competition was a defense under Section 2 of the Clayton Act, as was a showing that the discrimination was made because of cost savings, or proof of the other defenses given by the Act. But since large buyers could always get such price meeting by suppliers to justify a discrimination in price in their favor, the purpose of the Act to avoid such discrimination was easily evaded."

The evidence thus seems overwhelming that this legislation should not be passed by the Congress. It should not be passed because, as stated above, it legalizes price discrimination of every kind, and will allow the re-imposition of the old Pittsburgh Plus system and repeals our basic anti-trust laws. We, therefore, urge that every member of Congress use his utmost efforts to bring about the defeat of this legislation.

TESTIMONY OF ANGUS MCDONALD, ASSISTANT LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION, ON THE NOMINATION OF JOHN JOSEPH CARSON TO SERVE AS A MEMBER OF THE FEDERAL TRADE COMMISSION TO THE SENATE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, JULY 7, 1949.

Mr. Chairman and members of the committee, I am appearing here in behalf of John Joseph Carson who has been nominated to serve on the Federal Trade Commission. As a representative of the National Farmers Union I wish to endorse without any qualifications whatsoever this nomination.

I would like to read a quote from the May 7, 1949 issue of the publication America - A Catholic Review of the Week:

"On the face of it, John Carson is just the kind of man the country wants in a position of public trust. A gentleman of impeccable character, thoroughly honest, devoid of vulgar desire for power, devoted to democratic ideals, he is richly endowed to discharge the obligations of an FTC commissioner. A one-time city editor in Indianapolis, he was for some years a Washington correspondent. From 1924 to 1936 he was secretary to the late Senator James Couzens of Michigan. Washington veterans still recall his many contributions to the nation in that responsible position. More recently he has been acting as director of the Washington office of the Cooperative League of the U.S.A. Throughout his career, Mr. Carson has striven to promote friendly collaboration among all groups in our society. His other chief interest has been to encourage widespread ownership and the responsibility that goes with it. Can it be, perhaps, that reactionaries fear Mr. Carson's well-known dislike for monopoly and the intelligence and zeal he would exert in combating it? The Senate should react to this deplorable campaign by confirming Mr. Carson fast and fearlessly."

We in the National Farmers Union feel that Mr. Carson's comprehensive background as a representative of consumer, governmental and quasi governmental bodies qualifies him to assist in the enforcement of our anti-trust laws. We feel that the Government of the United States is fortunate in being able to secure the services of so able an individual.

John Carson for many years has been associated with many governmental policy-making bodies and investigatory bodies including the Senate Interstate and Foreign Commerce Committee, Senate Labor and Public Welfare Committee, the U. S. Maritime Commission, the Bituminous Coal Commission and others. He had been for many years intimately associated in the past with Senator Couzens and Senator George Norris and is now associated with such men as Monsignor Ligutti and Father Parsons.

We would also like to mention the fact that we in the National Farmers Union feel that John Carson is especially qualified to serve on the Federal Trade Commission because of his experience in the cooperative movement. Over the years John Carson has fought untiringly to protect farmers in the right to sell and buy cooperatively. Since we feel that the cooperative movement is not only the economic backbone of our organization but is necessary for the well-being of all American farmers we would like to emphasize this point. Carson's cooperative qualifications are needed now more than any other time in view of the attacks of the National Tax Equality Association and other groups who are seeking to destroy the cooperative movement. And during the more than 25 years of activity with various groups he has shown himself to be a tireless worker in the public interest. He has worked for the cause of labor; he has worked to protect the consumer. He has worked to protect small business from the growing power of monopoly. Over the years he has worked consistently and actively to check the growth of monopoly and preserve our free enterprise system.

Although he, among others, including leaders in the National Farmers Union, have become alarmed over the failure of the U. S. Government to check monopoly, Carson cannot be counted among those who have adopted a fatalistic attitude and who have resigned themselves to the inevitability of monopoly and the end of the free competitive system. For Carson knows, as we in the National Farmers Union know, that we must not give up in our fight to save our economic and political democracy. I say political because once the economic freedom of the small business

man disappears, once he becomes a mere appendage of big business then our political democracy is also doomed.

In our opinion, America is at the crossroads in the preservation of our anti-trust laws, and consequently, our economic freedom. According to reports of the Federal Trade Commission, monopoly has proceeded apace during the last few years. Farmers and small business are finding their very existence threatened. Adequate enforcement of our anti-trust laws may determine, now that we apparently have passed through the war and post-war expansion, whether or not our family-type farmers and small businessmen live in a dog-eat-dog society where there are no rules of fair competition and where a few mammoth corporations determine economic conditions under which agriculture, business and industry must live. I do not think this point can be over-emphasized. The establishment of new business enterprises and the life of cooperatives which enable farmers to market and buy together and share their savings are at stake. For example, if big business through monopoly control is able to squeeze the cooperatives to death by unfair discriminatory practices then the farmer will be forced to pay strictly monopoly prices and sell at whatever prices the monopolists condescend to give him.

Only adequate and strict enforcement can prevent such a situation from developing. And enforcement of our anti-trust laws will be in large part dependent on the personnel of the Federal Trade Commission. We therefore join the other groups and individuals in urging the speedy ratification of the Carson nomination.

STATEMENT OF TRUMAN STYNER OF BURLEY, IDAHO, ON BEHALF OF FARMERS UNION MEMBERS IN COLUMBIA BASIN STATES, BEFORE THE PUBLIC WORKS COMMITTEES CONSIDERING A COLUMBIA VALLEY ADMINISTRATION.

- - - - - - - -

MR. CHAIRMAN, I am Truman Styner of Burley, Idaho. I am a farmer and have been asked to appear here in behalf of the state Farmers Unions and their members in the Columbia river basin states. There are around 20,000 farm families in our organization in those states.

I was asked to come to Washington late last week by President Don Chapman of the Montana Farmers Union, Ronald E. Jones of the Oregon Farmers Union, Herbert Rolph of the Washington state Farmers Union, as well as the leaders of my own state and of the states less involved geographically to tell you that our people are overwhelmingly in favor of the Administration proposal for a Columbia Valley Administration.

It is our understanding that this committee contemplates field hearings, and I urge that you hold such hearings. We believe that they are essential to get a true picture of the sentiment of the people of the basin. We are as far away from Washington, D.C., as any region in the United States. The distance makes it impossible for a large and representative group of citizens to get here for personal appearances. As a result, the bulk of witnesses here in Washington may very well represent special business interests, who are actually a small minority of the people of the valley, while the largest groups of people are inadequately represented. Probably this situation will illustrate one of the points I want to make about the proposed CVA. We like it because it will put final authority out in the region among those of us who are affected by its operations, where we can reach the administrators much more easily than we can down here in Washington.

Our farm organization is a democratic organization, like the Congress itself. We do not always have unanimous agreement about major issues. But on this issue of river basin development, we have unusual agreement among our members that regional agencies, patterned after the Tennessee Valley Authority, should be established. Late in 1945, the National Farmers Union took a poll at the regular monthly local meetings and found that more than 98% of the membership was in favor of the valley authority type of administration for regional development. There has been no poll since that one because none has been needed. There has been a lot of discussion of the subject at our local meetings and the only change in attitude has been toward even greater unanimity and much more vigorous support of the over-all agencies. There is definitely a swing toward the valley authorities or administrators.

I would like to mention one or two recent occurrences in Idaho, which I consider indicative of sentiment in the area on CVA.

After a recent debate on the CVA before the League of Women Voters at Boise, in which Judge Robert Sawyer of Bend, Oregon, former head of the National Reclamation Association, took the anti-CVA side, the ladies voted 86 for CVA, 10 against CVA and 60 for a non-authority type of development. The CVA thus had a clear majority of all the votes cast. I get these facts from the Boise Statesman.

Last March 31, there was a meeting on the CVA at Boise at which Mr. William Harmon of San Francisco appeared for the U. S. Chamber of Commerce against the CVA proposal. The Boise Statesman reported that about 200 attended. When questions were asked favorable to CVA, Mr. Harmon told the audience "we're against CVA and anyone who doesn't like it can leave and hold a meeting of their own." The paper then says: "Nearly half of the group left the meeting."

This meeting is in contrast to one held just last month at the Boise High School, where Assistant Secretary of the Interior Davidson, a proponent of CVA, spoke. The Statesman reported that there were 1500 people at this meeting. I was there and the audience was enthusiastically for CVA. Out in the valley, our people regard this issue as a contest between a minority who are very vocal and well financed and able to get down here to Washington, and the great majority of people who are for CVA, but not so well organized and represented.

This swing was apparent last week at the Midwestern Conference of Democrats in Des Moines, Iowa, where the national committeemen, national committeewomen, state chairmen and state vice-chairmen of that party from 16 states adopted resolutions

which included a call for "integrated development of our great river basins, patterned on the Tennessee Valley Authority." The conference included Wyoming and Montana, which are involved in the Columbia basin proposal and it included all of the states which would be affected by the proposed Missouri Valley Authority. Other important groups, like the National Association of Rural Electric Co-operatives, have this year endorsed valley authorities for the first time.

The reasons for the swing are apparent. All the developments we have seen in the Columbia basin, everything we have heard from the Missouri basin where there is a parallel problem, and everything coming out of Washington for some time has pointed toward the need for valley authorities, or administrations.

I am sure that others with a more thorough knowledge of the Hoover Commission reports will discuss that important development here in Washington, and that there will be other witnesses more familiar with the conflicts and disputes which still rage in the Missouri basin. I would like to discuss a little of the background and the situation as we see it in the Columbia basin.

For a good many years, we have watched the spectacle in the Columbia basin of the Army Engineers and the Bureau of Reclamation racing to lay claim to dam sites for their bureaus. This race resulted in two separate plans for Hell's Canyon dam and conflicts over other sites which have sometimes come clear into Washington and to Congress for settlement. These conflicts have already been described to this Committee by Secretary Krug.

More recently, we have seen the Army Engineers and the Bureau propose a plan for the river which is supposed to be completely unified and "the finest plan ever conceived in the minds of men" for a river's development. We understand it was described that way to this committee, although the plan is now before the President, the states and other federal agencies for comment and suggestions.

To those of us out on farms, any such statement as that seems not only extravagant but wholly unwarranted. As we understand the Pick-Straus or Newell-Weaver plan, it attempts to deal with water without dealing with the watershed. There is no plan for the land of the basin, and every farmer who has been involved in much soil conservation work knows that gullying isn't stopped just by dealing with water instead of the land from which the water comes. We must go back into the fields, fertilize, plant cover crops, contour or build terraces and treat the watershed as well as the stream itself to do a job that will stand up. We cannot help but believe that enormous losses may be involved in going ahead with the Army-Bureau plan of water control in the main streams without doing something about the watershed at least at the same time.

On page 35 of the Hoover Commission's report on the Interior Department, it says:

> "Siltation of reservoirs due to absence of sufficient data concerning sedimentation is another common form of loss. Many river works have failed to function as expected or are doomed to early failure due to loss of storage capacity for power production and other purposes. In some cases siltation has necessitated the raising of dams at considerable expense . . ."

On the previous page, the report says:

> "In the Columbia Basin, for example, less than half of the watershed has been topographically mapped or has had ground control lines established. Stream survey and stream gauging programs have lagged far behind project planning, notwithstanding the fact that development agencies have transferred considerable funds to data collecting agencies and have frequently undertaken surveys themselves. Conditions in the Missouri Basin are equally bad."

We know, from the amount of silt in our Columbia Basin rivers, that siltation represents a very great problem in any permanent development program. Yet the Army-Bureau plan apparently takes no account of it, except to make some allowances for the deposit of a few thousand farms in some of the reservoirs.

We submit, Mr. Chairman, that although farmers deal with very much smaller streams than the Columbia river and its tributaries, there have been far better plans for the control of streams born in the minds of tens of thousands of plain, ordinary dirt farmers than this Pick-Straus plan for the Columbia river basin. From our experience out among the little streams, we do not see how treatment of the watersheds can be divorced from planning for the stream. The volume of flow, the speed of the run-off, the amount of silt carried by the water and many other factors are determined by the character of the watershed. The size and design of dams must necessarily depend to some extent on what is being done on the land.

We are told that within recent weeks the Department of Agriculture released an agricultural plan for the Missouri basin which proposes the treatment of tens of millions of acres of land in that valley, the construction of thousands of ponds and 14,000 or 15,000 small-stream check dams. A Denver Post writer says that these proposed works will hold back 9,000,000 acre feet of water annually, or about half of the average annual flow of the river out of the West. Certainly such a holding back of water on the land will have a significant effect on the plans for the main stream dams and navigation works. Unfortunately, in the Missouri basin, some of these projects are already going ahead so that very great wastes may ultimately be involved.

In the Columbia basin, we farmers are convinced that the plan for the watershed and for the water should be worked together, and that it can best be done by an overall agency as proposed by the Administration in the Magnuson Bill.

We are especially concerned, as farmers, with this phase of the matter because most of our hopes and aspirations are bound up with this phase of the development. We understand that the Forest Service wants to reforest 5,000,000 acres of burned-over land in the Cascades watersheds, ultimately restoring their capacity to hold water useful to irrigators. The Bureau of Land Management is seeking to restore 7,800,000 acres of denuded range lands, which would replenish our diminishing supply of range feed and rebuild the water-carrying capacity of those lands. The Soil Conservation Service is increasing the tempo of their warnings of soil erosion by both wind and water and would be glad to speed its work in the basin a great deal more. We farmers are interested in those projects. We recognize the need for greatly intensified soil conservation programs and for all small-stream projects of the type the Department of Agriculture recently proposed in the Missouri basin.

It does not seem to us to require men of super minds to see that these projects which are ignored in the Pick-Straus plans for the Columbia basin, are related to basinwide development and must be taken into account in any adequate plan for water control.

We are deeply concerned that the Pick and Straus plans for the Columbia basin endanger our irrigation water supplies by dedicating or making prior allocation of the water to main-stream works, which works will only be economical, particularly in dry years, if handling the full flow of the river without depletion for full irrigation upstream.

It is obvious that no survey of all irrigable lands in the basin has been made. The Hoover Commission reports less than half of the area is mapped topographically, and I understand there are no reports available on the full possibilities for irrigation in the basin.

The governors of our states, or their spokesmen, who appeared at the brief House hearings on the Army 308 report held by the Public Works Committee, May 20, showed grave concern about this feature of the Pick-Straus proposals.

Representative John Sanborn, speaking for himself and Governor C. A. Robins, of my own state of Idaho, told that committee:

> "The greater future development of Idaho lies in the undeveloped lands yet to be irrigated. Retention of the water of the Snake river for use in this development is of the first importance to Idahoans.
>
> "It is considered fundamental and of the utmost importance that all of the waters of the entire Columbia watershed, including the main Columbia river and all of its tributaries, which may ultimately be used for irrigation and reclamation, should be forever protected and reserved for that purpose . . ."

The spokesman for the Governor of Montana, state Engineer Fred E. Buck, said in a statement in which he did <u>not</u> flatly approve of the Army and Bureau plans:

> "We feel that there are many more irrigation projects within the Columbia basin in Montana than those outlined for authorization at the present time, and urge that these potential developments be pushed forward in the program as rapidly as demand for them becomes apparent.
>
> "It is considered fundamental and very important that all water within the state which may ultimately be used for irrigation should be forever protected and reserved for that purpose. <u>I wish to assert our right to the consumptive use of water as set forth in the amendments to the 1944 Flood Control Act and the 1945 River and Harbor Act against navigation, and ask that the same protection be extended against power and/or other uses.</u>"

Governor Langlie of Washington approved the Army 308 report only —

"...with certain qualifications pertaining to irrigation, to power revenues and other power policy questions — which I have not yet had time to consider in sufficient detail to determine as yet just what course I believe will be in the best interests of the people of the states affected."

Mr. Chairman, you can realize why we farmers, whose very life blood is water, wholeheartedly endorse Mr. Sanborn's and Mr. Buck's statements. Irrigation must come first.

It seems obvious to us, from the deep concern of the Governors over this question, that the Army-Bureau plan has not adequately accounted for irrigation and that our governors fear exactly what farmers fear - that irrigation may suffer in a conflict of demand for water between over-built downriver works and consumptive use for agriculture.

We would feel much safer under the proposed CVA bill, which reenacts the provisions of Reclamation Law in regard to water rights, requires observance of state water laws, and specifies that water for atomic plants for national defense and then irrigation shall have prior rights.

We feel that the CVA should and would review the whole development plan, keeping irrigation in proper balance, and observing the law as to priorities, thus make our position much more secure than under the Army-Bureau plan, which has apparently caused the governors some concern.

Mr. Chairman, as citizens of the Columbia basin we are also disturbed by other phases of the multiple-agency plan. There is no provision in the Army-Bureau agreement for a single watermaster who will control the flow of the river for its multiple purposes in the future. There is no formal, stated power policy, and we strongly favor the power policy stated in the proposed CVA Act. We want low-cost public power available throughout the region, including power for the manufacture of low-cost phosphate fertilizer, to which reference will be again made. We are fearful that the salmon industry will be injured by the Army-Bureau plan, and that the plan should be reviewed from that angle. We do not find in the Army-Bureau plan either an assured low cost power program nor a research program, both of which are vital to the encouragement of industry. They are in the CVA proposal.

I shall not expand upon those matters since I understand that you will later hear representatives of our national organization, who will testify concerning them.

I would like, briefly, to make a recommendation for the improvement of the CVA Act, as proposed.

Farmers are anxious to see the Columbia Valley Administration develop phosphate fertilizer production in the Western area. We think that Section 6 of the Act should be amended to permit this. The Tennessee Valley Authority has accomplished a great deal in the field of soil erosion, which stops silting up of dams by developing a supply of high analysis phosphate fertilizer and then demonstrating to farmers how to use it economically. We feel that the same sort of program could be used advantageously in the Columbia basin.

Such a program would require the development of at least one commercial-size phosphate plant. Section 6 now provides that the CVA may conduct investigations and studies, operate research facilities and undertake experiments and practical demonstrations. We understand, however, that this is not construed to mean that it could build and operate a commercial-size plant such as needed in the fertilizer field.

A greater supply of high analysis phosphate is needed in our area and I understand it is needed throughout the whole western part of the United States.

I recently took a soil sample from the fields of my own farm near Burley, Idaho, --and it is typical of farms in that area -- and the test disclosed a 20 to 30% deficiency in the amount of phosphate in the soil. There was a deficiency of 5 to 10% of nitrogen, and ample potash. From what I have been told by neighbors, I believe these tests are typical of the situation throughout the irrigated areas in Idaho. The phosphate deficiency aggravates the nitrogen deficiency because legumes, which transfer nitrogen into the ground from the atmosphere, cannot be grown with the volume of foliage necessary for good green manure crops. The phosphate deficiency, further, through reduced foliage, reduces the amount of humus that can be returned to the soil. Low humus content is one of the main causes of wind and water erosion and the low water-holding capacity of all our country's lands

Flash flood damage to North Idaho, Oregon and Washington farms is year-by-year becoming more serious. It is obvious that flood control, to some extent, depends on fertilizer availability at reasonable prices.

There isn't enough phosphate to go around in our area.

I wrote our Farmers Union seed and fertilizer manager at Salt Lake City about fertilizer supply. He wrote back as follows:

> "The supply of high percentage or triple superphosphate in this area continues very short indeed, and up to this time at least we have had to ship some from Florida, which increase makes the cost too high for general use."

The manager, Mr. Paul V. Kelly, would not have to prove the statement about cost to me, because I am up against the problem of paying the costs.

I had to pay $84 per ton this spring for 42% commercial superphosphate. The Department of Agriculture advises me that this same phosphate sells in the Tennessee Valley for about $53 per ton. Apparently, until adequate electric power at reasonable cost is developed in the northwest, and it is combined with our rich phosphate deposits in southwestern Idaho to produce low-cost high analysis phosphate we are going to have to pay at least $31 per ton premium for our supply. I simply cannot afford to use the amount of fertilizer I should be applying to my farm at that price. My neighbors are up against the same problem. We need the very early development of this western phosphate deposit and we think that a CVA should do it, just like the TVA has done it for the South.

As soon as private enterprise, in which I include co-operatives, are in a position to take over such plants and supply high analysis fertilizers to the CVA for its soil conservation work, and to farmers to meet their needs, we would not object to a provision for transfer of any CVA plants to the co-ops or private enterprise. That, I believe, is the sort of provision which was in the National Soil Fertility Act before the last Congress, which was supported by leading members of the Senate from both parties, including men like Senator Wherry, Senator Hill, Senator Hickenlooper and Senator Thye. If they can do the job now, well and good. But we believe that this matter is so urgent that this CVA law ought to contain the same sort of language as there is in the TVA act, directing the new Administration to see to it that such a fertilizer supply is developed.

Our National Farmers Union witnesses will testify in greater detail about this fertilizer problem, but I would like to give you one figure. In the 11 western states it is estimated in the report of June, 1947, by Bell and Griffith on "Studies made by the Division of Industrial Resources", that we are taking 233,000 tons of phosphate out of the soil each year through crops and putting back less than 70,000 tons. We put back less than 1 pound for every three pounds taken out. In the 11 Central and Northern states they take out 963,000 tons and put back only 154,000 tons, or about one-sixth. In the South and the East, which get fertilizer more cheaply from the Florida and Tennessee beds, they take out514,000 tons and put back twice as much - 1,060,000 tons.

That indicates how much more phosphate we need to be using in our section. We think one of the great advantages of CVA to us, and to the whole nation, would be to develop adequate phosphate at reasonable prices to keep our soil from running down any further and to begin to build it back up and stop erosion and soil loss.

Mr. Chairman, I have only touched on the reasons why farm people support the CVA bill, as I know that they do because I talk and meet with lots of them all the time. We regard the Army-Bureau plan as inadequate to the problem of regional development. We do not think that it is enough to say that an agricultural plan will come along later. The water and the watershed should be handled at the same time. We fear that great losses may be incurred by getting the dams ahead of the land program. We believe that research work and industrial development work need to be carried on along with the other developments, so we will get a well-balanced development of our region. We do not see in the present multiple-agency arrangements any sound operating plan for the future.

Farmers fear that they are going to lose tremendous advantages if the CVA plan is not adopted. I am sure that if your committee will come out to the region as I understand the Senate committee plans to do, you will hear the things I have said, and other points, repeated time and again.

I appreciate your time and attention.

REMEBER THE BUDGET FUND!

SENATE HESITATES ON FARM BILL; PATTON CALLS FOR EARLY ACTION

Left to its own devices by Secretary Brannan, the Anderson subcommittee of the Senate Agriculture Committee this week was so entangled in controversy that it appeared possible no bill would be forthcoming from the Committee this session, and President Patton, in a ringing statement, demanded immediate action. Senator Anderson, N. M., subcommittee chairman, came up with his third draft of a bill during the week, a measure that attempted so many compromises it pleased no one. As a result, tempers became short and Senators of the same party were rowing with each other by week's end.

IT BECAME CLEAR that strategy of the supporters of the low-level, flexible support program scheduled to become effective January 1 are stalling and attempting to create so much confusion and division of opinion that nothing can be done in time to prevent Title II going into effect.

The result has been an increase in Senate sentiment for adoption of the House-Passed Gore Bill extending the present program another year. Senators Thomas, Okla., Hoey, N.C., and Young, N.D., are more or less openly coming to this view because of inability to gain agreement on any other alternative to the Aiken Act, although Young is fearful that, if this is done, the terrific public cost in prospect will jeopardize the whole support program.

IN HIS STATEMENT PATTON warned that this was likely to happen. Farmers "see the shadow of the Aiken Act, with its low support prices, creeping toward them as 1950 approaches, and it strikes fear to their hearts", he said. Patton said only through adoption of the Brannan program can "the dangers of a grave decline in farm income" as called for in the Aiken Act, and "excessive cost and waste", as the result of extend-

ing the present law, be avoided.

The new Anderson bill would provide for support of major basic crops at 75 to 90% of parity the same supports for such nonbasics as are storable or could be converted to storable form, if production controls were in effect. However, only Section 32 money would be available for the latter, and that fund is so small as to make the provision of little value.

The subcommittee will resume sessions next week in further effort to reach agreement.

* * *

RECORD VOTE TO BE FORCED BY PUBLIC POWER BACKERS

The havoc wrought by the Senate Appropriations Committee with the public power program now stands a good chance of being undone, as a result of strategy evolved behind the scenes in Washington this week by supporters of the transmission line items knocked out by the committee from the Interior Department Appropriation Bill. In a sweeping series of actions, the committee eliminated nearly all transmission line appropriations from the bill.

NOT ONLY DID the committee take this action, but in its report it actually named the private power companies which would benefit from having publicly-produced power turned over to them. The report has turned out to be a boomerang and the Senators are hearing from folks back home about it. The net effect of removing the transmission line funds is to continue to produce power at public expense but then to turn it over to private companies to deliver at whatever rates to consumers they can get away with.

As a counter to this procedure, the Senate supporters of public power caucussed this week and agreed among themselves that each Senator whose state suffered from this raid would support the Senators from each of the other states in getting the money restored. They further agreed to insist on a roll-call vote on each item as it was reached.

THE RESULT of this strategy has been to reverse a very gloomy picture. It now appears likely that by this concerted action, the Senate will overturn the Appropriations Committee and put back all or most of the money originally included for transmission lines, funds that had been retained in the bill through the yeoman service of Rep. Kirwan, O., chairman of the House subcommittee which handled the bill. Many items of great importance to Farmers Union members are involved.

BRANNAN ENDORSES CVA AT CONGRESS HEARINGS

Secretary of Agriculture Charles F. Brannan testified for a Columbia Valley Authority before both House and Senate Public Works Committee hearings this week. The Secretary told the House Committee that there should be such valley agencies in other watersheds. "We have long advocated such an agency in the Missouri Basin," he told the House Committee.

AID-TO-EDUCATION BILL LOST FOR THIS SESSION

The bitter strife symbolized in the Cardinal Spellman-Mrs. Roosevelt exchange of letters over the issue of public aid to private schools this week doomed the chances of passage of a federal aid-to-education bill in this session, after NFU in alliance with a host of other organizations had helped to bring the measure to the point of passage.

ALREADY THROUGH THE SENATE, the bill unquestionably would pass the House if it reached the floor. As passed by the Senate, the bill left to the states the question of aid to private schools. The bill drafted by Rep. Barden, subcommittee chairman in the House, would have barred flatly use of any of the funds for private schools. Barden's sponsorship of this proviso unleashed the attacks of Spellman and others, which in turn were answered with acrimony.

Despite the gloomy outlook, two freshman members of the Education and Labor Committee, Rep. Sims, S. C., and Rep. Wier, Minn., this week forced a new vote in the committee in an effort to move the bill, but this last-ditch effort failed. It is hoped that between now and next winter, settlement of the controversy can be reached, at least to the extent where a vote can be obtained in the House.

CLARK APPOINTMENT DISAPPOINTS

President Truman this week appointed Attorney General Tom Clark to the Supreme Court to take the place left vacant by the death of Justice Murphy, thus ignoring the Farmers Union recommendation that Under Secretary of Interior Chapman be appointed. There is little question that Clark's appointment will insure a permanent "conservative" majority on the court. Only Justice Black, Douglas and Rutledge can be counted as stanch liberals. The great Roosevelt fight for a modern, progressive Court thus seems to have been largely lost in the four years since his death.

LIFE INSURANCE COMPANIES GET ANOTHER $3,857,000,000

Figures on the business done by life insurance companies in 1948 have just become available in the Life Insurance Fact Book and show that the companies grabbed another $3,857,000,000 of the nation's investible funds. The life companies had total assets of $51.743 BILLIONS at the end of 1947. They had gone up to $55.6 BILLIONS at the end of last year, or the $3.857 BILLIONS indicated above.

TOTAL INCOME of the companies was $9.575 BILLIONS, including $7.2 BILLIONS of premiums. The balance was earnings on investments. Policyholders and their beneficiaries got back less than $1 for every $2 paid in premium. Death benefits paid totalled only $1.466 BILLIONS. Payments to living policyholders on matured policies, cancelled policies and in dividends were $1,790,307. Both death benefits and living benefits totalled $3.236 BILLIONS - much less than half of the $7.2 BILLIONS paid in premiums.

Atlanta 3, Georgia

The figures also showed large increases in insurance company investments in private utilities and Big Business.

"The moral of all this," said President Jim Patton, "is that we should patronize our own life insurance institutions and keep the huge sums of capital which are accumulated in our own control, for use by farmers and their co-ops instead of utilities and Big Business."

NFU URGES FAST ACTION ON RURAL PHONE BILL

The National Farmers Union urged the Senate Agriculture Committee Friday to get speedy action on the rural telephone bill so lines can be built yet this fall. The committee hopes to close hearings and report the bill next week. Congress is so near adjournment, however, that every day counts. After the bill is passed and signed by the President, an appropriation measure must be pushed through or all work will have to wait until the next session of Congress makes the appropriations. The current bill is only the usual "authorization bill". It does not carry any funds.

NFU VIGOROUSLY OPPOSED AMENDMENTS TO THE MEASURE which might increase the costs of rural telephone service or make it possible for established companies to have the time to build "spite lines", skimming the cream of close-in customers and leaving remote farm people without any hope of getting service. Two such amendments appeared certain to be offered. Senator Clinton Anderson announced at the first day of the resumed hearings that he thought the interest rate approved by the House (2%) should be boosted. The Bell telephone system wants an amendment which would give them 12 to 18 months in each area to provide service. (They may get support from the Farm Bureau on this. The FB Board last spring held that the bill should provide for "sound amoritization of loans" and give established companies "at least 12 months" to show that they were ready to provide service).

REN STONG WHO APPEARED FOR NFU, told the committee that recent figures showing an increase in "rural" phone service were misleading. First, he said, the new rural services are largely filling stations, sandwich shops, tourist camps and other crossroads establishments instead of farmers. Secondly, he contended that there should be a breakdown on the 42% of farmers who are supposed to have telephone service. Some of them only have "shouting lines", he told the committee. (The bill provides funds for reconstruction of rehabilitation of run-down systems).

The bill looks like a cinch to be reported and passed by the Senate. The big job - and it may be too big - is to get fast action and then an appropriation bill before Congress adjourns.

Southern Regional Council

STATEMENT OF BENTON J. STONG FOR THE NATIONAL FARMERS UNION BEFORE THE SENATE COMMITTEE ON AGRICULTURE CONSIDERING THE RURAL TELEPHONE BILL, ~~JULY~~ Aug. 5, 1949.

My name is Benton J. Stong and I represent the National Farmers Union.

At the outset, I want to express the appreciation of our organization to this Committee for expediting hearings on this bill. We hope that necessary action may be taken before this session of the Congress adjourns to permit a beginning by the Rural Electrification Administration on the rural telephone problem. It is becoming increasingly clear that after permitting rural telephones to decline over a period of many years, that telephone monopolists are now concentrating their efforts on delaying this measure so they may have time to make a show of giving rural telephone service, skim the cream of rural customers and make areawide service to farm people by farmer co-operatives less and less feasible economically.

On the morning that these hearings were resumed by this committee -- Wednesday, August 3 -- the New York Times carried a very revealing item on its business page in a regular column entitled "Topics of the Day in Wall Street". The story was titled "Rural Telephones" and read:

> "The opposition of the American Bell Telephone & Telegraph Company to the politically potent measure that would put the Rural Electrification Administration into the telephone business has met with success in the form of a delay on the bill in the Senate Agriculture Committee. The chairman of that Committee, Senator Elmer Thomas, is reportedly meeting difficulty in getting hearings started on the measure. If Senate action can be postponed until Congress adjourns - which may be another month - critics of the bill hope that a rapidly improving rural telephone service will remove the pressure back of the bill by the time Congress meets in January."

The Wall Street gossipers seem to have been about as wrong as usual about what goes on. These hearings have not been delayed. I am sure that the chairman has not had any very great difficulty in getting the hearings resumed. And I am equally sure that the little construction of lines to skim the cream of farm telephone business which the A.T.& T. might do in three or four months would not "remove the pressure" back of this bill. It might reduce feasibility of areawide service in some areas but in my own opinion that would increase pressure for this legislation. The story is accurate in one statement. This bill is a potent one. We know that to be a fact in the Washington office of the National Farmers Union from the volume of mail which we have received about it. Occasionally there is some agricultural matter before the Congress which causes a real tide of letters direct from our members to our national offices, and this measure is one of them. We have not only had a large volume of correspondence urging its passage, we have had repeat letters since the House acted urging us to press for Senate action and even a few requests for application blanks for loans. There is both wide support for the bill among farm people and an urgency about getting it passed promptly. Some of the letters have pointed out the possibility, within the communities of the writers, of spite lines being built during any delay which would serve only a fraction of rural customers and make areawide service economically impractical. Having had experience with this tactic in the rural electrification field, a great many farm people fear just what the New York Times indicates may be in store - a hurried, inadequate operation by A.T. & T. to prevent this needed development.

We urge the committee to continue to handle this measure expeditiously.

I do not desire to take a great deal of the committee's time. I would like to direct your attention to testimony of Farmers Union witnesses before the subcommittee of the House agriculture committee when it held hearings on this bill. On that occasion, Mr. Obed Wyum of North Dakota Farmers Union, Mr. Emil Loriks of the South Dakota Farmers Union, and Mr. Oscar Torstenson of the Minnesota Farmers Union appeared with me, pointing out the need for rehabilitation of old services and the establishment of new telephone services in their states. We have not asked such witnesses from the field to appear at this hearing because the demand in rural areas for the measure is now quite apparent and they would be time consuming.

I would like to make three principle points about the arguments over this bill and the nature of the bill.

First of these is about the statistics which have been used in connection with the arguments, which need a little analysis; the second is about the need for REA type of administration of this program, and the third about the desirability of true areawide coverage and the danger of amendments which would defeat that objective.

THE STATISTICS: The most generally used figures about the status of rural telephone service are census figures which show that farm phone services declined from 40% in the 20's down to 20% in 1935 and then back up to 42% in recent times. Additionally, there has been considerable publicity about expnasion of rural service since the war. The Bell system conducted a big ceremony when it installed its millionth rural phone after the war and built up the impression that these were farm phones by publicizing a farmer as that millionth new customer. These new rural phones are obviously preponderan ly non-farm customers. Included in the census figure on the number of farm telephones is everyone who resides on 2 or 3 acres or more at the edge of all the towns in the nation. But there is not even that much of an agricultural test made in the classification of rural phones. The A.T. & T.'s rural phones obviously include suburban areas and all the cross-roads filling stations, sandwich shops, tourist camps and similar establishments outside town limits. The Bell company advertising said they had set 1,250,000 poles in the period in which they took on this million new rural customers. At 20 poles to the mile, that means that there were 16 customers to the mile. Such figures do not indicate that there was much farm telephone service involved in the expansion. I have been working in western farm areas most of the time since the war and I have not seen a half dozen new farm telephones. Obviously, some of the figures being used in this discussion need careful analysis.

Further, if the total figures are accepted, they still fail to differentiate between real farm telephone service and the "shouting lines" which offer almost as much of a problem as the unserved areas. I have nowhere seen a figure which indicates whether 50%, or 75% or 80% of the so-called farm telephones could properly be classified as modern telephone service. Undoubtedly a very large percentage of them are so run down that they need the rebuilding or rehabilitation which would be possible under this bill. These run-down lines are a problem that is totally ignored, so far as I know, in the opposition arguments of the telephone industry. Unless I have missed some statement, they have made no proposal whatever as to how they will handle this very large rehabilitation problem if this bill is defeated.

NEED FOR REA TYPE SERVICE: The rehabilitation problem is one that has convinced farm people that REA is an ideal agency to handle the rural phone program. Beside tens of thousands of miles of inadequate, run down and poorly managed rural telephone lines are the well-maintained lines of the rural electrification cooperatives. Farmers are not telephone technicians. Neither are they utility accountants or bookkeepers. This lack of special training and special skills has resulted in many hundreds of rural systems running down without the accumulation of replacement reserves, in excessive costs, inadequate rates, poor service and all the other ills which beset rural mutuals.

The Rural Electrification Administration has filled this gap for farmers in the establishment of rural electrification cooperatives by supplying the know-how, the bookkeeping systems, the technical standards, rate schedules and advice which has made REA coops not only splendid services technically, but also sound services financially. We might hesitate to endorse an extension of federal credit for the expansion of rural telephone service at this time were it not for the fact that this same sort of management assistance would be provided in connection with the loans, guaranteeing both the soundness of the service to farm people and the soundness of the loans for the government.

DEFEATING AMENDMENTS: We are extremely concerned about some of the amendments which have been proposed to the Hill bill, because most of them strike at the basic objective of areawide service. Amendments which would give the A. T. & T. three or four months of delay to build just enough service to "remove the pressure" might be fatal to areawide service in the communities where spite lines are built.

In this connection, I have particularly in mind an area in Utah where I worked last summer, the Castle Valley, below Price, Utah. The people in that valley have been attempting to get phone service for several years. They have signed petitions and commitments to take service on several occasions and presented them to Mountain States Telephone Co. or the state utilities commission without avail. They are now organizing for a cooperative service built around the five or six communities in the valley. The farmers are now in the constant

danger that if there is delay, Mountain States will build a few spite lines into the communities, pick up the cream of the customers and make it impractical for lines to be extended out to the farm areas. It is our hope not only that this bill will be finally passed by this session of Congress, but that funds will be provided for an early start on areawide services in communities where farmers desire such development.

We are similarly opposed to any amendments which will tend to increase the costs of rural telephone service. Every increase in costs finally reflects itself in a reduction of the number of farm people - the percentage - to whom service can be extended. Every economy increases the feasibility of reaching more.

Because of this, we oppose any rigid requirements in the law to force the new REA systems to arrange switchboard service with existing telephone companies. In a great majority of instances such arrangements would be desirable and should be made to maintain a single phone system within the community. But such arrangements should be made by free negotiation between the farmers, represented by their cooperative, and the existing companies. If the farmers have no alternative, and are placed under the compulsion of taking service from the existing companies, they will have no bargaining power at all.

In the field of electrical service, the private companies have repeatedly demonstrated that they will use any such hold they may get over an REA cooperative to hamper their operations. Some private power companies use the dependence of REA cooperatives on them for wholesale power supply to force long term, high rate power supply contracts upon the coops, or to embarrass them with an inadequate power supply, obviously hoping that the members of the REA will become dissatisfied and ultimately approve the merger of their facilities into the private, monopoly industry. Examples of high rate demands, of supply squeezes put on REA coops, and of forced negotiation of long term contracts at high rates could be cited.

We recognize that the preservation of farmers' bargaining power as to use of switchboards and existing facilities might result in a few instances of duplication. We believe that they will not be many. Farmers do not want two telephone systems in their communities and will attempt to avoid it. They will suffer from duplication. But even if some duplications occur and we get back to the "horse and buggy days" of duplicating services in a few communities, it will still be a step forward, not backward. Back in the horse and buggy days of 1920 we were far ahead of 1935 in percentage of farms served with telephones. We have only recently caught up with the horse and buggy days percentagewise and probably on a comparison of the quality of services, the horse and buggy days of 1920 would still be ahead. Equipment was new then and much of today's equipment is now 30 and 40 years old.

For the same reason of economy to permit the widest possible extension of lines, we hope that the Senate will approve of the 2% interest rate proposed by the House. That is the approximate average cost of money to the government. We are advised that the average interest on all government borrowings now runs about 2.01%. Even if a small subsidy is involved, we feel that the "advantage of the doubt" should be given to attaining areawide coverage, rather than fractional coverage, with phone service. Our RFD mail service was not self-sustaining when it was established and probably is not today. But I doubt if a baker's dozen of votes could be mustered to restrict RFD service today to self-supporting boxes. REA, likewise, has an element of subsidy. But like the RFD, it has contributed to the modernization of farm life, to increased efficiency and increased incomes in agriculture which far more than offset the subsidies. The availability of phone service throughout rural areas can reduce operating costs and increase efficiency of both farmers and those who deal with farmers, including our agricultural agencies. It should result in many savings, including saving of fire losses and even human life. Our witness before the House Committee, from Minnesota, Mr. Torstenson, credited his phone with saving his life when his arm was mangled by a corn picker. He was able to call neighbors to get him to a doctor and stop the flow of blood in time.

We feel that this bill is one through which something more than lip service can be done for family farmers by seeing that, through areawide coverage, they receive another tool for modernization of their homes and their farming practices. If amendments should make such areawide coverage less possible, or impossible, they will be proportionately disadvantaged. And with 4,095,000 unemployed in cities, according to August 1 census figures, the possibilities of an easy adjustment to some job in town are not currently very bright.

The telephone monopoly has had several decades in which to provide telephone service to farm people. It has largely ignored the field, in spite of repeated warnings from farm sectors. It seems to us obvious that the attempts to win delay at this late date are not based on a sincere desire to provide wide and adequate service at reasonable rates to farm people, but to skim the cream of the market and - as the New York Times put it - "remove the pressure" back of this bill.

In the interests of the best development of phone service - orderly and areawide - we urge action on this measure as early as possible.

Again, I want to express our appreciation to the Chairman and the Committee for your time and these early hearings.

YOU CAN'T MAKE A DEAL WITH REPUBLIC STEEL

The biggest sensation of the week here in Washington (aside from the spy hearings which have degenerated into nothing but name calling) was the investigation and sale of the big government-owned pig iron blast furnace at Cleveland, Ohio, to Henry Kaiser. This great plant, the largest in the nation, is vital to our economy. It produces 250 thousand tons of pig iron a year and has been operated by Republic Steel since 1941. Investigation here was touched off by the proposed sale of the plant to Henry Kaiser. Republic Steel protested this sale, said it was a "stinking deal", and as a result the Joint Congressional Committee headed by Sen. Wherry and Rep. Bender investigated the deal.

THIS HEARING WAS ONE OF THE MOST VIOLENT <u>ever conducted in Washington.</u> Charles M. White, president of the Republic Steel Corporation said he resented "dirty damn things said here today by these dirty damn bureaucrats". White was referring to the testimony of War Assets Administrator Jess Larson, who made the deal with Kaiser on August 17. Other testimony included statements by a number of small businessmen who said they would be put out of business if the Kaiser deal went through. Most of the time was taken up by name-calling and by attempts of Congressmen to prove the deal illegal. <u>But a few facts show clearly that "you can't make a deal with Republic Steel". Here is the true story.</u>

1. War Assets Administration over a period of several years tried to work out some kind of deal with Republic Steel. These efforts all failed because White and other Republic Steel executives insisted repeatedly that they didn't want the plant, that they wanted to get out of the pig iron business.

2. Republic Steel insisted that it would close down the plant on September 1 and n otified all its customers by letter of its plans, in spite of appeals by

Larson to keep the plant in operation.

3. Larson only entered into negotiations with Kaiser after attempts to work out some kind of a deal with Republic Steel had failed and after Republic Steel had given notice they were closing down the plant.

4. The best offer Republic made to War Assets for the plant was an arrangement whereby the government would get a minimum price of $3 million and maximum price of $13,600,000 (the plant cost $28 million).

5. Kaiser is prepared to enter into an agreement whereby he would pay a minimum of around $15 million and a maximum of $30 million.

Conclusion: Republic Steel hasn't a leg to stand on. Its action throughout this episode reveals that it is greedy, unpatriotic and that it only runs to the government when it can get something for nothing.

PRESIDENT PATTON ATTENDS ECA MEETING

On August 25 President Patton attended the second official meeting of the Advisory Board of the Economic Cooperation Administration headed by Administrator Hoffman. During the meeting President Patton made a number of observations and suggestions which were favorably received by other members of the committee including representatives of other farm organizations. Patton reiterated his plea that small business and cooperatives be allowed to participate in the ECA program as much as possible. He also pointed to certain economic realities in the rehabilitation program which involved trade between the West and East-that is between the Soviet Union and nations with the Soviet orbit and other European countries. Patton suggested that such trade be implemented and expanded if possible, because complete sustained economic recovery was impossible unless trade was carried on between East and West.

Considering the tense situation which exists in Europe, the meeting was conducted in a general atmosphere of optimism. Several members of the committee are very favorably impressed with the forward-looking perspective of Mr. Hoffman. Agreement was reached on a number of important matters involving cooperation with other governmental agencies both here and abroad.

* * * * * * * * * *

WAITING FOR THE OTHER SHOE

"The period ahead may well be characterized as similar to the individual about to retire who, having heard the first shoe drop on the floor above, expectantly awaits the fall of the second.....the immediate outlook is for additional price, profit.....and continuing deterioration of our standard of living---Facts on Inflation--published this week by Public Affairs Institute."

FARM PRICE SUPPORT PROGRAM IN DANGER

Many so-called agricultural experts in Washington are saying that Congress should do away with all price support legislation. They say that public resentment is rising against the farmer and that the price support program is responsible for high prices. Another group of"exports" want the parity percentage lowered but not done away with completely. In other words they want the Aiken law to go into effect now while farm costs are high as a cat's back. Little is said, of course, about scaling down exorbitant profits of middlemen and monopolists. The plan is for the farmer to be the goat in this period of lowering 'on the farm' prices and rising consumer prices.

* * * * * * * * * *

INVESTIGATION OF FREIGHT COSTS IS SCHEDULED

The Senate Trade Policies Committee headed by Senator Capehart is making plans to hold an investigation of transportation costs. Transportation charges are getting a great deal of attention these days because econ omists have been finding out that they are responsible for the excessive spread in prices between farmer and consumer. The Department of Agriculture for example reported this week that transportation charges accounted for almost 30% of the retail price of fresh fruits and vegetables. USDA is carrying on a study under the authority of the Research and Marketing Act which, it is hoped, will throw some light on how retail prices may be reduced and at the same time give the farmer a fair price for his products.

* * * * * * * * * *

BILATERAL TRADE AGREEMENTS AGAIN

The reason for the rejection of the Wheat Agreement and failure to extend without strings the Reciprocal Trade Act makes significant a report which came in this week from the National Farmers Union In England. This report states that the British have signed a new trade agreement with Ireland and New Zealand. The Un ited Kingdom will buy meat and butter and cheese in large quantities from Ireland and New Zealand. It agrees to take 97% of New Zealand's exportable surplus. This calls to mind the time before the Reciprocal Trade program when the U. S. was shut out of the world markets by bilateral agreements between the United Kingdom and her dominions and other countries.

* * * * * * * * * * *

DISPLACED PERSONS WORK STARTED

The three appointees names by President Truman on August 2 to administer the Displaced Persons Program under the Displaced Persons Law have prepared rules and regulations to carry out the program. Mr. Ugo Carusi, former U. S. Commissioner of Immigration, told FU this week that although the DP program was not yet under way that administrative plans were about complete.

* * * * * * * * * *

FARMER TAKING A BEATING ON PRICES

Another one of those dull reports that the Department of Agriculture puts out attracted considerable attention here this week. This report which is called the Marketing and Transportation Situation released August 25, tells the real story of who is to blame for the high cost of certain farm commodities. According to the published figures, the farmers in June only got 17% of what the consumer paid for a loaf of bread. The farmer's share of the consumer's bread dollar is lower now than it has been since before the war. In June, 1947, it was 21%. Here are some more figures on the farmer's share of what consumers pay for food. The farmer gets only one-third of the retail cost of all fruits and vegetables, only one-fifth of the retail cost of canned fruits and vegetables. He does better on some other commodities (beef 71%, eggs 72%, chickens 62%).

* * * * * * * * * *

INFLATIONARY HOUSING LAW ANALYZED

The National Housing Conference this week released a detailed analysis of the emasculated housing bill passed during the special session. Here is what the bill provides: (1) The $1,500 to $1,800 per room mortgage loan limitation has been changed to a limitation of $8,100 per family unit. (2) The mortgagors must state under oath that in selecting tenants he will not discriminate against families with children. (3) Lenders are insured against losses of up to 80% or 90% of the purchase price of the house (depending on the value of the house). (4) Loan rates for GI's are increased to 4½% with the approval of the Secretary of the Treasury. (5) Limitations on classes of houses are increased. For example the former $6,000 limitation is increased to $7,000; the $10,000 one to $11,000. (6) Salaries of housing administrators are increased to $16,500 and $15,000.

* * * * * * * * * *

PRICES PAID BY FARMERS HIGHER THAN CITY

Figures released by the Bureau of Labor Statistics, United States Department of Agriculture and the College of Agriculture, Illinois University, indicate that the cost of farm production has risen more than living costs in the city, at least through December, 1947. At that time city folk were paying 67% more than they paid before the war, prices paid by farmers including taxes and interests were 91% greater.

* * * * * * * * * *

MILK MONOPOLISTS TO BE INVESTIGATED

Monopolistic practices and those who control the distribution of the sale of milk are getting a good deal of attention these days by the Department of Justice. In New York the Department is taking action against the major milk companies charging them with violations of the anti-trust law. These companies are arbitrarily fixing and raising prices of milk. Farmers generally do not benefit from these practices. For example when the retail price of milk was increased by 1¢ in June, the farmer received only ½¢ increase and very little of the price increase on the other dairy products.

HOUSE RETURN HELPS STEP UP CONGRESSIONAL ACTION

With the return of the House of Representatives to Washington this week Congress doubled its snail's pace towards getting the Fair Deal Program enacted. At the same time, Farmers Union leaders intensified their efforts towards influencing the Congress in getting the FU legislative program enacted. Highlights of the week were:

(1) Increased insistence of FU representatives , that following President Patton's conference with Senator Lucas, that the farm bills finally enacted make some provision for a trial run of the production payments proposed by Secretary of Agriculture Brannan.

(2) A speech by President Patton in San Francisco at the Democratic Conference in which he flayed Democrats for running out on the Brannan Plan. Reaction on Capitol Hill toward this and other speeches made in San Francisco has finally convinced Congress that the Administration is not dropping the Brannan plan.

(3) A meeting with President Truman was scheduled for President Patton, Albert Goss, Master of the National Grange; John H. Davis, of the National Council of Farmer Cooperatives, a Farm Bureau representative, and Clyde Ellis, the executive manager of the National Rural Electrification Cooperative Association for late this week, in which the President was urged to use his influence to obtain enactment of a satisfactory rural telephone bill.

* * *

ANDERSON BILL ON CALENDAR; BIG DEBATE DUE THIS WEEK

Of prime consideration among FU leaders this week was the expected revision of the Anderson bill which will be debated on the floor next week. Certain senators who agreed to its approval in the Agriculture Committee will work against it or for its improvement. Few senators from farm states are expected to defend the Aiken sliding scale proposal which is incorporated in the Anderson bill. The Anderson bill in substance merely increases the minimum parity percentage for basic commodities from 60% to 75%.

Among those senators expected to work for high supports is Senator Young, of North Dakota. He assured FU representatives this week that he was unequivocally opposed to anything less than 90% for basic commodities. Symptomatic of this feeling in the Senate was Young's statement that "I will work for high supports and I expect to introduce an amendment to the Anderson bill." Young added that he had suggested to a number of senators the continuation of present supports, postponement of the enactment of the Anderson bill for a year, and authorizing the use of production payments on selected commodities.

ALTHOUGH FINAL RESULTS will not be known until the Senate acts and until a compromise is worked out with House conferees, it seems obvious at this point that the sliding scale principle which would lower price supports when surpluses mount is thoroughly discredited. No farm organization and few congressmen want the sliding scale put into effect immediately. Everyone wants low supports postponed for a year. Anderson was careful to put into his bill a provision which for next year would give the basics 90% was acreage allotments and quotas are applied. Senator Aiken, as previously pointed out, feels that under the Aiken law these commodities could receive 83% to 90% support.

* * *

PATTON CALLS ON DEMOCRATS TO FIGHT FOR BRANNAN PLAN

President Patton in his speech in San Francisco, released both here and there, flayed the 'renegade' Democrats who have been knifing the Brannan plan and other Fair Deal measures. He commended, however, Democratic Party leaders for sticking by their obligations to carry through on principles and policies which the electroage has endorsed. He said that the Democratic Party should not "forever tolerate unrepentant obstructors of the electorate's mandates." He called on the Democratic Party to bring about enactment of the Brannan proposals. "The adoption of the program," said Patton, "is an immediate and urgent need. Farmers already have been dangerously deflated. Many of them are today living in sub-parity economic basements....Every compromise bill thus offered to Congress, including both the Gore and Anderson proposals, provides leeway for further deflation of farmers which will adversely affect, not just farmers, but our whole economy."

* * *

'PERIL POINT' AMENDMENT TO TRADE ACT DEFEATED

The Farmers Union won a signal victory late last week when the Senate by a vote of 62 to 19 approved the extension of the President's authority to negotiate reciprocal trade agreements. This legislation has been under intense attack by a number of Republican senators. Among these was Senator Millikin (R.Colo.), who sponsored the so-called "peril point" amendment. President Patton (see last week's newsletter) in a public statement attacked the amendment as a "purely partisan measure." He said that it was completely unnecessary and that it would allow special interests to shoot full of holes the Administration's reciprocal trade program.

SIGNIFICANTLY, THE DAY AFTER the Patton statement was released, the "peril point" amendment was defeated by a vote of 38-43. The vote was as follows:

YEAS - 38

Aiken	Capehart	Flanders	Jenner	McCarthy
Bricker	Cordon	Gurney	Johnson (Col.)	Malone
Bridges	Donnell	Hendrickson	Kem	Martin
Butler	Ecton	Hickenlooper	Knowland	Millikin
Cain	Ferguson	Ives	Langer	Mundt

YEAS (cont'd) - 38

O'Mahoney	Saltonstall	Smith, Maine	Thye	Vandenberg	Wherry
Reed	Schoeppel	Thomas, Ok.	Tobey	Watkins	Williams
					Young

NAYS - 43

Anderson	Frear	Hill	Kilgore	Magnuson	Pepper
Byrd	Fulbright	Hoey	Leahy	Maybank	Robertson
Chapman	George	Holland	Long	Miller	Russell
Connally	Gillette	Humphrey	Lucas	Murray	Sparkman
Downey	Graham	Johnson, Tex.	McClellan	Myers	Stennis
Eastland	Green	Johnston, S.C.	McFarland	Neely	Taylor
Ellender	Hayden	Kerr	McKellar	O'Conor	Thomas, Utah
					Tydings

Note that the only Democratic senators to vote for the amendment were: Edwin C. Johnson, Colo., O'Mahoney, Wyoming and Elmer Thomas, Oklahoma.

* * *

CARSON CONFIRMATION GIVES FU, COOPS SMASHING VICTORY

The three main developments on the anti-monopoly front this week were: () approval of John Carson's nomination to the Federal Trade Commission by the Senate (2) announcement that hearings would be held on the re-appointment of Leland Olds as Federal Power Commissioner and (3) presentation of a statement by an FU representative to the Senate Judiciary Committee approving the bill to prohibit evasion of the anti-trust laws by acquisition of physical assets as well as stocks of competing companies.

FU LEADERS HAVE BEEN ACTIVE throughout all of these developments. President Patton urged President Truman to nominate Carson in the first place and FU represenatives appeared in Carson's behalf, before the Senate Interstate and Foreign Commerce Committee. Here is the vote:

YEAS - 45

Anderson	Gillette	Johnson, Tex.	Lucas	Myers	Stennis
Chapman	Green	Johnston, S.C.	McFarland	Neely	Taylor
Connally	Hayden	Kerr	McKellar	O'Conor	Thomas, Utah
Downey	Hill	Kilgore	McMahon	O'Mahoney	Thye
Ellender	Holland	Langer	Magnuson	Pepper	Tydings
Frear	Humphrey	Leahy	Maybank	Robertson	Watkins
George	Johnson, Col.	Long	Miller	Russell	Withers
			Murray	Sparkman	Young

NAYS - 25

Bricker	Cordon	Flanders	Ives	McCarthy	Reed
Butler	Donnell	Gurney	Jenner	McClellan	Saltonstall
Byrd	Ecton	Hendrickson	Kem	Malone	Schoeppel
Cain	Ferguson	Hickenlooper	Knowland	Millikin	Wherry
					Williams

THOSE WHO VOTES NAY may be considered as voting on the side of monopoly. Carson as repeatedly pointed out, is a liberal interested in preserving cooperatives and a true free enterprise system.

FU leaders and others here have already asked the Senate Interstate and Foreign Commerce Subcommittee, which will hold hearings on the Olds appointment, to be allowed to appear. Senator Johnson, chairman of the committee, has appointed a seven-man subcommittee which will be, in all probability, opposed to the re-appointment of Olds. Furthermore, an informal check has indicated that a majority of the

Geo. S. Mitchell
63 Auburn, N. E.
Atlanta 3, Georgia

NATIONAL FARMERS UNION
300 B STREET SOUTHEAST
WASHINGTON 3, D. C.

whole committee might turn thumbs down on the appointment. It is hoped that if there is an adverse report by the committee the fight may be won by carrying it to the Senate floor.

THE FU REPRESENTATIVE in his appearance before the Senate Judiciary Committee reiterated the position of NFU in regard to HR.2734 which provides that a corporation may not purchase the assets of another firm where the effect is to lessen competition. He pointed out that agriculture is the most competitive segment of our economy and that if the farmer fell a victim to a system of privately administered prices then the system of free enterprise would be destroyed. He also pointed out that the position of the Farmers Union on this legislation had previously been presented to the committee in a letter dated August 29, 1949. (See newsletter September 2.)

* * *

LEGISLATION OF INTEREST TO FU

BILL	WHAT IT IS	WHERE IT IS
RECIPROCAL TRADE TREATY HR.1211	Peril point amendment would have ruined trade pact program	Defeated in Senate Sept. 15 by vote 38 to 43
FEDERAL TRADE COMMISSION APPOINTMENT	Confirmation of John Carson to FTC	Approved in Senate Sept. 19 by vote of 45 to 25
BRANNAN PLAN HR.5345	Provided trial run of Brannan plan	Defeated July 21 239 to 170
ANDERSON BILL S.2522	Provides 75% to 90% parity depending on supply	Will be debated by Senate September 26
ELECTRIC TRANSMISSION LINES HR.3838	Appropriates funds for power lines	Approved by both Houses
RURAL TELEPHONES HR.2960	REA type loans for telephones	Passed House July 13. 281-110. Reported with crippling amendments by Senate Committee

FOR RELEASE:
NOTE TO EDITORS: The following story is for release on and after Monday, October 3, 1949.

SETS JOB BIAS CASE
FOR PUBLIC HEARING October 3, 1949

NEW YORK, Oct. 3.-- Following protest by the National Association for the Advancement of Colored People against a lengthy postponement of the public hearing on charges of violation of the Ives-Quinn law, by the George H. Flinn Corporation, the New York State Commission Against Discrimination today announced that the hearing will be held on October 31.

The hearing, the first public session to be scheduled by the Commission, was originally set for October 4. The company sought postponement until November 14. Mrs. Marian Wynn Perry on behalf of the NAACP filed a protest, pointing out that the case was already a year old. SCAD granted an extension of time until October 31.

The case involves charges of Walter Tannis that he was discharged by the Flinn Corporation because he protested against the company's discriminatory employment practices. Tannis further charged that he was threatened with physical violence by Cornelius Cunningham, a company foreman. The company is engaged in the construction of the Brooklyn-Battery Tunnel connecting Brooklyn and Manhattan.

Mrs. Perry, who represented the complainant during the preliminary proceedings, will represent him on behalf of the NAACP at the Commission's first public hearing.

ARTICLE IN CRISIS EXPOSES
RAILWAY JOB DISCRIMINATION September 29, 1949

NEW YORK, Sept. 29.-- The discriminatory practices of railroad companies and unions are exposed by Charles H. Houston in an article in the October issue of The Crisis, NAACP monthly organ.

Mr. Houston, a member of the NAACP legal committee, has represented Negro workers in their efforts to halt the steady elimination

of Negroes from the operating services of the industry. He has won important cases in the Federal courts involving the right of Negro workers to such employment.

Tracing the history of the Negro in the railroad industry, Mr. Houston concludes: "It is reasonably safe to say that practically no Negro firemen, brakemen, switchmen, flagmen or yardmen have been hired on Class I American railroads since 1928." This elimination of Negro railway workers is the result of collusion among the railway unions, the companies and certain governmental agencies, Mr. Houston charges.

In the same issue of The Crisis, Clifford R. Moore reviews the role of Governor Alfred E. Driscoll in the adoption of the civil rights provisions in the New Jersey State constitution of 1947. Other articles include an account on the Brazilian Negro experimental theatre by its director, Abdias Nascimento, and a summary of the Groveland, Florida, rioting and "rape" case.

Editorially the Peekskill riots are condemned with a demand that "the culprits must be apprehended and brought to justice."

APPEAL FILED TO BAN
JIM CROW IN SCHOOLS September 29, 1949

NEW YORK, Sept. 29.-- The New York State Department of Education has been asked by the National Association for the Advancement of Colored People to end segregation of Negro children in the public schools of Hempstead, Long Island.

Following filing of the appeal last week, Negro parents sent their children back to school pending the outcome of their petition to the state agency. Failure of the Hempstead board of education to integrate Negro pupils precipitated a strike at the opening of the school term.

STATE GROUPS TO MEET September 29, 1949

NEW YORK, Sept. 29.-- Meetings of state conferences of NAACP branches will be held in Norfold, Va., October 21-23 and Terre Haute, Ind., December 2-4, Gloster B. Current, NAACP director of branches announced today. The Alabama state meeting, originally scheduled for November 11-13, has been postponed until November 18-20 at Tuskegee.

GROVELAND FUND NOW $3,840 September 29, 1949

NEW YORK, Sept. 29.-- Additional contributions amounting to $477

last week brought the total of the Groveland defense fund up to $3,840.54, the National Association for the Advancement of Colored People announced today.

NAACP SUPPORTS UN SECRETARY
ON TRUSTEESHIP FOR COLONIES September 29, 1949

NEW YORK, Sept. 29.-- Commending Trygve Lie, Secretary-General of the United Nations for his support of a direct United Nations trusteeship for the former Italian colonies in Africa, Roy Wilkins, acting NAACP secretary, wrote to the UN official today expressing the hope that he would use "every influence of [his] office to see that [his] recommendations for the disposition of the former Italian colonies is adopted at the current session of the General Assembly of the United Nations."

"Such a trusteeship", Mr. Wilkins wrote, "should be maintained for a limited period with a view to developing the inhabitants of these lands for self-government and nationhood as rapidly as possible...You may be sure that you have the support not only of our organization but also of all those who are striving for and believe in the right of self-determination and the equality of all humankind."

The NAACP, Mr. Wilkins pointed out, has taken "a strong stand against restoration of Italian administration in these colonies in any form."

INITIAL STATEMENT OF JAMES G. PATTON IN THE OPENING SESSION OF THE NEW YORK HERALD TRIBUNE FORUM ON "RESOLVED: THAT THE DEMOCRATIC PARTY SHOULD SEEK TO BECOME A FARMER-LABOR COALITION", October 24, 1949

Ever since the farm states joined with organized labor in the last elections to give President Truman his victory I have been urging the leaders of the Democratic Party to cement that alliance. Hence, it is not strange that I should take the affirmative position in this discussion with my good friend, Congressman Case of New Jersey. I share with the Congressman many of his fears concerning economic power groupings in American politics. I am well aware that violent collisions of economic interests can lead to even more violent physical collisions, and that in other countries unscrupulous men have taken advantage of such conflict to erect fascist systems of one kind or another.

But let us not fool ourselves with high-sounding words that do not mean anything. The fact is, that the greatest threat to the working of democracy in America has always been -- and is now -- from the efforts of monopolists, of economic royalists, of "malefactors of great wealth", to take over any and all political parties. Ceaselessly, these men seek to control the parties in order that they may control the government -- and control it in the interest of their own profits.

That is the fact. It was a fact in the struggles that gave birth to this nation. It is a fact now. These blind men, if they ever succeeded in their efforts -- and I think they never will -- would be walking to their own destruction. In this day, government cannot long function for the benefit of any small group of men. We found that out in 1929. I hope we never have to learn it over again.

There is the real danger, and the best guarantee against it is in the growing political strength of agriculture and labor.

I cannot agree that there is such a risk in the effort to retain for the Democratic Party the loyalty of farmers and labor. This is because of the peculiar American political system and the peculiar American economic system. Under our party system, each of the two major parties consciously strives to become ever more like the other. The defeated party always tries to sound at least enough like the winning party to enable it to win the next time.

As to the economic system, it is unique in the size and steady growth of the white collar groups. The vast increase in service trades in the last half century, for instance, provides assurance that no coalition of farmers and organized labor would in and of itself ever be able to take over entirely the control of government at the expense of other groups. An equally effective counterbalance to such a development of course has been provided by the extension to some of these same farmers and same workingmen of <u>part</u> of the fruits of the tremendous American productive power. So long as they share in the benefits of the economic system, just so long will they tend to think of themselves as citizens and not as individual elements in an economic bloc.

But the positive point to be noticed here is that farmers and laborers have never shared in these benefits by grace of others. They have received what they have received only by fighting for it. Both have now learned that economic organization must be followed and paralleled by active political participation.

Even though farmers and organized labor are outnumbered by the rest of the population, this new political consciousness makes it probable that neither the Republicans nor Democrats henceforth can win an election if the majority of farmers and workers side with the opposition.

I am a good Democrat and I want the Democratic Party to win. Therefore, I want it to attract farmers and labor. It is just that simple.

But I am not such a good Democrat that I want that party to win regardless of the welfare of the country, so let us see what would be the result of a definite Democratic attempt to become the means for achieving the aims of farmers and labor.

What does labor stand for? In world affairs, it stands for peace and for international collaboration. It is against any kind of imperialism and for strengthening the United Nations. At home, it stands for full employment

and against depression. It stands for using the instruments of government to bring within reach of increasing numbers of citizens the good homes, the good food, the good clothing, the good health and all of the facilities of a good life generally which are thought of when the term, "the American standard of living", is used.

What about agriculture? Just about a year ago farmers conclusively rejected what they regarded as a Republican attack on national farm programs developed during the Roosevelt administrations. In particular, they objected to references of Republican leaders to the need for lower prices and incomes on farms and to the 80th Congress' surrender to the grain trade that resulted in losses to farmers because storage facilities were inadequate. The majority of farmers then expressed themselves in favor of many of the same objectives which which I have just said that organized labor stands. So long as government remains truly popular, farmers are not afraid to use its instruments to assure themselves of a fair economic deal.

In all of this what is there to alarm non-farmers and non-laborers? What points of public policy are here that should be rejected by the people-at-large? What is there but good in store for the country if it moves toward these objectives? The answer, it seems to me, is that progress along these lines would be in the best interest of all of us. We are not engaged here in theoretical speculations about political science. Rather, talking about ways and means of political achievement in the here and now. In that content, it seems to me that nothing but good can flow from an active effort by the Democratic Party to assure itself of the support of the majority both of farmers and of workingmen.

LONG-RANGE AGRICULTURAL POLICY FOR AMERICA

Address by James G. Patton, President, National Farmers Union, at the Annual Meeting of the Association of Land Grant Colleges, Kansas City, Missouri, October 25, 1949

To start with, I think we can all agree that a discussion of long-range agricultural policy first must take account of the general climate of the society and economy in which it is to be applied. For some time now we have been living in a period of unprecedented prosperity - a prosperity grounded on tremendous production and on full or very high employment. We have been fortunate in that this prosperity has endured through serious inflation and to a considerable degree through a period when deflation began to rival inflation as a threat. Inevitably this boom has tended to blind us to some of the fundamental dangers against which we should always be on guard. Specifically, it has tended to make us forget what is a fact - that we do not live in a truly competitive enterprise system. In many segments of the economy competition has been substantially stifled.

I submit that if we are truly dedicated to the protection of that American way of life so widely praised in Fourth of July addresses, then we ought to do everything possible to preserve effective competition. I also submit that we are not doing this. At most of the critical points of the economy, at the key nerve centers of our production system, we are faced with outright monopolies or with combinations of control that to some extent constitute a government of their own and that make their own rules of the game. We are all familiar with the list of corporations the assets of which exceed those of many of the states. We know that the rate bureaus set up by the railroad companies virtually write their own tickets and that the government regulatory agency merely sanctions in general what has been agreed upon. We know that for many years big corporations have been growing bigger through evasion at least in spirit of the anti-trust laws in the purchase of assets rather than stock of competitors.

Yet it is these very same gigantic corporate bodies that inspire many of the criticisms of farmers for resorting to the uses of the device of government in an attempt to protect their interests in the economy. The hyprocrisy of these attacks was never better illustrated than in the session of Congress just ended when attack after attack against the competitive free enterprise system was launched by these concentrations of wealth. I refer specifically to the attempts to overturn the decisions of the Supreme Court in the Tidelands oil case and in the base-point pricing case, to the prolonged and bitter attempt to block the use of publicly generated electric power for the benefit of the whole people, and to the defeat of the nomination of Leland Olds for a third terms as a member of the Federal Power Commission because he had proved himself to be effective in administering the rules laid down by government for the successful functioning of our kind of economic system.

And how did these great corporations and monopolies seek to achieve their ends? They went after what they wanted by attempting to turn the instruments of government to their own account, just as they have always done from the beginning of the protective tarriff system through the fight over the United States bank and down to the days of the establishment of the Reconstruction Finance Corporation.

It ill-behooves such sources to attack farmers and farm organizations when they in turn are forced by economic pressures to obtain by governmental action their equitable share in the fruits of the American production plant. How indeed can farmers otherwise assure themselves of a fair deal? In many areas of trade and production prices no longer are determined by the free flow of supply and demand. Patent controls are used to keep technical improvements and conveniences off the market, and to concentrate the ownership of processes.

The onwership of raw material supplies and the creation of service subsidiaries everywhere are used to further this concentration. Labor is far more tightly organized than it is possible for farmers to be, and far better equipped to fight for its demands, for agriculture is made up of nearly 6 million independent and diverse units.

When an economic collapse occurs the rigidity of the price structure is exposed naked to view. Production curves on all the charts go whizzing downward. Prices, except to farmers, show little change. In that kind of an economy it is necessary that farmers demand that the government aid them in the securing of economic justice.

This seems to me one crucial point that must be settled in discussing long-range agricultural policy. The question is not whether we shall have big government. We have big government. The real question can be divided in half:

Will government function to the benefit of the whole people, including farmers?

Will government remain truly responsive and democratic, whatever its size?

To my mind, the answers to these twin questions must be in the affirmative and we must use all the strength we have to see to it that they are answered in the affirmative. What does that mean in terms of a long-range policy for agriculture? To put it bluntly it means the Brannan program or something closely akin to it. Even its bitterest enemies and critics admit that the Brannan program is at least an attempt to have the government function in the field of agriculture for the benefit of the whole people. That is to say, it seeks to use the public revenues collected in accordance with the long established American practice of levying most heavily on those best able to pay, to insure the maintenance of farmers' incomes at reasonable and desirable levels and to insure that consumers will pay reasonable and desirable prices. This is the real basis of the proposals made last spring by the Secretary of Agriculture. Most of the debate about the proposals has centered upon the questions of mechanics. In general, people have agreed that this is what the plan seeks to do. I think we can agree, then, that these proposals of the Secretary are an affirmative answer in principle to the first of the major questions I have put.

As to the responsiveness and democratic character of government, I am unable to follow those critics who have said that the Brannan proposals inevitably will mean more regimentation and governmental interference with individual farmers than will other current or proposed programs. Under the law just passed by Congress some sort of controls inevitably must be resorted to if price levels are to be maintained. Under the Anderson-Aiken law, abnormal supplies must be accumulated before an attempt is made to regulate those supplies by acreage allotments and marketing quotas. The result would certainly be the imposition of controls at least as strict as those contemplated under the Brannan proposals.

Indeed the Brannan proposals probably offer a better prospect than the others, at least in the long run of minimizing the necessity of controls for the simple reason that it puts very heavy emphasis upon the expansion of consumption. By making it easier for people, both in the United States and in other countries to acquire our farm products, it should help greatly over a period of years in reducing what the economists call "burdensome surpluses". A final point to be noticed here is that the proposals of Mr. Brannan extend over a wide range of commodities the benefits of the agriculture program, a far wider range than any other proposals. Such equitable treatment also should go far towards the promotion of desirable adjustments and the consequent minimizing of the necessity for strict controls to reduce output.

Much of the final answer to this question to democratic and responsive government rests in other fields than in the field of price support legislation. A great part of the answer of course is administrative, and here agriculture has had greater experience than any other of the economy in drawing into the operation of national programs the rank-and-file of the citizens. None of the farmer committee or board systems evolved during the days of the New Deal ever proved perfect, but they were a long step in the right direction and that experience provides a base on which to go forward.

In conclusion, let me point out that a large part of this answer, too, rests with the systems and devices of education. Upon the shoulders of the Land Grant Colleges rests a very heavy responsibility in the years ahead.

As I think most of my audience knows I and my organization have battled strenuously for many years to relieve the Extension Services, and thereby the Land Grant Colleges, of the burden of performing non-educational duties now demanded of them. We did this not alone because we disliked the use of public monies and public agencies for private ends, but also because we felt very deeply that the Smith-Lever Act of 1914 began a great experiment in the democratization of education, one that flowed logically from the Morrill Act of 1862 establishing the Land Grant College system and the Hatch Act of 1887 establishing the Experiment Station system.

The mere recitation of some of the problems with which we in agriculture are now struggling indicates the complexity of the years ahead and the very great dependence of rural people upon the success of these educational instruments. For example, how can farmer committee systems become progressively more and more enlightened and more and more adequate to deal as truly public agencies with their tasks unless they are increasingly better informed as to the relationship between the communities and the nation and for that matter the world. I think the days of isolationism, which unfortunately flourished in some rural areas are gone for-ever, but that is merely a negative victory. Among the tasks of educators ahead is that of helping farm people to understand the whole world better so that each individual may play his part in helping to build a new time of peace and abundance. You may be sure that I, personally, and the National Farmers Union always will be found 100% back of proposals for improving and expanding that kind of an educational system for rural people. In that task I wish you God Speed.

FARMERS UNION PROTESTS PRIVATE POWER LICENSES

President Jim Patton of Farmers Union has wired President Truman urging that the Administration contest to the limit the recent decision of the Federal Power Commission granting three hydro-electric power sites on the Kings River, in California, to the Pacific Gas & Electric Co.

The licenses were authorized November 9 but Bureau of Reclamation, which plans an over-all development of the Central Valley of California including the Kings River, can still ask a rehearing and appeal to the courts. The Bureau opposed granting the P.G. & E. licenses at the original hearings, but was over-ruled by FPC in a decision made after Leland Olds was retired from the Commission.

POWER COMPANIES could cut the heart out of all other valley and regional developments by taking the cream power sites away from the government if the Kings River precedent stands. There is now pending two similar power company applications for Roanoke Rapids, in Virginia, and for redevelopment of Niagara Falls. Niagara Falls Power Co. wants to develop the nearly 1,100,000 kw potential at that site -- a keystone to full development of the St. Lawrence River. If the FPC precedent stands, the company is sure to get the site and the full development of the St. Lawrence will suffer a tremendous blow.

NTEA's $10,000 FUND OFFER TO YOUNG MAY BE INVESTIGATED

Senator Milton Young's disclosure that the National Tax Equality Association offered him $10,000 political funds if he would join the fight on co-operatives is going to reverberate around the Capitol as quickly as Congress gets back into session in January.

The astounding offer to the Senator was revealed by him in a letter to M. W. Thatcher, general manager of the Farmers Union Grain Terminal Association of St. Paul and first published, with the Senator's consent, in the Farmers Union Herald. Senator Young wrote Thatcher:

> "Ever since becoming a member of the United States Senate one pressure group after another has beseiged me -- usually from the left wing of the CIO and similar organizations, and

now, in a more obnoxious way, pressure from one Vernon Scott, attorney for the NTEA, even to the extent of offering to raise $10,000 or more in campaign funds from sources which have opposed me in the past."

THAT'S BRIBE TALK in anybody's language and friends of farmer co-operatives in four or five spots in Washington have indicated they will want to get to the bottom of the situation when Congress returns. Both House and Senate agricultural committees, Congressman Wright Patman's small business committee and the Special House Lobbying Committee would have "jurisdiction" in the matter, which may easily prove to be the first Congressional sensation of 1950.

* * *

"WHAT DOES THE FARM BUREAU STAND FOR ANYWAY?"

The National Farmers Union released a pamphlet this week entitled "What Does the Farm Bureau Stand For Anyway?" in which the disgraceful record of the Farm Bureau during the first session of the 81st Congress is completely exposed.

THE PAMPHLET documents the zig-zag and contradictory course of the Farm Bureau by extracts from Farm Bureau publications and testimony before House and Senate committees.

THE PAMPHLET proves that the Farm Bureau was first for 60% parity, then for 90% and finally for 75%.

For example, the Farm Bureau worked tooth and nail for the Gore amendment in the House which provided 90% and then went over to the Senate, worked for 60% and 75% simultaneously and conducted an all-out campaign to defeat Senator Young's 90% amendment.

THIS PAMPHLET IS "MUST" READING. Ask your local officer to get you a copy.

MONOPOLY INVESTIGATION POORLY HANDLED, INEPT

The big monopoly investigation being conducted by a House Judiciary Committee under Congressman Emanuel Celler of New York is proving the biggest dud in Washington during this off-season, recess period. The committee has virtually occupied the whole Washington stage, without competition from other Congressional activities. It has had a steady parade of prominent witnesses, but the chairman and staff apparently have been totally unprepared to develop information or build any sort of a case through them.

Veteran newsmen described the proceedings Tuesday, Nov. 29 as a "better than average" day. On that day the hearing opened with William Montgomery, president of the Acacia Life Insurance Co. of Washington, D. C. on the stand. Mr. Montgomery is elderly and in ill health. He was not a quick witness. He indicated to the committee that his company -- one of the smaller ones -- found competition from the big life companies of such a nature that it was most difficult for new and smaller companies to get business, or to get a fair share of good industrial investments. He favored federal regulation of life companies, and the requirement that the companies report annually on their savings from each class of business, so that mutual policyholders could see clearly whether or not they are getting all the refunds to which they are entitled.

WITHOUT AID from Mr. Celler or the staff, the witness was caused to reverse his position on federal regulation by a G.O.P. member of the committee, who got Mr. Montgomery to testify that he thought federal regulation should be substituted for regulation by the 48 states and, that since state regulation can't be ended, he was against federal regulation now.

J. A. Fulton, president of the Home Life Insurance Co. of New York, one of the larger life concerns (207,000,000 assets), testified that he was chairman of a group which negotiated the famed "insurance agreement" whereby a group of large life insurance companies agreed to limit their industrial investments down toward the securities offered by 17 New York investment banking houses. This agreement is the key to monopoly financing arrangements of the life insurance companies. The U. S. Attorney General has cited it in an anti-trust complaint against the investment bankers.

BUT JUST AS THE AUDIENCE AT THE CELLER HEARING settled down to watch the committee develop the details about this agreement, the insurance executive took the initiative in the situation and criticized Congressman Celler for using the terms "culpable" and "in cahoots with the investment bankers" in regard to the life companies. Such terms, Fulton said, were unwarranted. The agreement between the companies and the bankers had been developed at the suggestion of the New York banking commissioner. Congressman Celler attempted to explain his statements. He had never called the life companies guilty and had always been careful to say that they were "mentioned" (not indicted) in the federal complaint, he said. Then, to the amazement of veteran observers of investigations, Mr. Fulton was thanked for his testimony and excused. The notorious "insurance agreement", under which billions are held exclusively for investment in the favored enterprises of the few big investment bankers, was dropped like a hot potato. The committee adjourned for the day.

"OH, THAT WAS NOTHING," a top flight newsman told Farmers Union. "On the day before they had an insurance man in here from Columbus, Ohio, and no one even knew why he was called. No one had any questions for him. When one of the staff asked him a question or two they proved to be out of his field and he couldn't give the answers. His whole trip was a waste of time and money."

* * *

PRICES JUSTIFY WARNINGS OF PATTON AND TALBOTT

With the release of the Bureau of Agricultural Economics Agricultural Prices this week it became apparent that the so-called Golden Era for American farmers had definitely come to an end. According to this publication the parity ratio of farm prices received and paid dropped to 100 for the first time since November 1941. This is one point below a month ago and nine points below a year ago. This means that not only have farm prices hit new lows but that the farmers purchasing power is lower than it has been in 8 years.

Most of the recent declines in prices brought farm products down to or below the 90% level. For example, hogs theoretically supported at $17.40 per cwt actually brought only $15.60. Prices farmers received for eggs dropped to 77% of parity, for corn to 66%, for oats to 69% and for sorghum grain to 57%. The only commodities well above the 90% level were beef, veal, lamb and wool. Milk stood at 100% and butterfat at 93.

IT IS IMPORTANT TO EMPHASIZE that these declines in farm prices if accompanied by declines in consumers prices would not necessarily be disastrous for the farmers. But consumer prices have not declined proportionately at all. This fact was revealed this week by O. V. Wells, chief of the BAE, who told a Senate subcommittee that farm prices have been drifting downward for some 22 months but that marketing costs have remained constant. For example, said Wells, "since July 1948, the month when retail food prices reached their peak, the over-all cost of the annual average 'market-basket' for a family of three has dropped $75 -- with the farm value declining $65, the marketing charges $10."

NATIONAL FARMERS UNION
300 B STREET SOUTHEAST
WASHINGTON 3, D. C.

Geo. S. Mitchell
63 Auburn, N. E.
Atlanta 3, Georgia

THESE FIGURES SIMPLY MEAN that the farmer is being made the goat in this downward trend of agricultural prices. It also means that the fears of President Patton and Glenn Talbott and others who appeared before congressional committees during the 81st Congress were well justified. Both Patton and Talbott pointed out to House and Senate committees that the middlemen were increasing their take at the expense of the farmers and that something must be done to put a floor under farm prices so that the disastrous declines would be halted.

NOW IT IS APPARENT what would have happened in 1950 if the Aiken bill had been allowed to go into effect on January 1 as urged by the Farm Bureau and the National Grange. Prices of most agricultural commodities in 1950 even with marketing quotas would probably have dropped to 72% of parity and price floors this low would not even give the farmers cost of production. The result would have been bankruptcy for hundreds of thousands of family farmers. But in spite of these obvious facts the National Grange persists blindly to fight the Brannan plan calling it a cancer. And the Farm Bureau, meeting in mid-December this year is expected to reaffirm its previous position.

* * *

AMA COURTS NEGRO MEDICAL ASSOCIATION

The American Medical Association usually snooty to Negroes is making overtures to the National Medical Association which is largely composed of Negroes. The New York State Medical Association recently elected a Negro physician as a delegate to the AMA's House of Delegates in May. This, according to NMA officials "could not be interpreted as other than designed.....to convey the false impression to the general public that the national office ...(of AMA) should be credited with some liberal move in respect to Negro physicians."

* * *

NOTES: The 81st Congress spent more than 50 billion dollars, most of it to pay for future and past wars. Agriculture got nearly $800,000,000, which amounted to 1.6% of the total.....Burley tobacco growers have voted for marketing controls by an overwhelming majority.....USDA is putting out a pamphlet on acreage allotments. Write us if you want one.....President Patton arrived from Denver to attend the ECA Board Meeting (he is a member of the Advisory Council), and to participate in the FAO conference now going on.....Patton was present also at the ceremony at which Oscar Chapman was sworn in as the new Secretary of Interior.

26 - N.A.IRO.

National Association

of

Intergroup Relations Officials

The NATIONAL ASSOCIATION OF INTERGROUP RELATIONS OFFICIALS is

- A national organization of individuals and agencies primarily engaged in intergroup relations.
- An association to improve intergroup relations and to aid in the attainment of equality of opportunity for all persons regardless of race, religion, national origin or ancestry.
- An organization which attempts to improve standards of work in the field of intergroup relations and to advance professional and technical knowledge.

PURPOSE

The program of the National Association of Intergroup Relations Officials has this major purpose—To improve intergroup relations by:

- FACILITATING MORE EFFECTIVE EXCHANGE OF INFORMATION and experience and furthering cooperation among official agencies and citizens' organizations dealing with racial, religious, ethnic, and cultural relations.
- ESTABLISHING CONTINUING RELATIONSHIPS with national and international official and private agencies and organizations concerned with intergroup relations in order to bring about more effective utilization of the resources of these agencies and organizations on the state and local scene.
- IMPROVING STANDARDS OF WORK IN THE FIELD of intergroup relations, advancing professional and technical knowledge and practice, and aiding the policy makers, administrators and professional personnel in their day-to-day operations.

ORGANIZATION AND SERVICES

To accomplish its stated purposes, the National Association of Intergroup Relations Officials through its officers:

- MAINTAINS A SECRETARIAT and an Executive Secretary which operate as a central headquarters office to serve the divisions, councils, committees and conferences of the Association.
- SERVES ITS MEMBERS by developing through publications, committees, conferences and by other means, a continuing program designed to improve public policy, professional practice and citizen support of and participation in intergroup relations.
- OFFERS THE SERVICES of its office and its members to those federal agencies and national private organizations in the field of intergroup relations, to supply available current information to enable the national agencies and organizations to become more fully informed of the problems and activities in the states and localities and to utilize the resources of state and local organizations more effectively.

MEMBERSHIP

Active membership in the Association is of two classes:

(a) AGENCY MEMBERSHIP

All agencies and organizations principally engaged in any phase of intergroup or race relations.

(b) INDIVIDUAL MEMBERSHIP

All board members, commissioners, officers and professional or technical personnel of agencies and organizations principally engaged in any phase of intergroup relations.

The Board of Directors of NAIRO may admit to associate membership other agencies, organizations or individuals.

MEMBERSHIP DUES

ACTIVE AND ASSOCIATE INDIVIDUAL MEMBERSHIP dues $2.50 per year.

AGENCY OR ORGANIZATION MEMBERSHIP on the following scale:

Agency Annual Budget	*Dues Per Year*
Under $10,000	$10.00
Over $10,000 but less than $25,000	25.00
Over $25,000	50.00

(In those instances where agency regulations on resources limit payment of dues, a minimum of $10.00 per year may be accepted.)

The membership application blank on the reverse side is for your convenience in applying for membership.

26 — Negro in America

Communist

INFLUENCE AMONG NEGROES—

Fact or Illusion?

useful
contains Jackie Robinson
statement. also.

Statements presented at Washington before the House Committee on Un-American Activities by Lester B. Granger, executive director, National Urban League, and Jackie Robinson, second baseman, Brooklyn Dodgers.

Printing of these statements has been made possible by friends of the National Urban League. Jackie Robinson, together with Branch Rickey, manager of the Brooklyn Dodgers, received, in 1948, the TWO FRIENDS AWARD of the National Urban League, presented for outstanding instances of interracial teamwork. These two statements, one by the League's executive director, and the other by a citizen whom the League has honored, constitute an important document on the subject of racial advancement effort by the Negro population of the United States.

Single copies may be had upon request to the

NATIONAL URBAN LEAGUE
1133 Broadway
New York 10, N. Y.

Communist Influence Among Negroes — Fact or Illusion

By Lester B. Granger

I

The National Urban League is a social service agency which seeks to improve the socio-economic conditions under which Negroes live in American cities, using to this end the professional skills of organized social work. Representative colored and white persons serve on the executive boards and committees of the National Urban League and its local affiliated branches in 29 states and the District of Columbia.

In the usual sense of the phrase, the Urban League is non-political. But every American social agency that deserves the classification is necessarily political to the point of subscribing unreservedly to the principles that must govern a vibrant and growing democracy. A social agency, to be truly American, must be opposed to any social and political forces that threaten the onward march of the democracy. It must, therefore, be opposed to Communism as well as to Fascism. It must reject the dishonest appeals of those who would substitute a state-controlled existence for the democratic relationships involved in group cooperation and personal freedom. *It must also strongly fight against the native-born proponents of a brutal racism* such as Hitler found to be a convenient tool in his building of the Nazi state.

Thus, as the National Urban League goes about its work of providing better job opportunities for Negro workers, better homes for Negro families and better facilities for health and recreation and good citizenship among the Negro population; and uses to this end the influence resources of our best white and our colored leaders throughout the country — in doing such a job the National Urban League constantly finds itself opposed to and opposed by the proponents of Communism in the United States.

I have made the *foregoing* statement in order to set forth without any chance of misunderstanding the philosophy and methodology that govern the operation of the National Urban League insofar as political questions are concerned. But in making the statement that follows, I am speaking, not as the chief executive officer of the Urban League, but rather as a Negro individual — one who has spent more than fifteen years in the service of his organization and has travelled throughout the country in large cities and small; who has had intimate contacts with all types of Negro and white Americans; who has been in the offices of labor unions, in the plants and offices of business and industry, in churches and lodges and social clubs and civic groups of both the Negro and the white population. An individual, therefore, who has had ample opportunity to observe not only to what extent Communist influence has been developed among our Negro population, but also the methods and strategies by which the Communist Party has sought to advance its cause among Negro people of this country.

Let me make it very clear from the outset that I consider that the extent of Communist influence among our Negro population has been grossly exaggerated, not only by spokesmen for the Communist Party, but also by gullible and fearful defenders of the political status quo. Objective reference to a few basic figures will prove my point. The number of Communists in the United States who are officially members of the Party has been variously estimated during the last ten years at between 100,000 and 200,000. Of course, these numbers do not represent all of the influence generated by the Communist Party, for so-called "fellow travellers" have been estimated at between one and two million. In other words, for every official member of the Communist Party, there are believed to be some ten or twelve "fellow travellers," or effective and consistent sympathizers with and supporters of the Communist Party line. American Negroes have traditionally reflected with a fair degree of consistency the political thinking of their neighbors and their neighborhoods. In sections which are overwhelmingly Republican, for instance, the great majority of Negroes are apt to be Republicans. In sections that are distinctly Democratic, the great majority of Negroes are Democratic. The chief exception to this general rule is to be found in those Southern states where, through manipulation of election laws for a great many generations, Negroes have been prevented from voting as Democrats in the primaries of an overwhelmingly Democratic area.

Negroes are ten percent of our national population, and if this same consistency in adherence to prevailing political thinking holds good with respect to Communist belief and persuasion, then ten percent of the members of the Communist Party — as well as ten percent of the "fellow travellers" — would be colored Americans. In other words, there would be, according to this method of figuring, approximately 10,000 Negro members of the Communist Party and another 100,000 inclined to support the Party in its political objectives and policies. Even if this were true, these numbers would hardly be large enough to justify the wild speculations that have been indulged in about Communist infiltration in Negro leadership groups, or Communist capture of the political power of Negroes.

Actually, however, *the ratio is a great deal less than one-tenth,* as is admitted by Communists themselves in their infrequent moments of frankness. Fifteen million Negroes live in these United States, but of that number approximately sixty-five precent — close to 10,000,000 — still live in the South. As everyone here knows, the media of communication are more limited in the South than in other parts of the country. Transportation is more difficult, especially in those farming areas where the large proportion of our southern Negro population lives. And because of limited transportation and communication facilities it is difficult for *any* undercover movement to spread in the South, *unless it be a movement which suits the purposes of the dominant majority.* The Ku Klux Klan, for instance, was at one time able to spread very rapidly because it fitted into the plans of some political and economic overlords of the Southern Region. And so, because of these basic difficulties of communication, the chances are slight that there has been any important recruitment of Negroes in that very part of the country where considerably more than half of their number live.

It is my considered opinion that the number of Negroes in this country who are members of the Communist Party falls considerably below even that 10,000 mark which would be established by the usual population proportions. The highest figure that I have heard quoted from any authority is 2,000.

This latter figure is further supported by the experience of the Progressive Party in the recent Presidential election. It is no secret that Henry Wallace's candidacy for the Presidency, if not originally conceived, was at least warmly supported by the Communist Party. And Communist spokesmen and political hacks did their utmost to convince American minorities — and especially such

groups as our Negro population — that their best chances of improving their social and economic position lay in rolling up a large protest vote for Henry Wallace, even if their candidate should not be victorious in the election. Every person present will remember the grandiose claims of coming victory that were made by "Wallaceites." It will be remembered, also, that at the Wallace meetings there was invariably a generous turn-out, and whenever the Presidential candidate spoke in the environs of such cities as New York or Chicago a large number of Negroes were sure to be included among his audience.

And yet what happened in the election? An analysis of the election returns shows that the number of votes corralled by Henry Wallace as candidate for the Presidency approximately equalled the maximum estimate of the number of "fellow travellers" consistently supporting Communist purpose. Mr. Wallace rolled up around 1,000,000 votes, but if the figures available from such cities as New York and Chicago are to be taken as evidence of what happened, considerably less than ten percent of those 1,000,000 voters were Negroes, and by no means all of Wallace's supporters were Communist sympathizers. New York's Harlem, that tremendous Negro neighborhood, is frequently represented by its detractors as a "vast, seething, hotbed of Communism." Yet in Negro Harlem, Henry Wallace consistently ran a poor third to President Truman and Governor Dewey. In five election districts of that area, President Truman received 108,643; Governor Dewey, 34,076, and Henry Wallace only 28,903 — 14 percent of the total. In Brooklyn, where another large concentration of Negroes is to be found, the figures show a similar ratio — one that was *lower than the ratio of white support for the Progresive Party candidate.* In Harlem again, the Negro candidate for the State Senate running under the banner of the American Labor Party — a Progressive Party affiliate — received only 12,719 votes against the vote of 55,874 for the regular Democratic candidate, who was white.

In Chicago, three Negroes sought to represent the Negro Southside in Congress. The Democratic candidate rolled up a count of 98,204 votes; the Republican, 43,620; the Progressive Party candidate, 5,188. And yet Chicago and New York are the two large cities which have been constantly referred to as centers of Communist influence among Negroes. Where, then, is this vast out-turning of Negro following in response to an assumed Communist leadership of our Negro population? I say that there was no such

turn-out because no such following ever existed *except in the imagination of the defenders of the status quo and the spokesmen for the Communist Party.*

Why, then, all the shouting about Communist influence among Negroes? Why the blatant claims by spokesmen for the Communist Party, and why the hysterical charges by the defenders of an entrenched conservatism? (Because I believe that analysis of the claims and charges will show them, in the main, to proceed from one or the other of these quarters.) The answer to the mystery reveals that there is no mystery at all. The Communist Party seeks to establish among Negroes and the rest of the world, the *illusion* of an influence they actually never hope to attain. On the one hand, that illusion, if foisted upon the public, might tend to intimidate truly democratic Negro leadership in their oposition to the Communist Party, for fear of losing their influence with their own racial group. And on the other hand, that illusion might persuade the unsuspecting among the general public that the Communist Party is making progress in recruiting among the disadvantaged of the world's greatest power. Such an impression, skillfully established, would support Community prophesies of a coming collapse of capitalism, and would obviously strengthen the hand of Moscow in power politics the world over. Far-fetched, some might say? Not if we keep in mind the close-knit relationships of Communist strategy in its various worldwide aspects.

And as for the anti-Communist reactionaries, they, too, are engaged in trying to fool the public by shouting "Communist" at every Negro spokesman who offers a protest against racial injustices, or by exaggerating the extent of actual Communist influence among the Negro public. The press has recently been full of accounts of racial clashes here in Washington, and in St. Louis, and in Youngstown, Ohio, arising out of insistance of Negro citizens that they be given full access to public recreational facilities — swimming pools especially — which are built and maintained through taxpayers' money. Here is a position which is defensible in law as well as in democratic theory. There is no trace of Communist ideology contained therein. Yet in such instances charges have been freely made that these incidents have been created by Communists. In Youngstown, Ohio, a local newspaper and some city authorities have heavily advertised charges that "left-wing" leadership has sought to exploit the local swimming pool situation for their own purposes. By implication, at least, anti-Communist Negroes are daubed with the

red brush. According to such practice, if Communists were to come into a city selling Bibles, the Christian Church would be brought under suspicion of Communist inclination.

These accusations are, of course, playing directly into the hands of red leadership, here and throughout the world. Defenders of the status quo may hope to intimidate or discredit reputable Negro spokesmanship by affixing the red label, but actually they are supporting the very position that Communists are hoping to establish. Consider, for instance, the hysterical shouts and headlines that followed Paul Robeson's Paris address to a Communist-sponsored conference. That furore would have been ludicrous if it had not been so tragic. Consider this. One man, Mr. Robeson, expressed his personal opinion and made a reckless prediction of what 15,000,000 Negroes in the United States, all different individuals, would do in the event of war with the Soviet Union. And remember that this same man, just a year previously, was predicting the election of Henry Wallace with the overwhelming support of that same Negro electorate. I have already reminded this Committee of how grievously in error that earlier prediction was. But did the American press refer to this prophet's batting average before advertising his current performance? No! The press headlines stretched across the country. The radio blared in suburban homes and farm houses and city apartments. A nation-wide, nine-day sensation was manufactured. Prominent colored men and women were importuned by the white press to disavow the Robeson statement, and to assure white America that the traditional loyalties of American Negroes would be continued, "world without end, Amen."

It is to the credit of our racial commonsense and sense of humor that most Negro spokesmen did not fall into the error of responding to such requests. For the most part they merely pointed to the record, and suggested that the record be brought into evidence. The reason for this kind of response by Negro spokesmen is clearly understandable. Authentic Negro leadership in this country finds itself confronted by two enemies on opposite sides. One enemy is the Communist who seeks to destroy the democratic ideal and practice which constitute the Negro's sole hope of eventual victory in his fight for equal citizenship. The other enemy is that American racist who perverts and corrupts the democratic concept into a debased philosophy of life. In opposing the one, Negro leadership must be careful *not to give aid and comfort to the other.* Those white leaders of stature in this country, those who exert wide-spread

influence in government, industry, business and politics, will be very badly advised if they seek to increase the difficulties of reputable Negro leadership as it stands precariously on defense against these two enemies.

The American Negro population will never accept or willingly endure any social philosophy or political practice that enforces upon persons, merely because of their color, an inferior status in their citizen-community. Such acceptance would be a betrayal of the Negro's responsibility for working to build Democracy in the country which he has helped to found, protect, and support. As long as there remains one Negro who can be identified as such, and who is subjected to restrictions and abuses because of his race, that one Negro will continue, courageously and stubbornly to resist racism in American life. In such resistance, the Negro has to choose between two allies — one honest and the other dishonest. The honest alliance is increasingly being established with Americans who may be liberal or conservative in their political affiliation, but who are agreed that race, color, and creed must not be allowed to condition a person's chances of happiness, health and success in the American community. To seek to check this alliance, or to disregard the principles upon which it is based, would be to encourage Negro Americans to seek support from other sources. Even under the best of present conditions it is sometimes hard for the so-called "average" person of color to retain faith that in some predictable future his racial disabilities will be removed. That such faith is generally maintained is chiefly due to the courageous and often self-sacrificing support which the Negro group has received from white Americans of democratic conviction and liberal impulse.

On the other hand, when the Ku Klux Klan in Alabama, Georgia or Florida indulges in floggings, lynchings or other forms of Negro intimidation, and the Klan's atrocities are tolerated without protest, or even tacitly approved by representative community leadership, the Negro population is provided with additional grievance against the present way of life in America and Communist zeal for proselyting is correspondingly accelerated. When on the floor of the Congress, elected representatives of the people of states of the Union express obscenely racist sentiments regarding the legitimate aspirations of Negro citizens, once more aid and comfort is given to the Communist cause.

There are, it is true, only a small number of Negroes who have joined or who sympathize with the Communist Party in its efforts

to "hamstring" this country's welfare, but even that small number stands, not as a testimonial to the recruiting skill of Communist leadership, but rather as a sign of our failure to make good on our democratic professions. The Party has been clever at adopting, as if they were its very own, causes which any self-respecting Negro must necessarily support. Red spokesmen got their first soap-box position in Negro neighborhoods with the notorious Scottsboro case. Jim-crow practices by labor unions, denial of free employment opportunity by employers, racial segregation enforced by law or covenants or community custom — these are situations which have nothing whatever to do with Marxism. But they serve the strategy of the Communist Party. The obvious way to block such strategy is for the anti-Communists of this country to deprive our enemies of their propaganda weapon by moving with equal vigor and more honesty to eliminate these fester-spots from our national life. The prescription is less worry about Robeson and more concern *for* Democracy.

The House Committee on Un-American Activities can make an unparalleled contribution to such an effort by instituting and vigorously prosecuting an inquiry into the activities of such organizations as the Ku Klux Klan, and similar "black shirt" and "white sheet" groups wherever they may be found. Such efforts will serve to reassure Negro leadership that while we are fighting against one enemy of this country, Communism, our Government is helping to fight off the other, Racism. Negro leadership in America does not need any defense against the charge of being Communist-led. There are, of course, some few exceptions, in the case of the blind, the short-sighted, and the careless. But any effort to indict a whole leadership group because of the attitudes of a few persons, many of whom are completely sincere, may easily lead to a revulsion of feeling among the Negro population which would be ideally suited to the purposes of the Communist Party.

This statement is not a report on Communist activities among Negroes so much as it is an indictment of the kind of blind mismanagement and stubborn stupidity that encourages such activities. We in the Urban League movement — our more than four-hundred staff members, our more than four-thousand board and committee members — have for years been fighting against Communist objectives. Not by name-calling or empty baiting of the enemy, but rather through the simple device of seeking to make democratic advances for our Negro population. We have never been

afraid of Communist infiltration, *for there is no room for anti-democratic influences in a movement which is wholly and continuously engaged with building Democracy.* As we remove employment barriers, one by one, and open the way to fuller employment of the skills of Negro workers; as we aid the racial group to secure better housing and a full share in use of public facilities — as we accomplish gains in this direction, we are cutting away the ground upon which the Communists attempt to establish their position with Negroes.

Therefore, let me repeat in closing that the real danger to America that lies in the Communist appeal to racial minorities is not any important chance that the appeal will be effective. The real danger lies in the uses which the Soviet Union and all its Communist puppets here and abroad can find for the unsavory racial conditions which they so zealously advertise. It is true that this country stands shamed before the world today because our racial practices do not accord with our professions of democratic idealism. It is this stubborn straying from our national ideal that the Communist Party has been able to use effectively throughout the world. They have not forged the weapon they now use against us. We have placed it in their hands. It is still not too late to recover it.

By Jackie Robinson

II

When the House Committee on Un-American Activities invited me to appear here today and express myself on the subject of your present interest, I answered that I would be glad to do so, although it isn't exactly pleasant to get involved in a political dispute when my field of earning a living is as far removed from politics as anybody can possible imagine.

I am sure you know that I am a professional ballplayer. Baseball has been called the great American sport because all Americans get their kicks out of the game some way or other, no matter what their political or social connections may be. So it's customary, and I suppose pretty sensible, for ballplayers to keep out of partisan politics or any other kind of arguments and contests that may split their supporting public.

Of course it will be said, and it's certainly true, that the question of Communist activity in the United States isn't partisan politics. But it's also true that some of the policies of this committee have become political issues. And so, naturally, I've had a great many messages come to me by wire, phone and letter, urging me not to show up at this hearing. And I ought to make it plain that not all of this urging came from Communist sympathizers. Of course, most of it did. But some came from people for whom I have a lot of respect and who are just as opposed to Communist methods as I am.

And so it isn't very pleasant for me to find myself in the middle of a public argument that has nothing to do with the standing of the Dodgers in the pennant race — or even the pay raise I am going to ask Mr. Branch Rickey for next year.

So you'll naturally ask, why did I stick my neck out by agreeing to be present, and why did I stand by my agreement in spite of advice to the contrary. It isn't easy to find the answer, but I guess it boils down to a sense of responsibility.

I don't pretend to be any expert on communism or any other kind of a political "ism." Going to college at UCLA (the University of California at Los Angeles), helping to fight a war, with about ten million other fellows, trying to break into professional baseball

and then trying to make good with the Dodgers, and trying to save some money for the time when my legs lose their spring — all this, together with my family life, has been enough to keep me busy without becoming an "expert" — except on base-stealing or something like that.

But you can put me down as an expert on being a colored American, with thirty years of experience at it. And just like any other colored person with sense enough to look around him and understand what he sees. I know that life in these United States can be mighty tough for people who are a little different from the majority — in their skin, color or the way they worship their God, or the way they spell their names.

I'm not fooled because I've had a chance open to very few Negro Americans. It's true that I've been the laboratory specimen in a great change in organized baseball. I'm proud that I've made good on my assignment to the point where other colored players will find it easier to enter the game and go to the top. But I'm very well aware that even this limited job isn't finished yet. There are only seven colored players signed up, out of close to four hundred major league players on sixteen clubs.

But a start has been made, and progress goes on, and Southern fans as well as Northern fans are showing that they like the way things are working. And as long as the fans approve, we're going to keep on making progress, until we go the rest of the way in wiping Jim Crow out of American sports.

We are doing this because the American fans are just beginning to understand that a sport, to be a real sport, has got to be contested on the basis of the best man or team winning — and that "best" has got nothing to do with how much brown or red or yellow tint is in a man's skin.

We're going to make progress in other American fields besides baseball if we can get rid of some of the misunderstanding and confusion that the public still suffers from. I know I have a great desire and I think that I have some responsibility for helping to clear up that confusion. As I see it there has been a terrific lot of misunderstanding on this subject of communism among Negroes in this country, and it's bound to hurt my people's cause unless it's cleared up.

The white public should start toward real understanding by ap-

preciating that every single Negro who is worth his salt is going to resent any slurs and discrimination because of his race, and he's going to use every bit of intelligence, such as he has, to stop it. This has got absolutely nothing to do with what Communists may or may not be trying to do.

And white people must realize that the more a Negro hates communism because it opposes democracy, the more he is going to hate any other influence that kills off democracy in this country — and that goes for racial discrimination in the Army, and segregation on trains and buses, and job discrimination because of religious beliefs or color or place of birth.

And one other thing the American public ought to understand, if we are to make progress in this matter, is the fact that because it is a Communist who denounces injustice in the courts, police brutality and lynching, when it happens, doesn't change the truth of his charges. Just because Communists kick up a big fuss over racial discrimination when it suits their purposes, a lot of people try to pretend that the whole issue is a creation of Communist imagination.

But they are not fooling anyone with this kind of pretense, and talk about "Communists stirring up Negroes to protest" only makes present misunderstanding worse than ever. Negroes were stirred up long before there was a Communist party, and they'll stay stirred up long after the party has disappeared — unless Jim Crow has disappeared by then as well.

I've been asked to express my views on Paul Robeson's statement in Paris to the effect that American Negroes would refuse to fight in any war against Russia because we love Russia so much. I haven't any comment to make, except that the statement, if Mr. Robeson actually made it, sounds very silly to me. But he has a right to his personal views, and if he wants to sound silly when he expresses them in public, that's his business and not mine. He's still a famous ex-athlete and a great singer and actor.

I understand that there are some few Negroes who are members of the Communist party, and in event of war with Russia they would probably act just as any other Communists would. So would members of other minority and majority groups.

There are some colored pacifists, and they'd act just like pacifists of any color. And most Negroes — and Italians and Irish and Jews and Swedes and Slavs and other Americans — would act just as all

these groups did in the last war. They'd do their best to help their country stay out of war; if unsuccessful, they'd do their best to help their country win the war — against Russia or any other enemy that threatened us.

This isn't said as any defense of the Negro's loyalty, because any loyalty that needs defense can't amount to much in the long run. And no one has ever questioned my race's loyalty except a few people who don't amount to very much.

What I'm trying to get across is that the American public is off on the wrong foot when it begins to think of radicalism in terms of any special minority group. It is thinking of this sort that gets people scared because one Negro, speaking to a Communist group in Paris, threatens an organized boycott by fifteen million members of his race.

I can't speak for any fifteen million people any more than any other one person can, but I know that I've got too much invested for my wife and child and myself in the future of this country, and I and other Americans of many races and faiths have too much invested in our country's welfare, for any of us to throw it away because of a siren song sung in bass.

I am a religious man. Therefore I cherish America where I am free to worship as I please, a privilege which some countries do not give. And I suspect that nine hundred and ninety-nine out of almost any thousand colored Americans you meet will tell you the same thing.

But that doesn't mean that we're going to stop fighting race discrimination in this country until we've got it licked. It means that we're going to fight it all the harder because our stake in the future is so big. We can win our fight without the Communists and we don't want their help.

Chattanooga (Tenn) Times 6/14/44

SALARY RAISE FOR TEACHERS PLANNED HERE

School Board Says $242,587 More Money Will Be Needed Over Budget of 1943-44

The Chattanooga Board of Education, seeking further to raise the salary standards of its teaching staff, has prepared a new salary schedule that will require $242,587.80 more money than was allowed it in the 1943-44 budget, of which amount $100,000 would have to come from the city treasury, the board announced yesterday.

Commenting upon the ways and means by which the $242,587.80 can be provided, the board said as follows in its report:

"Now, the board of education is committed to a program of great economy and the strict application of the methods of business administration to the school system. The board proposes to maintain and extend its program of economical organization and administration and by this means to meet in part the advances now proposed. Of the $242,587.80 estimated as the cost of the proposed plan for teachers' salaries, it has been seen that the state will furnish approximately $116,000. The remaining $126,587.80 involved in the plan for teachers' salaries and the additional money needed for such services as might be added and for employes other than teachers would have to be provided by other means.

The board through savings in operation and maintenance, by means of savings in teaching positions, and by avoiding any provision for capital outlay in its 1944-45 budget will undertake to provide approximately $25,000 toward the $126,587.80 deficiency in the proposed plan for teachers' salaries and in addition by the same means will go as far as possible in meeting the other needs in its 1944-45 program. Thus, there would be approximately $100,000 which would have to be furnished as new money in addition to state funds and savings in order to make completely effective the plan proposed."

And even though the money is made available for the new salary schedule, the pay of Chattanooga teachers will still be the lowest of any other large municipal system in Tennessee, and will stand second from the bottom of 36 cities over the country having a population of between 100,000 and 200,000, the report stated. As the situation now stands, the report emphasized, Chattanooga is still at the bottom of the entire list of 36 cities from which reports were received.

It was explained, unofficially, that the school board obtained salary schedule reports from all cities [illegible] the 100,000 to 200,000 population bracket within the United States except about six. However, [illegible] 36 municipal systems from

which amount $100,000 would have to come from the city treasury, the board announced yesterday.

Commenting upon the ways and means by which the $242,587.80 can be provided, the board said as follows in its report:

"Now, the board of education is committed to a program of great economy and the strict application of the methods of business administration to the school system. The board proposes to maintain and extend its program of economical organization and administration and by this means to meet in part the advances now proposed. Of the $242,587.80 estimated as the cost of the proposed plan for teachers' salaries, it has been seen that the state will furnish approximately $116,000. The remaining $126,587.80 involved in the plan for teachers' salaries and the additional money needed for such services as might be added and for employes other than teachers would have to be provided by other means.

The board through savings in operation and maintenance, by means of savings in teaching positions, and by avoiding any provision for capital outlay in its 1944-45 budget will undertake to provide approximately $25,000 toward the $126,587.80 deficiency in the proposed plan for teachers' salaries and in addition by the same means will go as far as possible in meeting the other needs in its 1944-45 program. Thus, there would be approximately $100,000 which would have to be furnished as new money in addition to state funds and savings in order to make completely effective the plan proposed."

And even though the money is made available for the new salary schedule, the pay of Chattanooga teachers will still be the lowest of any other large municipal system in Tennessee, and will stand second from the bottom of 36 cities over the country having a population of between 100,000 and 200,000, the report stated. As the situation now stands, the report emphasized, Chattanooga is still at the bottom of the entire list of 36 cities from which reports were received.

It was explained, unofficially, that the school board obtained salary schedule reports from all cities within the 100,000 to 200,000 population bracket within the United States, except about six. However, of the 36 municipal systems from which reports were furnished to the Chattanooga school board, the local system is at the foot of the list in the matter of salaries.

$236,618 Increase

When the 1943-44 budget was adopted and approved by the City Commission, there was an increase of $236,618 in the appropriation over what had been allowed for the immediately preceding fiscal year. Of that amount, $205,000 came from the city treasury and $30,618 from the state treasury. With the additional $236,618 the board of education was able to bring salaries of Chattanooga teachers up to a schedule that it had adopted two years previously. The $205,000 increase in the city appropriation was allowed after the board of education, allied with various educational organizations, waged a vigorous campaign for the extra funds. But the board of education does not intend to conduct a similar campaign this year, that is for the $100,000 additional funds, the report stated.

"The board of education does not feel that it can again this year take an uncompromising position as it was forced by the circumstances to do one year ago and demand the additional minimum need for $100,000 in new money from local sources in order to achieve in full its program for 1944-45," the board's report stated.

"The board does feel that this money ought to be provided for even should that be the case, the Chattanooga schools will still be in an unfavorable position comparatively."

The school board emphasized, however, that it would insist upon the same appropriation from local sources as was received for the current fiscal year and indicated that it would be prepared to wage a fight to retain what it gained in the campaign for the $205,000 increase last year. Apparently the board anticipated that there might be an effort made to reduce the $205,000 increase for the 1943-44 budget in view of the fact that the Tennessee General Assembly, in extraordinary session last April, appropriated sufficient funds to grant every teacher and principal in all Tennessee public schools—the city of Chattanooga system included—an increase of $160 per

See Page Nineteen, Column Four

MORE TEACHER PAY PROPOSED IN CITY

From Page Three

year over what they were paid for the school term which ended only a short time ago.

Minimum Program

"As a minimum program the board will insist upon the same budget for 1944-45 as that provided for 1943-44. In the face of the grave needs of the schools, to do otherwise would be inexcusable," the report continued. "In addition, the board urges all citizens in positions of leadership and responsibility (and that, of course, includes the City Commission), and all other parsons concerned to take stock of the ways and means whereby Chattanooga, which compares so favorably in wealth and resources, without adverse effects can give more adequate support to the public schools next year and ultimately place her schools in proper position of service. There could be no better investment."

The board in its report emphasized that its request last year for a $205,000 increase in appropriation was only a "minimum requirement" at that time and does not, by any means, meet the problem. Commenting upon its action last year, the report stated:

Budgetary Advance

"The needs were so great that the board of education did not deem it wise to insist all at once upon a school budget which would be fully adequate for this system. However, the board did ask as a minimum measure for a very large budgetary advance amounting to $205,000 in new money, exclusive of increases in state funds and in addition to such funds as might be derived from further economies in the operation of the schools.

"The board of education in the 1943 report stated, despite the grave needs and the fact that even such substantial increases would not be fully adequate, that its considered judgment was the schools could be operated during 1943-44 'with new strength and certainly without further impairment of efficiency' should the minimum requests as indicated above ($205,000) be confirmed."

"When you, the citizens of Chattanooga were confronted with the challenging facts about the public school system, your response was truly characteristic of the highest traditions of our city, which has the habit of success in meeting the issues of public need and public welfare. The board's minimum program was approved, the school budget having been increased from $1,173,824 to $1,409,442, including a $205,000 increase from the city and an increase from the state funds amounting to $30,618."

The board said that since the "minimum program" had been approved by city fiscal authorities, it has received numerous inquiries in regards to the results that had been obtained from the additional funds. Partly in response to these inquiries the board said that it prepared its second edition of "Your [illegible] in a Nutshell."

SEEKS WINGS—AC Jack E. Peffer, son of Mrs. F. C. McMillian of Chattanooga and Lloyd Peffer of Atlanta, is now enrolled for advanced training at the Frederick, Okla., army air field and expects to receive his wings and commission in August. He was married May 20 to Miss Bettye Jean Purvine of Atlanta.

since July 1 of 57 per cent, which simply emphasizes the urgency of providing year-round employment and points to the need of increasing pay.

"While not all janitors have been placed upon the 12-month basis, it has been possible to give this steady employment and provide this needed service in cases of more than half of the janitors who have been regular employes, and who are older in the service."

Textbook Stock

Another improvement which the $205,000 additional appropriation brought, according to the school board, was its ability to build up its stock of textbooks.

"Last, but not least, in reviewing the highlights of progress made possible by the increased budget for 1943-44, the board is pleased to report that the great majority of needed textbooks as adopted three years ago by the state textbook commission have been at long last supplied to the schools through the first eight grades," the school board asserted.

But despite the program that has been made, the school board declared that there are still serious problems facing the system and perhaps the biggest among them is the inability of the board, with appropriations allowed for 1943-44, to advance the salary of the teaching corps a step further.

The report makes an analysis of the salary schedules of teachers in the other major municipal systems in Tennessee — Memphis, Nashville and Knoxville — and showed that the Chattanooga schedule was well under those of the other cities. The increase granted last year, the board [illegible]

surances have been given that if these sums are insufficient to achieve the new program, the city tax rate will be advanced as much as necessary in order to guarantee success. The Nashville school budget for 1944-45 will total $1,892,373.96. This budget is for a system with a teaching staff numbering only 30 more than the staff for the Chattanooga system.

"Though Nashville has more pupils than Chattanooga, she has fewer teachers in proportion because all Nashville first and second grade teachers teach double sessions, thus carrying a double load. Nashville is making plans to change this type of organization, with its bad features, within the near future so as to eliminate all double session programs. This change will add substantially to the number of teachers and to the school budget of the system."

Lower Tax Rate

The combined tax rate of Nashville and Davidson County is much lower than the combined rate of Chattanooga and Hamilton County. This situation results from the fact that Hamilton County's tax rate is about twice higher than Davidson County's. But the Nashville rate is higher than the Chattanooga rate.

Concerning the Memphis system, the board of education's report stated:

"During 1943-44 Memphis teachers were allowed a $300 per year cost-of-living supplement in addition to the normal salary increments given to those teachers who have not reached a maximum salary. This will be continued for 1944-45 and is exclusive of the state emergency increase of $202. Thus, Memphis teachers may expect next year to have their salaries increased $502 per position above the 1942-43 levels which reached maximum salaries of $1,800 and $2,100; for 1944-45 these levels will be fixed at $2,302 and $2,602 for elementary and high school teachers respectively."

The board published, in its report, a table showing a comparison of the salary scales of the Memphis, Nashville, Knoxville and Chattanooga systems. Chattanooga is at the bottom of the list. The table, together with the board's comment, follows:

	Maximum Salaries as Provided by Existing Salary Scales	
	Master's Degree	Bachelor's Degree
Memphis	$2,400	$2,400
	2,100	2,100
Nashville	2,100	2,000
Knoxville	1,950	1,850
Chattanooga	1,810	1,584

Memphis and Knoxville salaries for 1944-45 will be $202 higher since the state emergency salary supplements are to be added to the figures listed above. The Chattanooga figures include $42 of the state emergency salary supplement, but they, too, will be boosted by the 1944-45 state emergency money in the amount of $160. However, even this boost will leave Chattanooga at the bottom of the list.

Memphis does not operate under a salary schedule. These figures represent salaries paid to teachers in the highest groups.

Even if the $100,000 additional funds are furnished to supplement the extra money the state will provide, Chattanooga's salary scale will still be under those of Knoxville, Nashville and Memphis, the report averred.

The proposed new salary schedule promulgated by the board of education follows:

Years of Service	Class I (Teachers with Master's degree—five or more years of college training)	Class II (Teachers with four years of college training)	Class III (Teachers with less than four years of college training)
1	$1,200	$1,000	$ 810
2	1,275	1,075	885
3	1,350	1,150	960
4	1,425	1,205	1,035
5	1,500	1,300	1,110
6	1,575	1,375	1,185
7	1,662	1,462	1,270
8	1,749	1,549	1,355
9	1,836	1,636	1,440
10	1,923	1,723	1,525
11	2,010	1,810	1,610
12	2,100*	1,900	1,700

*Under the proposed schedule at the maximums including state emergency salary supplements were it achieved in full, Chattanooga would still be $502 below Memphis; $52 below Knoxville, and $202 below what Nashville teachers may expect to receive, for the state supplements there will be paid in addition to the scale.

Commenting upon the new schedule, the board stated:

"It will be observed that Chattanooga would remain at the bottom of the list of comparable Tennesse systems even by the proposed scale. But to achieve this next step in the further standardization of teachers' salaries will require $242,587.80 in additional funds. Of this amount the state will furnish approximately $116,000 in emergency funds for 1944-45 leaving a balance of $126,587.80 which would have to be furnished locally to meet the full scale."

The report, a 15-page document, was prepared under the supervision of Supt. Lawrence G. Derthick. Various students of the Kirkman Vocational High School made contributions. All of the art work and printing was done at the vocational school. The front cover was contributed by Sherman Paul, commercial art teacher at the Kirkman school, and pen and ink sketches included in the publication were contributed by Lillian Hixson, Le Roy Wilson, Florine Ashcraft, and Robert Thompson, students at Kirkman school. Pictures were composed by Virginia Paul, a teacher at the Kirkman school.

The report will be distributed to interested persons and organizations.

"The board of education in the 1943 report stated, despite the grave needs and the fact that even such substantial increases would not be fully adequate, that its considered judgment was the schools could be operated during 1943-44 'with new strength and certainly without further impairment of efficiency' should the minimum requests as indicated above ($205,000) be confirmed."

"When you, the citizens of Chattanooga were confronted with the challenging facts about the public school system, your response was truly characteristic of the highest traditions of our city, which has the habit of success in meeting the issues of public need and public welfare. The board's minimum program was approved, the school budget having been increased from $1,173,824 to $1,409,442, including a $205,000 increase from the city and an increase from the state funds amounting to $30,618."

The board said that since the "minimum program" had been approved by city fiscal authorities, it has received numerous inquiries in regards to the results that had been obtained from the additional funds. Partly in response to these inquiries the board said that it prepared its second edition of "Your School Problem in a Nutshell."

Morale Improved

In the first place, the ability of the city to place its teachers even on the modest salary schedule devised in 1941 has "vastly improved" the morale of the teaching corps, the board's report stated.

"This advance," the board said of its adoption of the 1941 schedule, "is too significant and too rich in implications to make comment necessary other than to point out that morale in a school system, like morale in an army, is even more vital than morale elsewhere.

"This improvement in morale has occurred for two important reasons. First, because for the first time it has been possible to meet the terms of the modest 1941 salary schedule, and second, there is a feeling that the citizens are more and more awakening to the vital functions of the public schools in preserving the ideals of our country."

The report further pointed out additional progress that the $205,000 increase enabled the board to make during the school term which just ended. It stated that "by means of economies effected through the school organizations resulting in the saving of certain teaching positions, it has been possible to allow partial credit for experience outside of the system on the salary schedule, thus making it slightly more attractive for experienced teachers to enter this system."

"Another accomplishment made possible through savings," the report went on, "has been the assignment of principals to duty one week before the opening of school. This plan allows the solution of many organizational problems before the opening day with the result that the first week of the term is much more effective. It is highly desirable to extend the term of service by the principals even further.

Improvements Made

"Many citizens have been considerably troubled by reason of the sad state of repairs in which the school buildings have fallen. One of the first acts of the board of education was to make personal inspections of the school plants which were found to be in dire need of rehabilitation. For three years a systematic program of improvements has been strictly observed and even stepped up during 1943-44 until, though there is a big job yet to be done before the buildings are placed in a standard condition, the signs of progress are impressive throughout the system."

A further improvement made as a result of the $205,000 increase in the city appropriations pertains to the janitorial staff, according to the report.

"The janitors, despite a scale of pay which is too low, were not given pay increases for 1943-44, but their budget was increased by a greater percentage than was the teachers' budget in order to extend their term of service from nine months to 12 months, a plan which gives year-round employment and one which gives the school protection and much-needed maintenance service during the summer months in keeping with established and proven practices in city school systems. This plan also aided materially in holding together the janitorial staff, though there has been a turnover

Textbook Stock

Another improvement which the $205,000 additional appropriation brought, according to the school board, was its ability to build up its stock of textbooks.

"Last, but not least, in reviewing the highlights of progress made possible by the increased budget for 1943-44, the board is pleased to report that the great majority of needed textbooks as adopted three years ago by the state textbook commission have been at long last supplied to the schools through the first eight grades," the school board asserted.

But despite the program that has been made, the school board declared that there are still serious problems facing the system and perhaps the biggest among them is the inability of the board, with appropriations allowed for 1943-44, to advance the salary of the teaching corps a step further.

The report makes an analysis of the salary schedules of teachers in the other major municipal systems in Tennessee — Memphis, Nashville and Knoxville — and showed that the Chattanooga schedule was well under those of the other cities. The increase granted last year, the board pointed out, permitted it to meet the 1941 schedule, which calls for a minimum of $900 a year for the beginner and a maximum of $1,810 for the teacher with long years of experience in the system and with high professional experience. Moreover, it gave maximums ranging from $1,269 to $1,584 per year for 654 out of the 720 teachers in the system, according to the report. Furthermore, the $205,000 increase raised the per capita expenditure for Chattanooga's school children from $59.22 to approximately $76.

Retarded Status

"It is only when comparisons are made not simply with other systems throughout the country, but with comparable and neighboring systems here in Tennessee, that the retarded status of Chattanooga is properly emphasized," the school board said. "These systems * * * did not stand still this year when through the generous response of the citizens our schools partially caught up, but rather these systems without exception proceeded immediately to forge ahead once again."

Knoxville, the report observed, has a school budget for the 1943-44 term totaling $1,612,456, which was $203,104 more than the Chattanooga system received. During that school term, for instance, Knoxville increased its school budget by $247,380. Moreover, it has a smaller system than Chattanooga and for that reason the per capita expenditure for the 1943-44 school term was $89.48. In fact, the board's report averred, Knoxville has steadily increased its per capita expenditures from $75.96 in 1941-42 to $89.48 for 1943-44. Knoxville also has raised its minimum salary level from $900 to $1,200 a year, the increase to be effective with the beginning of the 1944-45 school term. Also, last December the Knoxville system paid all of its personnel a 12 per cent increase in salary and the increase was retroactive to October.

Nashville teachers were increased $10 per month in the middle of the 1943-44 term and that was "in addition to the regular increments," the board's report stated.

Nashville Plans

"For next year, Nashville has successfully completed plans to initiate a program of increases which will enable elementary and junior high schoolteachers at the top of the scale, heretofore prevailing, to advance at once $350, and hereafter consistently $200 and $300 more (depending upon the amount of training)," the report further observed. "In the case of senior high schoolteachers the advances to these same new maximum will be consistent and will amount to $300 and $400 (depending upon the amount of training).

"At the same time, Nashville is maintaining her beginning salary of $1,200. All of these figures are exclusive of the state emergency allowances of $202 ($42 for 1943-44, plus $160 for 1944-45) for each teaching position. Thus, the 1944-45 beginning salary in Nashville will be $1,402 (compared to $900 in Chattanooga), and the maximums likewise will be $202 higher.

"Exclusive of state funds, in order for Nashville to achieve her new program, the school budget will be increased $175,000 from city funds and $92,373.96 from Davidson County elementary school funds. Furthermore, as-

mentary and high school teachers respectively."

The board published, in its report, a table showing a comparison of the salary scales of the Memphis, Nashville, Knoxville and Chattanooga systems. Chattanooga is at the bottom of the list. The table, together with the board's comment, follows:

	Maximum Salaries as Provided by Existing Salary Scales	
	Master's Degree	Bachelor's Degree
Memphis	$2,400	$2,400
	2,100	2,100
Nashville	2,100	2,000
Knoxville	1,950	1,850
Chattanooga	1,810	1,584

Memphis and Knoxville salaries for 1944-45 will be $202 higher since the state emergency salary supplements are to be added to the figures listed above. The Chattanooga figures include $42 of the state emergency salary supplement, but they, too, will be boosted by the 1944-45 state emergency money in the amount of $160. However, even this boost will leave

education follows:

Years of Service	Class I (Teachers with Master's degree—five or more years of college training)	Class II (Teachers with four years of college training)	Class III (Teachers with less than four years of college training)
1	$1,200	$1,000	$ 810
2	1,275	1,075	885
3	1,350	1,150	960
4	1,425	1,205	1,035
5	1,500	1,300	1,110
6	1,575	1,375	1,185
7	1,662	1,462	1,270
8	1,749	1,549	1,355
9	1,836	1,636	1,440
10	1,923	1,723	1,525
11	2,010	1,810	1,610
12	2,100*	1,900	1,700

*Under the proposed schedule at the maximums including state emergency salary supplements were it achieved in full, Chattanooga would still be $502 below Memphis; $52 below Knoxville, and $202 below what Nashville teachers may expect to receive, for the state supplements there will be paid in addition to the scale.

BATTLE OF THE BALLOT

Ga. White Press OKs Primary Ban

ATLANTA—Leading white newspapers in Georgia have endorsed the recent ban on the lily-white primary.

Throughout the state, the press commented favorably on the ruling by Middle District Federal Judge T. Hoyt Davis which declared the white primary unconstitutional and invalid.

The Sunday Ledger-Enquirer, of Columbus, hometown paper of the Rev. Primus E. King, who won the decision over the Muscogee Democratic Executive committee, commented following the ruling:

"Federal Judge T. Hoyt Davis' decision that Negroes are entitled to vote in Georgia 'white' primaries should surprise no one who is familiar with the supreme court's interpretation of universal rights in the Texas and Arkansas cases, and we rather think his opinion will prevail even upon appeal.

"Actually we know of very few persons who would question the moral right of Negroes to participate in primaries which in practical effect select the officers who govern him.

"They have been barred from white primaries simply because white Democrats have always felt they had the right to act as free agents in naming their own candidates for public office, and that they had the additional right to bar from their counsels anyone — regardless of race or color — whose participating was deemed undesirable.

"There are many of us who still feel that way about the inherent right of white Democrats—or blue black or purple Democrats — select their own candidates, but perhaps the time has come when tradition (and personal preferences) must bow to the compelling mandate of constitutional law which all Americans respect instinctively.

"For ourselves, we yield gladly, and with no fear of the outcome."

The Macon News declared:

"It is the opinion of this newspaper that federal Judge Hoyt Davis is right in his judgment in the Columbus election that Negroes cannot be debarred from voting in Georgia primaries without violating rights guaranteed by the constitution of the United States.

"Let's be honest with ourselves and admit the obvious facts. The Democratic primary in Georgia is a state institution; there is nothing 'private' about it. It absolutely controls the election of all state officers. And exclusive of Negroes from it, solely because of their color, is therefore in direct violation of the federal constitution. We have a theory that no people ever went wrong by doing right. And this thing that Judge Davis has decided must be done in Georgia is right.

"The right of the citizen—white, black or yellow—to vote is a fundamental right of democracy. The question really is whether the people of Georgia are going to make

Bessemer were elected vice presidents at large.

During the meeting last Saturday, Hosea Hudson, a union president, took the floor in a brilliant speech pleading to the convention to set up machinery to aid "Your Negro brothers who are being turned down for nothing when they try to register." His speech was greeted with applause when he mention that in Japan General McArthur was giving the vote to the Japanese women while in Jefferson county the board of registrars is taking the vote away from Negroes.

Negro and white delegates met in the same auditorium, but were separated on the right and left side of the aisles.

Says New Deal Backers Lack 'Sense of a Goose'

COLUMBIA, S. C. (A N P) — Disturbed over the mounting fight by southern Negroes to vote as Democrats, a white Alabamaian who refused to sign his name sent from Fort Payne, Ala., a letter to John H. McCray, state chairman of the Progressive Democratic party, along with a newspaper clipping telling of the DAR's treatment of Miss Hazel Scott.

The letter said: "Any Negro who will organize or vote for the New Deal party should have been in Japan when the atomic bomb was loosed down there.

"If the Democratic par wanted you they would let y vote in South Carolina, y home state, Texas, Georgi A bama, Mississippi, Arkansas a in fact all the southern states

"Why was Rep. Powell's w denied admission to Constitut hall? Simply because the N Deal doesn't love her color. W were 25 Negro soldiers s down at Camp Sibert, Ala., buried like cattle in 1942? Th why has the New Deal not passed laws in the south to do away with public lynchings?

"A Negro who will sponsor the New Deal's cause hasn't the sense of a goose."

S. C. Whites Claim Bias In New Negro Demo Party

COLUMBIA, S. C. (A N P) — Following the two-day convention here last week of the National Council of Negro Democrats, several native white South Carolinians have complained to

Sweeping Decision Opens Primary To All Citizens

(From Saturday's Edition)

In a sweeping and eagerly awaited decision Friday, federal district Judge T. Hoyt Davis of the Middle Georgia Division, delivered the final knock-out blow to the Georgia White Primary when he declared unconstitutional, rules and regulations of the State Democratic Executive Committee which deny to any group the right to vote on account of race and color, a right he declared to be federally secured under the provisions of the Fourteenth, Fifteenth and Seventeenth amendments.

Judge Davis' decision follows the formal closing of arguments on the primary, held at Macon on September 13, 14, tnd 15. in which the Rev. Primus E. King, Columbus, Georgia Negro minister, through his attorneys, sought damages of $5,000 and the right to vote in all elections, as a result of his denial of a ballot in the July 4, 1944 primary elections, conducted by officials of Muscogee County.

Defendants in the case included E. Chapman, W. E. Swinson, T. McGee, S. J. Green, Sim Garrett, Anna C. Cartledge, A. W. Jenkins, W. Moye and Wilbur Glenn, all of Muscogee County, Columbus, Ga.

Counsel for Rev. King included Harry S. Strozier, brililant Macon Georgia lawyer and liberal, Arthur Shores, Negro leader and able Birmingham lawyer, together with attorney O. D. Smith of Columbus, who engineered the primary suit and gave friendly counsel to Columbus Negroes. Counsel for defendants were Attorney Charles J. Bloch, Macon lawyer and president of the Georgia Bar Association; Ellsworth Hall of Macon, Georgia and A. Edward Smith of Columbus.

Judge Davis' decision, which he took under advisement and study, extends over a stretch of 22 days. and follows the formal introduction of evidence for and against the Georgia Primary. In the main argument for the plaintiff, Attorney Strozier introduced evidence to show that the Primary is an integral part of the State election machinery; that the sheriffs and all other law enforcing officers, together with the county and city officials are employees of the state, as such, they make the state liable for denying to Negroes the right to vote. So intimately woven are the election laws and election machinery that "even the Secretary of the State Democratic Executive Committee maintains his office in the State Capitol in Atlanta," declared Attorney Strozier.

Attorney Bloch, representing the defendants, contended that in Georgia, unlike in Louisiana, and Texas the Smith-All Wright decision could not obtain, since in this state unlike those two," Georgia has no statutory laws regulating the primary; that it does not require the holding of primaries and that only when such elections are held does the state seek to regulate their conduct.

'Acting as the duly constituted authorities of the Democratic Party in refusing to permit the plaintiff to vote," declared Judge Davis, "is said primary solely on account of his race and color, deprived the plaintiff of a right secured to him by the Constitution and laws of the United States and were in violation of the Fourteenth, Fifteenth and Seventeenth amendments. In addition to this hard-fought and long awaited ruling, Judge Davis also ordered the State to pay $100 to Rev. King with interest thereon at the rate of 7 per cent annually.

Judge Davis suceeds to the federal bench the late Bascom S. Deaver. He was the prosecutor in the Claude Screws lynching at Newton, Baker County, Georgia. He based his decision on the Smith-Allwright decision in Texas case and the Classic decision against the state of Louisiana and adds: "However, a fair consideration of the foregoing Georgia statutes leads to the conclusion that whenever a political party holds a primary in the state, it is by law an integral part of the election machinery. Once a decision to hold a primary is made, the statutes of Georgia take hold and direct every essential step for registration and qualification of voters to the placing of the names of the nominees on the general election ballot."

Besides Rev. King other Columbus leaders involved in the vote denials of July 4, 1944, included T. H. Brewer, Columbus physician; Dr. K. H. Terry, Rev. H. I. Bearden, B. H. Strickland, John S. Stroniers, and scores of others, who threw the full weight of their influence behind the fight to establish the validity of their claims to an unrestricted ballot.

A similar case was filed in Atlanta, with Wallace Van Jackson suing for the right to have his and other Negro names submitted to the election officials. The Jackson suit, now that Registrar Suttles has complied with that phase in his complaint, will probably be expanded.

Attorney Bloch, promises to appeal the decision as soon as papers can be prepared. The dicision will permit some 250,000 odd thousands of Negroes to cast a vote in the next State Primary election.

BATTLE OF THE BALLOT

Ga. White Press OKs Primary Ban

ATLANTA—Leading white newspapers in Georgia have endorsed the recent ban on the lily-white primary.

Throughout the state, the press commented favorably on the ruling by Middle District Federal Judge T. Hoyt Davis which declared the white primary unconstitutional and invalid.

The Sunday Ledger-Enquirer, of Columbus, hometown paper of the Rev. Primus E. King, who won the decision over the Muscogee Democratic Executive committee, commented following the ruling:

"Federal Judge T. Hoyt Davis' decision that Negroes are entitled to vote in Georgia 'white' primaries should surprise no one who is familiar with the supreme court's interpretation of universal rights in the Texas and Arkansas cases, and we rather think his opinion will prevail even upon appeal.

"Actually we know of very few persons who would question the moral right of Negroes to participate in primaries which in practical effect select the officers who govern him.

"They have been barred from white primaries simply because white Democrats have always felt they had the right to act as free agents in naming their own candidates for public office, and that they had the additional right to bar from their counsels anyone — regardless of race or color — whose participating was deemed undesirable.

"There are many of us who still feel that way about the inherent right of white Democrats—or blue black or purple Democrats—to select their own candidates, but perhaps the time has come when tradition (and personal preferences) must bow to the compelling mandate of constitutional law which all Americans respect instinctively.

"For ourselves, we yield gladly, and with no fear of the outcome."

The Macon News declared:

"It is the opinion of this newspaper that federal Judge Hoyt Davis is right in his judgment in the Columbus election that Negroes cannot be debarred from voting in Georgia primaries without violating rights guaranteed by the constitution of the United States.

"Let's be honest with ourselves and admit the obvious facts. The Democratic primary in Georgia is a state institution; there is nothing 'private' about it. It absolutely controls the election of all state officers. And exclusive of Negroes from it, solely because of their color, is therefore in direct violation of the federal constitution. We have a theory that no people ever went wrong by doing right. And this thing that Judge Davis has decided must be done in Georgia is right.

"The right of the citizen—white, black or yellow—to vote is a fundamental right of democracy. The question really is whether the people of Georgia are going to make democracy effective in this state. We have an idea that they are, because deep in their souls they know they ought. And they want to do the right thing.

"Moreover, in our opinion they have nothing to fear from doing it. Negroes will divide on public issues like white people and will react like other ordinary human beings to the responsibilities of citizenship. We need to get rid of our foolish fears and make up our minds to practice the preachments of democracy."

The Atlanta Journal editorialized: "Is there anything revolutionary or ominous in this decision? The Journal does not regard it... There have been no radical upsets in Louisiana and Texas since their Democratic primaries were adjusted to the supreme court's ruling. The fact is, realistic Georgians have recognized that it is neither sound policy nor good politics to put the state in the attitude of evading or defying fundamental laws of the land."

Ala. CIO Meets; Rips White Vote Bill

BIRMINGHAM. (ANP) — Opposition to the Boswell White Supremacy Vote bill was voiced in resolutions adopted Saturday at the CIO State convention in session here October 19-21.

The convention also favored the FEPC, fair registration to vote, improving housing and the full employment bill among its resolutions.

About 100 Negro delegates attended this convention which also adopted a new constitution.

Robert McGruder Sr., of Montgomery and Asberry Howard of Bessemer were elected vice presidents at large.

During the meeting last Saturday, Hosea Hudson, a union president, took the floor in a brilliant speech pleading to the convention to set up machinery to aid "Your Negro brothers who are being turned down for nothing when they try to register." His speech was greeted with applause when he mention that in Japan General McArthur was giving the vote to the Japanese women while in Jefferson county the board of registrars is taking the vote away from Negroes.

Negro and white delegates met in the same auditorium, but were separated on the right and left side of the aisles.

Says New Deal Backers Lack 'Sense of a Goose'

COLUMBIA, S. C. (ANP) — Disturbed over the mounting fight by southern Negroes to vote as Democrats, a white Alabamaian who refused to sign his name sent from Fort Payne, Ala., a letter to John H. McCray, state chairman of the Progressive Democratic party, along with a newspaper clipping telling of the DAR's treatment of Miss Hazel Scott.

The letter said: "Any Negro who will organize or vote for the New Deal party should have been in Japan when the atomic bomb was loosed down there.

"If the Democratic par wanted you they would let y vote in South Carolina, yo home state, Texas, Georgia, A bama, Mississippi, Arkansas a in fact all the southern states

"A Negro who will sponsor the New Deal's cause hasn't the sense of a goose."

S. C. Whites Claim Bias In New Negro Demo Party

COLUMBIA, S. C. (ANP) — Following the two-day convention here last week of the National Council of Negro Democrats, several native white South Carolinians have complained to the Progressive Democratic party's leader, John H. McCray, that they were not being given sufficient prominence.

The complaints have been registered by liberal whites, those of Jewish extraction and several bolters from the "lily-white" Democratic party, all of whom supported the party's senatorial candidate last year, Osceola E. McKaine.

Open to all races and creeds, the Progressives plan a statewide membership campaign among white citizens, McCray said, and that by next spring when reorganization is undertaken at the 1946 state convention, many whites would hold offices now held by colored party members.

In a sweeping and eagerly awaited decision Friday, federal district Judge T. Hoyt Davis of the Middle Georgia Division, delivered the final knock-out blow to the Georgia White Primary when he declared unconstitutional, rules and regulations of the State Democratic Executive Committee which deny to any group the right to vote on account of race and color, a right he declared to be federally secured under the provisions of the Fourteenth, Fifteenth and Seventeenth amendments.

Judge Davis' decision follows the formal closing of arguments on the primary, held at Macon on September 13, 14, tnd 15. in which the Rev. Primus E. Let Negroes Vote—Arnall

Refuses To Join In Any Subterfuge

By JOHN COURIC

Gov. Arnall has called upon Georgians as "good citizens" to accept the Negro's right to vote and has flatly refused to "be a party to any subterfuge or 'scheme' designed to nullify the orders of the courts."

Declaring he will not call the Legislature into an extraordinary session, the Governor, in a statement yesterday, said he was convinced the General Assembly would refuse to repeal the State's primary laws even if convened.

However, he added, if such a repeal were effected, primary elections, in his opinion, still would be a part of the State's election machinery and therefore subject to federal laws.

Pointing out the County Unit System and laws against election fraud would be voided by a repeal of State primary regulations, the Governor said he would not assume responsibility for such a move.

"If the members of the Legislature want to assume the responsibility, they have the right," he declared.

He termed the County Unit System a "law that affords the small counties recognition in State political affairs." The importance of this section is the basis of his belief that the Legislature would not repeal the White Primary Law.

"Should the criminal statutes be abolished," he added, "the people would have no assurance the primary elections would not be 'stolen' by fraud and corruption."

Both House Speaker Harris and former Gov. Talmadge have advocated the repeal of the State's primary law as a means of preventing Negro voting. They also have argued for keeping the County Unit System and regulations against fraud by rulings from the State Democratic Executive Committee.

The Governor's statement in full follows:

"The courts having spoken, I call upon the people of Georgia to accept their decisions. It is our duty as good citizens to uphold the courts, the Constitution and laws of our land. As governor, sworn to uphold the Constitution and laws, I will not be a party to any subterfuge or 'scheme' designed to nullify the orders of the courts.

"I am persuaded that the General Assembly would refuse to repeal the law providing a county unit system in our primary elections. This is the law that affords the small counties recognition in state political affairs. Likewise, it is my opinion that the General Assembly would refuse to abolish the criminal laws governing our primary elections. Should the criminal statutes be abolished, the people would have no assurance that the primary elections would not be 'stolen' by corruption and fraud.

"It is my considered legal judgment that even if the county unit system and the criminal statutes against corruption in primary elections were repealed, the courts would still hold that the primary elections are a part of the state election machinery in that they are recognized on the official ballot and are, therefore, protected by the provisions of the United States Constitution.

"I do not propose to call an extraordinary session of the General Assembly to do away with the county unit system and the criminal laws governing primary elections. If the members of the Legislature want to assume that responsibility, they have that right."

Arnall Primary Stand Assures Session--Harris

House Speaker Roy V. Harris is sure that Gov. Arnall's statement calling for citizens to uphold the Negro's right to vote will guarantee an extra session of the Legislature either in May or June.

Harris, reached last night in Augusta, where he is waging a campaign to keep his seat in the Legislature, called the county unit system a smoke screen. "We had the county unit system before we had primary laws. We will always have the county unit system," the House Speaker declared.

"As far as I'm concerned, I'm in favor of the white primary. It will be reinstated in Georgia in an extra session or at the regular session in 1947," he added.

When asked if he thought any type of primary elections would be held as part of the state's election machinery and, therefore, subject to federal laws, Harris remarked: "There is nothing to that statement by the Governor. The courts have already held primaries not governed by state laws can restrict its voters."

B'ham Registrars Face Refusal Prosecution

BIRMINGHAM, Ala.—(SNS)—The Jefferson County Board of Registrars — Dr. J. B. Vines, R. J. Creel and Mrs. Eva M. Whitfield must stand trial for allegedly illegally refusing to register Mrs. Pastorah Vinson as an elector on April 10, 1945.

That is the substance of the opinion of Federal Judge Clarence Mullins on November 29 who "overruled in all other respects" but the class feature of the state's motion to dismiss the suit in which Mrs. Vinson, a registered nurse and property owner, asked for $5,000 damages from the registrars, declaratory judgment and an injunction to restrain the registrars subjected her to an oral test not required of white applicants and rejected her application solely because of her race and color.

Attorney Arthur D. Shores of Birmingham and Thurgood Marshall noted constitutional lawyer of New York City are representing Mrs. Vinson. County Solicitor Robert McAdory is representing the defendant registrars.

The Plaindealer Dec. 7, 1945

SUPREME COURT DECISION OPENS VOTE TO NEGROES IN ATHENS

Athens, Ga. (ANP)—Negroes voted without incident in the Democratic primary last week. It was the first time in 40 years that Negroes had voted in the Democratic primary election. According to the city clerk, upwards of 75 per cent of the 500 registered Negroes participated in the balloting which is tantamount to election.

Decision to permit Negroes to vote in the Athens city primary came a few days before the election when the Clarke County Democratic Executive committee voted 9 to 1 to comply with the federal election laws as decided in a ruling by Judge T. Hoyt Davis of the U. S. District court. Judge Davis had ruled that the Muscogee Democratic committee had erred in barring the Rev. Primus King from voting in the July, 1944, Columbus primary on the basis of his color and race and a fine was assessed with interest against the defendants. In his ruling, Judge Davis said the state of Georgia could not bar Negroes from voting in the vital elections on the basis of rulings in the Texas and Louisiana cases decided by the U. S. Supreme court and under constitutional law.

The Athens' committee's ruling followed a heated session in which officials let it be known they would not "hold the bag" in defying Judge Davis' ruling. It was pointed out that Judge Davis had the power to hold the committee members in contempt of court and to fine and imprison them, or impose both punishments, if the committee should fail to comply with the law.

According to the Athens Banner-Herald, two of the members of the Clarke Executive committee instituted the action to change the custom of holding a white primary to the exclusion of Negro voters. They informed Secy. Lumpkin they were of the opinion that the law required that Negroes be allowed to vote in the Democratic primaries. A meeting of the whole committee followed and after considerable debate, the body voted 9 to 1 to permit Negroes to vote without restriction.

There were no incidents on election day, although police watch was kept over the polling places at the provision of the committee and the promise of Mayor Robert L. McWorther that there would be no confusion at the polls. Mayor McWorther was renominated reelected to the post for the third term.

Unofficially, it was reported that one of the three candidates for the mayoralty nomination, faced with the prospect of defeat because of official allegiances and vote ties, brought pressure to bear on the Democratic Executive committee to permit Negroes to vote, using the Davis ruling for convenience.

Georgians generally were hailing the breakdown of the primary barrier in Athens, hopeful that other executive county committees would follow the Davis ruling pattern.

PRIMARY VOTING ISSUE IS RAISED

PANAMA CITY, Fla., Jan. 3—(AP)—The question of Negro voting was injected into Alabama's gubernatorial campaign today with an appeal for candidates to support a proposed constitutional amendment tightening registration qualifications.

A request for endorsement of the amendment was addressed to four avowed candidates for governor by E. C. Boswell, Geneva, Ala., legislator, member of the State Democratic Exective Committee.

The constitutional proposal, which will be voted upon in the November general election, would require prospective registrants to be able to "understand and explain" instead of merely reading portions of the State's basic law. It also would eliminate from the constitution the provision that anyone owning $300 worth of property is qualified to register.

Boswell, an attorney who maintains an office here, said in his letter to the candidates that be believed passage of the amendment "essential to the preservation of white supremacy and an intelligent electorate."

He expressed belief "every white Democrat" in the State would favor the change "if it is fully understood."

The appeal was sent, Boswell said, to Lt. Gov. Handy Ellis, Chairman Gordon Persons of the public service commission, Agriculture Commissioner Joe Poole and Probate Judge Elbert Boozer, of Calhoun County, the four who have announced their intention to qualify for governor in the May 7 Democratic primary.

copy so-called because it normally is kept in the Lincoln cathedral—is considered the finest of all.

Alabama Moves To Let Negroes Vote in Primaries

Montgomery, Ala., Jan. 12.—(U.P.): The state Democratic executive committee of Alabama today, by failing to insert the words "white primary only" in their regulations governing the 1946 primary, opened the door for negroes to participate "providing they meet the qualifications".

The action departed from a procedure 75 years old.

The committee also officially designated May 7 as the date of the primary, and June 4 as the time of a run-off, if necessary; set up qualifications for candidates, designated entrance fees for the candidates, specified that no citizen could enter the lists for a judgeship of a court who was under disbarment or suspension, and endorsed and asked for the voters' support of the Boswell amendment, which will be offered in the general elections in November.

The Boswell amendment sets up qualifications of voters, among other things, on their ability to understand any article in the U. S. constitution, as well as their ability to read and write it.

In a short address before the committee Chairman Gessner T. McCorvey, of Mobile, said:

"The federal law prevents our excluding negroes from our primaries and we must abide by it. There will not be many who will vote in this year's elections, and they will be more intelligent negroes. The white folks will run the state like they always have, and always will."

Atlanta Ga. Journal
Jan. 13, 1946

Alabama Demos Open Primaries To Negro Votes

MONTGOMERY, Ala., Jan. 12. (AP)—Alabama democrats discarded Saturday their traditional "white" primary and, in effect, left the rolls open to Negroes otherwise qualified by law to participate in party elections.

The action, presaged by previous recommendations by party leaders, featured a meeting of the state executive committee which formally opened the state's 1946 political campaign.

With qualifications for the May 7 primary set—a runoff will be held June 4 where necessary—four candidates for governor and several others for lesser officers filed their formal declarations.

Abolition of the white primary was urged by Gessner T. McCorvey, Mobile lawyer and committee chairman, who said it was necessary to meet conditions set out in a U. S. Supreme Court decision to the effect that Negroes could not be barred from Texas democratic primaries.

At the same time, however, the executive group went on record urging adoption of a constitutional amendment, to be submitted next November, fixing more stringent requirements for registration.

The proposed amendment would require the applicant for registration to be able to understand any section of the Constitution, as well as to read it as now required, and would eliminate a $300 property ownership clause.

McCorvey told the committee the amendment would "prevent those residents who are not yet qualified from participating in elections."

'Qualified' Negroes Get Vote In State Democratic Primaries

Three Put Hats In Ring For Governor's Seat; Voting Requisites Meanwhile May Be Stiffened

BY HUGH W. SPARROW
News Staff Writer

MONTGOMERY, Ala., Jan. 12—Alabama Democratic Executive Committee members, with but one outspoken dissenter in the group, today removed traditional barriers against "qualified" Negroes voting in Democratic primaries but at the same time unanimously urged ratification next November of the Boswell constitutional amendment which would make it increasingly difficult for Negroes to register.

The action was taken, largely through necessity as the state committee formally designated May 7 as date for the 1946 state and local primaries and June 4 as the runoff date, and was followed by the formal entry of three candidates for governor.

Lt. Gov. L. N. (Handy) Ellis, Agriculture Commissioner Joe N. Poole and Calhoun County Probate Judge Elbert Boozer filed their declarations of candidacy with State Chairman Gessner McCorvey, of Mobile, at the conclusion of the state committee meeting.

Alabama Public Service Commission President Gordon Persons announced that he would mail his papers to the state chairman immediately.

* * *

A POSSIBLE FIFTH CANDIDATE for governor, James E. (Big Jim) Folsom, of Cullman, did not qualify and continued largely noncommittal regarding his candidacy plans.

By its action today the executive committee departed with apparent reluctance, from the long established custom of permitting only white persons to vote in Democratic primaries. State Chairman McCorvey recommended the step as a means of complying with a recent U. S. Supreme Court ruling that Negroes cannot be barred from voting in Democratic primaries when the cost is paid from public funds.

Despite McCorvey's explanation that the action was necessary if Democrats are to continue to conduct primaries for the nomination of candidates and his assurance that the Boswell amendment would guarantee continued control of party affairs by white people, T. H. Maxwell, veteran committee member from Tuscaloosa dissented.

Maxwell said he approved the resolution designating May 7 as the primary date and fixing qualifications of voters and candidates but added that he objected to removal of the word white in describing the Democratic primary.

We can't defy the U. S. Supreme Court, McCorvey replied.

A moment later McCorvey put the question and the resolution was adopted.

Previously McCorvey had explained the court ruling and its effect upon Democratic primaries in Alabama and added that we should go ahead and bow to the law as constructed by the Supreme Court. Even if we do permit qualified Negroes to vote, he added, "it won't amount to a row of pins. In come counties there are only two or three registered Negro voters and in Mobile County there are about 200 Negro voters against 19,000 white voters. The white people are going to run things. They always have and always will."

The Boswell amendment, he added, gives county boards of registrars enlarged powers to grant or deny applications by Negroes to become registered voters.

Negroes Seek To Qualify Before Registrars Here

Mobilians Take Action To Be Placed On List Of Recognized Voters; Flock To Registration Booths

Chairman Milton Schnell reported Monday that more than 30 negroes appeared before the Mobile County Board of Registrars seeking to qualify as voters. Schnell said the number was "unusually large." He attributed the pickup to action of the State Democratic Executive committee Saturday in Montgomery in opening its primary elections to qualified negro voters.

All of applicants were given a written examination testing their ability to read and comprehend the United States constitution and Schnell said that only one of three applicants whose papers had been graded qualified as a registered voter.

Test Takes 90 Minutes

The tests required about an hour and a half, Schnell said.

In the group of negroes were several veterans. Under a 1945 state law, veterans are exempted from paying the state poll tax but are required to meet registration requirements.

Schnell said negroes and whites alike, who had little educational background, were given the constitution test.

Read Constitution

Present registration requirements in Alabama are, he said, that the applicant be able to read and understand any section of the federal constitution; that he must reside in the county one year, in the state two years and in the ward three months; that he must be 21 years old, and own real or personal property valued at $300.

Chairman Gessner T. McCorvey of the state executive committee estimated recently only 275 of the approximately 19,000 registered voters in Mobile County were negroes.

Many Mobilians, meantime, acted

to get on the list of qualified voters prepared by the Board of Registrars, Schnell said. He referred them to registration booths which have been set up in the city's three banks and Gayfers and Hammel's or to the board's headquarters in the Board of Revenue assembly room at the county courthouse.

Young women have been stationed in these registration booths to aid persons whose names were excluded from the list. By going to such booths within the next 10 days, the elector will be enabled to have his name included in the list of qualified voters to be published by Judge of Probate Norvelle R. Leigh, Jr.

strangling a government employee here in October, 1944, was denied a review of his case. The victim was Dorothy Berrum, 18, of Chippewa Falls, Wis.

MOBILE NEGROES SEEK SUFFRAGE

MOBILE, Ala., Jan. 14—(AP)—Chairman Milton Schnell reported today that more than 30 Negroes appeared before the Mobile County Board of Registrars here today seeking to qualify as voters.

Schnell said the number was "unusually large." He attributed the pickup to the action of the State Democratic Executive Committee Saturday in Montgomery in opening its primary elections to qualified Negro voters.

All of the applicants were given a written examination testing their ability to read and comprehend the United States Constitution and Schnell said that only one of three applicants whose papers had been graded qualified as a registered voter.

The tests require about an hour and a half, he said.

In the group of Negroes were several veterans. Under a 1945 state law, veterans are exempted from paying the state poll tax but must meet registration requirements.

Schnell said that Negroes and whites alike, who had little educational background, were given the Constitution test.

Present registration requirements in Alabama are, he said, that the applicant be able to read and understand any section of the Federal Constitution; that he reside in the county one year, in the state two years and in the ward three months; that he be 21 years old, and own real or personal property valued at $300.

Chairman Gessner T. McCorvey of the State Executive Committee estimated recently that only 275 of the approximately 19,000 registered voters in Mobile County were Negroes.

Feb. 1 is the registration deadline.

January 16, 1946

Perfect Weather and Fine Labor Conditions Make Montgomery Ideal for New Industries

Negro Registration Heavy In Mobile

MOBILE, ALA., Jan. 15.—(AP)—Twelve Negroes were registered as qualified voters today as registration seekers in that group continued to appear before the Mobile County board of registrars in what Chairman Milton Schnell described as "unusually large" numbers.

The board chairman said the negroes now seeking to get their names on the list of those eligible to cast ballots in the coming state elections are school teachers and returning servicemen. Many in the latter category he asserted, were attending Negro colleges before they entered the armed forces.

Four of some 30 Negroes who sought to register today were rejected after taking written examinations to test their ability to read and understand the United States constitution, Schnell reported, adding that many of the group could not be reached before the office closed for the day.

Negroes who are college graduates are not required to take the examination, but any white person or Negro whose ability to read and understand the national constitution is in question must pass the test, Schnell said.

The chairman expressed the view that when Negro school tachers of the county have completed their efforts to register, only returning servicemen will remain among the group of Negros aspiring to gain the voting privilege.

Schnell attributed the pickup in Negro registration efforts to the action of the State Democratic Executive Committee in opening its primary elections to qualified Negro voters, and also to the poll tax exemption granted ex-servicemen.

Negro Vote Signup Tops Whites 2-1

By GEORGE BEEBE
Herald State Editor

Political events continued to hold the Florida news spotlight Tuesday, with the most startling announcement coming from West Palm Beach officials that negro

The Day In Florida

registrants for both city and county-state elections outnumbered the whites almost two to one.

It was estimated that of 2,800 persons who have registered there since the books opened Jan. 2, three fourths were negroes. Almost all of the negroes are signing up as democrats.

In Tallahassee, Assistant Secretary of State M. E. Tolson said that State Sen. Wilbur King of Zolfo Springs cannot run for the railroad commission office to be vacated next January by Eugene Matthews, because he supported a bill in the legislature increasing the salaries of railroad commissioners.

Under Florida law, Tolson said, no member of the legislature may be a candidate for an office of which he has increased the salary or helped to create, while he still is a member of the legislature.

New candidates announcing Tuesday were State Sen. W. A. Shands of Gainesville, who seeks re-election; C. Farris Bryant of Ocala, who seeks a seat in the house of representatives from Marion County; Tommy Kurtz, 27, Fort Meyers attorney, candidate for state representative from Lee county, and State Rep. Tim M. Seller of Leesburg, candidate for re-election.

In the meantime, Republicans of the First congressional district revealed they will fire their opening gun of the 1946 political campaign at a meeting Monday in Tampa.

Florida. They came to St. Petersburg for the winter to visit their daughter, Mrs. John Wilhelm, 126 Fifteenth avenue northeast.

Democrats Grant Vote to Negroes

Over the angry, shouted dissent of a scant five members, the state's Democratic executive committee yielded Monday to a U. S. supreme court decision and granted negroes the right to vote in party primaries.

A resolution which omitted the traditional word "white" from the description of a Democratic elector slipped through without opposition at the comittee's meeting in Tampa.

But a second resolution, urging that separate voting places be set up for negroes "whenever advisable," drew the only negative notes that were registered during the meeting.

There was no discussion on the resolution and when Chairman Tom Conely of Okeechobee City called for a vote there was a murmur of "ayes" and a few loud "noes."

The resolution set forth that since the supreme court has ruled that negroes must be permitted to vote in Texas primaries and since Florida's laws are similar to those of Texas the same ruling would apply to Florida.

THE COMMITTEE ALSO voted to:

1. Place state's attorneys and juvenile judges on the primary ballot.
2. Request 25 per cent of the proceeds from Jackson day dinners for the state committee.
3. Support President Truman throughout his administration.

Numerous party leaders attended the brief session and speakers included Attorney General Tom Watson and two former governors, Fred P. Cone and Spessard L. Holland.

Holland's opponent in the race for the United States senate, Mrs. Polly Rose Balfe of Ft. Lauderdale, also spoke briefly.

Mrs. Beulah Hooks Hanna, a former vice chairman of the committee, urged members to support the administration's health bill.

Fuller Warren of Jacksonville, introduced as "Florida's atomic bomb," suggested that the committee should attempt to exercise greater influence in Tallahassee.

The Pinellas delegation included Committeeman Walter P. Fuller, Committeewoman Hattie P. Coke and County Chairman William B. Tippetts. Mrs. Coke, now secretary to Rep. Dwight Rogers of Fort Lauderdale, brought the committee the regrets of the state's congressional delegation that none was able to attend.

Miami Herald
January 24, 1946

...pure of 25% to ...per cent is expected, he said. Another provision of the bond issues would be for their amortization within 20 years, with one-twentieth of the principal retired annually.

Large Negro Turnout Seen

Election officials Wednesday were prepared for a record-breaking turnout by negroes after permanent city-county registration gets underway in Dade county Feb. 1.

It's anticipated, too, that a large proportion of the 5,700 negroes registered here in 1944 as Republicans will switch their affiliation, now that the state Democratic executive committee officially has buried the "white primary."

In Palm Beach county, where registration has been underway for some time, negroes outnumbered whites in qualifying to vote in the Democratic primaries.

Carl Holmer, jr., county supervisor of registration, said names of negro voters were kept separately, so it would be easy to handle negro voting at separate machines in the primaries in case the county Democratic committee decided to follow the state committee's recommendation for separate voting places.

Holmer was pessimistic about the likelihood of total registration for the May primaries exceeding the 1944 total of approximately 105,000.

"This is an off-election year," he pointed out. "There won't be so many races."

Registration will begin Feb. 1 in the 92 precincts into which the county has been divided under the new combined city-county permanent registration system which Holmer fathered and Frank J. Kelly, former city clerk, helped pass through the 1945 legislature.

NEGRO REGISTERING

To the Editor of The Age-Herald:

I hope that you will find it possible, through this letter, to correct an erroneous statement which was attributed to the writer in today's issue of The Age-Herald.

The story concerning the efforts of Negro veterans to register as voters described me as saying that "15 out of 100" veteran applicants were being rejected by the board. The facts are that I made no such statement and that the statement is incorrect.

Actually the vast majority of Negro veterans who have presented themselves to the Jefferson County Board of Registrars during these first two days have been rejected. Only a token few have been sworn in as voters. The board continues its long-standing practice of requiring of Negro applicants "interpretation" of the constitution, despite the fact that the law establishes as a requisite for registration the simple ability to read or write. In so doing, the board violates the law and applies the provisions of the undemocratic Boswell amendment, upon which the voters have not yet had a chance to decide.

The efforts of Negro veterans to register as voters, under the sponsorship of the Southern Negro Youth Congress, is the simple, patriotic endeavor of first-class fighting men to become first-class citizens. The question involved is whether men who fought to save democracy shall have the right to vote in it. We expect that white veterans with whom Negroes shared the battles overseas will join us in this battle, for the Boswell amendment and the practices it seeks to legalize are aimed at disfranchising the common people, whatever their color, and establishing the political dictatorship of the aristocratic few.

Alabama's behavior in this instance makes it increasingly difficult for America to exert a democratic influence in the affairs of a world so recently rescued from the terrors of fascism. The first step toward correction should be the dismissal by the governor of the present Board of Registrars which flaunts the tlaw. And this should be followed by the registration of all who qualify in fact without discrimination based on color and by the defeat of the Boswell amendment in November.

LOUIS E. BURNHAM.

Birmingham, Jan.

Birmingham, Ala., Age-Herald

Is This Constitutional?

The Mobile County Board of Registrars is giving written examinations on the United States Constitution to applicants for registration as voters. According to the board's chairman, Milton Schnell, the tests on ability to read "and understand" the constitution are being given uneducated white persons as well as Negroes.

The Alabama Constitution does not require any such test. Section 181 of the constitution sets up as a qualification for voters the ability to "read and write any article of the Constitution of the United States in the English language." Specifically exempt from this requirement are those unable to read or write solely because of physical reasons. There are also certain property qualifications for suffrage.

The present State Constitution says nothing about ability to "understand" the constitution as a prerequisite for voting. The nearest approach to any such provision is in Sec. 180 of the constitution where it is declared that, except for those specifically disqualified, the right to vote shall be given "all persons who are of good character and who understand the duties and obligations of citizenship under a republican form of government."

* * *

Do these sections of the Alabama Constitution give a board of registrars the right to demand that applicants for registration undergo a written examination on the Federal Constitution? Does ability to explain the constitution fall among the "duties and obligations of citizenship" in this country?

If that ability is required as a *sine qua non* of citizenship, then Alabama has no need of the so-called Boswell amendment which would limit the franchise to those "who can read and write, understand and explain any article of the Constitution of the United States in the English language." But if the present law does not demand ability to explain the constitution as a prerequisite to registration, then what right has a board of registrars to give written, or oral, examinations on the constitution?

* * *

The loose, and sometimes autocratic, attitude taken by some Alabama boards of registrars toward their duties is a repudiation of constitutional law. It often, as one might expect, leads to a denial of justice.

It begins to appear that a basic reason for the proposed Boswell amendment is to give the color of legality to something boards of registrars are already doing. Perhaps what we need more than any new law on the subject is a higher sense of duty on the part of registrars, more devotion to the principles of justice, and more fidelity to practices of impartiality and fairness.

Ruling Bars Negroes From Florida Caucus

WEST PALM BEACH, Fla., Feb. 23 (UP).—Circuit Judge Joseph H. White ruled today that Negroes are not entitled to vote in the city caucus scheduled for March 5, when candidates will be nominated for a city election in April.

White upheld the ctiy stand that the caucus has no legal standing, because it is conducted by a citizens' group and is not financed by the city government. The caucus is similary to a primary, and nomination is tantamount to election. The suit was brought by Dr. J. H. Terrell, a Negro dentist.

A total of 7,656 white voters are eligible to vote in the caucus, and 2,678 Negroes in the general election.

Mississippi Seeks Way To Keep White Primary

Chicago Defender 3/2/46

By JOHN LeFLORE
(Defender Staff Correspondent)

JACKSON, Miss.—Alarmed over Mississippi Negroes' vote demands in resolutions to the state legislature and governor last week, the House of Representatives took initial action Friday to "protect" one of the state's "white supremacy" traditions—the Democratic white primary.

Legal artifices, which they hope may afford loopholes to permit circumvention of the recent Texas white primary decision of the U.S. Supreme Court, are being planned by Mississippi lawmakers.

The House, without a dissenting vote, approved and sent to the Senate a concurrent resolution directing the speaker of the House and president of the Senate to appoint a special committee to revise the state's primary election laws.

Act To Bar Negro Voter

A rush order has been given the Senate to take similar action this week in order that committeemen may be appointed to begin work to effect a change so that the present session of the legislature may pass the revised legislation to continue the political disfranchisement of Negro citizens.

The resolution provides for a committee of five members — three from the house and two from the Senate. Speaker Walter Sillers and Lt. Governer Fielding L. Wright will be ex-officio members of the group.

The resolution, offered by Rep. Hilton Waits of Washington county, charges the U.S. Supreme Court decision outlawing the Texas white primary laws has "provoked an acute and unprecedented problem with reference to the Mississippi statutes."

Proposals Stated

All other Southern states except Mississippi have revised all their primary laws to meet the "imperfections disclosed by said decision of the U.S. Supreme Court," the resolution declared.

It also stated that "in the judgment of the legislature of the state of Mississippi, the best interests of the people of the state of Mississippi would be best served by appointing a special committee to study said legislation and make its reccommendations to this legislature."

An opinion prevailed in legislative circles that a constitutional amendment may be required to bring about one of the proposed changes:

In the Texas white primary case, the Supreme Court ruled that primary elections held under state supervision and with taxpayers' money should be open to all eligible voters. The decision denied the state Democratic party or executive committee to bar Negroes from such elections. Mississippi primary elections are conducted with public funds.

Despite Mississippi's large Negro population, fewer colored people are believed to be now voting in its primary elections than in the Democratic primaries of any other state in the South.

REGISTER DEMOCRAT BECAUSE the Democratic Party is the party in power in Florida. Register DEMOCRATIC in order to improve conditions for workers, Negro and white! Former registered Republicans can change to Democratic now.

REGISTER DEMOCRAT BECAUSE big landowners and Big Businesses are trying to keep your standard of living down. Register DEMOCRATIC so they can't lower it even further.

REGISTER DEMOCRATIC BECAUSE your registration is a protest against the lynch murder of two Negroes in Florida. Mr. Jesse James Payne of Madison County and Mr. Sam MacFadden of Suwanee County will not have died in vain if you REGISTER DEMOCRATIC!

REGISTER DEMOCRAT BECAUSE you can then vote for candidates who will support the 65¢ Minimum Wage Bill. The South desparately needs 65¢ bottom wages for protection of both white and Negro families.

REGISTER DEMOCRAT BECAUSE you can then give real support to the bill for a Fair Employment Practices Committee, now being sabotaged by Congress. (Emory Price, Congressman "representing" the Jacksonville area, is opposed to the FEPC, as well as to most other progressive legislation).

REGISTER DEMOCRAT BECAUSE today there is developing in America a movement for a THIRD PARTY made up of VETERANS, SHARECROPPERS, TRADE UNIONISTS and the NEGRO PEOPLE. And because this Alliance can only come about if the southern Negro becomes an organized group of voters, you should:

REGISTER DEMOCRATIC AND VOTE IN THE 1946 DEMOCRATIC PRIMARIES!

P. O. Box 2970, West Bay Station

COMMUNIST PARTY OF JACKSONVILLE

Have the Communists been successful? Up to this date, approximately 25,000 people to whom the above appeal has been addressed have registered as members of the Democratic Party in Duval County. These people will vote! Many of these people do not realize the dangers of the Communist form of government, and will be duped into voting as they are instructed.

IS THERE ANY DANGER IN THESE STARTLING FIGURES? HERE'S YOUR ANSWER . . . During the past ten years an average of only 36,233 people have voted in the Democratic primaries held every two years. This Communist-inspired vote will elect the candidate of their choice if YOU do not REGISTER AND VOTE.

DEMOCRACY IS THREATENED IN OUR OWN COUNTY!

YOU

are neglecting your duty as an American IF YOU DO NOT REGISTER, VOTE AND FIGHT to destroy this evil doctrine being openly preached in opposition to the American form of government. Demand that candidates for public office declare their position.

REMEMBER! MARCH 30th IS THE DEADLINE TO REGISTER!

ACT NOW!---REGISTER BEFORE MARCH 31st

US Action on White Primary Won't Affect South Carolina, Says State Democratic Head

No Violation Here, Declares J. D. Parler

St. George, April 6—(AP)—An announced justice department policy of prosecuting party officials attempting to prevent Negroes from voting in primaries "shouldn't affect our Democratic party in South Carolina," State Democratic Convention President J. D. Parler said today.

"We have no primary laws on our statute books," Parler said, "as Georgia did. We removed them in our special legislative session two years ago.

"I don't think the Democratic party of South Carolina can be found to be violating any laws. Our rules specify nothing as to the race or creed of members, only that primary voters must be enrolled on the precinct enrolment books.

"Precinct clubs handle the books, the dates they are open and the places they are open, and supervise all enrolment. The only state party requirement is that primary voters must be enrolled."

Parler continues as president of the state party until its next convention at Columbia, May 15.

Columbia, S. C., Record

Every time a [illegible]
answers the call to arms.

No Answer

The Progressive Democratic party of South Carolina, made up of both Negroes and some whites, has petitioned Speaker Sol Blatt for permission to use the hall of the House of Representatives for its regular convention this year.

And the House already has set a precedent by granting permission to the regular Democratic party to use the hall of the House for its convention on May 15.

"Under present statutes all political groups enjoy identical status," Chairman J. H. McCray of the Progressive Democratic party points out, "and it is felt that a privilege extended to one should also be extended to others."

And there is no answer to his argument in logic. The House if it grants the use of the hall to one party, must logically grant it to all parties or place itself in the position, which it does not want to be placed in, of granting official recognition to the regular Democratic party. It took an act of the House—a House resolution—to grant the use of the hall to the Democratic party.

And there is a record made of this act of the House in the journal which may be cited in the eventual hearing of the case in the federal courts to compel the admission of Negroes to the regular Democratic party primary in South Carolina, the real election in the state.

BENEFITS ENACTED FOR NEGROES BY SOLONS CITED BY COMMITTEE

In a move designed to improve good will between the white and negro races, the Inter-Racial committee of the Jackson Chamber of Commerce made public Saturday a statement embodying a list of projects approved by the 1946 legislature which will be of benefit to the negro race and a list of developments planned by the city commission to help the negroes. The statement, signed by Maj. W. Calvin Wells, chairman, and bearing the names of W. F. Bond, Dr. G. T. Gillespie, C. Guy Lowe and Mayor Leland Speed, as members, said "in many respects the recent session of the Mississippi legislature did more for the negroes in an educational way than proportionately for the whites of the state, and passed more constructive legislation for both races than any other legislature in the history of the state."

It listed as important acts of the recent session especially helpful to the negroes of the state the following:

"(1) Creation of a Junior College for Negroes to be located in the Delta with an initial appropriation of $300,000 for buildings and equipment. Vocational subjects will be stressed.

"(2) Two acts are of special interest to Jackson College. One is to make available $12,000 to supplement salaries of faculty members for sessions of 1944-45 and 1945-46. The other is an appropriation to pay the college's part of abutting property assesment in the amount of $28,493.20 for paving along the boundary of the campus.

"(3) An appropriation of $275,000 to pave a road from Highway 61 to Alcorn College. This road when constructed will put Alcorn College in the same position for travel as the University and State College, as both of these white institutions have paved highways but poor railroad facilities.

"(4) The legislature made a special appropriation of $3,000,000 to be used in improving rural school buildings, mostly for Negroes, as a result of a study by a Legislative committee headed by Senator Kyle.

"(5) The appropriation for public schools was increased $3,500,00 and the negroes will share this amount in increased salaries for teachers.

"(6) $5,000,000 was appropriated and turned over to the Building Commission for the repair and construction of state owned institutions, and the two Negro colleges will certainly share well in the allocations of this fund.

"(7) House Bills 368 and 369 create a million-dollar revolving fund for G. I.'s tuition and expenses in college to be used by the institution as a source for ready cash, and a million dollars to provide buildings, accommodations, materials, equipment and supplies to effectuate the development and training of returned veterans. The benefits of these two bills are open to all races alike. Also state colleges may now accept tuition fees from Federal Government for service men and women.

"(8) Another bill gives the Board of Trustees of Institutions of Higher Learning permission to lease college lands for oil, gass and minerals, and the revenue received will accrue to the institution owning or having control of the land. Alcorn College's nearly 800 acres is in the oil "hot spot" at the present time.

"(9) The legislature increased the appropriation to the Teacher's Retirement Fund 95 per cent and the aged, tired old Negro teachers, who have given of their years that their race might know better how to live, will share in all respects with white teachers as provided in this act.

"(10) The support fund for the Negro Juvenile Reformatory was increased from $25,000 to $60,000. A fine site had previously been selected and acreage set aside from the Oakley Farm for this institution. This increased appropriation will make it a real training institution.

"These are some of the acts that are of special interest to the Negro race, but, of course, these people will share alike in the many constructive acts that this legislature

(Continued from Page Two)

passed which will make Mississippi a better place in which to live for white and negro.

"Now, in addition to what has been done for the Negro race in Mississippi by the recent session of the Legislature, the City of Jackson is planning additional provision for the health and recreation of the Negro race in the city.

"This committee in informed that if and should the $3,500,000 bond issue be voted by the people of Jackson, the Negroes will share in the expenditure with others in a general way, but in a special way it is expected to provide two

NEGROES PLAN VOTING TESTS

CHARLESTON, S. C., April 13.—(AP)—The Right of Negroes to enroll for the Democratic primary this summer will be tested next month when the party club books open, it was announced yesterday at a meeting of the Charleston County Progressive Democratic executive committee (Negro).

A. J. Clement, Jr., chairman, who presided, told the meeting that 10 persons would be sent to 10 precincts in the county each with two witnesses. If enrollment is denied, he said, affadavits will be taken and turned over to the district attorney.

TIME FOR WISDOM

Here and there in South Carolina and Georgia politicians are getting worked up into an oratorical frenzy by the possibility that Negroes may be voting in the Democratic primaries. There is talk of "perilous times" and not too vague references to "force" as the only remedy if others fail.

It is dangerous talk, calculated to excite passions and provoke violence. It should be condemned wherever it raises its head.

For there are reasonable solutions of the problem presented by the federal Supreme Court decisions, holding that Negroes have the right to participate in primary elections where these primary elections are regulated in any wise by laws. And they do present a real problem. Always a problem is created when the law gets ahead of education.

But the greatest problem involved is the threat to the established political hierarchies in the South. The professional Southern politican has made racial prejudice his chief stock in trade and the participation of the Negroes in the Democratic primaries in the South, even in comparatively small numbers threatens the overthrow of these demagogues.

In Georgia the problem seems to be approaching an acute stage, fanned into flame by Eugene Talmadge and others of his political ilk. Georgia could win a little time in which to work out its problem by following the South Carolina lead and repealing all of its primary laws, leaving the Democratic party organization, nothing more in theory than a private club, to make its own rules and regulations. But this would mean in Georgia the elimination of the county-unit systhem—that adaptation of the electoral college idea to a state's uses—which gives the rural sections of Georgia a disproportionate voice in the selection of men for all state-wide offices. And the Georgia politicians, especially those from rural counties, do not want to abolish the county-unit system. Having a choice of preserving the white primary or the county-unit system they have elected apparently to preserve the county-unit system.

But they refuse to content themselves with their own choice. They refuse to do what Alabama has done, provide for the orderly participation of the Negroes in the Alabama primaries by prescribing educational tests applying alike to voters of both races. Negroes vote now in every state except Georgia, South Carolina, Mississippi and Arkansas. They have been accorded the vote in North Carolina, Virginia, Texas, Louisiana, Tennessee, Alabama, Florida without causing a revolution and what these states do Georgia, South Carolina, Mississippi and Arkansas can do without revolution, without bloodshed.

South Carolina has a little more time than the rest of these four states to work out a solution, though Arkansas may also gain time by the device of separating the federal primaries

rules and regulations. But this would mean in Georgia the elimination of the county-unit systhem—that adaptation of the electoral college idea to a state's uses—which gives the rural sections of Georgia a disproportionate voice in the selection of men for all state-wide offices. And the Georgia politicians, especially those from rural counties, do not want to abolish the county-unit system. Having a choice of preserving the white primary or the county-unit system they have elected apparently to preserve the county-unit system.

But they refuse to content themselves with their own choice. They refuse to do what Alabama has done, provide for the orderly participation of the Negroes in the Alabama primaries by prescribing educational tests applying alike to voters of both races. Negroes vote now in every state except Georgia, South Carolina, Mississippi and Arkansas. They have been accorded the vote in North Carolina, Virginia, Texas, Louisiana, Tennessee, Alabama, Florida without causing a revolution and what these states do Georgia, South Carolina, Mississippi and Arkansas can do without revolution, without bloodshed.

South Carolina has a little more time than the rest of these four states to work out a solution, though Arkansas may also gain time by the device of separating the federal primaries from the state primaries. When South Carolina repealed its primary laws it guaranteed that no test case carried to the Supreme Court from any other state would apply to South Carolina. The South Carolina law and the right of the Negroes to participate in South Carolina primaries can be decided only by the appeal of a case from South Carolina to the Supreme Court of the United States. It presents issues that the court has not passed upon.

And South Carolina has another trick up its sleeve, even if the Supreme Court should, as it hinted in the Texas decision, find ways to get around the device of eliminating the primary laws. It could abolish the primary and return to the convention system, as the Charleston News and Courier urged and still proposes. But this seems to be a scheme for punishing the whites of South Carolina in order to get at the Negroes, a device for effectively disfranchising the great majority of the white voters as well as the Negroes. It would make the general election in South Carolina what it hasn't been since the primary was evolved, the real election in South Carolina, an election in which both whites and Negroes would participate alike.

The aim of The News and Courier is to hold white conventions and put out a "white" Democratic party ticket in the general election. The Negroes in self defense would have to select their own ticket and the general election would as a result present the picture of an election conducted, not in the interest of better government but strictly along racial lines. It is a dangerous idea, and so also is the "white" primary idea—South Carolina was retrieved from carpetbag rule by the votes of both whites and Negroes, supporting Wade Hampton, and it wasn't until comparatively recent years that the Democratic party in South Carolina became what it is now an exclusively white party. Now in South Carolina, if the Negroes are to vote they must run their candidates in the general election and so long as South Carolinians are indifferent to participation in the general election they may even win in some elections.

The State Democratic convention should have adopted the advice of a small group of Columbians six years ago and set up a committee to study the problem of Negro participation in the primaries. It did not. This year, however, it should do so. If the Negroes are to participate in South Carolina's primaries it is better that the South Carolina Democrats should voluntarily admit them and fix the conditions, applicable to both races, of their admission. Why wait for the Supreme Court to compel the state and the party to do so? Isn't it a South Carolina problem?

South Carolina and the Democratic party of South Carolina have a little time. They should use it and use it wisely.

Cracker Politics:

Duval Politicos Worried About Negro Vote; Lex Green May Poll Good Ballot in Second

By ALLEN MORRIS
[Special to The Sunday Sentinel-Star]

JACKSONVILLE — There are three explosive situations this spring in the Second Congressional District, and two revolve to some extent around the third—negro voting.

Florida may find in Duval county on May 7 an answer to questions which have been troubling people since the possibility first arose that negroes eventually would vote as democrats.

Negroes have registered by the thousands as democrats, without harass, all over the state this year. They amount in Duval county to around 14,000 out of 72,000 registrants: certainly the largest number for a single county and perhaps the greatest on a percentage basis, too.

It is an incontestable fact that negroes now are a part of Florida politics.

Cracker Politics has canvassed the triangle from Pensacola to Tampa-St. Petersburg and Jacksonville within recent days, and only in Duval has alarm been expressed by politicoes over negro voting.

Elsewhere, the feeling seems to be that negroes will be no more regimented or voted as a bloc than any group of white voters reflecting the same economic or educational background.

But in Jacksonville, however, you will be told the negroes are to vote as a unit either, depending upon your source of information, [1] against all incumbents, or [2] for a slate of candidates.

This slate, so goes the account, will be disclosed by unidentified leaders to the negro voters on the day before the primary of May 7, and possibly could prove stories 1 and 2 to have the same end.

Off-setting of negro influence by getting whites out to register and, later, to vote has been the aim of white organizations and their campaign stimulated activity along the same line by the other race.

You also will hear in Jacksonville:

That the Communist Party spearheaded a drive to get negroes registered as democrats.

That the CIO relies upon negro voters to unseat congm. Emory Price.

That friends of Price were shouting communist! and CIO! to divert attack upon his congressional record.

★ ★ ★

This being the district which Lex Greene represented in congress for so many years, it is not surprising to hear predictions that he will roll up a majority vote in many of its counties. Some qualified observers include Duval.

Greene's campaign for the U. S. senate has here a substantial backlog of oldtime friends, while his rival, ex-Gov. Spessard L. Holland, labor is under the additional burden of a charge of being a "silk-stocking" candidate because of the big names in his local committee.

About the most attractive piece of this year's campaign literature was put out by Sen. W. A. Shands of Gainesville—who would be on Millard Caldwell's purge list if the governor had one. Shands has E. M. Deaton of Gainesville as his opponent.

Shands bore down hard upon his legislative experience, his pamphlet headlining this: "A Senator's Effectiveness is Measured by the Esteem in Which He Is Held by His Fellow Senators."

Letters of commendation are included from fellow senators: 1945's Pres. Walter W. Rose praised Shands for "your courageous fight to eliminate waste," while 1947's president-designate S. D. Clarke said he knew of no lawmaker of higher statesmanship or sounder views.

Incidentally, Clarke said Shands, if returned by his people, would be back on the keystone finance and taxation committee. He served as its chairman in 1945. The consensus: Shands should win.

White Supremacy Is Settled in State, Levings Declares

GULFPORT—(AP)—The issue of white supremacy is settled in Mississippi, Nelson T. Levings of Gulfport declared here Tuesday night in opening his campaign for the United States Senate seat now held by Theo. G. Bilbo (D-Miss).

He asked Mississippi voters for "your help toward extinguishing the Bilbonic plague which has so long ravished Mississippi."

"White supremacy," Levings asserted, "is not an issue so far as the people of Mississippi are concerned. We have it and will continue to maintain it in Mississippi."

He pledged if elected to "fight with every influence I may command such evils as the anti-poll tax bill, the anti-lynching bill and the fair employment practices act." He termed these "our state's own business."

Levings outlined a program of legislation he said he would support including a bonus for veterans of World War II, maintenance of America's superiority in military and economic power, guarantee of freedom either to join a union or not, trial of voluntary military training but compulsory training if the voluntary method fails, equalization of freight rates, and an end to deficit spending by the national government.

Levings, the only World War II veteran in the Senatorial race, said he would not deal in personalities but would let Bilbo tell "the lowdown on Ross Collins" and "if you want the lowdown on Bilbo, Ross Collins will tell you that."

Negroes Informed Georgia Ruling Applies to S. C.

Columbia, May 3. (AP)—James M. Hinton, president of the South Caroline state conference of the National Association for the Advancement of Colored People, said today he was officially informed that a recent justice department ruling that private party primaries were open to negroes "applies" to South Carolina.

The ruling was made recently aftef a federal circuit court of appeals decision in a Georgia case, in which the court held that Georgia Democratic primaries, which excluded negroes, were open to them.

The justice department said it interpreted tnis deciison as meaning that party primaries were a part of the general election machinery, and, as such, were open to negroes.

Hinton said he wrote the department "to make certain that South Carolina was included in the department's announced intention to enforce its interpretation of the law."

He received a letter, he said, from Assistant Attorney General Theron L. Caudle, whose reply said in part:

"You request information as to whether or not South Carolina is included (in the department's statement) x x x to the effect that the department of justice would prosecute where the right to vote was denied on account of color or race.

"Please be advised that the press release mentioned in your letter applies to all of the states x x x."

Hinton Insists Primary Open To Negroes

The Democratic view that the party primary belongs to Democrats under their own rules, and as defined yesterday by James H. Hammond, state executive committeeman from Richland county, was opposed in a contrary view today by James M. Hinton, president of the state NAACP conference.

Mr. Hammond stated the position held by the Democratic party was that since the party maintains its own individuality as any private club, the recent court decision in the Georgia application does not apply in South Carolina. He pointed out that the Georgia and Texas decisions were on points of law, since both states retained primary laws on their statute books.

The NAACP counter view today was expressed in a letter from the NAACP president to Mr. Hammond as follows:

"It is very surprising to find, that such an outstanding lawyer would make the public statement, that the United States Supreme Court's decision did not apply in South Carolina.

"Negroes are willing and ready to carry the fight for participation in the Democratic primary to the courts, and will be willing to abide by the decision, after the court in the last instance has spoken. The Court of the last instance is the United States Supreme Court, and Negroes will not stop shorter than that court.

"Evasion" Charged

"The Democratic party officials, through the extra session of the South Carolina general assembly, attempted to plan evasion of the decision of the United States supreme court, and as such, Negroes are not the least bit afraid of the outcome of the cases that will be carried to them. . ."

The exchange of opinion on the matter will be viewed with interest by the Democratic party since delegates from over the state will convene here Wednesday for the annual state convention to be held at the Columbia Township auditorium.

The matter will be considered then as the issue was raised at the Richland county Democratic convention, and was passed on to the state convention for a decision.

Columbia Republicans today distributed literature through the mails asking registered voters to support the Republican municipal ticket at the polls next Tuesday.

I. S. Leevy of the Tolbert-Leevy Republican faction stated today that the two-party system would benefit Columbia and that while Republicans faced defeat their presence at the polls were educational to members of that party.

He said the heavy Democratic registration was due to the fact that Republicans were entering their first slate in 75 years.

The GOP candidates are: H. A. Hawkins for mayor. I. S. Leevy and the Rev. L. C. Jenkins for city council.

Negroes Call On U. S. Attorneys To Back Bid To Vote

The South Carolina chapter of the National Association for the Advancement of Colored People today called on the state's three federal district attorneys to support its attempt to enrol Negroes for Democratic primaries this summer.

President James M. Hinton of the state NAACP, in letters addressed to District Attorneys O. H. Doyle at Greenville, Claud N. Sapp at Columbia and Assistant District Attorney Ben Scott Whaley at Charleston, said that in the event Negroes were denied voting privileges at the polls they planned to file with the attorneys "sworn affidavits of the denial."

Hinton enclosed a copy of a letter addressed to him from U. S. Assistant Attorney General Theron L. Caudle reaffirming the solicitor general's statement that the department of justice "would prosecute where the right to vote" in primaries "was denied on account of color or race" in any section of the country.

THE NEWS AN

Columbians Would Admit Negroes to Democratic Ranks

Columbia, May 11.—(AP): Delegates to the biennial state Democratic convention here next Wednesday will be presented with a resolution proposing "serious and open-minded consideration" of the opening of party ranks to negroes.

The resolution, referred by the Richland county convention to the state convention for "appropriate action", said that "we (the authors: Mrs. Margaret Howe, W. G. Belser, Jr., Dr. William Weston, Jr., all of Columbia) believe that the time has come when this question can no longer be ignored and that the choice now lies between accepting qualified negro voters into the Democratic party where they may reecive wise counsel and leadership or forcing them into other parties subject to radical and alien influences."

"We feel that the Democratic party has nothing to fear and much to gain from the qualified negro vote . . ." the resolution added.

Might Provoke Fireworks

The issue can probably be neatly sidestepped, if the convention is so-minded, by referring the resolution and any other matters bearing on the subject to a committee for study. Several party leaders and officials were of the opinion that would happen although they agreed reading of the resolution might provoke fireworks.

At least one county delegation, that from Williamsburg, was instructed "to support and maintain the white Democratic party in South Carolina".

Admission of "qualified negroes" to the party, long an exclusively white organization, has been requested by James M. Hinton, state president of the National Association for Advancement of Colored People, who also has served notice that "qualified negroes" would present themselves for enrolment for participation in the coming primaries.

Danger Believed Eliminated

Party leaders have expressed the belief that 1943 erasure from state statutes of all references to the party and its primaries eliminated any danger of federal interference.

Members of a special party rules committee said privately here this week that they still were convinced the federal government could not legally touch the state Democratic party and its primaries. They expressed the opinion that the party's stand would be the same as it has been and that no action one way or the other would be taken by the convention.

The convention, for which U. S. Senator Burnet R. Maybank, of Charleston, is slated to be the keynote speaker, will be held in the Columbia township auditorium instead of the hall of the house of representatives in the state house, the scene of the conventions for years.

Practice Called Dangerous

The change to the auditorium, for which the party will pay rent, was announced by Winchester Smith, chairman of the state executive committee, although the representatives invited the convention to the state house. The Progressive Democratic (negro) party also sought use of the state house for its convention but its requests were not acted upon by the legislators.

In line with Smith's decision to hold the convention at the auditorium rather than the state house, former State Senator James H. Hammond of Columbia, Democratic executive committeeman from Richland county, said "the practice of using tax-supported buildings for party purposes is a dangerous one in view of the undesirable infiltration of our party ranks for which outside groups are pressing."

Hammond contended that if the party were "to remain its own boss, we must keep our skirts clear of aid from the taxpayers" and "we must provide our own facilities". He advocated discontinuance of the old practice of using county courthouses for receiving primary election returns and for county conventions.

In this connection, the special rules committee met at the Jefferson hotel and "not in the state house", members pointed out.

ITEM, SUMTER, S. C.

Dabbs Speaks Before Rotary On Negro Vote

Professor James McBride Dabbs, Sumter county farmer and former head of the English department of Coker college, spoke to the Rotary club today on the question of allowing negroes to vote in Democratic primaries.

Professor Dabbs gave his reasons for advocating changes in rules of the Democratic party so as to allow negroes to vote. Chief of these was the action of the supreme court in ruling several years ago that negroes in Texas must be allowed to vote in Democratic primaries and also a similar federal court ruling more recently in a Georgia case.

The speaker contended that the South Carolina Democratic party is in fact a part of the governmental machinery. The action of the state legislature several years ago in passing legislation divorcing the Democratic party from the state government does not in fact change its status, he declared.

Edwin B. Boyle spoke briefly in reply to Professor Dabbs' remarks. He said he disagreed with Mr. Dabbs that the Democratic party was still a party of the state governmental machinery.

Professor Dabbs was introduced by Rabbi Sam Shillman.

William Boyle, son of Rotarian Ed Boyle, was welcomed as a new member by Bill Eldridge.

Party To Back Officials If Negroes Sue

Columbia, May 16—(AP)—The State Democratic Party executive committee has agreed to defend party officers against prosecution for their enforcement of the party rule restricting membership to white persons.

A resolution, setting forth this support was offered by J. M. Moorer of Colleton County at a committee meeting here yesterday. Its adoption ended a lively discussion of what one member termed "this threat to prosecute" if Negroes were not permitted to vote in the party primary.

The committee agreed to return to the old practice of a county-to-county campaign tour for state candidates and adopted the same entrance fees charged candidates two years ago.

These fees were $1,200 for governor, $200 for lieutenant governor, $600 for treasurer, Comptroller General, Secretary of State, Attorney General, Adjutant General, Commissioner of Agriculture and Superintendent of Education, and $400 for Solicitors.

If more than one candidate listed for a race, the entrance fee would be reduced half.

Long Pays Fee

Rep. John D. Long of Union last night became the first of eight announced gubernatorial candidates to pay the qualification fee when he deposited $600 with party secertary James Hunter.

The committee also appointed a special committee of three members to arrange a county-to-county itinerary, and made a special rules group, appointed recently to draft rules changes, into a permanent committee.

James H. Hammond of Richland County broached the subject of Negro attempts to vote in the primaries and to seek party membership. "Something is going to happen," he warned and said party members should be prepared.

County and local organizations should be advised "in keeping with the rules of the party," Senator W. B. Harvey of Beaufort said. "A lot of people are afraid of this threat of prosecution."

A member of the special rules committee, Harvey said "we are confident that 1943 removal from state stautes of all references to the Democratic party and its primaries removed all dangers of successful Federal interference,

Negroes Discuss Rights to Vote in State Primaries

Jackson, May 17 (AP) Further plans to assure qualified negroes the right to vote in Mississippi Democratic primary July 2 were under discussion here today at a meeting sponsored by the Mississippi Progressive Voters League.

More than two score negro leaders, most of them from the Delta and northeast area of the state, attended the two-day meeting. A nine-man committee was named yesterday to study a proposal to raise $20,000 to test in court any refusals of circuit court clerks to register qualified negroes.

Percy Green, negro editor of Jackson, told the meeting that the negroes did not want to dominate the white race and could not if they desired. He said they merely want to join the white voters in giving Mississippi good government.

Another plan adopted provided for the formation of county units of the league in each congressional district, with the units to conduct voting schools to teach negroes how and where to qualify to vote.

Bomb Project Is First Major Goal in South—Offices Set Up by 6 Unions

Copyright, 1946, by The New York Times.

WASHINGTON, May 18 — The Congress of Industrial Organizations said today that Oak Ridge, Tenn., home of the atomic bomb project, is now the first major concentration point in the southern organizing campaign.

A corps of CIO organizers, veterans of World War II and of organizing drives previously conducted by the CIO, is already in the city. The CIO said the project employs more than 40,000 workers who will be asked to join the Gas, Coke and Chemical Workers Union.

OAK RIDGE, Tenn., May 18 (AP) — Six national unions have opened offices in Oak Ridge and have organizers at work among workers in atomic energy plants here.

During the war, through an agreement with the War Department, the CIO and AFL made no attempts to organize the workers at the plants, officials said today.

"The main reason for this was security," an official said, but emphasized that it was an agreement, and that the Government had received complete co-operation from the unions.

"Now, if they want to organize the workers, it is up to them," he stated.

The unions represented are the Chemical Workers Union, International Brotherhood of Electrical Workers, Fire and Oilers Union and Plumbers and Steamfitters Union, all of the AFL; the Coke and Chemical Workers Union of the CIO, and the Machinists International, an independent union.

Officials said a National Labor Relations Board representative had recently investigated claims by the CIO and AFL chemical workers units and had returned to Washington to finish his report.

Negro Party To Open Drive For Ballot Here

"Winning the right of all citizens to free voting" will be the keynote of the Progressive (Negro) Democratic party convention here Wednesday, State Party Chairman John H. McCray said today.

"Foremost . . . will be the white primary" to which the Progressive Democratic party's executive committee committeed it two weeks ago, according to McCray, with reference to an announced attempt of the party to enrol Negroes in the regular Democratic party primary.

He said the Progressive Democratic party had "officially" asked the U. S. Department of Justice to assist in removing what he called "new extensions of the poll and personal property taxes" by some county auditors "in an avowed attempt to restrict voting privileges of the Negroes."

Ability to interpret the constitution was added to the requirements for membership in the state Democratic party at its convention last week in what Senator Kearse of Bamberg told the Democrats would "shut out" 90 per cent of the undesirable element should the United States Supreme Court rule that no person may be banned from the party because he is not a "white Democrat."

Negro Party Plans Action If Vote Denied

Columbia, May 22.—(AP)—Resolution recommending immediate legal action against boards of general election registration "suspected of deliberately and wilfully restricting" registration and qualifying of "certain citizens" was debated here today by the second biennial convention of the South Carolina Progressive (negro) Democratic party.

This was one item in a 14-section resolution that dominated the convention program.

The resolution, prefaced by the statement that "we wish to prevent future local, national and international conflicts and violence," called for all party members to enroll "on the club books of the Democratic party of South Carolina" on June 5 and to support candidates "appearing to be the least prejudiced and able to render the most impartial service to all citizens."

Would Educate Voters

"A program of education of citizens on all phases of voting and enrolment" was suggested in the resolution offered by the resolutions committee of which John H. Green of Charleston is chairman. Payment of a poll tax as a qualification for voting was opposed.

The resolution urged the federal government to "reallocate the number of representatives for states found guilty of deliberately denying the ballot to any race or group of persons, but at the same time professing to hold congressional seats in the interests of these denied persons."

Endorsement of "the efforts of labor organizations to organize and improve the living standards of all workers in this and other states" was recommended "in establishing further the rights of the common man."

Other parts of the resolution advocated a national health improvement act, "firmer action * * * in settling strikes" by President Truman, federal aid to education, and enactment of a federal law to prosecute law enforcement officers "proved guilty of inciting mob action and crimes against any group of citizens."

A. J. Clement, Jr., of Charleston was keynote speaker.

Negro Progressive Party Reaffirms Determination To Vote in State Primaries

By The Associated Press

Last week's state Democratic convention was charged here yesterday with "defiance and utter disdain of the highest court of the land" for failure to open the party ranks to Negroes.

In a ringing keynote speech to the South Carolina Progressive (Negro) Democratic party biennial convention, A. J. Clement, Jr., Charleston insurance man, said the "white" Democratic party not only "refused" to admit Negroes "in defiance and utter disdain of the highest court of the land but dared to fool themselves into a false state of security by adoption of some ram-shackled, bombastic and redundant porridge of words as to who is a 'Democrat.'"

The resolution to which he referred defined the word "Democrat" as having the meaning "understood in South Carolina since 1876, and not necessarily as understood nationally or as exemplified by the national chairman or leader of the party; and is to include those who believe in local self-government as against the idea of a strong centralized, paternalistic government; and excludes those whose ideas or leadership are inspired by foreign influences, communism, fascism, statism, totalitarianism, or the fair employment practices commission, or some purely race committees . . ."

Clement said "by that definition a Democrat can only be a white person rather than a whom" and that, if applied, the definition would rule ineligible for membership "over 80 per cent" of the white people of the state.

"Full participation by Negroes in the affairs of the Democratic party in South Carolina" was called for by both Clement and J. M. Hinton of Columbia, state president of the National Association for Advancement of Colored People, before approximately 150 delegates assembled in a Negro lodge hall.

Clement said participation in the Democratic primary was "the only avenue by which a voter in this state can enjoy his full constitutional rights" and Hinton expressed confidence that the U. S. supreme court would hold that Negroes must be permitted to participate in the primary.

"The NACCP is sure that the eight old tired men will liberate the Negroes in South Carolina as they did the Negroes in Texas, Georgia and Florida," Hinton said. He promised that "the case will come up."

"We are going through the white man's courts and the white man's

Hinton was sharply critical of U. S. Senators Maybank and Johnston whom he said "consistently voted against rights for Negroes." He also criticized W. W. Ball, editor of the Charleston News and Courier, as an editor "who has outlived his usefulness."

He urged and promised "orderly" Negro attempts to enroll for the Democratic primary, saying, "We are not going to give anyone trouble" but "if presenting ourselves brings trouble then let trouble come!" This statemnet set off loud applause.

"I do not believe the white people of South Carolina are looking for trouble or for bloodshed," Hinton continued. "I believe the white people want to live peaceably with colored people . . . Only some hotheads like John D. Long (Union county representative who is a candidate for the Democratic gubernatorial nomination) and Editor Ball will even talk of Redshirts (the white organization which functioned in 1876 against the Carpetbag and Negro state government).

Hinton introduced Harold L. Boulware, Negro attorney of Columbia, whom he said had been retained to represent the Negro citizens committee if Negroes were not permitted to enroll for the Democratic primary.

A resolution calling for a state holiday for Negroes June 5 for the purpose of "orderly and organized efforts to enroll in the club books of the Democratic party" was defeated after Clement said that it would "defeat some of our purposes and injure our cause."

Enactment of federal laws to make officers found guilty of participating in mob actions guilty of insurrection against the federal government, re-allocation of the number of congressmen in states "which circumvent" free voting of all citizens, immediate court action against boards of registration "suspected of deliberately" restricting Negro registration and inclusion of "competent colored citizens" on groups "charged with projects "of interest to all citizens" were advocated in a group of 13 resolutions adopted as the party platform.

John H. McCray, editor of The Lighthouse and Informer, Columbia Negro weekly newspaper, was re-elected party chairman for the next two years. Other officers elected included John H. Green of Charleston, first vice chairman; the Rev. B. F. Sumpter of Union, second vice chairman; and Clement, executive secretary.

Negro Progressive Party Reaffirms Determination To Vote in State Primaries

By The Associated Press

Last week's state Democratic convention was charged here yesterday with "defiance and utter disdain of the highest court of the land" for failure to open the party ranks to Negroes.

In a ringing keynote speech to the South Carolina Progressive (Negro) Democratic party biennial convention, A. J. Clement, Jr., Charleston insurance man, said the "white" Democratic party not only "refused" to admit Negroes "in defiance and utter disdain of the highest court of the land but dared to fool themselves into a false state of security by adoption of some ram-shackled, bombastic and redundant porridge of words as to who is a 'Democrat.'"

The resolution to which he referred defined the word "Democrat" as having the meaning "understood in South Carolina since 1876, and not necessarily as understood nationally or as exemplified by the national chairman or leader of the party; and is to include those who believe in local self-government as against the idea of a strong centralized, paternalistic government; and excludes those whose ideas or leadership are inspired by foreign influences, communism, fascism, statism, totalitarianism, or the fair employment practices commission, or some purely race committees . . ."

Clement said "by that definition a Democrat can only be a white person rather than a whom" and that, if applied, the definition would rule ineligible for membership "over 80 per cent" of the white people of the state.

"Full participation by Negroes in the affairs of the Democratic party in South Carolina" was called for by both Clement and J. M. Hinton of Columbia, state president of the National Association for Advancement of Colored People, before approximately 150 delegates assembled in a Negro lodge hall.

Clement said participation in the Democratic primary was "the only avenue by which a voter in this state can enjoy his full constitutional rights" and Hinton expressed confidence that the U. S. supreme court would hold that Negroes must be permitted to participate in the primary.

"The NACCP is sure that the eight old tired men will liberate the Negroes in South Carolina as they did the Negroes in Texas, Georgia and Florida," Hinton said. He promised that "the case will come up."

"We are going through the white man's courts and the white man's law," he said, adding that he was certain "the white people in South Carolina" would be "good sports" like "they were in Texas' and other states when the Negroes won.

Clement asserted that "the Negro in the South is on the march for the things that he has been denied politically for too many years . . . we are seeking the political emancipation that belongs to us.'

He said the present situation in this state was "not altogether . . . the fault" of the white people because "the Negro is his own greatest enmy." There was a "race-created barrier," he said.

"Too many of us are too indolent, too downright lazy and don't give a damn," Clement said, and "those of us who are fighting politically . . . should realize this environmental situation first."

Negro participation in primaries in other states "has blazed the way for us in South Carolina," he said. Negro participation in pollitical affairs in South Carolina, he promised, would "guarantee both races . . . more of the better things of life.'

Clement contended that "the proud and mighty and haughty state of South Carolina" was "not controlled by its best brains" because "its best brains refuse to indulge in the dirty, petty and hypocritical politics that dominate the state."

He said that "the teachings of Christianity have been too long denied by the poliltical forces in South Carolina and the South" and predicted that "the Southern system of segregation will pass into oblivion." In this connection, he said, "we should want our sons and daughters to attend "the University of South Carolina and Clemson college."

Clement's address sent the delegates into wild delight. He was congratulated on all sides, slapped on the back by the men and hugged and kissed by the women delegates. Someone started the "Battle Hymn of the Republic" and all joined in.

Hinton was sharply critical of U. S. Senators Maybank and Johnston whom he said "consistently voted against rights for Negroes." He also criticized W. W. Ball, editor of the Charleston News and Courier, as an editor "who has outlived his usefulness."

He urged and promised "orderly" Negro attempts to enroll for the Democratic primary, saying, "We are not going to give anyone trouble" but "if presenting ourselves brings trouble then let trouble come!" This statemnet set off loud applause.

"I do not believe the white people of South Carolina are looking for trouble or for bloodshed," Hinton continued. "I believe the white people want to live peaceably with colored people . . . Only some hotheads like John D. Long (Union county representative who is a candidate for the Democratic gubernatorial nomination) and Editor Ball will even talk of Redshirts (the white organization which functioned in 1876 against the Carpetbag and Negro state government).

Hinton introduced Harold L. Boulware, Negro attorney of Columbia, whom he said had been retained to represent the Negro citizens committee if Negroes were not permitted to enroll for the Democratic primary.

A resolution calling for a state holiday for Negroes June 5 for the purpose of "orderly and organized efforts to enroll in the club books of the Democratic party" was defeated after Clement said that it would "defeat some of our purposes and injure our cause."

Enactment of federal laws to make officers found guilty of participating in mob actions guilty of insurrection against the federal government, re-allocation of the number of congressmen in states "which circumvent" free voting of all citizens, immediate court action against boards of registration "suspected of deliberately" restricting Negro registration and inclusion of "competent colored citizens" on groups "charged with projects "of interest to all citizens" were advocated in a group of 13 resolutions adopted as the party platform.

John H. McCray, editor of The Lighthouse and Informer, Columbia Negro weekly newspaper, was re-elected party chairman for the next two years. Other officers elected included John H. Negroes Try To Register, Are Refused

The first attempt to enrol Negro citizens in the Democratic club books was made here at 11:09 this morning when an effort was made to place three names on the Ward 2 book at Jordan's drug store.

The group was denied permission, after a call to county Democratic party in which their spokesman, who identified himself as the Rev. J. P. Reeder, was informed that under party rules only white persons were eligible to enrol in party ranks in South Carolina.

Reeder said that those Ward 2 residents with him included John H. McCray and C. L. Lilliwood.

Others, however, accompanied the group as witnesses.

John H. McCray, editor of The Lighthouse and Informer, is party chairman for the Progressive (Negro) Democrats.

Today's effort to enrol was regarded merely in the light of seeking material which will be used to test the barring of Negroes in the Democratic party in South Carolina.

Under party rules, only white persons are permitted membership in the party in this state.

After the first attempt to enrol in Ward 2, attempts were made this afternoon in Wards 7, 9, 3 and 8.

Refusals were encountered in all except Ward 9 (Millwood avenue), where the names of four Negroes were placed upon the books.

At county party headquarters, Lane L. Bonner, acting secretary, said the names will be purged. Mr. Bonner said several Negroes called there, but said they would return tomorrow as John I. Rice, county party chairman, left Columbia this morning, and was absent from the city at the time the group called.

Jim Crow Ruled Off Bus By U. S. Supreme Court

WASHINGTON, June 3—(AP)—The Supreme Court Monday decided a state cannot require segregation of white and Negro passengers in buses crossing state lines.

The decision was given on a Negro's appeal from a Virginia Supreme Court ruling. The Virginia court upheld that State's Jim Crow law which requires bus drivers to segregate the races.

Justice Reed delivered the high tribunal's 6-1 decision.

Justice Burton wrote a dissenting opinion. Justices Black and Frankfurter delivered concurring opinions.

The appeal was filed by Irene Morgan, a Negro fined $10 because she refused to change seats on request of a Greyhound Bus driver. This bus was traveling from Norfolk to Baltimore. The woman was ejected and fined in the Circuit Court of Middlesex County, Va.

UNDUE BURDEN?

The Virginia Supreme Court said the law did not result in discrimination against whites or Negroes and did not violate the Federal Constitution.

Justice Reed held that the Virginia statute imposes an undue burden on interstate commerce.

"As there is no Federal act dealing with the separation of races in interstate transportation," he explained, "we must decide the validity of this Virginia statut on the challenge that it interfere with commerce, as a matter c balance between exercise of th local police power and the nee for national uniformity in the reg ulations for interstate travel.

"It seems clear to us that seating arrangements for the different races in interstate motor travel requires a single, uniform rule to promote and protect national travel."

RAIL QUESTION OPEN

The two opinions dealt with motor bus travel. They did not refer to possible effects of the majority decision on "Jim Crow" laws affecting railroad transportation.

Reed said that 18 states prohibit racial separation on public carriers. Ten require separation on motor carriers.

"Where uniformity is essential for the functioning of commerce, a state may not interpose its local regulation," he added.

Justice Burton, in his dissent, was unconvinced that the majority was right in assuming that "there exists today a requirement of a single uniform national rule on the subject."

WANT UNIFORMITY

Burton said he believed that "the inaction of Congress is an important indication that, in the opinion of Congress, this issue is better met without nationally uniform affirmative regulation than with it. . . . The fact that 18 States have prohibited in some degree racial separation in public carriers is important progress in the direction of uniformity.

"The fact, however, that 10 States in some degree require some racial separation of passengers on motor carriers indicates a different apprisal by them of the needs and conditions in those areas than in others. The remaining 20 States have not gone equally far in either direction.

Burton said it was a fundamental concept of the constitution "that where conditions are diverse the solution of problems arising out of them may well come through the application of diversified treatment matching the diversified needs as determined by our local governments."

Court Is Interfering, Says Alabama Governor

MONTGOMERY, Ala., June 3—(AP)—Gov. Chauncey Sparks criticized as "interfering with State's rights" Monday a United State Supreme Court decision outlawing racial segregation on buses in interstate commerce.

"Decisions of this kind are a fertilizer for the Ku Klux Klan," the Governor declared.

He predicted they would lead to demands for social equality for Negroes in schools "or any kind of facility supported and controlled by the State."

"I think the people who promote this kind of stuff are not realists," Sparks commented. "Never in history have any two races which are diametrically opposite—like the white and black or the white man and the Indian—ever gotten along except by independent association."

"If we are going to prevent violence," he added, "we must learn to promote the development of the races in their own spheres."

Gov. Sparks said he stood for "two things which are fundamental":

1. Absolute segregation.
2. Independent racial development with equal opportunity for both races.

Louisiana To Continue Segregation in Buses

BATON ROUGE, La., Ju (AP)—Louisiana will conti enforce its laws relating to gation of races on buse trains in intrastate co despite Monday's decision United States Supreme Cou such segregation in buses c State lines is legal, Clayto man, Acting Secretary o Louisiana Public Service Co sion, declared Monday.

Louisiana's laws on segre of the races in railway c and depots date from 189 1894, Coleman said, and we tended to cover buses by a mission resolution in May 19

"Enforcement of the ba race segregation in buses en in Interstate transportation matter under the jurisdicti the Interstate Commerce Co sion," the Secretary said, ' can tell you that Louisiana' on segregation in buses in state transportation will co to be enforced."

Carolina Official Fear Segregation Is Doome

RALEIGH, N. C., June 3— North Carolina's utilities co sioner, Stanley Winborne, M described as 'regrettable' a sion of the U. S. Supreme banning the segregation of and Negro passengers on inte buses.

Winborne said that he w the opinion that all inter buses operating in North Car would have to discontinue the gregation of white and Negro assengers.

Tickets May Determine Enforcement of Decree

COLUMBIA, S. C., June 3 — (AP)—Enforcement of a Supreme Court of the United States' decision Monday that interstate buses may not segregate white and Negro passengers, as required by South Carolina law, may depend on tickets, State's Atty. Gen. John M. Daniel said Monday.

"Not having seen the opinion I can only surmise," Daniel said in reply to questions from newsmen, "but previous Supreme Court rulings lead me to believe that the decision may have been based on the fact that the Negro passenger held an interstate ticket, and not on the reported fact that the bus was traveling interstate."

Daniels said it was possible that while a bus might be traveling interstate, from Georgia through South Carolina into North Carolina, that South Carolina's law requiring segregation might continue to apply to passengers getting on at points in the state and off at points in the state.

Atlantic Greyhound 'To Comply at Once'

CHARLESTON, W. VA., June 3 — (AP) — Immediate compliance with a Supreme Court ruling that states cannot require segregation of whites and Negroes in interstate buses - as indicated Monday by the Atlantic Greyhound Corporation, which operates in most of the so-called "Jim Crow" Southern States.

"We will naturally comply with whatever the Supreme Court of the United States says is the law," said George S. Engle, Executive Vice President and General Manager of Atlantic Greyhound.

'Nooga City Transit Is Affected Slightly

CHATTANOOGA, Tenn., June 3—(AP)—The City transportation system of Chattanooga, close to the Tennessee-Georgia border, will be affected, although only slightly, by the U. S. Supreme Court's decision Monday banning racial segregation on interstate buses, it was indicated here.

City Attorney J. W. Anderson said the ruling would apply to buses of the local system, operated by the Southern Coach Lines, which crossed into Georgia.

Only one major route, that joining Chattanooga with Fort Oglethorpe, Ga., is affected.

Returning servicem

Jim Crow Ruled Off Bus By U. S. Supreme Court

WASHINGTON, June 3—(AP)—The Supreme Court Monday decided a state cannot require segregation of white and Negro passengers in buses crossing state lines.

The decision was given on a Negro's appeal from a Virginia Supreme Court ruling. The Virginia court upheld that State's Jim Crow law which requires bus drivers to segregate the races.

Justice Reed delivered the high tribunal's 6-1 decision.

Justice Bu ton wrote a dissenting opinion. Justices Black and Frankfurter delivered concurring opinions.

The appeal was filed by Irene Morgan, a Negro fined $10 because she refused to change seats on request of a Greyhound Bus driver. This bus was traveling from Norfolk to Baltimore. The woman was ejected and fined in the Circuit Court of Middlesex County, Va.

UNDUE BURDEN?

The Virginia Supreme Court said the law did not result in discrimination against whites or Negroes and did not violate the Federal Constitution.

Justice Reed held that the Virginia statute imposes an undue burden on interstate commerce.

"As there is no Federal act dealing with the separation of races in interstate transportation," he explained, "we must decide the validity of this Virginia statu on the challenge that it interfere with commerce, as a matter c balance between exercise of th local police power and the nee for national uniformity in the reg ulations for interstate travel.

Louisiana's laws on segregation of the races in railway coaches and depots date from 1890 and 1894, Coleman said, and were extended to cover buses by a commission resolution in May 1939.

"Enforcement of the ban on race segregation in buses engaged in Interstate transportation is a matter under the jurisdiction of the Interstate Commerce Commission," the Secretary said, "but I can tell you that Louisiana's laws on segregation in buses in intrastate transportation will continue to be enforced."

Carolina Official Fears Segregation Is Doomed

RALEIGH, N. C., June 3—(AP)—North Carolina's utilities commissioner, Stanley Winborne, Monday described as 'regrettable" a decision of the U. S. Supreme Court banning the segregation of white and Negro passengers on interstate buses.

Winborne said that he was of the opinion that all interstate buses operating in North Carolina would have to discontinue the segregation of white and Negro passengers.

Tickets May Determine Enforcement of Decree

COLUMBIA, S. C., June 3 —(AP)—Enforcement of a Supreme Court of the United States' decision Monday that interstate buses may not segregate white and Negro passengers, as required by South Carolina law, may depend on tickets, State's Atty. Gen. John M. Daniel said Monday.

"Not having seen the opinion I can only surmise," Daniel said in reply to questions from newsmen, "but previous Supreme Court rulings lead me to believe that the decision may have been based on the fact that the Negro passenger held an interstate ticket, and not on the reported fact that the bus was traveling interstate."

Daniels said it was possible that while a bus might be traveling interstate, from Georgia through South Carolina into North Carolina, that South Carolina's law requiring segregation might continue to apply to passengers getting on at points in the state and off at points in the state.

Gene Would Have Negroes Buy New Tickets at State Line

Constitution June 5

By JOHN COURIC,
Constitution Staff Writer.

CARTERSVILLE, June 4—Replying to a United States Supreme Court decision prohibiting race segregation on interstate buses, Gubernatorial Candidate Eugene Talmadge Tuesday promised to enforce Georgia Jim Crow laws by requiring purchase of new tickets each time a bus crosses the State line.

"We won't have any interstate travel through Georgia," Talmadge declared in an address here. "All travel will become intrastate. Georgia can control licenses on intrastate tickets and on intrastate buses," he said.

Talmadge explained that Negroes on buses entering Georgia will be required to purchase tickets for the distance traveled within the State and, therefore, will not be classed as traveling in interstate commerce.

The Supreme Court ruling, which held that races cannot be segregated on buses, applied only to buses in interstate travel.

Referring to the decision, handed down Monday, Talmadge said: "If Congressmen think Georgia will take this laying down, they will quit fighting against FEPC."

Twice during his speech, he repeated this phrase: "Supreme Court decisions follow elections." Explaining his point, Talmadge asserted: Elect the right man and the Supreme Court will get in line and realize they will have to deal with things in a practical manner.

Talmadge also promised his audience he would do his utmost to make the provisions of the GI Bill of Rights a reality for every Georgia veteran.

Urging voters to support him, the former Governor discussed in detail his program for veteran assistance, including free business licenses, five-year ad valorem tax exemptions and honorary drivers licenses for life. He promised that 50 per cent of those he appointed to public office would be veterans.

Talmadge discussed the necessity for a sound health program and pledged to set aside $1,000,000 for aid to Georgia's rural communities to construct and equip hospitals.

In addition, he promised support for expansion and improvement of farmers' markets.

Turning to the need for highway construction, Talmadge said, if elected, he would show Georgia the largest road-building program the State has ever known.

Ill, May Es

TOKYO, Sunday, June 2—Yosuke Matsuoka and Shumei criminal suspects, will be made Military Tribunal convenes Mon

Both men are seriously ill, Matsuoka reportedly of tuberculosis and Okawa of tertiary paresis, the last stage of a complete break down of mental capacities.

Defense attorneys will move tha Matsuoka be confined to a pri vate sanitarium and his nam stricken from the indictment, i was reported Sunday. A reques for a stay of proceedings will b made on behalf of Okawa.

Matsuoka is a former Foreig Minister and leader of the radi cally imperialist Showa restora tion who helped set Japan on th path of world aggression. Okaw was the leading Japanese rabble rouser, crying for expulsion of al white races from Asia.

Two physicians appointed by th Tribunal to examine the two de fendants, one recommended by th defense and one by the prosecu tion, reported on May 23 that the were too ill to stand trial.

After receiving the report, th Tribunal ruled that the two me should remain in the U. S. Arm Hospital for treatment until further ruling could be hande down.

The Japanese public has re fused to accept the medical diag nosis of Okawa's illness. There i a rumor which insists he was sub jected to a new, mysterious "in sanity gas" by the Americans t keep him from revealing some un known "startling revelations which would damage the prestig of the Tribunal.

Jones To Lead

too, inasmuch as "Hell Bent"—long a Talmadge stalwart—was noticeably missing.

THE FAITHFUL

Others of the faithful were present, however, and duly introduced. These included:

Susie T. Moore, Tifton, whom Talmadge named to the State Board of Regents; Taxi Smith, Albany, whom Talmadge appointed Treasurer of the State Highway Department; and John Blease, for-

23 Virginians Quit Bus When Negroes Sit Tight

SUFFOLK, Va., June 10—(AP)—The first repercussion of the U. S. Supreme Court's ruling against segregation of races on interstate buses was felt in Virginia Monday when 23 white Nansemond County draftees left a Greyhound bus rather than sit next to Negroes.

The draftees, headed for Richmond for induction, walked off the bus because, they said, Negroes occupied half of the many available seats and refused to double up.

M. P. Spivey, in charge of the Suffolk men, and Melvin Brinkley, of White Marsh Road, in charge of the men living out in the county, said that Negroes occupied about half of the seats in the rear of the bus, with only one Negro to a seat and that they refused to double up.

"The men left the bus on their own initiative," Spivey said, "and I joined them, along with Brinkley. We are waiting for the next bus, and if we have to sit with Negroes, we'll keep on waiting."

The bus was one bound for Washington from Norfolk. To conform with a ruling by the Supreme Court of the United States a week ago that a state cannot require segregation of white and Negro passengers on interstate buses, the interstate lines have abolished the "Jim Crow" system from buses crossing state lines.

The draftees, however, boarded the next Greyhound bus which left here at 11:50 a. m. for Richmond.

GEORGIA EDITORS SAY:

ALL OUT FOR COPPERHILL

(North Georgia Tribune, Canton)

Eugene Talmadge says now that if he is elected Governor he is going to force everybody who rides buses from one State to another, to get off at the Georgia State line and buy another ticket, replying to a Supreme Court decision prohibiting segregation of the races on interstate buses. When this day comes, if it ever does, everybody who plans to go to Copperhill are reminded that they will have to get off at the river bridge and walk on into town or else carry an extra three cents along for another ticket into Copperhill.

here. "All travel will become interstate. Georgia can control licenses on intrastate tickets and on intrastate buses," he said.

Talmadge explained that Negroes on buses entering Georgia will be required to purchase tickets for the distance traveled within the State and, therefore, will not be classed as traveling in interstate commerce.

The Supreme Court ruling, which held that races cannot be segregated on buses, applied only to buses in interstate travel.

Referring to the decision, handed down Monday, Talmadge said: "If Congressmen think Georgia will take this laying down, they will quit fighting against FEPC."

Twice during his speech, he repeated this phrase: "Supreme Court decisions follow elections." Explaining his point, Talmadge asserted: Elect the right man and the Supreme Court will get in line and realize they will have to deal with things in a practical manner.

Talmadge also promised his audience he would do his utmost to make the provisions of the GI Bill of Rights a reality for every Georgia veteran.

Urging voters to support him, the former Governor discussed in detail his program for veteran assistance, including free business licenses, five-year ad valorem tax exemptions and honorary drivers licenses for life. He promised that 50 per cent of those he appointed to public office would be veterans.

Talmadge discussed the neces-

hospitals.

In addition, he promised support for expansion and improvement of farmers' markets.

Turning to the need for highway construction, Talmadge said, if elected, he would show Georgia the largest road-building program the State has ever known.

Talmadge Would Order Jim Crow Sleeper Hunt

By JACK TARVER,
Constitution Associate Editor

MOULTRIE, June 1—"Elect me Governor and I'll put inspectors at the State line to look into every sleeping car and see that there's no mixing of the races in Georgia."

That's the plank former Gov. Eugene Talmadge nailed into his already bulging anti-Negro platform here Saturday.

Citing an alleged instance where "a feather-in-his-hat Negro zoot-suiter went into Atlanta's First Baptist Church and tried to set down right there alongside a white lady," Talmadge invoked the memory of the State's Confederate dead as he pledged himself to keep Georgia "a white man's State."

He was introduced by Roy V. Harris, lame duck speaker of the Georgia House of Representatives, who declared Talmadge gave Georgia the best and most honest government in his memory.

CHASED BY SHOWER

The crowd, which gathered early, was dispersed by a brief shower a few moments before time for the program to get under way. For a while it appeared that Talmadge's speech was to be rained out, as was his July Fourth opener here four years ago, but the clouds cleared, and, by the time activities finally got under way, several thousand persons were in attendance.

Like the weather, Talmadge was in better fettle than four years ago, having carefully avoided the roadside resting place where a lurking black widow spider incapacitated him in 1942, making it necessary for "Hell Bent" Edwards to take over midway the proceedings. And a good thing, too, inasmuch as "Hell Bent"—long a Talmadge stalwart—was noticeably missing.

THE FAITHFUL

Others of the faithful were present, however, and duly introduced. These included:

Susie T. Moore, Tifton, whom Talmadge named to the State Board of Regents; Taxi Smith, Albany, whom Talmadge appointed Treasurer of the State Highway ... her Talmadge stalwart in the Legislature. But for the addition of Roy Harris to his retinue, Talmadge's show Saturday was remarkably little changed from those of four years ago.

In addition to his promise to put inspectors at all State lines to enforce Georgia's Jim Crow laws on passenger trains, Talmadge added two new planks to the platform on which he is seeking a come-back. These were:

1. To establish a veterinary college in South Georgia.
2. To put a Georgia Bureau of Investigation deputy in every county to combat cattle thieves, and "the postwar crime wave."

HARRIS HITS PAPERS

Following Roy Harris, who blasted Jim Cox and carpetbag newspapers attempting to control politics in Georgia, Talmadge renewed his threat to establish "the biggest newspaper in the South in Atlanta." It was also announced that solicitors would be present after the meeting to take subscriptions to The Statesman.

Ole Gene was running against carpetbaggers and nigger-lovers and alien influences, just as he was four years ago.

WHO WILL RULE?

"The people of Georgia must decide whether or not the white people will continue to run the State or whether they are willing to turn it over to the Moscow-Harlem zoot-suiters," roared Talmadge. "If the white primary is not preserved, the Negroes will vote in a bloc and soon will dominate the elections. Colored candidates will then be elected to office and our Jim Crow laws will be destroyed. South Carolina retained its white primary and so can Georgia."

Talmadge did not tell his audience that South Carolina has never had the county unit system which would automatically be abolished if Georgia followed South Carolina's example and repealed all statutes pertaining to primary elections.

He did contend that the white primary can be retained without jeopardizing the county unit system by writing the latter into the State constitution, a device which most authorities on organic law say would merely bring on more litigation.

HIS CONTENTION

Talmadge would continue the white primary by writing it into the rules of the State Democratic Committee with a provision that such rules cannot be changed except by a four-fifths vote of the delegates assembled at the Democratic convention. Delegates to the convention are appointed by the successful candidate for Governor.

In addition to his pledge to retain the white primary, to which he devoted the greater part of his speech, Talmadge renewed his promise to increase salaries of teachers and bus drivers, provide free driver's license to veterans, hard surface roads over which school buses and mail carriers must travel, and increase old-age pensions.

"I have received thousands of pitiful letters from old persons in Georgia who are hardly existing in the bare necessities of life," said Talmadge. "The people who are entitled to a pension are getting a mere pittance or nothing at all. When elected Governor, I shall work to see that every old person in this state who makes application receives a pension substantial enough to support himself and his family."

Negroes Seek Federal Aid In Gaining Ballot

Intervention of the department of justice to force the South Carolina Democratic party to enrol negroes for party primaries was sought today.

Affidavits from four Columbia negroes that they were denied the enrolment privilege were "in the mail" to Washington, Chairman James M. Hinton of the state conference of the National Association for the Advancement of Colored People, said.

Hinton said the justice department had informed him it would prosecute "any state or party official who attempts to prevent any person from voting because of color" in a primary or general election.

Negroes were being encouraged by the South Carolina Progressive (negro) Democratic party to go to enrolment places in the state today in attempts to get their names on Democratic party books, despite a party rule that limits membership to whites.

Democratic party officials have declared their party a private one, not subject to state or other election laws.

ALABAMA MOVES TO TIGHTEN UP VOTE PRIVILEGE

Trend Follows Recent Negro Balloting In Primaries

MONTGOMERY, Ala., June 3. (AP) A constitutional amendment to "tighten up" on voter qualifications is the answer of Democratic party chieftains to the question of Negro voting in Alabama.

The traditional "white party" label was ripped off this year's primaries by the state Democratic executive committee, the party's governing body, in keeping with a U. S. supreme court decision that Negroes cannot be barred because of race or color.

Before the Negro can vote, however, he must register, and to do that he has to meet certain qualifications. That's where the amendment comes in.

Boswell Amendment

When the state committee discarded the racial restrictions last January, it also endorsed the Boswell amendment which will be voted on in the general election in November. The amendment, sponsored by Rep. E. C. Boswell, Geneva, Ala., attorney, and passed by the 1945 legislature, would do two things:

Remove from Alabama's 45-year-old constitution the property ownership clause which gives the right of ballot to anyone who owns $300 worth of property or whose wife or husband is similarly situated.

Require registrants to be able to read and write, "understand and explain" any section of the federal constitution. They can qualify now if they can "read and write" it.

County boards of registrars are the sole judges of a prospective voter's qualifications and their word is law until questioned in court, a long and often costly procedure.

Race Not Mentioned

Of course, the language of the amendment makes no mention of race, and in principle it applies to all alike. But Boswell told his fellow legislators he felt passage of the act was essential to "white supremacy," and party chairman Gessner T. McCorvey has referred to it as an "effective way of keeping Negroes from voting in primaries in the future."

Some Democrats disagree with the Boswell proposal, however, and have begun a campaign to defeat it at the polls.

Richard T. Rives, Jr., Montgomery attorney widely known in Alabama political circles, is one. He argues that enactment would "encourage Negroes to go to court to enforce their right to vote" and that court action "inevitably breeds bad feeling between the races."

One such suit is pending now in federal court.

Democrats Ask 'White Primary'

Repeal of Laws Which Permit Negroes To Vote Urged By Executive Committee

By HENNING HELDT
Herald Political Writer

The State Democratic Executive committee called for a return of the "White Primary" Wednesday, less than a month after the first Democratic primaries in this state in which negroes voted in numbers.

Meeting in Jacksonville, the 98 members qualified to vote adopted a resolution asking the state legislature to repeal at the 1947 session all election laws "which prevent the Democratic Party from remaining an exclusively white party."

It was only last Jan. 21 that the same committee failed for the first time since 1904 to include in its qualifications for voting in the Democratic primaries that the voter be of the white race. Wednesday's action followed state and federal court decisions that negroes could be barred from primaries conducted by the state.

The committee Wednesday was meeting in the one county—Duval—in which the negro vote became a major issue last month in a legislative race.

SOUGHT CHANGE

State Sen. John E. Mathews who won re-nomination in a second primary runoff with Mabry Carlton who received a big majority of the negro votes, charged that "the CIO-Communists" were organizing the negroes into a voting bloc.

Mathews fought at the 1945 legislative session for a change in election laws to "save" the white primary, but had only one other supporter on a joint committee which kept the issue from reaching the floor in either house.

Aging Fred P. Cone of Lake City, governor of Florida from 1936 to 1940, made a brief talk lauding "white man's government."

Nothing was said in the committee's motion concerning the method by which the white primary should be restored.

ONE WAY

The one way in which it could be done, however, would be by transfering jurisdiction over the Democratic party primary from the secretary of state and county commissions, to the party machinery of state and county Democratic committees.

Mathews fought at the 1945 legislative session for a change in election laws to "save" the white primary, but had only one other supporter on a joint committee which kept the issue from reaching the floor in either house.

Aging Fred P. Cone of Lake City, governor of Florida from 1936 to 1940, made a brief talk lauding "white man's government."

Nothing was said in the committee's motion concerning the method by which the white primary should be restored.

ONE WAY

The one way in which it could be done, however, would be by transfering jurisdiction over the Democratic party primary from the secretary of state and county commissions, to the party machinery of state and county Democratic committees.

Costs of the primaries then would have to be borne by party members. This probably would be defrayed through membership fees or annual assessments.

Nearly all Democratic leaders in the state have expressed the utmost opposition to any return to the convention form of nominating party candidates.

This method is particularly susceptible to machine control.

An alternative suggested during committee discussions at the 1945 session, was nomination by petition. Anyone who could get the required number of signatures on a nominating petition would qualify as a candidate for the primaries.

In its resolution Wednesday, the committee said that if the legislature should see fit to pass laws giving the party control over its affairs, "this committee will call and hold white Democratic primaries for the nomination for candidates for office of the Democratic primary."

ONE CONTINGENCY

Before the state committee met, it was reported that introduction of such a resolution was contingent upon the election as chairman of Assistant State Attorney Joe Hill Williams of Lake Butler.

Williams was elected early in the session to succeed Tom Conely of Okeechobee who was not a candidate for re-election. Williams defeated Judge E. B. Donnell of West Palm Beach, 56 to 42.

Mrs. Lucille Tally of Tavares defeated Mrs. Myrtie G. Brown of Lake City for vice-chairmanship. Irvin Walden, Sarasota, was re-elected secretary-treasurer.

There is considerable likelihood the legislature will reject the party committee's request for legislation to re-establish the white primary.

Negro voting played an insignificant role in the primaries in most Florida primaries last month.

FEAR PARTY CONTROL

Many election officials, including Secretary of State R. A. Gray who heads them all in Florida, fear that the evils of party control over primaries would more than offset any problems created by negro voting.

Gray's strong appeal to the legislative committees in 1945 not to tamper with the present primary system was largely responsible for their decision to leave it in status quo.

On the other hand, the North Florida counties are closer to Georgia where negro voting played an important part in the election of congresswoman Helen Mankin and in the defeat of Speaker Roy Harris, Gov. Ellis Arnall's chief legislative foe.

The United States supreme court has ruled that the negro may not be barred from Democratic primaries in states in which they are conducted under supervision of the state.

Efforts Made By Negroes to Enroll Meet With Rebuffs

Spartanburg Finds 13 Names Placed on Books

(By The Associated Press)

Attempts by Negroes to enroll at several places Wednesday for the coming "white" Democratic primary met rebuffs about as expected, although Spartanburg reported that the names of 13 Negroes were placed on club books there.

Chairman John H. McCray of the Progressive Democratic (Negro) party said here that the rebuffs were expected and that refusal of permission for Negroes to enroll was "what we want." The United States Department of Justice will be notified, he said that the South Carolina Democratic party officials refused to allow Negroes to enroll as he contended they had a right under federal court rulings to do.

Negro enrollment at Spartanburg was apparently without objection on the part of those in charge of the books in the two precincts where the incidents occurred. McCray expressed surprise when informed by the Associated Press, saying that he was sure the names of the 13 Negroes would be "purged" from the books.

(State Democratic rules provide that names of "unqualified" persons—those persons not "White Democrats" and those who do not meet age and residence requirements—shall be removed from enrollment books).

Negro groups were turned away from enrollment places at Columbia, Charleston, Greenville and Sumter. At Charleston, the group, McCray said he was informed, was told that "this is a strictly White Democratic book."

In all instances, the Negroes were referred to the county Democratic chairmen when turned away.

Meanwhile, affidavits of five Columbia Negroes who were refused permission last week to enroll were "in the mail" to Washington, Chairman James M. Hinton of the South Carolina Conference of National Association for Advancement of Colored People said. They were directed to the attorney general of the United States, whose office, Hinton said, had informed him it would prosecute "any state or party official who attempts to prevent any persons from voting because of color."

At Union, Representative John D. Long, a gubernatorial candidate in the August 13 Democratic primary, issued a statement challenging "the right of the federal government in Washington to threaten a group of citizens in South Carolina with criminal prosecution for forming their own political party to nominate candidates of their own choosing for election to public office" or "to dictate the personnel and policies and rules of political parties in South Carolina."

A few hours after Long's statement, Hinton gave to the Associated Press a copy of a letter to Long in reply.

"Your words....are a travesty on justice and democracy," Hinton's letter said. "They can only be interpreted as calling for riots and bloodshed in South Carolina.

"They are most unfortunate at this time, and more especially coming from an official sworn to uphold law and order.

"The state conference of NAACP condemns in no uncertain terms, the words attributed to you in the press on June 5.

"The sons of this day, of both races, who fought sided by side, and the cry from the graves of those who perished upon battlefields do not think like you, and if left alone, would fight just as hard to bring economic and political freedom to all peoples in America....Negroes in South Carolina will be free, in spite of Mr. Long."

Negroes Denied Right to Enroll In Georgetown

Georgetown, June 7. — Special: Several attempts have been made by negroes to enroll to vote in the Democratic primary election here but enrolment has been refused them.

T. H. Rhea, secretary for the county organization in Georgetown, said Friday that a delegation of about nine negroes called on him Wednesday and asked if they would be allowed to enroll. Mr. Rhea told them that "the party rules stated that registration was restricted to whites 18 years old."

He said that there was no resentment displayed but that the group formally asked for his name. Mr. Rhea said that negroes had tried to enroll at two registration points but the keepers had denied them access to the books.

Jackson Would Bar Negroes

MARIANNA, [UP] The Jackson county democratic executive committee yesterday went on record against permitting negroes to vote in white primaries.

THE ATLANTA CONSTITUTION . . EDITORIAL PAGES

FRIDAY, JUNE 7, 1946.

Tell the Whole Truth, Mr. Talmadge

Ex-Gov. Eugene Talmadge has an unadmirable habit of dealing in half-truths and of twisting facts to meet his own selfish ends.

Thus it is that Mr. Talmadge is currently citing South Carolina to prove that Georgia can maintain lily-white primaries by the simple expedient of abolishing all State laws pertaining to party elections.

What Mr. Talmadge is not saying, of course, is that South Carolina does not have the county unit system as Georgia does. Therefore it was not necessary there to repeal any act similar to Georgia's Neal Primary law, wherein the county unit system is provided.

Nor is Mr. Talmadge telling his audiences that South Carolina's action has been but lately taken, that there has not been time as yet for fraudulent election practices to become prevalent as inevitably they will once those so inclined realize they may stuff ballot boxes without fear of prosecution.

Mr. Talmadge is ignoring the fact that countless South Carolinans have great apprehension that, by removing party primaries from the influence of the law, they have opened the floodgates to an era of flagrant violation of the canons of honesty and decency.

Georgia can follow South Carolina's example and maintain—at least for a little longer—its white primary.

But Georgia cannot do it without:

1. Abolishing the law providing for a county unit system.

2. Inviting election stealing on an unprecedented scale.

And that is the whole truth which Mr. Talmadge has not been telling.

JACK TARVER

Ole Gene Running Under Wraps?

Personally, I have been a little disappointed with Gene Talmadge's uncharacteristically modest approach to the gubernatorial campaign.

Instead of pussyfooting around with promises to abolish all the primary laws, I mean, why doesn't he go ahead and propose that we do away with all elections of any sort, setting up a Talmadge dynasty? He could be Eugene The First and Herman could still take over in four years, as currently planned, and then Herman's boy . . . and so on ad infinitum, or at least until Georgia really gets ready for democracy.

And why, instead of some weak-kneed action like stopping all trains and buses at the State line, doesn't Ole Gene just outlaw them altogether? That way, we wouldn't be bothered with all these alien influences from Alabama and Tennessee and South Carolina. We wouldn't have to worry about freight rates any more, either.

And why, while he's about it, doesnt Talmadge lay bare his heart and recommend that we solve the Negro question once and for all by a general lynching? There are only about a million Negroes in Georgia. Hitler killed that many Jews a month in Germany and Gene is just as capable as Adolf.

I don't think his ex-excellency is playing fair with his followers, running on such a milk-and-water platform. He ought to throw them more raw meat along, take off his inhibtions along with his coat, and give the faithful the type stuff they really want to hear.

Come, come, Gene . . . Let's not be bashful. You've got a reputation to uphold.

JACK TARVER, Associate Editor

Albert Hardy on the Governor's Race

Ex-Gov. Eugene Talmadge has been threatening to put up a new newspaper in Atlanta, where both the established dailies are against him.

Mr. Talmadge has not said so, but we assume he is also prepared to start additional "Statesmans" in Augusta, Macon, Columbus, Albany and Waycross; in Brunswick, Statesboro, Rockmart, Griffin, Americus, Hawkinsville and a hundred other Georgia communities where the present newspapers are opposing him.

Mr. Talmadge has also been berating the editors of the Atlanta papers, impugning their honesty and questioning their sincerity.

Yet Mr. Talmadge has said not a word against editors like Henry McIntosh, Jack Williams, Isador Gelders, Dave Turner and Roy McGinty, to mention just a few of the hundred-odd who are opposing him just as vigorously—and ofttimes more intelligently—than we.

No man in Georgia, for instance, is more loved and respected than Albert Hardy, of The Gainesville News. Mr. Hardy has been watching and writing about Georgia since the turn of the century. This week, in a characteristically succinct editorial, "Queer Political Race," Mr. Hardy evaluates the present gubernatorial picture.

"Have you ever stopped to think that the present gubernatorial campaign is one of the most peculiar in the annals of Georgia history?" Mr. Hardy begins. "It is queer in that two have-been Governors are running again and both are jumping on the third man in the race, who has never been Governor. They seem to fear him more than they fear each other.

"It appears to The News that Rivers and Talmadge seem to think that the other's record in office is so odoriferous that it will defeat him, hence they both are doing everything in their power to stave off, hog-tie, belittle, and besmirch the character and integrity of Mr. Carmichael.

"They are doing this more or less to put up a smoke screen to hide their records in office. What they did in office is a hush-hush secret. Every time they open their mouths about what they did in office, someone brings out the record book and shows their present claims to be contradictory to the facts.

"Talmadge, for example, was making a speech before the labor unions in Atlanta and stated how he favored unions, yet he was the one to call out the State militia when some textile workers went on strike during one of his terms in the Governor's office. He stated that he was a man in favor of equal rights, yet his record shows where he ran roughshod over business interests.

"Rivers claims he is honest and for law and order, yet he had duly elected officers thrown bodily out of office when they refused to obey his orders, which were in violation of the law. He also granted pardons right and left to criminals which the State spent thousands of dollars trying in courts before conviction.

"If there were nothing else to choose from except the records of the two Governors' terms in office, a majority of the voters in Georgia would vote for anyone besides Rivers or Talmadge.

"Georgia is fortunate in having Jimmie Carmichael to run in opposition to these two. He has had enough experience in the Legislature to know what it is all about, and through his own ability and initiative demonstrates that he is capable of conducting the affairs of Georgia in a creditable manner."

Any Moves To Circumvent Negroes' Right To Ballot Opposed By Women Voters

The Georgia League of Women Voters concluded a two-day biennial convention here Friday with the unanimous adoption of a resolution upholding the right of Negroes to vote in the Democratic white primary, election of officers and adoption of a seven-point legislative program for the next two years.

The resolution, prepared by Mrs. Harry Green of the DeKalb County league and introduced at a general session, stated:

"Any endeavor to circumvent the supreme law of the land is in violation of the fundamental principle of democracy that each individual is entitled to have a voice in the selection of those who are to rule over him."

In adopting the seven new projects, the league also carried over eight points from last year's general program and dropped two others because the recommendations had been adopted by the state. Two other issues were held "for study".

The League elected Mrs. Leonard Haas of Atlanta president, succeeding Mrs. J. C. Blalock of Atlanta. Mrs. Olaf Krogland, 1637 Seventeenth avenue, Columbus, was named secretary, and other new officers are:

Mrs. Harry Green of DeKalb county, first vice president; Miss Johnnie Hillbun of Augusta, second vice president; Mrs. James Selvage, Atlanta, treasurer.

Placed on the board of directors were Mrs. J. C. Blalock, retiring president; Mrs. Deane Chivington, Savannah, president of the Savannah league; Mrs. W. L. Steinhauer, 1614 Springer street, Columbus, and Miss Josephine Wilkins, Atlanta.

The seven new points adopted were:

1. Improvement of legislative procedure through careful checking of bills to prevent ambiguous and contradictory legislation; improvement of machinery that would give the public easy access to any bill from time of introduction, and compulsory advertising of local bills.

2. Primaries: legal regulation of primaries to insure fair, honest and democratic procedure. No state primary before Sept. 1 and change from a plurality to a majority vote under the county unit system.

3. Equalization of freight rates.

4. Conservation of natural resources with emphasis on forestry.

5. An adequate probation system for Georgia.

6. Enforcement of Georgia law prohibiting sale of liquor to minors.

7. Placing the institution for the insane at Milledgeville under the state health department rather than the welfare department.

Points on the general program carried over from last year were:

1. Safeguarding of constitutional rights, with special reference to freedom of speech, assembly and press.

2. Strengthening of health, recreation, education and welfare departments th[illegible] proposed increase in train[illegible] Mrs.

3. State-wide [illegible]ing

4. Substantial [illegible] the ber of counties [illegible] dation. [illegible]ent,

ATTEMPT TO SAVE WHITE PRIMARY

PETITIONS ARE PLANNED TO CALL LEGISLATURE INTO SESSION

ATLANTA, April 3 (AP).—Petitions asking Gov. Ellis ASrnall to call a special session of the legislature to preserve the white primary will be circulated this week, Representative Jim Dykes of Cochran declared.

Dykes said he had joined Roy V. Harris, House speaker, in a move for a special session because of their mutual interest in the white primary.

He reported 107 lawmakers already have indicated they would approve a special session.

"We're definitely going to have a special session," he said.

Signatures of 125 House members and 30 senators are required under the law for convening a special meeting of the legislature.

Asked if he was affiliated with former Governor Eugene Talmadge, Dykes said he had never supported Talmadge for governor but that "it looks like he's the only one a white man can vote for now. Ed Rivers hasn't said anything and Ellis Arnall definitely wants the negro vote for his people's candidate."

Both Talmadge and Rivers have been mentioned as probable candidates for governor. Harris faces opposition for re-election to the House in Richmond county. The Atlanta Constitution quoted Harris as saying a statewide movement to preserve the white primary would be too late for the Richmond primary April 16.

"We are going to have to handle the situation locally," he was quoted.

A student voters' league was organized at the University of Georgia and its president, George Doss of Canton, said the group was dedicated to the defeat of former Governors Eugene Talmadge and E. D. Rivers.

The Constitution reported that Represeptative John Gibson of the Eighth congressional district is conferring with friends in South Georgia on the possibility that he might run for governor.

Gibson Has No Comment

DOUGLAS, April 3 (UP).—Representative John Gibson (D.-Ga.) declined comment on reports that he was in Georgia to discuss the possibility of running for governor in the forthcoming election

Gibson recently was endorsed for re-election to Congress by the Eighth Congressional district Democratic executive committee. He had been a member of Congress since 1941 and prior to that was solicitor general of the Waycross Superior Court circuit for six years.

Any Moves To Circumvent Negroes' Right To Ballot Opposed By Women Voters

The Georgia League of Women Voters concluded a two-day biennial convention here Friday with the unanimous adoption of a resolution upholding the right of Negroes to vote in the Democratic white primary, election of officers and adoption of a seven-point legislative program for the next two years.

The resolution, prepared by Mrs. Harry Green of the DeKalb County league and introduced at a general session, stated:

"Any endeavor to circumvent the supreme law of the land is in violation of the fundamental principle of democracy that each individual is entitled to have a voice in the selection of those who are to rule over him."

In adopting the seven new projects, the league also carried over eight points from last year's general program and dropped two others because the recommendations had been adopted by the state. Two other issues were held "for study".

The League elected Mrs. Leonard Haas of Atlanta president, succeeding Mrs. J. C. Blalock of Atlanta. Mrs. Olaf Krogland, 1637 Seventeenth avenue, Columbus, was named secretary, and other new officers are:

Mrs. Harry Green of DeKalb county, first vice president; Miss Johnnie Hillbun of Augusta, second vice president; Mrs. James Selvage, Atlanta, treasurer.

Placed on the board of directors were Mrs. J. C. Blalock, retiring president; Mrs. Deane Chivington, Savannah, president of the Savannah league; Mrs. W. L. Steinhauer, 1614 Springer street, Columbus, and Miss Josephine Wilkins, Atlanta.

The seven new points adopted were:

1. Improvement of legislative procedure through careful checking of bills to prevent ambiguous and contradictory legislation; improvement of machinery that would give the public easy access to any bill from time of introduction, and compulsory advertising of local bills.

2. Primaries: legal regulation of primaries to insure fair, honest and democratic procedure. No state primary before Sept. 1 and change from a plurality to a majority vote under the county unit system.

3. Equalization of freight rates.

4. Conservation of natural resources with emphasis on forestry.

5. An adequate probation system for Georgia.

6. Enforcement of Georgia law prohibiting sale of liquor to minors.

7. Placing the institution for the insane at Milledgeville under the state health department rather than the welfare department.

Points on the general program carried over from last year were:

1. Safeguarding of constitutional rights, with special reference to freedom of speech, assembly and press.

2. Strengthening of health, recreation, education and welfare departments through proposed increase in trained personnel.

3. State-wide merit system.

4. Substantial reduction in number of counties through consolidation.

5. Continued work for ideal state constitution.

6. Strengthening of representative government.

7. Strengthening of state finance system.

8. Continued reform of penal system.

Two other points were adopted for study, but not included in the general program. They were:

1. In field of categorical relief, funds should be made available to permit full minimum budget grants to be given instead of 75 per cent of minimum budget as now is allowed.

2. Extension of educational facilities for handicapped children.

ATTEMPT TO SAVE WHITE PRIMARY

PETITIONS ARE PLANNED TO CALL LEGISLATURE INTO SESSION

ATLANTA, April 3 (AP).—Petitions asking Gov. Ellis ASrnall to call a special session of the legislature to preserve the white primary will be circulated this week, Representative Jim Dykes of Cochran declared.

Dykes said he had joined Roy V. Harris, House speaker, in a move for a special session because of their mutual interest in the white primary.

He reported 107 lawmakers already have indicated they would approve a special session.

"We're definitely going to have a special session," he said.

Signatures of 125 House members and 30 senators are required under the law for convening a special meeting of the legislature.

Asked if he was affiliated with former Governor Eugene Talmadge, Dykes said he had never supported Talmadge for governor but that "it looks like he's the only one a white man can vote for now. Ed Rivers hasn't said anything and Ellis Arnall definitely wants the negro vote for his people's candidate."

Both Talmadge and Rivers have been mentioned as probable candidates for governor. Harris faces opposition for re-election to the House in Richmond county. The Atlanta Constitution quoted Harris as saying a state-

Gibson Has No Comment

DOUGLAS, April 3 (UP).—Representative John Gibson (D.-Ga.) declined comment on reports that he was in Georgia to discuss the possibility of running for governor in the forthcoming election

Gibson recently was endorsed for re-election to Congress by the Eighth Congressional district Democratic executive committee. He had been a member of Congress since 1941 and prior to that was solicitor general of the Waycross Superior Court circuit for six years.

Two Southern Customs Hit

Recent State Law, High Court Ruling, Affect White Vote Supremacy, Segregation

By KENNETH TOLER

JACKSON, Miss., June 8.—Two deep-rooted Southern customs and traditions—white supremacy at the ballot box and segregation—were dealt blows this week which threaten them to an alarming degree. Responsibility for one of the threats rests on the doorstep of the State Legislature, where it was least expected. The other rests on the United States Supreme Court whose ruling on interstate "Jim Crow" segregation was to be expected, but not so soon. An insight on where the legislative action could lead was given in a Democratic city election at Pass Christian on the Gulf Coast when 10 per cent of those voting this were mostly If that hould

senger buses operating interstate. Governor Bailey pretty well answered the issue when he said Mississippi negroes will continue to respect Southern segregation custom. Whether those crossing state lines will have the same regard for that Southern custom, however, remains to be seen.

In regard to Pullman accommodations and dining car service, "Jim Crow" in the South has been ignored ever since the war began. Chair car service on railroads, however, continues along Southern segregation lines.

A big influence in the trend, which until recently has gone unchallenged, has been certain "teachings and conclusions" by one of the most powerful religious denominations, the Methodist Church. 't has taken root since merger of he denomination's two branches. Now, however, certain Mississippi leaders of the church have alled on their leaders to "take a ok at what's going on." They plan carry their fight to the high uncils of the church within the ate and to its controlling Council Bishops.

At Inverness, a district conference of the Methodist Church, once ith a Northern and Southern division, went on record as "prayerlly petitioning" its Council of

tarian legislation. If it is for the people it is dubbed Socialism or Communism.

Whites Divide on Negro Vote

Georgians are not quite agreed on the manner in which they will face the new situation created by the United States Supreme Court that opens the Democratic primaries of Georgia to Negro voters. Some of the best people in Georgia, and some of our lifelong Democrats, favor bowing to the decision of the court and accepting the Negro citizens as voters in our primaries. There are groups forming, however, that are opposed to this. They are asking that we create a new sort of primary that will evade the court decision and make it possible for white voters alone to participate in it. What they propose is that we shall have an extra session of the legislature and repeal all laws that have to do with our Democratic primary. With this machinery out of the way they would then proceed to work outside of the framework of Georgia laws and the Georgia constitution and set up primary machinery as a sort of society or independent organization. Using the club system for operating the party machinery it is contended that we can hold our nominating elections exclusively for the whites. Of course, there would be some features of the primary law that could not very easily be utilized in the strictly party election regulation. For one thing, we would probably lose the country unit system. The Observer would shed no tears about this. Majority rule is good enough for us and we are perfectly willing to elect our state officers by a statewide majority vote. But the county unit system is very dear to some of our politicians and they would not be happy without it.

There are still other suggestions being made by a great many that we regulate our primaries by an educational yardstick or a sort of voters IQ. This could be used to keep many Negroes from voting, but it would also apply to a considerable number of whites. The Observer holds with those who think that we should first give the Negro a trial at voting in the primary and govern our action for the future by what develops when the colored man shares the voting privilege with the white man.

Two Southern Customs Hit

Recent State Law, High Court Ruling, Affect White Vote Supremacy, Segregation

By KENNETH TOLER

JACKSON, Miss., June 8.—Two deep-rooted Southern customs and traditions—white supremacy at the ballot box and segregation—were dealt blows this week which threaten them to an alarming degree. Responsibility for one of the threats rests on the doorstep of the State Legislature, where it was least expected. The other rests on the United States Supreme Court whose ruling on interstate "Jim Crow" segregation was to be expected, but not so soon. An insight on where the legislative action could lead was given in a Democratic city election at Pass Christian on the Gulf Coast when 10 per cent of those voting this week were negroes, mostly veterans. If that ratio should govern in the July 2 Democratic primary when a United States senator, four of the seven representatives in Congress and several state judges are to be named, then around 20,000 negroes could be counted among the 200,000 or more votes expected to be cast.

Mr. Toler

Because of the sharp division among Democratic factional lines in Mississippi, the negro vote could develop as a balance of power as it has in other sections of the Nation. Even more could develop here in view of the close division in population between the races; 52 per cent white and 48 per cent negro.

88,000 Negro Veterans

Another angle is that of the 210,000 Mississippians who served in World War II, around 88,000 were negroes.

Eager to give veterans, who were more concerned with bullets than ballots and as a result did not pay their poll taxes for the two preceding years, an opportunity to vote in the July 2 primary, the Legislature at its recent session passed a bill permitting them to do so without the poll tax requirement. It also extended to June 17 the time to register in order to be "otherwise qualified" to vote next month.

Protests were raised against the bill because of its threat to white supremacy at the ballot box, but due to its veteran-vote appeal, they were brushed aside. Proponents felt secure in the state constitution's literacy provision as a guard against negro veterans taking advantatge of the measure and becoming qualified to participate this Summer. They had overlooked the educational progress made by negroes while in service, along with other indoctrinations, and a friendly United States Supreme Court and Federal Department of Justice.

Hardly had the session formally adjourned, than out of Washington came a mandate from the Justice Department that any person or party denying a qualified person the right to vote because of color would be criminally prosecuted. Therein lies one of the threats, affecting the county circuit clerks, who have the sole authority in determining the qualification of a voter.

That negro veterans are taking advantatge of the statute was demonstrated in the Pass Christian election, and reports from many sections say they are presenting themselves for registration. In Jackson, more than 400 have been registered, with the number here and other places likely to increase before the June 17 qualifying deadline.

Bailey On Segregation

Little trouble is anticipated at this time as a result of the United States Supreme Court decision breaking down segregation on passenger buses operating interstate. Governor Bailey pretty well answered the issue when he said Mississippi negroes will continue to respect Southern segregation custom. Whether those crossing state lines will have the same regard for that Southern custom, however, remains to be seen.

In regard to Pullman accommodations and dining car service, "Jim Crow" in the South has been ignored ever since the war began. Chair car service on railroads, however, continues along Southern segregation lines.

A big influence in the trend, which until recently has gone unchallenged, has been certain "teachings and conclusions" by one of the most powerful religious denominations, the Methodist Church. It has taken root since merger of the denomination's two branches.

Now, however, certain Mississippi leaders of the church have called on their leaders to "take a look at what's going on." They plan to carry their fight to the high councils of the church within the state and to its controlling Council of Bishops.

At Inverness, a district conference of the Methodist Church, once with a Northern and Southern division, went on record as "prayerfully petitioning" its Council of Bishops to investigate certain inter-racial literature being sent South. More recently, the board of stewards of the Millsaps Memorial Methodist Church at Jackson took the same action and plan it as an important item on the agenda at the district conference meeting in Canton later this month.

Meanwhile, these leaders plan to continue their fight "until something is done." Oldtimers are fearful where the "liberal" movement will lead. They admit a changed order is in store. Some admit their positions in present day trends are comparable to the horse and buggy day, but they will continue to challenge the swift-moving events, "even if as horse and buggy believers all we can do is to stay in the way and slow up the movement as much as possible."

Va.'s J.C. Bus Law Enacted in 1930

Gives All Drivers Wide Police Powers

1902 ACT RECALLED

Court Ruling Might Outlaw Both Measures

RICHMOND — Virginia's segregation statute (enacted in 1930) as it applies to bus and motor vehicle travel, which now has been outlawed by the U.S. Supreme Court, is almost an exact replica of the act passed in 1902 affecting common carriers.

Primary difference in the statutes is that the 1930 law affects motor vehicle travel only, while the older law is applicable to inter and intrastate railroad, streetcar and water transportation. It embodies chapters covering each mode of travel.

1930 J.C. Law

Full text of the latter act by sections (1930) follows:

"4097z—Segregation of Colored and White Passengers—

"All passenger motor vehicle carriers operating under the provisions of Chapter 161 of the Code of Virginia shall:

"Separate white and colored passengers in their motor buses and set apart and designate in each bus or vehicle a portion thereof, or certain seats therein, to be occupied by colored passengers;

Violators Subject to Fine

"Such company or corporation, person or persons that shall fail, refuse or neglect to comply with these provisions shall be fined not less than $50 nor more than $250 for each offense.

"4097a—Discrimination Prohibited—

"The said companies, corporations or persons operating motor vehicle carriers shall make no difference or discriminate in the quality or convenience of the accommodations provided for the two races under the provisions of the preceding section.

"4097bb—Driver May Change

"Any driver or operator in charge who fails or refuses to carry out provisions of this section shall be deemed guilty of a

Designation of Seats—

"The driver, operator or person in charge of motor vehicle shall have the right, and is directed and required, at any necessary time, for the comfort and convenience of passengers, to change the designation so as to increase or decrease the number of seats set apart for either race;

"But no contigious seats on the same bench shall be occupied by white and colored passengers at the same time; and said driver, or person in charge may require any passenger to change his seat as it may be necessary or proper;

misdemeanor, and upon conviction

5. Appealed to Supreme Court, March 2, 1946.
6. Decision Reversed, June 3, 1946.

Supreme Court's Ruling in Morgan Case Stirs Va.

RICHMOND.—The 6-1 decision of the U.S. Supreme Court in the case of Mrs. Irene Morgan, upsetting Virginia's jim-crow bus transportation statute, came like an earthquake Monday and shook the State from center to circumference.

Mrs. Morgan, en route from Hayes Store, Gloucester County, to Baltimore aboard a Greyhound bus in July, 1944, was seated in the second seat ahead of the long rear seat there were two vacancies and six white passengers were standing.

The driver ordered her to take one of the vacant rear seats, citing the segregation law, but she refused to move. He then caused her arrest on a warrant charging violation of the State segregation law—Section 407dd of the State code.

Ignored Fine

She was later fined $10 in Middlesex County Circuit Court, noted an appeal to the Virginia Supreme Court of Appeals, which sustained the ruling of the lower court, whereupon she appealed the case to the United States Supreme Court.

The case was fought through the courts by Spottswood W. Robinson 3rd of the law firm of Hill, Martin and Robinson of Richmond, with the support of the Richmond and Virginia branches and the national office of the NAACP.

Although Greyhound Bus Lines officials expressed the opinion they would abide by the ruling, they were cautious in defining the effects of the decision, since they had not received an official copy of the text of the opinion.

Early Test Looms

While buses in most cases in Virginia carry no signs, indicating seating space for passengers of either race, this being left to the drivers' discretion, it is believed that colored citizens will lose no time in testing out their new freedom.

One man had informed his attorney Tuesday morning that he was preparing to purchase a ticket to a destination in North Carolina on a Greyhound bus and had planned to seat himself in one of the front seats in order to test the effectiveness of the decision.

Buses Checked

A check at the local Greyhound bus station, however, revealed that most colored travelers either are not so eager to test the efficiency of the new ruling or have not given the matter any serious consideration.

The reporter checked three outgoing buses at the Greyhound terminal—two bound for Washington and another for Jacksonville, Fla., and on none of them were colored passengers found in any other section of the bus than the traditional rear section.

Porter's Comment

Discussing the matter with a porter at the station, the reporter was informed that no colored passengers leaving Richmond had been noted taking forward seats in the buses, but that several had arrived here from the North with the races mixed.

The porter pointed out that it would probably be some time before colored passengers in the South begin taking advantage of their new freedom, having been for so long accustomed to riding in the rear.

He added that "fear will force some of them to run to the rear" for a long time to come.

Started Ball Rolling

SPOTTSWOOD ROBINSON, Richmond attorney, whose defense of Mrs. Irene Morgan and appeal Oct. 18, 1944, started the ball rolling toward elimination of segregation on interstate buses.

Riders Just Can't Believe End of Jim Crow in D.C.

Baltimore Lines Rules Unaffected

Southbound Busses Stop in Washington

NO RIDER CHANGE

Say Jim Crow Policy Begins Farther South

BALTIMORE

Managers of the bus lines operating through Baltimore were not particularly concerned with the action of the U.S. Supreme Court, which, on Monday, ordered an end to jim crow interstate bus travel.

Basis for the lack of special concern was the fact that most busses going south from New York, terminate their runs in Washington.

Consequently, managers of the local offices of both the Greyhound Lines and Safeway Trails Inc., were not bothered over the seating arrangement of passengers traveling through the South.

Safeway Office Notified

Both company representatives were familiar with the Supreme Court's ruling; and one had already complied in following orders received from a higher office.

John F. Peterman, resident agent for the Safeway Trails Inc., said he had received notice of the court action from his national office in Washington.

He said that his drivers had always been able to work out an amiable seating agreement with passengers and that the ruling would cause no radical changes in the local policy.

D.C. Southern Limit

The Safeway Trails Inc., is a chain of 20 individual bus operators with separate divisions for various sections of the country.

The line that runs through Baltimore covers the territory from New York to Washington. Travelers going farther south transfer there to the Virginia Trailways Line, with headquarters in Charlottesville, Va.

G. J. Sills, district superintendent of the Greyhound Lines pointed out that 99% of its busses end their southbound run in Washington.

Greyhound Gets No Orders

From there riders are shifted to the Virginia Greyhound Line for continued travel. Mr. Sills disclosed that there are three buses running into the Baltimore Terminal daily from Virginia.

They are operated by the Virginia branch of the network; and therefore all orders for drivers come from the office in that State, he said.

Mr. Sills stated that he had learned of the recent ruling through the newspapers and admitted that his national office had not sent out any formal notice.

Va. Leaders Glad Over J.C. Ruling

RICHMOND.—Civic and religious leaders here rejoiced Tuesday when the news became generally known that the U.S. Supreme Court had outlawed Vir-

Her Fight Ends Bus Jim Crow

MRS. IRENE MORGAN of Baltimore and New York, who was plaintiff in the NAACP suit against the State of Virginia, which resulted in the Supreme Court ruling Monday ending segregation of races on all buses traveling between the States regardless of local laws.

Passengers Made Victims by J.C. Travel Laws—Court

WASHINGTON (NNPA) — In the 6-1 decision handed down in the Irene Morgan bus jim-crow case, the Supreme Court ruled that racial segregation by each separate State constitute an "undue burden" on interstate commerce.

In explanation, the opinion read by Justice Stanley Reed pointed out that "an interstate passenger must if necessary [under Virginia law] repeatedly shift seats while moving in Virginia to meet the seating requirements of the changing passenger group."

Inconvenience to Passengers

Continuing, the court said:

"Interstate passengers traveling via motors between the North and South or the East and West may pass through Virginia on through lines in the day or in the night.

"The large busses approach the comfort of pullmans and have seats convenient for rest. On such interstate journeys the enforcement of the requirements for reseating would be disturbing."

Other Laws Debatable

In order to appraise the weight of the burden of the Virginia statute on interstate commerce, the court, the decision revealed, considered related statutes of other States as important in showing the cumulative effects which not clearly defined.

Moreover, it added that although the States plead a desire to "promote amicable relations in difficult areas by legislative segregation," local custom would have to give away to the need for national uniformity in the regulations for interstate travel.

Jurisdiction Question

In his separate but concurring opinion, Justice Hugo Black expressed belief that the Congress has the power to regulate commerce but added that as long as the Court is given that function, "I must make decisions under it."

Also giving a separate but concurring opinion, Justice Felix Frankfurter said:

Setup Called 'Crazy-Quilt'

"The imposition upon national systems of transportation of a crazy-quilt of State laws would operate to burden commerce unreasonably, whether such contradictory and confusing State laws concern racial commingling or racial segregation"

The sole dissenter, Justice Harold H. Burton held that since Congress has not acted to supply legal uniformity throughout the South that evidently national uniformity was not required.

He also stated that invalidation of the segregation laws of 10 Southern States may lead to ques-

Cases of Bus Jim Crow Show Barbarity of Policy

BALTIMORE

For over a quarter of a century, jim-crowing of colored passengers on busses engaged in interstate transportation has made that mode of travel a dreaded experience for non-white people.

Among the legion of cases reported are those in which women, ministers and persons in the service of their country have been stranded, beaten, fined, and imprisoned.

The following cases, cropping up since 1932, show to what barbarous lengths hate-filled bus drivers and law enforcement officers have gone in maintaining discriminatory policies, now outlawed by the Supreme Court:

Mrs. Bessie Nelson and Mrs. Mamie Kinchlowe of New York, in August, 1932, were dragged off a Greyhound bus in Alexandria, Va., jailed a week and two days, and fined $25 apiece for refusing to take a rear seat.

They entered suit for $20,000 damages in the D.C. courts, which, after being continued for five years, fizzled out when the District Court of Appeals upheld the infamous action in 1937.

On Sept. 25, 1932, Mrs. Phineas Bethel of 1231 Irving St., N.W., Washington, D.C., was denied transportation because of her race, by the Nevins Atlantic Bus Line at Salisbury, N.C. Her suit for $1000 was to no avail.

In Spite of Law

Mrs. Isabella Smith of Philadelphia was kept in jail all night in September, 1934, after she was ejected from a Greyhound bus in Salisbury, Md., although the State's jim-crow laws did not cover interstate bus travel.

In March of 1939, Gertrude Herndon of Cleveland was slapped in the face, refused a seat on a Greyhound bus and then arrested and forced to serve a month in a Birmingham workhouse for "forgetting her place."

To show that they meant it, Birmingham authorities slapped $50 fines and 30-day jail sentences on Mrs. Odell Moore and Mrs. Mahalia Webster of Philadelphia in August, 1939, for the same "crime."

Mrs. Dorothy H. Hydes and Miss Littie Mayor of New York were forced off a Greyhound bus without their baggage at 2:30 one night in August, 1942, when they would not move to rear seats after a Greyhound bus driver ordered them to do so.

Sgt. Charles Salter, 93rd Div. soldier of Nicholsville, Ky., and his wife were hustled off a Greyhound bus at Cincinnati in August, 1942, when they refused to move to a rear seat of a Greyhound bus.

At war's beginning, September, 1942, white cops in Montgomery, Ala., beat and jailed Second Lt. Nora Green, an Army nurse stationed at Tuskegee Air Field Hospital, because she sat in the wrong seat of a bus.

Two Navy Department clerks, Misses Mildred [illegible]

Tonito Holmes of Alexandria, Va., was beaten, forcibly ejected from a Greyhound bus in Johnson City, Tenn., and fined $14,25 for refusing to move to a rear seat.

Va. Bus Line Acts

The Alexandria (Va.), Barcroft and Washington bus line discontinued segregation of passengers immediately.

A company spokesman stated instructions had been given to all bus drivers to discontinue the separation.

The policy as it would apply to intrastate passengers was not decided upon, it was said.

The company, it was stated, was awaiting a ruling from the Attorney General. In the meantime, colored passengers are permitted to sit any place they desire.

Attorneys Hail Morgan Decision

WASHINGTON

Hailing the decision in the Morgan case as a great victory, Charles H. Houston of Washington, veteran NAACP attorney, declared that the affect on future developments in transportation will be far reaching especially in relation to air travel.

Observing that more and more colored people are traveling by plane, he said that there was a growing tendency to seek ways to apply the separate seating arrangements to this mode of travel.

The Morgan case will relieve the air companies from attempts made to compel them to comply with State segregation laws as most plane travel is interstate, he pointed out.

Expects Subterfuges

Mr. Houston, however, had no doubts, that many subterfuges will be employed before the Southern States willingly abandon their jim crow policies.

He believes that bus companies will attempt to follow the techniques employed by the railroad which extend the Jim Crow line into Northern States at the point where tickets are purchased. Railroad companies circumvent the law by selling tickets to colored passengers in jim crow cars in Philadelphia and New York, limiting the number who can travel on any given train.

Hailed as Precedent

Speaking from Columbia, Tenn., where he is now working on the "riot" cases, Thurgood Marshall of New York, one of the attorneys in the Morgan case said Monday.

"The opinion of the United States Supreme Court declaring that State statutes requiring the segregation of races cannot be applied to interstate passengers, is one of the most momentous decisions in the history of the country.

"It is a decisive blow to the evil of segregation and all that

"The said companies, corporations or persons operating motor vehicle carriers shall make no difference or discriminate in the quality or convenience of the accommodations provided for the two races under the provisions of the preceding section.

"4097bb—Driver May Change

"Any driver or operator in charge who fails or refuses to carry out provisions of this section shall be deemed guilty of a

Designation of Seats—

"The driver, operator or person in charge of motor vehicle shall have the right, and is directed and required, at any necessary time, for the comfort and convenience of passengers, to change the designation so as to increase or decrease the number of seats set apart for either race;

"But no contigious seats on the same bench shall be occupied by white and colored passengers at the same time; and said driver, or person in charge may require any passenger to change his seat as it may be necessary or proper;

misdemeanor, and upon conviction fined not less than $5 nor more than $25 for each offense.

"4097cc—Drivers Are Special Policemen with Powers of Conservators of the Peace—

"Each driver, or person in charge of any vehicle, while actively engaged in the operation of a vehicle, shall be a special policeman and have all of the powers of conservator of the peace in the enforcement of the provisions of this act.

Powers of Arrest

"In the discharge of his duty, the driver, shall likewise have the powers of conservator of the peace and special policeman while in pursuit of persons for disorders for violating the provisions of this act.

"These powers hold until such persons as may be arrested by him shall have been placed in confinement or delivered to the custody of some other conservator of the peace or police officer.

"For the purpose of this chapter, the driver shall be the judge of the race of each passenger whenever such passenger has failed to disclose his or her race.

"4097dd—Violation by Passengers; Misdemeanor or Ejection—

"All persons who fail while on any motor vehicle to take or occupy the seat or space assigned by the driver, or the person whose duty it is to take up tickets or collect fares, or who fails to obey the driver's directions to change seats as occasions may require, shall be guilty of a misdemeanor, and upon conviction, shall be fined not less than $5 nor more than $25 for each offense.

Forfeiting the Fare

"Furthermore, such persons may be ejected from the vehicle, and in case such persons ejected shall have paid their fares upon such vehicle, they shall not be entitled to the return of any part of same.

"For any passengers' refusal to abide by the request of the person in charge and his subsequent ejection from the vehicle, neither the person in charge, owner, manager nor bus company shall be liable for damages in any court."

SPOTTSWOOD ROBINSON, Richmond attorney, whose defense of Mrs. Irene Morgan and appeal Oct. 18, 1944, started the ball rolling toward elimination of segregation on interstate buses.

Riders Just Can't Believe End of Jim Crow in D.C.

WASHINGTON

In compliance with the anti-jim-crow ruling, all segregation signs had been removed from the Alexandria, Barcroft, and Washington bus lines, late Tuesday evening, but a majority of colored passengers were still finding back seats as late as Thursday morning.

At the bus terminal, 12th St. and Pennsylvania Ave., N.W., the platforms were crowded with a heterogeneous collection of colored and white passengers.

Workers Looked Tired

There were suave and immaculate businessmen, wrinkled old women with gnarled claws clutching enormous bundles, and tired clerks and government workers with drooping shoulders and gaunt looks.

A group of laborers with red mud spattered over their greasy coveralls hovered at the edge of the crowd. All were waiting to ride on the busses under the 6-1 decision handed down Monday by the Supreme Court.

A bus marked "Seminary, King Street Express" eased its way into the narrow lanes a few minutes later. Persons of all races pushed and elbowed their way aboard.

Three colored girls, after dropping their coins in the fare box, surveyed the surroundings, and by strong impulse, wiggled themselves through the tightly-filled aisle to the back seats.

Whites Watch Effect

White passengers watched the effects of the new law with mixed emotions, exhibiting neither pleasure nor displeasure. The bus driver, busily accepting fares and making change, apparently paid little attention to the seating arrangement.

Several colored passengers, either still laboring under the delusion that all is a farce, or from exceptionally strong conditioning, selected back seats.

Seating Reverses

One middle-aged woman pushed and offered apologies until she had reached the back of the bus. Finding the back seats occupied, she turned to a fellow passenger and said. "I see we got blocked out."

(A few whites had taken back seats, making it necessary for the woman and her fellow passenger to stand.)

However, a few obviously timid souls sat three or four seats from the back. Even though seats beside white passengers were available, colored riders inevitably sought seats with colored passengers.

3 Classes Passengers

In accepting the new law, the colored passenger seems divided into three classes: The conditioned passenger who has formed a habit by custom, and is reluctant to depart from the back seats.

For this type of rider, it will be years before he will adequately adjust himself to the new ruling.

Secondly, the timid passenger who will select a seat about two from the back. He feels that he will not offend anyone by sitting here, as he was doing it before the law was passed.

It will be months before he will attempt to test his civil rights.

Finally is the progressive passenger, who is quiet and conservative, and is cognizant of his civil rights as an American citizen and seizes every opportunity to assert ert Amos, father of the plaintiff,

Musicians' Union Hits Fla. Jim Crow

ST. PETERSBURG, Fla.—"If our colored delegates are not good enough to go there, we figure we aren't either."

Speaking those words, James C. Petrillo, president of the American Federation of Music, on Tuesday cancelled the AFM's convention's scheduled outing for its 800 delegates.

The stormy prexy of the musician's union became irked when two night clubs, Bill Williams, on Treasure Island, and the Penguin Club at Sunset Beach, refused to admit 45 colored delegates.

Twenty-nine Greyhound busses chartered for the scheduled all-day outing were cancelled. The two clubs, which refused to serve the delegates, had prepared $3,500 worth of foods and liquors.

Petrillo ordered the food given charitable institutions.

The 45 delegates attending the convention stayed in the homes of local colored residents, having been refused rooms at the headquarters hotel, the Soreno. All 45 musicians were from various parts of the country.

Greyhound Bos Co. Stops Interstate Jim Crow

CHARLESTON, W.Va. (NNPA)—Immediate compliance with the Supreme Court ruling that States cannot require segregation in interstate busses was to be ordered by the Atlantic Greyhound Corporation, which operates in most of the "Jim Crow" Southern States, according to a statement of George S. Engle, general manager, last Monday.

Interstate Bus Officials Abolish Jim Crow Signs

WASHINGTON

Officials of Washington bus lines, engaged in interstate commerce, were busy this week removing jim crow signs from carriers, following the U.S. Supreme Court ruling on Monday that segregation on interstate buses is unconstitutional.

Several managers of local bus lines were polled by the AFRO to ascertain what action they had taken or contemplated taking to conform with the new ruling.

Officials Polled

Their answers are as follows:

George Staeth, publicity director, A.B. & W. Bus Line, 12th and Pennsylvania Ave., N.W.:

"We are abolishing segregation on the several bus lines operated by this company by removing the 'jim crow' signs."

W. C. Beard, Greyhound Lines, 1110 New York Ave., N.W.: "I can't tell you a thing—you have to see the operating heads for the Southern lines, whose offices are located in Richmond and Charleston, W.Va."

N. Barry, manager of the Trailways Bus Lines, 1201 New York Ave., N.W.:

"I don't know a thing, as I have no authority over the Southern lines—you will have to call up Mr. Gray in the morning."

Franklin K. Lane, head of the Arlington and Fairfax Motor Transportation Co.: "We will obey the law, whatever it is."

An Arnold Bus Line Co. spokesman said that the company is awaiting a ruling from the State attorney general, but that in the meantime, colored passengers may sit anywhere they wish.

ton and another for Jacksonville, Fla., and on none of them were colored passengers found in any other section of the bus than the traditional rear section.

Porter's Comment

Discussing the matter with a porter at the station, the reporter was informed that no colored passengers leaving Richmond had been noted taking forward seats in the buses, but that several had arrived here from the North with the races mixed.

The porter pointed out that it would probably be some time before colored passengers in the South begin taking advantage of their new freedom, having been for so long accustomed to riding in the rear.

He added that "fear will force some of them to run to the rear" for a long time to come.

dent of the Greyhound Lines pointed out that 99% of its busses end their southbound run in Washington.

Greyhound Gets No Orders

From there riders are shifted to the Virginia Greyhound Line for continued travel. Mr. Sills disclosed that there are three buses running into the Baltimore Terminal daily from Virginia.

They are operated by the Virginia branch of the network; and therefore all orders for drivers come from the office in that State, he said.

Mr. Sills stated that he had learned of the recent ruling through the newspapers and admitted that his national office had not sent out any formal notice.

Va. Leaders Glad Over J.C. Ruling

RICHMOND.—Civic and religious leaders here rejoiced Tuesday when the news became generally known that the U.S. Supreme Court had outlawed Virginia's jim-crow travel laws and issued a second "Emancipation Proclamation."

While these leaders were jubilant, however, an almost impenitrable blanket of silence hung low over official circles, most of those in official positions refusing politely to comment on the decision one way or the other, while some awaited the official text.

Those asked by the AFRO to state their reactions to the momentous decision in the Irene Morgan case gave the following comments:

2nd Emancipation

WILEY A. HALL, executive secretary, Richmond Urban League:

"Here again is a milestone in the history of the colored American that parallels the Emancipation Proclamation.

"In my opinion, they (such far-reaching decisions) will be coming with increasing swiftness. The great question is: Will they find us as colored Americans ready?"

Democratic Action

DR. W. L. RANSOME, pastor of Second Baptist Church, South Richmond:

"I am glad to see that the personnel of the present Supreme Court have advanced to the stage where it can render a decision in harmony with the policy of democracy.

"I hope that in the not distant future this same court will abolish segregation on all common carriers everywhere."

People's Will

C. BERNARD GILPIN, secretary-manager, Richmond Beneficial Insurance Co.:

"It is in keeping with my opinion that there should be no segregation in either interstate or local transportation. It is the forerunner of the will of the American people that will mean the end of the segregation pattern in the U.S."

Important Decision

DR. LEON A. REID, local dentist:

"It is one of the most important decisions ever rendered by that body. It means the beginning of the end of segregation on all common carriers. Surely State authorities would not segregate the intrastate passengers, while not segregating interstate passengers.

"A few more decisions of this nature, and America will be moving in the direction of a true democracy."

Attorney General Abraham P. Staples: "He's out of the city," a clerk in his office told the AFRO reporter.

A Liberal Step

B. T. BRADSHAW, president, Virginia Mutual Benefit Life Insurance Co.:

"I think that it is one of the most liberal steps that the Supreme Court has taken in many a year.

"I am happy that they were not swayed by the fact that the law had been upheld by a unanimous decision of the Virginia Supreme Court, but considered the matter on its merits and rendered a decision in the true democratic tradition of our country."

Magistrate Silent

CARLETON E. JEWETT, police court justice: "I have no statement."

J. E. BANKETT, insurance man: "I think it's fine. I simply hope that we will continue to fight such cases—and continue to win."

Pastor Not Surprised

DR. JOSEPH T. HILL, pastor of Second Baptist Church:

"It does not surprise me in the least. My prediction is, that in a very few years the segregation and jim-crow policy of the entire South will be wiped out in churches, schools, places of amusement and industries, for economic reasons if for no other.

"The white man will tire of supporting two institutions when one will answer the purpose. As it is now, there must be something for the white and something for the colored in every case, entailing double expense. Common sense dictates another policy.

Commends Litigant

"The whole Southland, and Virginia in particular, should feel grateful to Miss Morgan for the determination she manifested in the outcome of this case. This far-reaching decision will affect not only the buses, but every form of carrier.

"We are thankful for the achievements of Spottswood Robinson 3rd and his helpers."

separate State [illegible] due burden" on interstate commerce.

In explanation, the opinion read by Justice Stanley Reed pointed out that "an interstate passenger must if necessary [under Virginia law] repeatedly shift seats while moving in Virginia to meet the seating requirements of the changing passenger group."

Inconvenience to Passengers

Continuing, the court said:

"Interstate passengers traveling via motors between the North and South or the East and West may pass through Virginia on through lines in the day or in the night.

"The large busses approach the comfort of pullmans and have seats convenient for rest. On such interstate journeys the enforcement of the requirements for reseating would be disturbing."

Other Laws Debatable

In order to appraise the weight of the burden of the Virginia statute on interstate commerce, the court, the decision revealed, considered related statutes of other States as important in showing the cumulative effects which make local regulation impracticable.

Except in the case of Alabama, whose laws refer specifically to interstate travelers, the court found that the language of the statutes of other States were "susceptible to an interpretation that they do or do not apply to interstate passengers."

Distinctions Not Clear

In addition, the High Court also called attention to the fact that except in a few States the racial differences between persons are

Mrs. Morgan Hails J.C. Bus Victory

By RICHARD DIER

NEW YORK—Mrs. Irene Morgan, plaintiff in the now historic Virginia jim-crow bus appeal case which brought a momentous edict from the U.S. Supreme Court, Monday, said here Thursday morning:

"I'm very glad tension of the case is over. I know this will abolish jim crow for Northerners going to the South.

"But for Southerners doing interstate travel it is another matter that must be cleared eventually so that the whole jim-crow pattern of travelling in the South will be abolished.

Greyhound Problem

"I'm glad mine was a test case to bring the issue into the open. It's a victory for me and all colored people. The question remains whether the Greyhound Bus Company will instruct its drivers to observe the Court's ruling.

"Previously, you'd never know your treatment while travelling interstate. Now, on the basis of the Court's decision, you know you are right and the law is back of you.

Tension Removed

"Jim-crow tension has been removed by the edict, and the insult and degradation to colored people is gone."

Mrs. Morgan is employed here as a practical nurse for the children of Mr. and Mrs. Harold Wolff, writers, 70 Haven Ave.

to give away to the need for national uniformity in the regulations for interstate travel.

Jurisdiction Question

In his separate but concurring opinion, Justice Hugo Black expressed belief that the Congress has the power to regulate commerce but added that as long as the Court is given that function, "I must make decisions under it."

Also giving a separate but concurring opinion, Justice Felix Frankfurter said:

Setup Called 'Crazy-Quilt'

"The imposition upon national systems of transportation of a crazy-quilt of State laws would operate to burden commerce unreasonably, whether such contradictory and confusing State laws concern racial commingling or racial segregation."

The sole dissenter, Justice Harold H. Burton held that since Congress has not acted to supply legal uniformity throughout the South that evidently national uniformity was not required.

He also stated that invalidation of the segregation laws of 10 Southern States may lead to questioning of the validity of the laws of the 18 States which prohibit segregation.

End of Bias Seen in Transportation

RICHMOND.—All persons who have been arrested in Richmond for violating the jim-crow laws on buses have been held under warrants charging them with being disorderly and refusing to obey orders of the driver.

Should the Supreme Court's decision barring jim crow bus transportation be interpreted to eliminate the practice, intrastate, also, bus passengers no longer would have to show obeisance to drivers. here.

Should the 1902 jim-crow transportation statute, which affects railroads, steamship companies and street railway corporations, be wiped out, Richmond would be minus any jim-crow transportation act, here and now.

Automatically Effective

Incidentally, the Virginia Transit Company has made plans to eliminate all streetcars here by 1950, substituting buses or trackless trolleys instead. This would end automatically all jim-crow transportation in Richmond.

Since Richmond has no ordinance segregating the races on buses, it has been necessary to arrest such persons on State rather than city warrants.

Invalid Arrests

In many cases, however, as in the case of John Raigns, Washington special police officer, magistrates have used city warrants.

Such warrants being invalid in these cases, the procedure in police court has been to draw a new warrant when counsel for the defendant challneges the validity of the original warrant.

This has not been done in the Raigns case, which is still pending in police court.

Wants to Dismiss Case

Mr. Raigns, special U.S. policeman, is represented by Spottswood W. Robinson 3rd, NAACP attorney, and J. Thomas Hewin, associate.

His case came up first in police court May 21, was continued to May 28 and is now scheduled for a hearing June 13.

What Justice Carleton E. Jewett, police court justice, will do with the case when it comes before him again on that date is a question for lively speculation here.

He offered to dismiss it May 28, if the defendant would agree not to file civil action.

New Methodist Unit in N.Y. to Fight Bias

NEW YORK—The formation of a New York City chapter of the Methodist Federation for Social Service was recently announced by the Rev. Alson J. Smith, president, who is also the editor of the group's Social Questions Bulletin.

The chapter has sent a letter to the City Council advocating school and neighborhood projects to combat racial prejudice and a telegram to President Truman asking an immediate diplomatic break with Spain.

Birmingham workhouse for forgetting her place."

To show that they meant it, Birmingham authorities slapped $50 fines and 30-day jail sentences on Mrs. Odell Moore and Mrs. Mahalia Webster of Philadelphia in August, 1939, for the same "crime."

Mrs. Dorothy H. Hydes and Miss Littie Mayor of New York were forced off a Greyhound bus without their baggage at 2:30 one night in August, 1942, when they would not move to rear seats after a Greyhound bus driver ordered them to do so.

Sgt. Charles Salter, 93rd Div. soldier of Nicholsville, Ky., and his wife were hustled off a Greyhound bus at Cincinnati in August, 1942, when they refused to move to a rear seat of a Greyhound bus.

At war's beginning, September, 1942, white cops in Montgomery, Ala., beat and jailed Second Lt. Nora Green, an Army nurse stationed at Tuskegee Air Field Hospital, because she sat in the wrong seat of a bus.

Two Navy Department clerks, Misses Mildred Turpin of New York and Caroline Johnson of Carlisle, Pa., who worked at Arlington, Va., were jailed at Clarendon, Va., on Jan. 16, 1943, when when they refused to sit in the back of the bus en route to Washington.

Delayed Five Days

An unidentified soldier of the 92nd Division was denied bus transportation for five days in April, 1944, at DeRidder, La., although he held a telegram from relatives notifying him that his mother's funeral was awaiting his presence.

The Rev. DeWitt Alcorn, a presiding elder of the Methodist Church, and Eugene Mitchell, a Tulsa defense worker, on March 24, 1945, were put off a Union bus in Boley, Okla., to make room for whites to sit.

Only last year, on Feb. 19, Miss

Vet Seeks $10,000 for Bus Jim Crow

WASHINGTON

Charging that he was forcibly ejected from a bus in violation of his civil rights, Samuel G. Foshee, 2100 block of I St., N.E., this week, filed suit for $10,000 damages against the Greyhound Bus Lines, Inc., of 1110 New York Ave., N.W.

Foshee, war veteran, asserts that he boarded the bus as an interstate passenger on Mar. 4, and was forced off by military police who were summoned by the bus driver after he refused to move to a rear seat.

The soldier says he was subject to the orders of the MP's, but because of the ejection he was delayed reaching his destination at Aberdeen, Md., on time, and for the physical pain and embarrassment seeks $10,000 damages, and a jury trial.

doubts, that many subterfuges will be employed before the Southern States willingly abandon their jim crow policies.

He believes that bus companies will attempt to follow the techniques employed by the railroad which extend the Jim Crow line into Northern States at the point where tickets are purchased. Railroad companies circumvent the law by selling tickets to colored passengers in jim crow cars in Philadelphia and New York, limiting the number who can travel on any given train.

Hailed as Precedent

Speaking from Columbia, Tenn., where he is now working on the "riot" cases, Thurgood Marshall of New York, one of the attorneys in the Morgan case said Monday.

"The opinion of the United States Supreme Court declaring that State statutes requiring the segregation of races cannot be applied to interstate passengers, is one of the most momentous decisions in the history of the country.

"It is a decisive blow to the evil of segregation and all that it stands for.

"We earnestly hope that the States will abide by the decision with good faith. Now is the time to push for the end of all forms of segregation throughout the country."

George E. C. Hayes and Judge James A. Cobb, members of the same Washington law firm, stated that while the decision as handed down in the Morgan Case refers specifically to busses they have little doubt that the ruling will have a definite affect on the outcome of similar cases involving railroads.

Father Delighted

Questioned in Baltimore as to his reaction to the decision, Robert Amos, father of the plaintiff, Mrs. Morgan, said:

"I am especially delighted that my daughter has won the case and to know that I've lived to see an important result of her early training.

"She was taught to believe like her father that all men are equal before God and should be treated with equal respect in their daily living."

Sister Social Worker

Mr. Amos, a merchant, lives with another daughter, Mrs. James Finney at 2036 McCulloh St., Baltimore. Mrs. Finney is a social worker with the city welfare department.

She said: "I am extremely happy about the decision especially for my sister who has suffered so much humiliation and embarrassment while the case was pending.

"We are 100% for the NAACP which fought the case through. We are proud of the organization and will support it heartily in all of its future undertakings.

"I did not go South last summer as I usually do because of the inconvenience and humiliation of traveling jim-crow.

"It is quite a relief to know now that as the result of this case, better accommodations will be available. I and all my co-workers are grateful."

Richmond Greyhound Bus to Comply With Court Rule

RICHMOND — "Naturally, we will comply with any Supreme Court decision," C. L. Major, president and general manager of the Richmond Greyhound Lines, Inc., declared Monday when asked if his company would bow to the court's edict on segregation.

"But," he added, "how far the opinion affects company rules or intrastate travel is unknown, of course, until we receive an actual copy of the text of the decision and the matter is turned over to our legal counsel for interpretation."

Many persons here, both laymen and those in the legal profession, are of the opinion, in the absence of the text of the ruling, that the decision wipes out all segregation in both intra and interstate travel.

Law Is Complex

The statute in question is based on a 1902 law affecting common carriers.

It is pointed out that the statute affecting interstate travel embodies also that applying to intrastate passengers, and the law carries no provision validating parts of it in the event any other part is declared unconstitutional.

A clerk in the office of Attorney General A. P. Staples, who argued the case before the U.S. Supreme Court, said Tuesday that he was "out of the city."

However, he had been quoted as expressing the opinion that the decision would apply to interstate rail as well as bus travel.

In the event the text of the opinion bears out the belief that the decision invalidates the segregation statutes in their entirety because of the nature of their construction, Virginia will be minus any segregation law—even on street cars—until a new statute is enacted.

This situation, should it come to pass, would obtain for approximately two years, unless the Governor calls the legislature into special session for the specific purpose of enacting such legislation. That body is not scheduled to meet again until 1948.

Negro Shot, Bus Driver Beaten in Seat Conflict

SAVANNAH, Ga. [AP] A negro man was shot and wounded and a bus driver beaten in a fight which allegedly grew out of a negro woman's insistence on seating herself by a white man, Chatham county Police Sgt. Lee Ingram reported yesterday.

Sgt. Ingram identified the principals in the case as James Braxton, 25, negro; J. R. Burton, bus driver, and Dorothy Bacon, negro woman.

Burton was charged with assault and freed on a $500 bond, ingram said, while Braxton is in a hospital suffering leg wounds and the negro woman is under arrest on charges of disorderly conduct, cursing and inciting to riot.

Negro Wounded In Savannah Bus Seat Clash

SAVANNAH, June 27—(AP)—A Negro man was wounded and a bus driver beaten in a fight which allegedly grew out of a Negro woman's insistence of seating herself by a white man on a city bus, Chatham County Police Sgt. Lee Ingram reported Thursday.

Sgt. Ingram identified the principals in the case as James Braxton, 25, Negro; J. R. Burton, bus driver, and Dorothy Bacon, Negro woman.

Burton was charged with assault and freed on a $500 bond, Ingram said, while Braxton is in a hospital suffering leg wounds and the Negro woman is under arrest on charges of disorderly conduct, cursing and inciting to riot.

In addition, said the policeman, another Negro woman, identified by him as Ruby Glover, is being held as a material witness.

Sgt. Ingram gave the following account of the incident:

The Negro woman boarded the bus and seated herself beside a white man. The man asked her to move and when she refused to do so, moved himself.

When the bus stopped for the Negro woman to alight, she began cursing Burton, who left his wheel to remonstrate. At this point several Negro men attacked Burton, who pulled his pistol and fired.

Ingram said the bus driver carried a pistol under a license issued by the Ordinary of Chatham County.

Braxton, who was hit, then began a struggle with Burton for the gun and when police arrived the battle was still in progress. All other passengers, including a lone white man, had left the bus.

The altercation was the third between Negroes and city bus drivers recently. Two drivers were beaten and robbed by groups of Negroes two weeks ago. Both drivers had to be hospitalized.

3 Negroes Held In Savannah Bus Argument

1946

SAVANNAH, Ga., June 29—(AP) Three Negroes, charged with attempting to incite a riot in an argument which grew out of a Negro woman sitting beside a white man on a bus, were ordered held for city court trial Saturday.

Charges against the bus driver of assault with intent to murder in connection with the shooting of one of the Negroes were dismissed after the police court hearing. Charges against a Negro woman also were dismissed.

The bus driver, J. R. Barton, told the court he had fired his pistol into the bus floor in an attempt to frighten two of the Negroes who he said assaulted him. Two of the bullets struck James Braxton.

Braxton, James H. Collins and Ruby Glover were ordered held for city court trial. Charges against Dorothy Bacon were dismissed.

The Negro women told the court they did not see the white man when they sat down. He later moved, they said, and an argument resulted in which Braxton was shot.

BUS PASSENGER KILLS OFFICER IN BIAS BRAWL

Atlanta Daily World July 3, 1946

TYLER, Texas — (ANP) — An unidentified 27-year-old Negro bus passenger furiously protested jim crow bus regulations here last week by fatally stabbing M. J. Buie, a local white policeman, who attempted to force him to move up the rear of the bus or get off.

Managing to escape the melee after being wounded in the abdomen, the furious passenger fled to his father's home near Corsicana in a taxicab. He was later seized there by a 10-man all-white posse on a tip by the Negro taxicab driver, who is reported to have supplied the information under duress.

According to police officers, a cache of arms near his bed plus his effort to use them indicated that he planned to continue the fight. He was wounded again in the insuing gunfight before he was captured and brought here for hos pitalization.

ATTEMPT SEIZURE

A white mob made two attempts to form to seize the wounded man as he lay in the hospital but were blocked by a cordon of about 50 police officers, who formed a line around the hospital.

"All it lacked of being a mob," said one of the officers, "was a ring leader."

The crowd started gathering in front of a sub fire station near the outskirts of town. About a half dozen cars arrived at the hospital after police brought the wounded suspect to the hospital.

Speculation is rife here that the wounded man is an ex-GI, who is among the first in this area to vehemently protest jimcrow bus segregation for Negroes.

Teacher Jailed For Not Moving On Bus

Journal & Guide, July 13/46

SPECIAL TO JOURNAL AND GUIDE

DURHAM, N. C.—Dr. Arliner Young, head of the department of biology at Shaw University, Raleigh, N. C., was arrested at Nashville, N. C. on Friday last week while en route by bus from Raleigh to Rocky Mount, N. C., because she refused to vacate the seat she was occupying and move back in order to seat a white youth who boarded the bus at Nashville.

When requested by the bus driver to move, Dr. Young invited the white youth to take the seat beside her. He declined and left the bus rather than sit behind her.

The bus driver called the police and Dr. Young was arrested. Dragging her from the bus and throwing her in a police car, Dr. Young was placed in the town lockup. Later she was transferred to the county jail and placed in a cell.

Some colored people on the bus, who witnessed the incident, notified Plummer R. Richardson, well known Nashville citizen, who furnished bail for Dr. Young in the amount of $200 pending trial on July 15.

A group of Nashville colored women called on the mayor in Dr. Young's behalf, and it is reported that he sent word to her that he would drop the charges if she would apologize. This Dr. Young refused to do.

The six-foot policeman placed charges of disorderly conduct and resisting arrest against Dr. Young.

TAUGHT 6 YEARS

Miss Young, who has taught in North Carolina for six years received her bachelor of arts degree from Howard University, the master of science degree in biology from the University of Chicago, and her doctor of phil-

osophy degree from the University of Pennsylvania.

During the summer Dr. Young is working as an A. F. of L. organizer. When arrested she was en route to Rocky Mount in connection with the organization of tobacco workers in that city under the A. F. of L.

Railway Bans Jim Crow Interstate Traveling

NEW YORK—(ANP)— In a letter to an ANP correspondent, Norman Call, president of the Richmond and Fredericksburg railroad connecting line between the north and the south on the eastern seaboard, said:

"Our recently adopted policy banning separation of passengers seems to be working out all right and I see no reason why it should not."

This is the first southern railroad to voluntarily act to comply with a recent ruling of the supreme court on the segregation of interetate passengers and its operation will be closely watched by other roads which will be effected by the same ruling.

CRACK ROUTE

Going south over the R F and P lines which run from Washington to Richmond are the Atlantic Coast Line and the Seaboard Air Line, two important passenger routes which haul many crack trains thru the coastal states.

Through passengers from New York to the south, especially Negroes, frequently have been embarrassed in the Pennsylvania station when officials direct them to a special car at the end of the train which would go straight through, eliminating the necessary change in Washington where the southern railroads pick up the northern cars. May protests have been filled with the Pennsylvania railroad over this practice and employes in the public relations department of the railroad have deplored the act and as far as possible tried to eliminate friction arising in the big New York station.

On the RF and P it was ruled that separate cars would be on all trains for intra-state passengers, white and colored would ride the same coach.

Mr. Call indicated that it was merely the duty of the railroad to comply with laws, both state and federal, so it may be assumed that when the state law is amended, the necessary changes will be made regarding the seating of colored passengers.

ORDER NUMBER

This Clipping from

Rockmart, Ga. Journal
Aug. 16, 1946

in the interest of these projects, because, to a great extent, Rockmart's future depends upon them.

The Teacher Situation

With another school term just before starting, Georgia is confronted with one of its most severe teacher shortages. And furthermore, it is pointed out, prospects don't look any too good for any betterment of the situation during the next several years.

According to latest estimates, if the state's public schools are to obtain an adequate number of instructors with a minimum of four years of college training— and certainly most of them should have that much—Georgia colleges must graduate in the neighborhood of 4,300 white and 2,000 Negro teachers annually for the next ten years. This is considered at present to be next to an impossibility.

Added to this dark prospect is the fact that the number of students now enrolled in colleges and universities in the state who plan to teach is just about half today what it was in the year preceding the war. Low salary schedules in the face of rising living costs have caused the drop in interest among young people who ordinarily would think of teaching as a career.

Another major factor contributing to the present shortage is the fact that a large number of teachers who have been teaching during recent years are inadequately trained and are slated to be replaced. In all, there are said to be 3,578 white and 3,201 negro teachers who would fall in that class, all of whom have less than two years of college training.

From all of this, therefore, it seems that Georgia is paying for its refusal during the past to pay its teachers salaries which were commensurate with the amount of preparation and work required of them. Such a situation is deplorable and the effect of it will be felt for years to come.

There is no profession more important than that of the teacher. It is he or she who deals with society's most precious possessions, the children—tomorrow's leaders. Although we have begun to realize that during the last three or four years and have provided substantial pay raises for our instructors there is still a lot to do.

Rockmart, as well as the hundreds of other school communities in the state, should do all in their power to provide the inducements which would draw more and better teachers as soon as possible.

Better teachers and more efficient schools are parts of a must program for any progressive state.

TAMPA TRIBUNE SEPT 3, 1946

Pinellas Teacher Pay Rating System Under Fire Of Many

This is another in a series of stories dealing with the educational system of Pinellas County.

By J. A. MURRAY
Tribune Staff Writer

CLEARWATER Sept. 2.—The Pinellas school administration a year ago put into effect a system to rate and pay teachers according to merit but ran into strong opposition from a group of teachers who disliked it. They are still fighting it.

Under the merit set-up the teacher is paid according to training, teaching experience, and a rating which takes into consideration her qualities as a teacher.

It is an effort to pay the good teacher more than her sister who is not so good, and to rid the system of those who fail. But some teachers do not like to have others say how good, or bad, they are. They say it is difficult for rating authorities to be fair, and it is too easy for favoritism to creep in.

Under the old system the teachers were paid on the basis of the number of years they spent in college, and their years in the school room. A poor teacher got just as much as a good teacher, if she had as much training and experience.

Many Complain

Supt. G. V. Fuguitt maintained he instituted the system to improve the teaching personnel in Pinellas schools and give the pupils the best instruction possible, but the teachers employed State Senator Henry S. Baynard and sought to have the new system revised or thrown out. News reports said from 50 to 150 teachers were complaining.

It is an issue that has been watched by other counties, all of which have more or less trouble deciding how teachers should be paid. Supt. Randolph McLaughlin, of Hillsborough County, which does not have a rating system, was quoted by Baynard as stating that any rating system for teachers is unfair because there was no definite way to evaluate the worth of a teacher.

But I talked with Fuguitt and he said he was more thoroughly sold on rating today than when he adopted it, although some revisions will be made in the Pinellas system.

How It Works

Here is the way it works:

The administration set up a rating committee made up of Dr. A. J. Geiger, principal of St. Petersburg High; J. F. Arnold, principal of Tarpon Springs High; Ashley R. Russ, principal of Southside Junior High; Miss Kathleen Plumb, county supervisor; Miss Mary Bainum, county supervisor; Miss Natalee Sterling, principal of

(Continued on Page 8—Column 3)

Pinellas Teacher Pay Rating System Under Fire of Many

(Continued from Page 1)

Central Elementary School, St. Petersburg; Miss Gladys Campbell, principal of Norwood Elementary School, St. Petersburg; Miss Lois Geiger, head of English department of Pinellas schools, and Miss Marguerite Morse, supervisor of science and mathematics in Pinellas schools.

This committee, with the help of principals and others in the system, rated all teachers as very good, good, average and fair. There is a top rating of excellent, but none was placed in that bracket, although some were rated excellent in certain particulars.

In rating a teacher the committee considered her health and vigor, personal attractiveness, poise, speech, imagination, judgment, cultural background, cooperativeness, leadership, understanding of children, teaching methods, resourcefulness, control, classroom management, accuracy, punctuality, effectiveness as shown by attitudes and interest of pupils and as shown by their study habits and work, planning, and her place in the community.

Scope Limited

Somewhat similar qualifications are set up for principals, teachers who come into the system from other sections and for beginners, but the scope of examination is more limited for those who are not well known.

The system, while intended to improve the quality of instruction, was put into effect, as in several other counties, after the school board has lost a federal court fight in which a Negro teacher asked for the same pay as white teachers. Negro teachers, therefore, are rated in the same way as white teachers.

Following is the result of last term's rating, as given to me by Fuguitt from memory:

Excellent, none; very good, white, 49 teachers; Negroes, none; good, white, 280; Negro, 21; average, white, 62; Negro, 52; fair, white six, Negro, 21.

A teacher rated "good" will get $1700 next term if she has had no experience, and $50 a year more each year until she has had 10 years experience. This is called the basic scale.

A teacher with a master's degree will get $150 more, one with only three years' training, $150 less, with two years training $300 less.

A teacher rated very good gets $150 more than the basic scale; one rated average, $300 less and one rated fair, $600 less.

Athletic directors get $600 above the basic pay; principals get $200 more plus $30 per class room in their schools.

These are the high points of the system. If a teacher is displeased with her rating she may take the standard teacher examination given by the American Council of Education, and be rated by this test.

For the first three years the system is in effect teachers will be rerated each year, thence once every three years.

Asks Scientific Method

In opposing the present set-up, Sen. Baynard asked that ratings be abolished "until a scientific and unbiased method" of rating teachers can be put into effect, or that the classifications be reconsidered.

Pinellas teachers received a blanket increase in pay for next term of $300, but Baynard said some would lose all of this under the low ratings given them. The school board said this was true.

He also alleged some members of the rating committee had favored relatives and that high school teachers were being rated by first grade teachers and vice versa. He said insufficient facilities in some schools kept teachers from getting good ratings.

Fuguitt replied that the system was new, and would be revised as the need arose. He told me it was planned to lengthen the time in which pay will be increased each year from 10 to 15 years, with the additional increase to be $30 a year and apply only to teachers rating "good" or better teachers, not to those in the lower brackets.

Combine Brackets

It also planned to combine the "good" and "very good" ratings and put all who make a grade from 60 to 95 in this bracket. The present bracket is 66 to 95.

Of the six white teachers rated fair, five have left the system, Fuguitt said, and a considerable number of teachers who never obtained degrees are off in school this summer working for them.

Pinellas County has no tenure law, but Fuguitt said he did not know of a good teacher who had lost her job in the last 10 years.

"A good teacher does not need a tenure law," he said.

"If you leave out the pressure that sometimes comes locally to give some girl a job, whether or not there is an opening, and the pressure that may arise to place somebody in a job for political purposes, tenure is not needed.

"In Pinellas we prize our good teachers so highly we don't pay much attention to pressure of any kind."

Florida Primary Open To Negroes, State Told

By JOHN LeFLORE
(Defender Staff Correspondent)

TALLAHASSEE, Fla. — Florida's Attorney General J. Tom Watson declared this week that Negroes should be registered as Democrats and permitted to vote in Democratic primaries in this bastion of white supremacy.

His opinion was rendered in reply to an inquiry from Secretary of State R. A. Gray of Tallahassee, with regards to the momentous question of Negro suffrage in the state. The Secretary of State turned over to the Attorney General for an opinion a letter from Boland X. Droit, supervisor of registration of Highlands County, who sought guidance as to whether he should permit Negroes to register and vote as Democrats.

In his reply to Gray the Attorney General said in part:

"You are referred to two recent cases of our Supreme Court: Davis vs. State ex rel. Cromwell, 23 So. 2d. 85, and Davis vs. State ex rel, Chavis, 23 So. 2d. 87. Cromwell and Chavis are Negroes, residents of Escambia County. Upon refusal of Mr. Ben L. Davis, supervisor of registration of Escambia County, to comply with the request of such Negroes that they be registered in the primary election books of such county as Democrats, these Negroes instituted action in mandamus to require said officers to so register them.

Supreme Court Mandate

"This office participated in the defense of said county officials in these suits. Upon final hearing the trial court issued peremptory writ of mandamus which, in effect, directed that said supervisor of registration so register such Negroes. The cases were appealed to our Supreme Court, and we participated in such cases on appeal.

"It was our contention in the trial court and in briefs filed and argument made in such cases in the Supreme Court that the registration officer of Escambia County was not required to register these

Pittsburgh Courier

Alabama Attorney

Hits Bill That Would Encourage Vote Suits

MONTGOMERY, Ala.—(ANP)—Richard T. (Dick) Rives, noted white lawyer with political weight, came out in opposition to the proposed Boswell Amendment, to be voted on Nov. 5, in a speech sponsored by the Museum of Fine Arts Association.

Rives, a former president of the Alabama Bar Association, said that the Boswell "understand-and-explain-the-constitution plan" would "encourage Negroes to go to court to enforce their right to vote."

The eminent barrister, member of a powerful law firm here, is special counsel for the defendant Macon County Board of Registrars in the Mitchell Vote Denial case, now under advisement by the Federal Court of Appeals in New Orleans.

WOULD AVOID COURTS

Rep. E. C. Boswell of Geneva County, author and sponsor of the vote-restricting bill bearing his name, is one of the other three lawyers listed with Rives in defending the registrars.

Among other objections to the Boswell Bill listed by Rives were its conflict with the constitutional rights to vote, that it would give too much authority to board of registrars, would bring on so many suits nobody would serve as registrar and, racial ill-will would come from court litigation.

The Boswell Bill was passed unanimously by the Alabama Lower House and with six dissenting votes by the upper chamber. It is supported by the Alabama Democratic Executive Committee. Executive Democrats have urged all candidates to support the bill.

THE WALTON TRIBUNE

Prejudice and Passion Flame

(Editor's Note: Ralph Jones is on vacation.)

The Tribune has had little to say regarding Negroes voting in the July State white primary because we realized that the Supreme Court of the United States had decreed they could vote, and nothing we might say would or could alter that decree.

This fact is recognized by all the candidates in the gubernatorial campaign, and by a majority of the people, but the Negro appears to be the principal basis for the entry of Eugene Talmadge in the race.

The publisher of this paper supported Eugene Talmadge in two of his races, but left him at his second nominating convention because those running the convention made a bitter attack upon President Franklin D. Roosevelt, even though Talmadge had previously assured me that he would "hands off" the President.

Shame and Disrepute

Most everyone will agree that Talmadge made a good Governor during his first term, but later on, drunk with power, he assumed the position of a dictator, and was guilty of several acts which brought shame and disrepute to the State .

Aside from numerous promises which will be impossible of fulfillment even should he be elected, Talmadge's main plank in his present race is an attempt to array the whites against the blacks, and fomenting race hatred which could easily result in trouble among peace loving people, even before the primary.

And yet, Talmadge knows, as we know, and everyone knows, it is impossible to bar the Negro from voting in the approaching primary, for the reason that the Supreme Court declares he is entitled to that privilege, and the Department of Justice has said it would prosecute any person attempting to keep him from voting.

Ridiculous Proposal

Any pretense that the State of Georgia could pass laws or regulations to prevent the Negro from voting is too silly to consider, as the State would be powerless to nullify any act of the highest court in the land.

Now it is being proposed to abolish all State election laws and permit the whites and the blacks to have separate primaries in which they could register their choices.

Abolishing present laws would probably result in wholesale graft and corruption, and the suggestion for separate primaries might also result in confusion and trouble.

Many of our people probably haven't thought of it, but a number of Georgia counties have more Negroes than whites, and in these counties it would be possible for the Negroes to nominate and later elect all the county officers if they voted in a colored primary.

And in State elections it would be possible for them to vote for Negro nominees for Governor and State House officers, and send Negro delegates to the State convention.

Under the circumstances, it appears far better to obey the law as defined by the Supreme Court and let the Negro vote in the white primary, where he will be under the restraint of white people and in many cases, will follow their suggestions as to voting.

Bar Negro Vote, Bilbo Entreats 'Red-Blooded'

JACKSON, Miss., June 22—(UP)—Sen. Theodore Bilbo, Democrat, Mississippi, Saturday night demanded that the "red-blooded men" of Mississippi bar Negroes from voting. His demand came a few hours after a Negro Army veteran charged that he had been beaten and flogged by four white men when he sought to register.

In one of his strongest white supremacy statements of his current campaign for renomination, Bilbo said at Laurel that if a few Negroes vote in the Democratic primary this year, more will vote in 1947 "and from then on it will grow into a mighty surge."

He called on every "red-blooded, Anglo-Saxon man in Mississippi to resort to any means to keep hundreds of Negroes from the polls in the July 2 primary."

"And if you don't know what that means, your are just not up on your persuasive measures," Bilbo added.

Bilbo's speech came after Etoy Fletcher, Army veteran attending school under the GI Bill of Rights, charged in an affidavit that he had been seized, flogged and beaten at Brandon, Miss., on June 2 when he attempted unsuccessfully to register. His charge was made in an affidavit made public by the National Association for the Advancement of Colored People in New York.

Use Troops at Polls, Oust Bilbo, Cry Negroes

CHICAGO, June 22—(UP)—Edgar G. Brown, Director of the National Negro Council, Saturday night urged President Truman to send troops into Mississippi for the July 2 election to enforce a Supreme Court decision giving Negroes the right to vote in "white" primaries.

Brown, speaking before the annual meeting of the National Sunday School and Baptist Training Union Congress, said that "if Mr. Truman could send troops to Gen. MacArthur to assure the right of the Japanese, our recent enemies, to vote, certainly he can do the same for our native Americans."

Some 17,000 delegates and guests, representing 4,000,000 Negro Baptists, signed petitions demanding the impeachment of Mississippi Sen. Theodore R. Bilbo.

Candidate Talmadge next week will make a mighty bid for the votes of Bibb and Hall Counties—with rallies scheduled for Macon and Gainesville. Talmadge leaders claim their Fourth of July program at Gainesville will be one of the campaign's highlights.

South Defending White Primary, Talmadge Says

By ROBERT H. McKEE
Journal Staff Writer

ROME, Ga., June 29. — House Speaker Roy Harris told a Talmadge rally that filled the city auditorium here Saturday that "this is your last chance to get the white primary back without bloodshed and race riots."

Mr. Harris said Mr. Talmadge's two opponents claim there is nothing they can do toward restoration of the white primary. "If they feel there is nothing they can do," he said, "they ought to get off the nest and turn it over to someone who thinks he can do something about it."

Mr. Harris predicted that Rivers would not carry more than seven counties in the July 17 primary, and at the most Carmichael would carry only 15 or 16 counties.

"The Only Man"

Mr. Harris said Gene Talmadge is the "only man running for governor this year that a white man can vote for."

Several Southern states are bestirring themselves energetically toward steps that will mean preservation of the white primary, Candidate Talmadge told a large crowd assembled on the lawn of the Polk County courthouse Saturday afternoon.

"The governor of Arizona," said Mr. Talmadge, "was found to be correct in his decision to preserve the white primary." He declared it was his understanding that Washington authorities were in agreement that the governor of Arizona had not violated the federal laws.

"Florida is getting ready to act," said Mr. Talmadge, "and watch the July 2 primary in Mississippi. They're getting ready to do things over there."

The candidate said the trend of the Negro vote is "a black cloud that will wither all it touches in Georgia. The South has always been good to the Negro. We educated them and we saw that they had justice. That is especially true in Georgia. Their civilization is an artificial civilization and the white people will never stand for turning over this country, in part or in whole, to Negroes."

Says C. I. O. for Him

He voiced the opinion that 90 per cent of C. I. O. members would vote for him.

"I didn't force that bus decision on you," he said. "That was brought up by a Negro in Virginia. A Negro that I know in McRae, my home town, recently stated that if he were invited to a white man's house he would go there, but that if he were not invited to take part in the white man's primary he certainly would not wish to participate.

"The best protection for the white people and the Negro as well, is for Talmadge to be elected. If I go in as your governor all these troubles will be obviated. Candidates will be soliciting the votes of white people exclusively."

BEST SHOWING IN LARGE CITIES

Negroes Pass Literacy Tests To Qualify as Georgia Voters

By THE ASSOCIATED PRESS.

Negroes registering to vote for the first time in a Georgia white primary are being given literacy tests in some counties and the larger cities are qualifying a larger proportion of Negro voters than other districts.

Under Georgia's county unit system of voting the smaller counties hold the balance of power.

In Fulton County, only 100 Negroes of the 24,000 registered have been purged from the voting list because of illiteracy.

In Sumter County (Americus), only 92 of the 650 Negroes who applied for registration were considered qualified.

In Muscogee County (Columbus) Tax Commissioner Sterling W. Dudley said only about 10 percent of the 2,940 Negroes who registered were purged because of illiteracy. Practically none of the Negroes applying for registration in Floyd (Rome) were disqualified. T. E. Clemmons, Floyd Tax Collector, said industrial areas such as Rome had fewer illiterate Negroes than country districts. That County qualified 1,200 Negroes among 17,200 voters.

DeKalb County (Decatur) reported it kept no record of the number of Negroes being disqualified for illiteracy or other reasons but that 1,300 Negroes were registered out of the total of 35,-520. Chatham County (Savannah) also had no figures on the number of Negroes disqualified. Registration there totals about 36,-000, compared to only 16,000 two years ago. Separate card files are kept but the number of Negroes registered has not been totaled.

Many counties are giving broad interpretation to educational requirements set up in the State constitution and leaning toward leniency in qualification tests. The constitution gives the ballot to "persons who can correctly read in the English language any paragraph of the constitution of the United States or of this State and correctly write the same in the English language."

The Muscogee Commissioner said "We are being as lenient as possible with Negroes. We give them the benefit of the doubt. The registration law, of course, applies to both whites and Negroes."

In Dougherty County (Al[illegible] 3,000 of the 13,000 applyi[illegible] registration are Negroes. [illegible]erty lists have not yet been [illegible]ed and the final registratio[illegible] not be determined for [illegible] days.

Talmadge Rebukes PAC for Vote Stand

Predicts He'll Get Many CIO Ballots Despite Call for Defeat 'At Any Cost'

Former Governor Eugene Talmadge predicted Monday that he will get thousands of C. I. O. votes, despite the P. A. C.'s declaration that members may vote for any candidate they see fit, so long as it is not for Talmadge.

Commenting on the committee's decision not to endorse candidates, but to oppose Talmadge—action taken at a Sunday meeting—the former governor said he was sorry that the C. I. O. took such a position.

"I'm the only candidate in the governor's race that is trying to protect the wives and sisters and children of C. I. O. white members and all other white people in Georgia from being forced on terms of equality with Negroes," he said.

"I know that I will get the votes of thousands of white members of the C. I. O. in Georgia because I know that they don't want to see their wives and children riding on busses with Negroes on the same seat.

"The other candidates in this race for governor are condoning social, economic and political equality with Negroes. I'm against it now, will be against it when I am governor and I'll straighten the situation out in Georgia."

State C. I. O. Chairman Charles H. Gillman said that approximately 300 members attending the executive session of the P. A. C. Sunday decided not to endorse any candidate, but added that the group "wants at any cost to defeat Talmadge."

Mr. Gillman said, however, that although no candidates were indorsed, the P. A. C. executive board will meet shortly before the July 17 election, when it may throw support to one of the candidates in the Governor's race. Prior to that time complete records of the various candidates will be compiled and sent to members.

Numerous political issues other than the Governor's race were discussed at the Sunday meeting of the P. A. C. The approximately 300 delegates voted unanimous support to continuation of the OPA and price controls, condemned emergency antistrike legislation, urged veto of the Case bill, endorsed higher pay for Georgia teachers, and expressed new interest in the small farmer.

DeKalb County (Decatur) reported it kept no record of the number of Negroes being disqualified for illiteracy or other reasons but that 1,300 Negroes were registered out of the total of 35,-520. Chatham County (Savannah) also had no figures on the number of Negroes disqualified. Registration there totals about 36,-000, compared to only 16,000 two years ago. Separate card files are kept but the number of Negroes registered has not been totaled.

Many counties are giving broad interpretation to educational requirements set up in the State constitution and leaning toward leniency in qualification tests. The constitution gives the ballot to "persons who can correctly read in the English language any paragraph of the constitution of the United States or of this State and correctly write the same in the English language."

The Muscogee Commissioner said "We are being as lenient as possible with Negroes. We give them the benefit of the doubt. The registration law, of course, applies to both whites and Negroes."

In Dougherty County (Albany), 3,000 of the 13,000 applying for registration are Negroes. Dougherty lists have not yet been purged and the final registration will not be determined for several days.

The question of separate polling places for Negroes and whites is not dealt with in Georgia statutes. An unofficial opinion by the Attorney General cited a code section limiting voting precincts to one in each militia district, except districts lying in whole or in part in incorporated municipalities.

J. M. Middlebrooks, Upson County ordinary, recently asked Eugene Cook, Attorney General, for an opinion on whether separate voting booths could be provided.

Cook's unofficial opinion pointed to lack of reference to the matter in the statutes. He said, however, that the law provided for as many voting precincts in militia districts lying wholly or partly in incorporated municipalities "as may be necessary and convenient for holding elections."

A survey showed some Counties will have separate booths for Negroes, some will not. Muscogee County will have separate polling places. Dougherty and Chatham County also will have separate booths. Fulton and DeKalb Counties will use the same booths for both races. Many counties have not yet decided on this matter.

'Saved Primary' Brings Woe to South Carolina

Eugene Talmadge is campaigning for Governor of Georgia on a platform pledging repeal of the State's primary election laws to keep Negroes from voting as did South Carolina where the Legislature hurriedly repealed that State's primary laws. But that South Carolina political leaders already are disturbed over the action and its possible consequences is told in the following article from the Greenville, S. C., News prepared by Arthur Gurley, of the paper's Columbia News Bureau:

COLUMBIA, June 1—A test case involving the rights of Negroes enroll and vote in the Democratic Primaries seems inevitable.

There is a variance of opinion ong political observers as to the come of such a test case should e come, but many believe the partment of Justice would ing along with the Negroes in eping with recent rulings of the preme Court and interpretation those rulings by the U. S. attor- y general.

ACK TO CONVENTION

What procedure will the white mocrats of the State take should e courts rule the Negroes must allowed to participate in the maries? One suggested answer this question heard this week uld abolish the primaries en- ely and nominate the Democrat- candidates at County and State nventions. These conventions, is pointed out, would not be as emocratic as the primaries in hich more people participate, but ight be made to serve the pur- ose of preventing the Negroes om having a hand in nominating he Democratic candidates.

However it seems doubtful if ven these conventions could be nade "lily white" for should the ourts open up the primaries it would seem the ruling would be xtended to include any other ype of political conclave.

Some members of the Democrat- party attending the State Con- ention expressed the feeling that he party did wrong in not facing he Negro issue by opening up the anks and taking in those who ould meet certain educational qualifications. The Richland Coun- ty Convention referred a resolu- tion to do just that to the State meet but, in the words of the Reso- lutions Committee Chairman, Cal- houn Thomas, of Beaufort, it was "lost in the shuffle."

SUPPORT PROMISED

The Democratic Executive Committee has promised to back any precinct enrollment clerk or other party official who may be forced into the courts for refusal to allow Negroes to enroll.

A declaration of policy by the Democrats earlier this week that theirs was a "voluntary organization" and therefore not subject to any statute or ruling in cases in other states was followed by a statement from John McCrary, Negro leader, that an orderly attempt would be made by Negroes to enroll on June 5 and the promise that those refusing the Negroes would be hauled into the Federal courts.

The outcome is in the realm of conjecture but Democratic leaders are preparing for any eventuality and speculation as to what will happen is the subject of most conversations around the Statehouse.

Talmadge Makes Bid On White Primary

Ex-Governor Begins 4th Term Drive On Racial Issue in Lyons Address

By L. P. PATTERSON, Journal Staff Writer

LYONS, Ga., May 18.—Bidding for a fourth term as governor of Georgia, Eugene Talmadge formally launched his campaign here Saturday with a speech mainly devoted to preservation of the Democratic white primary.

Urging his listeners to vote for James V. Carmichael if they favor abolition of Jim Crow laws and for E. D. Rivers if they don't care whether these laws exist or not, the former governor promised "a primary for the white people for Georgia at least for the next four years."

Promises Highways

The crowd stood for more than [illegible] hour in a scorching sun to hear [illegible] candidate. For the most part, it was a typical Talmadge crowd —the so-called "wool hat boys."

Mr. Talmadge promised to build more and better highways and said his program would include extensive benefits for veterans. It was the racial issue, however, the "White Primary" that brought out the yells, whistles and shouts of "That's telling 'em Gene" familiar to previous Talmadge rallies.

A motorcade met the speaker at the Toombs-Montgomery County line and escorted his party to the Lyons Public School where a platform had been erected. Before the time set for the speech, the school grounds began to fill with early comers. Fiddling John Carson, of radio fame, entertained them with music.

Master of ceremonies was D. D. Moore, Toombs farmer. The candidate was introduced by T. Ross Sharpe, Lyons attorney. Miss Marion Faircloth, of Savannah, presented Mr. Talmadge with a new straw hat in memory of her brother, the late Jack Faircloth, of Quitman, who had presented him with a hat in each campaign during his lifetime.

Takes Off Coat

The speaker, following demands of several supporters, shucked off his coat early in his speech, baring the familiar red suspenders.

"If you are opposed to a Democratic white primary," he continued, "vote for the Negroes, for James V. Carmichael, of Marietta, Georgia. The other candidates are trying to get the Negro votes but they are making a sad mistake."

"The influences that are controlling the Negro vote this year are far removed from Georgia," he charged. "They emanate from Moscow, Harlem, New York, Chicago and they are headed up by Henry A. Wallace, who is now campaigning for the presidency of the United States and he is trying to fool Ellis Arnall that he will put him on a ticket with him

Turn to Page 8, Column 2

as vice president as the champion of the Negro votes.

He charged Henry Walace, Secretary of Commerce, with making a speech at Tuskegee Institute two weeks ago in which he asserted, "we are going to ram the Negroes down the throats of the Southern white people."

"Most all of the candidates for Governor will agree on most points in the platform. The one thing that you want to remember is that any candidate can make promises to the people of Georgia. You want to remember which candidate will carry out his pledges to the people. You have tried me and you have tried Rivers, and you know our records. One candidate is completely untried, but you know that the average politician has no regard for a campaign pledge after he is once elected to office.

"Now, I will get to the plank in the candidates' platform upon which we differ. I favor a white primary. E. D. Rivers and James V. Carmichael are opposed to a white primary. The people of Georgia ought to know just how they have been robbed of the Democratic white primary. They have been told by Ellis Arnall and others among his friends that the law prevents it. This is not true and they know it. They know that South Carolina retained their white primary and they are having a white and a separate black primary in South Carolina.

"Judge Sibley, a native-born Georgian, in writing the decision in the District Court of Appeals of the United States, specifically went out of his way to tell the people of Georgia how they could retain the white primary when he used these words: ". . . but we [illegible] advised of no statute, state or federal, which undertakes to limit the right of citizens who form a political party to select those who shall participate in it. Nor is there any statute which prohibits those who do participate in a party caucus, mass meeting or election from agreeing to support the result thereof. Accordingly, there may be parties composed of wholly whites, or wholly colored people . . . or of men or of women. In a pure party activity by such parties there would result an exclusion from voting in that activity of those of another race, or sex, but it would not be a denial of the right to vote 'in any election by the people in any state, territory or county . . . or other territorial subdivision' in the words of 8 U. S. C. A. 31, nor within the meaning of the Fifteenth or Nineteenth Amendments.

"Ellis Arnall knows we can retain a white primary in Georgia, as well as the Atlanta newspapers. They know that we can also retain the county unit system in Georgia. They know the county unit system was maintained in Georgia before we ever had a white primary in Georgia. After the decision of the United States District Court of Appeals, I called for a special session of the General Assembly for the preservation of the Democratic white primary.

"All Georgia needs to do is exactly the same thing South Carolina has done. There is nothing whatever to prevent the laws that make the primary an instrumentality of the state from being changed and handle our primaries through party rules, which then will remove them from the jurisdiction of the federal courts.

"Now, here's what will happen if our Democratic white primary is not restored and preserved. The Negroes are going to vote in a bloc. The very purpose of the white primary is for the white people to vote in a bloc in the general election. Why should Negroes butt in and tell the white people who should be elected? The white people will not vote in a bloc in a white primary. That is what a white primary is for: it is to select the candidate for whom the white people will vote in the general election. If the Negroes want a primary to see who they will vote for, why don't they hold a separate Negro primary?

"There is no opposition to the Negroes voting in a general election, provided they can meet the qualification test and laws of our Constitution, but they should not come into our Democratic white primary.

Quotes 1940 Census

"Using the 1940 census figures as the basis for these computations, we find that in 47 counties of Georgia the Negroes represent 50 per cent and over of the population. In 92 counties the Negroes comprise 35 per cent or more of the population. In 114 counties the Negroes comprise 25 per cent or more of the population. What will happen in the 47 counties where the Negroes have a majority if the white Democratic primary is not restored and preserved? I will tell you what will happen; these Negroes in these counties will elect your judges, congressmen, sheriff, your tax collector, your ordinary, your clerk of superior court, your tax receiver, your county commissioners, your county treasurer, your county school superintendent, your mayor, and your council.

"Of course, when these Negroes have demonstrated that they vote in a ratio of 956 to nothing for their favorite candidate for office, it would be asinine to think these Negroes in the 47 counties of Georgia will look up white people to support. On the contrary, the Pittsburgh-Courier, the Chicago Defender, and the Atlanta Daily World, all Negro papers, are telling every one that the Negroes are on the verge of a new era in Georgia. They will soon be electing officials of this state; they have already elected officers in this state and defeated others.

"Ellis Arnall's chief sponsor, Jim Cox of Ohio, has carried him high on the mountains and had him look into the valleys, and his eyes since that time have been upon Harlem, the Negro settlement in New York City, and he idly for Carmichael. If we don't want to see the voting strength of Georgia turned over to the Negroes, you are going to have to combine. A split vote of the white people is dangerous, especially if split too much. I value my old friends and supporters as much as any man on this earth and I call on you that are true and tried, to forget factions in your county, stretch out your arms to newcomers, to the white people who want to join us, lay petty differences aside and let's have a solid march of white people who will go to the polls and save good old Georgia from the carpetbaggers who have invaded this state as strong, or stronger, than they did in the period of the sixties. The carpetbaggers took charge of Georgia then, they had a two-thirds margin of Negro members in our General Assembly; they had Bullock from New York for governor. The brave, courageous, God-fearing white men and white women rose to the emergency, threw off the shackles and restored Georgia to the white people.

"My election this year will be the greatest help on earth, not only to the white people of Georgia and this nation but to the Negro race. They are being used as tools by alien influences that care nothing about them. The white men of Georgia are their only protection—not only for the white people of this state but for the Negroes that dwell therein."

The former governor reminded his listeners of the accomplishments of his three terms in office, asserting he had saved the farmers millions of dollars through lower freight rates and development of livestock interests and co-operative auction sales.

He added that in 1940, during the Rivers administration, the state was overwhelmingly in debt and the schoolteachers were being paid in scrip, or not at all. All debts were paid and a surplus of more than seven million dollars was left in the State Treasury when his term ended, he said.

Officials from other sections of Georgia were present and a group of Talmadge Club members from the University of Georgia addressed the crowd when the former Governor had concluded.

WARMING TO HIS TASK—Lyons, Ga., May 18.—Former Governor Eugene Talmadge, coat off, collar open and red suspenders moist, was bearing down when this photo was made Saturday in his first open air speech of the present campaign.

Elect Me or Kiss Negro Babies, Says Talmadge

By KEN TURNER
Journal Staff Writer

WINDER, Ga., June 10.—If Eugene Talmadge is not elected governor there will be Negro delegates at the state convention in October, gubernatorial condidate Talmadge told a Barrow County

portant of which is an 18½ cent per hour increase in pay.

Few Citizens Understand

"Few average citizens understand

expected low of 66 degrees. The high Monday was 90.

In contrast to the scenes in the sunny Southland, a high of 65 degrees was registered in Chicago over the week-end, and a General week-end temperature drop was apparent over the Northern and Eastern part of the United States.

Elect Me or Kiss Negro Babies, Says Talmadge

By KEN TURNER
Journal Staff Writer

WINDER, Ga., June 10.—If Eugene Talmadge is not elected governor there will be Negro delegates at the state convention in October, gubernatorial condidate Talmadge told a Barrow County audience here Monday, as he continued to stress his white supremacy and white primary platform.

He also declared that if Gene Talmadge is not elected, within two years county officers of this state, when they go campaigning, will have to take off their hats when they go to a Negro's house—and maybe have to kiss Negro babies.

"I'm the only white man's candidate in this race—C. I. O. or no C. I. O.," he said. Denying vigorously that he favored repeal of the county unit system of voting, Mr. Talmadge declared, "If it had not been for the county unit system you would never have known Eugene Talmadge."

He contended there is no reasonable doubt that the county unit system and the white primary can be reclaimed. He pointed out that the Supreme Court decision pointed the way for the continuation of the white Democratic primary.

Mr. Talmadge thanks The Atlanta Journal, he said, for publishing some time ago a statement which said that he was the only candidate for governor on a platform for restoration of the Democratic white primary.

"That is the truth, and I thank The Journal for publishing it," he said.

He criticized Governor Ellis Arnall, although not mentioning his name, for not doing more for the veterans of Georgia.

He said that the present Governor spent most of his time speaking to Negro groups rather than attending to the veterans' business in Georgia.

Promises Highways

The crowd stood for more than [illegible] hour in a scorching sun to hear [illegible] candidate. For the most part, it was a typical Talmadge crowd—the so-called "wool hat boys."

Mr. Talmadge promised to build more and better highways and said his program would include extensive benefits for veterans. It was the racial issue, however, the "White Primary" that brought out the yells, whistles and shouts of "That's telling 'em Gene" grounds began to fill with early comers. Fiddling John Carson, of radio fame, entertained them with music.

Master of ceremonies was D. D. Moore, Toombs farmer. The candidate was introduced by T. Ross Sharpe, Lyons attorney. Miss Marion Faircloth, of Savannah, presented Mr. Talmadge with a new straw hat in memory of her brother, the late Jack Faircloth, of Quitman, who had presented him with a hat in each campaign during his lifetime.

Takes Off Coat

The speaker, following demands of several supporters, shucked off his coat early in his speech, baring the familiar red suspenders.

"If you are opposed to a Democratic white primary," he continued, "vote for the Negroes, for James V. Carmichael, of Marietta, Georgia. The other candidates are trying to get the Negro votes but they are making a sad mistake."

"The influences that are controlling the Negro vote this year are far removed from Georgia," he charged. "They emanate from Moscow, Harlem, New York, Chicago and they are headed up by Henry A. Wallace, who is now campaigning for the presidency of the United States and he is trying to fool Ellis Arnall that he will put him on a ticket with him

Turn to Page 8, Column 2

as vice president as the champion of the Negro votes.

He charged Henry Walace, Secretary of Commerce, with making a speech at Tuskegee Institute two weeks ago in which he asserted, "we are going to ram the Negroes down the throats of the Southern white people."

"Most all of the candidates for Governor will agree on most points in the platform. The one thing that you want to remember

"Judge Sibley, a native-born Georgian, in writing the decision in the District Court of Appeals of the United States, specifically went out of his way to tell the people of Georgia how they could retain the white primary when he used these words: ". . . but we [illegible] advised of no statute, state or federal, which undertakes to limit the right of citizens who form a political party to select those who shall participate in it. Nor is there any statute which prohibits those who do participate in a party caucus, mass meeting or election from agreeing to support the result thereof. Accordingly, there may be parties composed of wholly whites, or wholly colored people . . . or of men or of women. In a pure party activity by such parties there would result an exclusion from voting in that activity of those of another race, or sex, but it would not be a denial of the right to vote 'in any election by the people in any state, territory or county . . . or other territorial subdivision' in the words of 8 U. S. C. A. 31, nor within the meaning of the Fifteenth or Nineteenth Amendments.

"Ellis Arnall knows we can retain a white primary in Georgia, as well as the Atlanta newspapers. They know that we can also retain the county unit system in Georgia. They know the county unit system was maintained in Georgia before we ever had a white primary in Georgia. After the decision of the United States District Court of Appeals, I called for a special session of the General Assembly for the preservation of the Democratic white primary.

"All Georgia needs to do is exactly the same thing South Carolina has done. There is nothing whatever to prevent the laws that make the primary an instrumentality of the state from being changed and handle our primaries through party rules, which then will remove them from the jurisdiction of the federal courts.

"Now, here's what will happen if our Democratic white primary is not restored and preserved. The Negroes are going to vote in a bloc. The very purpose of the white primary is for the white people to vote in a bloc in the general election. Why should Negroes butt in and tell the white people who should be elected? The white people will not vote in a bloc in a white primary. That is what a white primary is for: it is to select the candidate for whom the white people will vote in the general election. If the Negroes want a primary to see who they will vote for, why don't they hold a separate Negro primary?

"There is no opposition to the Negroes voting in a general election, provided they can meet the qualification test and laws of our Constitution, but they should not come into our Democratic white primary.

Quotes 1940 Census

"Using the 1940 census figures as the basis for these computations, we find that in 47 counties of Georgia the Negroes represent 50 per cent and over of the population. In 92 counties the Negroes comprise 35 per cent or more of the population. In 114 counties the Negroes comprise 25 per cent or more of the population. What will happen in the 47 counties where the Negroes have a majority if the white Democratic primary is not restored and preserved? I will tell you what will happen; these Negroes in these counties will elect your judges, congressmen, sheriff, your tax collector, your ordinary, your clerk of superior court, your tax receiver, your county commissioners, your county treasurer, your county school superintendent, your mayor, and your council.

"Of course, when these Negroes have demonstrated that they vote in a ratio of 956 to nothing for their favorite candidate for office, it would be asinine to think these Negroes in the 47 counties of Georgia will look up white people to support. On the contrary, the Pittsburgh-Courier, the Chicago Defender, and the Atlanta Daily World, all Negro papers, are telling every one that the Negroes are on the verge of a new era in Georgia. They will soon be electing officials of this state; they have already elected officers in this state and defeated others.

"Ellis Arnall's chief sponsor, Jim Cox of Ohio, has carried him high on the mountains and had him look into the valleys, and his eyes since that time have been upon Harlem, the Negro settlement in New York City, and he forgets the people of Georgia who elected him to office.

"I was amused to see in the Atlanta press a few days ago an article about one of the candidates for governor that he had been called by the Supreme Being to offer as a candidate. Of course, I have been watching the press and the issues involved in this campaign. I have nothing but the highest regard for any one who is sincere in his religious faith, but when a candidate for governor, or a newspaper supporting a particular candidate for governor, goes to the extent of believing that the Supreme Being has called upon him to make a political race, then I think it is blasphemy of the worst form. This particular candidate for governor mistook his call. His call was from Jim Cox of Dayton, Ohio, and the Atlanta Journal and the Pittsburgh-Courier of Pittsburgh, Pa.

Warns of Negro Vote

"Here is another important thing we want to remember in Georgia this year. The Negroes are going to vote in a block. We don't know how many but we do know that they will vote solidly for Carmichael. If we don't want to see the voting strength of Georgia turned over to the Negroes, you are going to have to combine. A split vote of the white people is dangerous, especially if split too much. I value my old friends and supporters as much as any man on this earth and I call on you that are true and tried, to forget factions in your county, stretch out your arms to newcomers, to the white people who want to join us, lay petty differences aside and let's have a solid march of white people who will go to the polls and save good old Georgia from the carpetbaggers who have invaded this state as strong, or stronger, than they did in the period of the sixties. The carpetbaggers took charge of Georgia then, they had a two-thirds margin of Negro members in our General Assembly; they had Bullock from New York for governor. The brave, courageous, God-fearing white men and white women rose to the emergency, threw off the shackles and restored Georgia to the white people.

"My election this year will be the greatest help on earth, not only to the white people of Georgia and this nation but to the Negro race. They are being used as tools by alien influences that care nothing about them. The white men of Georgia are their only protection—not only for the white people of this state but for the Negroes that dwell therein."

The former governor reminded his listeners of the accomplishments of his three terms in office, asserting he had saved the farmers millions of dollars through lower freight rates and development of livestock interests and co-operative auction sales.

He added that in 1940, during the Rivers administration, the state was overwhelmingly in debt and the schoolteachers were being paid in scrip, or not at all. All debts were paid and a surplus of more than seven million dollars was left in the State Treasury when his term ended, he said.

Officials from other sections of Georgia were present and a group of Talmadge Club members from the University of Georgia addressed the crowd when the former Governor had concluded.

Carmichael Paints Talmadge As Paul Revere of Race Issue

By M. L. ST. JOHN,
Constitution Staff Writer.

TIFTON, June 4—Gubernatorial Candidate Jimmie Carmichael came into Georgia's "Black Belt" Tuesday and talked frankly about the racial issue, on which he said Ex-Gov. Talmadge is trying to ride into office. Crowds at Tifton and Douglas applauded Carmichael.

He traced the racial question back through 26 years of "Talmadge poppycock" and to the War Between the States, and then brought it up to date with this week's ruling by the United States Supreme Court holding that "Jim Crow" laws cannot be enforced on interstate bus transportation.

"Ever since I was 10 years old, Eugene Talmadge has been running for office in Georgia on the race issue," Carmichael told the laughing audiences. "He has played the role of a modern Paul Revere, hollering 'Wake up, wake up, the nigger is coming.' He has been trying to spread hatred for 26 years, purely to get into office.

"He has said each year that if you didn't elect Talmadge there would be a mixture of the races—but there has not been. He talks about a white primary, and says if he is not elected the Negroes will rule Georgia. The Negroes have been voting in Georgia's general elections since the War Between the States. The Negroes have been legally eligible to hold office in Georgia since that time. Yet, the Negroes have never ruled Georgia politics.

"The United States Supreme Court has ruled that segregation laws cannot be enforced on buses crossing the State lines. Talmadge already has pledged himself to stop vehicles at the State line and enforce the Jim Crow laws. If Georgia wants to do this, we have got to make up our minds to secede from the Union and match our National Guard against Federal troops.

"I will say that as long as I am Governor, Negroes will not attend white schools, there will be no interracial marriages, and there will be no mixing of the races in our institutions.

"I am just as steeped in Southern tradition as Talmadge is. My grandfathers both fought for the Confederacy. But, if I take the oath as Governor to depend the laws and Constitutions of our Nation and our State, I will not perjure myself. And if Eugene Talmadge were honest, he would say the same thing. The United States Supreme Court has decided who will vote in Georgia, and there is nothing I, nor Talmadge, nor anyone else can do about it. We must either have law and order, or chaos and anarchy," Carmichael declared.

St. John Story

Editor Constitution: Reference is made to an article written by M. L. St. John in your May 18 edition. This article purports to describe the appearance of Mr. Talmadge as a guest of the Student Veterans' Organization at the University of Georgia.

While a recent straw vote on the campus indicates that James V. Carmichael is an overwhelming favorite for Governor, in the spirit of fair play, the Student Veterans' Organization thinks the above mentioned article was overdrawn and colored to show Mr. Talmadge in an unfavorable light.

The purpose of our organization in bringing candidates for Governor to the campus is so that students may decide issues for themselves and not have decisions made for them by highly colored journalistic stories or other misleading information.

Also, in the above stated article our organization is referred to as the Student Voters League and I am listed as President of the Student Voters League. The Student Voters League is the Carmichael Club on the campus. We are the Student Veterans' Organization and we are maintaining a nonpartisan status in this election.

We would like to reiterate that this organization is not backing Talmadge or any other candidate, but we can not stand idly by without raising a voice in protest.

J. FRANK MYERS,
President, Student Veterans' Organization.
Athens.

(Editor's Note: Mr. Myers, a new member, was excused from part of the Gridiron Club's initiation so he could help keep down anticipated trouble at the Talmade speaking. In view of what he, faculty members, and student leaders said they were expecting, Myers did a good job. Even the effigy—which DID swing from the second-story window of the Joe Brown dormitory—was cut down and hidden before a photographer could be summoned. The Constitution regrets referring to Mr. Myers as President of the Student Voters' League instead of the Student Veterans' Organization.)

The Constitution welcomes letters from its readers. They must be signed, should not exceed 200 words.

For Talmadge

Editor Constitution: The white people of Georgia are going to vote for or against social equality. They are either going to uphold or do away with our Jim Crow laws.

Eugene Talmadge is the only man in the race for white supremacy. His opponents are for Negroes voting in our white primary. You know there are a lot of Negroes in Georgia with their face painted white. Some of these people are running for Governor.

I don't believe that the white people of Georgia will let a bunch of high-paid Negro-loving newspapers tell them how to vote.

It's the people with lots of money who are trying to mix the white and black folks together.

If we are going to give this country away, let's give it back to the Indians, not to a bunch of Negroes.

As for these little two by four weekly newspapers that have gone against our Southern traditions, we won't worry about them. You can walk out of their circulation in 15 minutes.

A white man will vote the white way.

JACK GREGORY.
629 N. Highland Ave., N. E.

Would Leave State

Editor Constitution: I read the statement made by Ole Red Gallus at Athens to the effect that he would not allow the Negro veterans of World War II to vote if he was elected Governor of Georgia.

By uttering these words, Talmadge removed all doubt as to how small and narrow-minded he actually is!

I have been in 27 States. Of these I dislike Illinois the most. However, I promise you one thing—if Ole Red Gallus is elected Governor of Georgia, I will move to Illinois—live there the rest of my life, and, furthermore, I will consider the State a paradise! JAMES I. LUNSFORD.

Bonnie Banks of the Sugar

Editor Constitution: Hod-dogy, Gene, you have the Knights of the Flaming Sword with you, leaving little Eddie, Evans and Brack out in the cold. I don't know whether you are fortunate or not, but Georgia, my dear Gene, will be fortunate because you will still be on the bonnie, bonnie banks of The Sugar, casting a wistful eye to the Capitol!

Gene, you've been in many respects a pretty good old wagon, but you have had your day, you have broken down and there isn't but one thing for you to do—take it now as a gentleman, on the chin, because you are going to take it on the chin.

Fayetteville. J. M. ELLIS.

Snake Bite

Editor Constitution: I would like to add another heartbeat to the Pulse of the Public by saying that I think it would be a great calamity if either Talmadge or Rivers should be elected as Governor of Georgia. It would be like going back to be bitten by the same snake again.

I am for Carmichael because I don't know what kind of a Governor he will make. I'm against Talmadge and Rivers because I do know the kind of Governor they would make.

MOTT A. RUSSELL.
Macon.

Knew Jimmie as Boy

Editor Constitution: I am tired of some people trying to cast a shadow on Jimmie Carmichael.

I have known Carmichael from childhood; know his parents and grandparents intimately, and am sure there are no finer people to be found; and as to an unkind word about Jimmie — well, it is another dirty falsehood.

A. C. CANTRELL.
911 Williams Mill Road, N. E.

Slogan for Jimmie

Editor Constitution: Every campaign needs a snappy slogan. My suggestion is "You've tried the rest, now try the best—vote for Jimmie Carmichael."

E. L. CARTER.
Albany.

THE PULSE OF THE PUBLIC

The Constitution welcomes letters from its readers. They must be signed, should not exceed 200 words.

Broke Up Playhouse

Editor Constitution: Mr. Hiram Dunn, in his recent letter, had very little to do to pass judgment on what Mr. Carmichael did at Bell Bomber plant. I'll admit it was just a playhouse for some who were put there by the Army and stayed there until it was turned over to Bell and Mr. Carmichael became manager.

He really did a fine job, especially in the breaking up of the playhouse permitted to exist there, even though he had no co-operation from a few foremen and general foremen who didn't care about anything but getting by.

Mr. Carmichael had the plant running very efficiently when it closed and I congratulated him for his part in turning out the B-29 that undoubtedly played a major part in winning the war.

In regards to Mr. Talmadge, he had his chance to write his little piece when he was Governor and he didn't, so why help a man who won't help himself?

A former Bell employe.
GORDON L. FINCHER.
Rome.

Carmichael Record

Editor Constitution: I have never voted in my life, but this year I am going to the polls and vote for Mr. Carmichael. I am proud of the opportunity to vote for such a fine person.

I feel certain that the thousands of peoples that worked under him at Bell Aircraft, in Marietta, will quickly recognize all of these false statements that have been made about Mr. Carmichael.

I am glad to know that my income tax was used to help build a B-29. Our pride at seeing a B-29 on her maiden flight was reward enough for the long hours spent producing it.

What some people don't stop to realize, is the fact that Bell Aircraft mushroomed up practically overnight. Personnel had to be hired and trained regardless of the cost. We cannot count the cost of noble American boys' lives in dollars and cents, and the planes had to be built quickly in order that their lives be spared on the fighting front. The production of the B-29 did hasten the end of the war. Sure, it cost money, and barrels of it, but it was spent for a good cause.

After V-E Day there was a little tension among workers at Bell. That is only natural, due to the fact that men and women who worked there were breadwinners at home. Mr. Carmichael sensed this, and knew the time had come for him to talk to us, so a meeting was called. It was his speech at this particular meeting that made us so very proud of him.

He didn't fill us with false hopes or promises, but told us very frankly that if war should end in Japan that very moment that he, as well as we, would be out of a job so far as he knew. But—if the war would only hasten to an end he would be glad to walk the streets with us, shoulder to shoulder, seeking employment.

That is the sort of fellow we need as Governor. One that will be frank and not afraid to speak the truth. One able to meet any emergency at any time, and know how to cope with the situation.

Mr. Carmichael reduced the production cost of the B-29 by half, and I am sure that if possible for any Governor to reduce the costs of the State of Georgia, Mr. Carmichael is the man who can do it.
MRS. J. D. QUARLES.
1047 Lee St., S. W.

Matter of Courtesy

Editor Constitution: I am 43 years old and have been voting ever since I was 21. I think we have had enough of Red Gallus Gene and Eurith D. Rivers. As for Jimmie Carmichael, I was glad when he entered the race. My wife and I read his announcement and looked at his picture and decided he was our choice. But the Atlanta newspapers and Mr. Carmichael's supporters at the University of Georgia have disgusted us with him. I think it a disgrace to the University of Georgia for its students to treat any speaker that is invited there like M. L. St. John says they did, and especially one who has been three times honored with the highest office in our State, and to think those young men are, or should be, the most intelligent and refined of our State. Am afraid we won't ever be hearing any more about that Southern hospitality in Georgia. If I could not listen attentively to any speaker, even though I did not like him, I would have the decency to keep quiet and give the fellow a chance who did want to hear him.

I will vote for Hoke O'Kelly. Why not give this crippled veteran a little publicity?
W. H. STREETMAN.
Thomaston.

Knocked and Knocked

Editor Constitution: I'm 51 years old and never voted, but I'm voting this time to try to help get a good Governor.

It says in the Bible, "Woe unto the man that is spoke well of." That's the reason I'm for Gene Talmadge. He has been knocked and knocked. I think he is the best Governor Georgia has ever had.

Mr. Talmadge always speaks what he thinks is right and holds fast to his promises. I admire a man of his fine character.

There is always a little good in a man no matter what people say about him, so come on all you ladies, let's vote for Gene Talmadge. MRS. A. C. BRASILL.
Smyrna.

Storm Trooper Action

Editor Constitution: Equally un-American as the Ku Klux Klan is the action of young hoodlums from Georgia Tech in attempting to break up a Talmadge meeting.

As an overseas Navy veteran I strongly protest the wearing of Naval uniforms in this disgraceful Storm Trooper action. These Naval ROTC members were guilty of conduct unbecoming future Naval Reserve officers. Unfortunately during this war there were far too many Reserve officers who also had no regard for the rights of others. NAVY VETERAN.
Columbus.

He Has Got To See It

Editor Constitution: I dislike Talmadge so much I just gotta see it in print. BILL KEITH.
Newnan.

MORGAN BLAKE

How About the General Election, Mr. Talmadge?

THE OTHER NIGHT over the air Mr. Talmadge issued the stern warning that unless he was elected governor there would be Negro judges, sheriffs, solicitors general, legislative representatives, etc. Mr. Talmadge said this with great solemnity and in a voice that trembled with apprehension.

The only way to keep the Negroes from electing such officials, he declared, was to keep them from voting in the primary where they would vote in a bloc and thus accomplish their purpose.

Would Vote as a Bloc

I have heard Mr. Talmadge suggest that the Negroes hold their own primary and nominate their own candidates for the general election. But if Negroes would have the power to elect members of their race in a primary, they would certainly have the power to do so in the general election, when they would naturally vote in a bloc for the nominees of their own primary.

So if this danger impends as Mr. Talmadge says it does then the only way to prevent it would be to keep the Negroes from voting at all, either in the primary or the general election. Mr. Talmadge, as I understand him, favors Negroes voting in general elections. Or at least he has expressed no opposition to it. So it would seem, according to the logic of Mr. Talmadge's contention, that it would be safer to let them vote in the primary with the white voters.

Nothing Like That Will Happen

Now Mr. Talmadge is intelligent enough to know that no Negroes are going to be elected to public office in this state, nor will segregation be lifted, nor Negro and white boys and girls go to school together. But evidently he thinks he can scare people into believing it.

Mr. Talmadge continues to charge that both of his opponents favor social equality of the races, and abolishing of the segregation laws. He knows full well that neither Mr. Carmichael nor Mr. Rivers favors any such thing. He is aways charging that the newspapers misrepresent him. Well, here is a clear case of Mr. Talmadge making untrue statements about his opponents.

Mr. Talmadge cites, as authority for his statement that by voting in the primary Negroes will be able to repeal the segregation law, the Pittsburgh Courier, a Negro newspaper. If the Courier believes that, it is just as far wrong as is Mr. Talmadge. It is entirely probable that Mr. Talmadge and the Courier could both be wrong in many other matters.

In a speech at Elberton Tuesday Mr. Talmadge declared that a great majority of "Bible-reading preachers in Georgia" are for him. There has been no poll of the preachers so far as I know, so Mr. Talmadge has as much right to guess on the matter as I have.

I am inclined to believe that Mr. Talmadge is far off on his guess. If he is correct it is indeed a fearful thing to contemplate. If a majority of the preachers in this state endorse the rabble-rousing, race-hate-promoting propaganda of the Sugar Creek statesman then Christianity in the state is indeed at a low ebb.

I am in receipt of many letters couched in violent language from Talmadge supporters telling me that I am going to hell because of my hatred for Mr. Talmadge. I do not hate Talmadge nor any other man, not even the cowardly creatures that call up anonymously over the phone. Such are the lowest form of animal life but their antics amuse rather than annoy me. However, it is certainly ironical for Talmadge supporters to accuse anybody of hating. For they are the most prodigious haters of all time. They hate with a vicious hate. All their letters breathe hatred.

If Mr. Talmadge should be governor for four years this state would be in a constant turmoil, one broil after another. The peace and tranquility of the past four years in the state would disappear.

Happily, this won't happen. Mr. Talmadge took an artistic lacing four years ago from Governor Arnall and he will fare even worse on July 17.

Notable Reinforcements

Gerald L. K. Smith, one of the most ingenious rabble rousers in the country, and who has amassed a good-sized fortune stirring up race and religious prejudice and hatred for the Jews and Negroes, and Americans of foreign birth, has announced his support of Gene Talmadge. He is quoted in an Associated Press dispatch that "I urge all my friends in Georgia to support Eugene Talmadge."

Mr. Smith, one of the old Huey Long gang, left Louisiana when the pickings became scarce and took over the whole country as his oyster. He opposed all legislation to get the nation prepared for war, and was an ally of the German Bund here and other subversive organizations. He is a smooth customer, but I don't think his help will be of much value to Gene Talmadge.

The Law as it Stands

Housing: The present would be a psychologically bad time in which to try to test the constitutional basis of restrictive covenants by an appeal to the Supreme Court, since the Court has just refused, six to two, to consider such a case for review. This indicates that the judges are not ready to question the social pattern involved in restrictive covenants, and it may take as much as a generation for them to reach a different point of view. Alternative strategies are: (1) educating of the public by all possible means on implications and the facts of covenants; (2) making efforts to secure state legislation against covenants; (3) nibbling at the covenants, and making their enforcement difficult by taking advantage of every legal device.

Employment: The present judicial view seems to be that a bargaining agent who represents an entire craft or class, regardless of their membership in unions. The law now tends to union a closed union with an open shop and an open union with a closed shop, but not a closed union with a closed shop. These rulings have been developed in the Railway Brotherhood Case and in the Boilermakers case on the West Coast. As an illustration of the unevenness of progress, what appears to be a step backward has been taken in the NLRB ruling on June 30, 1945 that separate locals for whites and Negroes do not violate the principles of collective bargaining. It is a known fact that such locals are actually discriminatory.

Education: The Gaines case raised the ceiling of Negro Education through the ruling that facilities substantially equal to those available to white students must also be available to Negro students who desire them. Efforts were made in Arkansas to fight the equalization of teachers' salaries by abolishing salary schedules, but evidence of differentials, based upon customary payments over a period of years, was accepted by the court.

The purpose of this type of legal attack is not to secure more money for a few teachers, but to benefit the masses of Negro ch[illegible] through raising teaching standards, since the state pays more attention to the quality of the teachers it employs when the consideration of higher salaries is involved. This is true of the fight for civil rights in general. Moreover, forcing a governmental agency to act democratically results in the establishment of a precedent for private individuals and institutions.

Transportation: The right of equal facilities for interstate train travel has been won on Pullmans and dining cars, [illegible]ttle has been done on busses. A test is now being brought in Virginia as to whether segregation can be enforced on a bus that crosses the state line.

Suffrage: The Texas primary case was a recent victory in this field. Anti-poll tax legislation is an illustration of the fact that the law moves through legislative as well as court action.

Other aspects of civil rights at the present time include virtual elimination of peonage, the right of Negroes to picket peacefully establishments which have denied them jobs, and the right of

NATIONAL CIO WAR RELIEF COMMITTEE

EDITORIAL STATEMENT

THE veteran problem is not something in the future. It is with us now. According to last official statistics, between 1,200,000 and 1,300,000 men had been discharged from the armed forces up to April. The patterns that are set in dealing with the re-establishment and the re-employment of these men are the same patterns that will apply during the period of mass demobilization.

What does THE NEW VETERAN want for the returning serviceman? The things that every veteran, today, wants: a chance to make a decent living, to raise a family, and to live in freedom from the threat of another war.

If this war ends in a peace involving mass unemployment, then we are fair game for a native version of Fascism. It would be a mockery, indeed, for the fighting men to come home from battle against Hitler, only to become, through economic desperation, followers and advocates of a native Hitlerian counterpart who would offer them security in return for their freedom.

There is reason to believe that the men in uniform are not too clear about what they are fighting for, but there is one thing all of them are clear about wanting, and that is jobs and security when they come home. The American army of 1944 is far different from that of 1918, when victory in that earlier "war to save democracy" was at hand. They are the children of men who were disillusioned by the betrayal of World War I. They know the score.

THE NEW VETERAN is dedicated to the task of providing full information on all aspects of the veteran problem. It is dedicated, also, to the task of presenting and supporting realistic programs to cope with veterans' aid and rehabilitation. The problem upon us today is a major one. It cannot be solved by a bonus system alone or simply by providing government hospitalization. Veterans must be helped to find a place in society. Few of those who witnessed it can forget the bewilderment and soulsickness of millions of Americans released from the services after the last war to resume a life that had become strange to them.

This time the problem is infinitely greater. The average age of the Marines today is 20. These boys were taken straight from school into

FIGURES IN A PATTERN—AN EDITORIAL

SHOCKING examples of the move now under way to split the veteran in uniform from his brother, the veteran in overalls, continue to multiply with increasing rapidity. As the war progresses to its victorious finish, the dividers who seek to turn veteran against worker, and worker against veteran, do not rest from their labors. They are bent on separating the men who have wielded the arms from the men who have produced the arms.

The last few months have brought more than the usual quota of such effort, and in addition have produced two of the most outrageous—and enlightening—maneuvers in the whole poisonous scheme thus far.

Taken together, these two figures in the pattern reveal the whole pattern. They offer the whole design by themselves.

The first occurred at the time of the invasion. General Motors Corporation inspired a news story to the effect that the UAW-CIO had asked the corporation to discharge five ex-servicemen because they failed to comply with the maintenance of membership clause of the UAW collective agreement.

The invasion, with its strong appeal to national unity for the sake of those whose lives were at stake, challenged different people in different ways. Some were spurred to greater war production to meet the needs of an invading army; others were moved to prayer on behalf of soldiers battling within a conquered continent. Not so the dividers. The General Motors-inspired story was carried on June 7, the day after D-Day, in the Washington *Post*, with appropriate overtones of threatening conflict between veterans and workers. Without losing any time, Representative John E. Rankin rushed into print to smack his lips in anticipation of what the boys "over there" would have to say about this latest atrocity of the CIO when they returned.

This was only the beginning; anti-union myths have a way of swelling

SPECIAL "GI BILL OF RIGHTS" ISSUE!

Owing to the importance of this new piece of veteran legislation, THE NEW VETERAN has combined July and August in a special omnibus issue. Also to make room for an extended treatment of the GI Bill, several of the regular departments have been omitted; they will re-appear in the next issue.

NATIONAL CIO WAR RELIEF COMMITTEE

CIO'S PLEDGE TO VETERANS

AT the national convention in Chicago last month, the CIO adopted the following resolution concerning veterans:

"**WHEREAS**, the unity between our fighting men and the working men and women of the production lines who make up the CIO has been built and maintained through our common war effort.

This unity is forged in our common stake in victory over Axis oppression and is born of the fact that workers and fighters in this war are of the same roots in the American people.

Despite malicious attempt to divide the American people on the home front from their sons and brothers on the fighting fronts, this unity has not been broken.

In addition, it must be recalled that 1,500,000 members of the CIO are today serving in the armed forces, using the weapons and supplies produced by their fellow CIO members at home.

The interests of veterans returning from the fighting fronts are identical with those of workers at home, and can only be served through the carrying out of the program of jobs for all and security that has been outlined by the CIO.

This program of jobs and security can only be guaranteed to veterans through the continued existence and strength of industrial unions, which offer them a protection that goes beyond the present provisions of law and a protection that is assured through the operation of collective bargaining contracts; now, therefore, be it

RESOLVED, that (1) the CIO shall continue to press its program for full production, full employment and security for all and assure means of furthering the welfare of workers and veterans and all the people of the United States.

(2) The CIO recommends to its affiliated unions to provide in their collective bargaining agreements that veterans who are employed for the first time in their plants be accorded cumulative seniority rights for the time spent in service since September 1, 1940, the date of the passage of the Selective Service Act.

(3) The CIO and its affiliated unions shall of course continue their present practice of waiving any requirement of initiation fees from those veterans who upon returning to employment desire to become members of our unions.

Veterans should know before STARTING A Business

COMPLIMENTS OF THE
BRIDGEPORT CHAMBER OF COMMERCE

BETTER BUSINESS BUREAU
FACT FINDING AND DISTRIBUTING
EDUCATIONAL DIVISION

INTRODUCTION

This booklet, "Facts Veterans Should Know *Before* STARTING A BUSINESS", is prepared for and dedicated to service men and women, three million of whom, according to estimates of the United States Department of Commerce, may elect to go into business for themselves during the first three or four years after the war. To this number will be added war workers and others who may start new businesses or reopen many which were closed.

The booklet is limited in scope. It covers only a few important points that should be familiar to veterans *before* deciding to go into business for themselves. They are:

I Loans Under G.I. Bill

II Opportunities and Risks

III Business "Opportunity" Schemes to Avoid

IV Sources of Additional Information

* * * *

Better Business Bureaus have published the following series of FACT booklets on business, merchandise, financial and other subjects which business, through Better Business Bureaus, is publishing in the interest of consumer education — to aid consumers in their everyday money management problems and relations with business.

Revised May, 1945

LOANS UNDER G. I. BILL

It takes money to start a business. This money must be provided by the veteran. The Government under the G.I. Bill of Rights does not make a gift to a veteran to start a business; neither does the Government make the veteran a loan. It does provide assistance if, and only if, the veteran can comply with definite and rigid requirements. For example, assume the veteran is qualified by experience and ability to manage a business. If he can induce a bank, insurance company, manufacturer, wholesaler, supply company, or individual to lend him money to go into business, at an interest rate of no more than 4%, he can apply to the Administrator of Veterans' Affairs for a guaranty by the Government not to exceed 50% of the loan, with the guaranteed part of the loan not to exceed $2,000. To illustrate, if the loan is for $6,000, the veteran can apply for a guaranty of $2,000 of it. If the loan is for $3,000, the veteran could apply for a guaranty of only $1,500.

A loan for the purchase of business property includes any business, land, building, supplies, equipment, machinery, or tools, to be used by the applicant in the operation of a business. Also included are such working capital items as the accounts receivable and inventory of a *going* business. No working capital items needed in starting a *new* business are included.

The Administrator of Veterans' Affairs will approve the application if, after investigation, he finds:

1. That the ability and experience of the veteran, and the conditions under which he proposes to operate are such that there is a reasonable likelihood that he will be successful.
2. That the proceeds of the loan will be used to pay for real or personal property that the veteran needs and will use in the operation of a business.
3. That the purchase price does not exceed the reasonable normal value, as determined by proper appraisal.

If the Administrator of Veterans' Affairs approves the application for a guaranty, the entire loan (including the guaranteed amount) must be payable in full in a specific period of time. The Government will pay interest for the first year on the guaranteed part of the loan. As the guaranteed part of the loan is limited to not more than $2,000, the Government is limited to pay 4% interest for one year on this amount, or $80. In the event the guaranteed part of the loan is half this amount, the amount of interest the Government may pay is $40, or 4% interest on $1,000, for the first year. This represents the only cash or money outlay contemplated by the Government to aid veterans in starting a business.

Unquestionably the guaranteed part of the loan will be a valuable inducement for a lender to agree to make the full loan. However, the veteran should frankly face the fact that he must get a responsible

party to be willing to make him the loan at 4% interest. This may be difficult. First, the lender must assume at least half of the risk and second, the interest rate is low in comparison with the speculative risks involved in financing new businesses. A bank or lending institution, as the custodian of funds of its depositors, must be guided by these considerations, In addition, the loaning activities of banks are regulated and subject to investigation by banking authorities to assure that all possible protective safeguards for the funds of depositors are in force. Thus the decision of a bank or lending institution to make the loan may have to be based, in addition to the character of the applicant, his experience and ability, and the fact that the government guarantees one-half up to $2,000, on what security the veteran can put up to cover the loan.

Two important facts the veteran should fully understand are: 1. If the debt or interest is not paid and it becomes necessary for the Government to make any payment on account of the guarantee, the veteran is obligated to repay such amount and the Government will hold him or his estate responsible. 2. Under the G.I. Bill, a veteran can apply for a guarantee of loans for (a) purchase or construction of a home (b) purchase of farm and farm equipment and (c) purchase of business property. However, *the aggregate amount guaranteed shall not exceed $2,000* whether the loans are for more than or only one of the above purposes.

OPPORTUNITIES AND RISKS

The number of business enterprises operating in the United States declined from 3,400,000 in 1941 to 2,900,000 in 1943, or a decrease of about 500,000 in the first two war years of 1942 and 1943. This decline has been particularly heavy among small firms. The number of retail establishments decreased about 18%, the greatest decline being in the number of household appliance stores, radio stores, meat markets, and filling stations. The number of service trades declined about 15%, whereas finance, insurance, and real estate decreased about 9%. On the other hand, the number of firms engaged in manufacturing, mining, and quarrying increased 3%.

These figures are particularly striking when compared with the fact that, had it not been for the war, we could have expected, on the basis of increased population and business activity, an actual increase in the number of business enterprises. It is, therefore, reasonable to conclude that there will be many opportunities to start a business after the war, even if the number of business enterprises increases only to the pre-war figure.

But, in addition to this, business, through the Committee for Economic Development, is setting a goal for 35% to 45% increase in production and distribution over the year 1940. The veteran must realize there is no certainty his goal will be reached although it is a highly desirable and important one. It would mean general prosperity and

employment and would definitely stimulate the starting of many businesses, particularly to engage in distribution and in services, as normally, we have about 5 times as many firms engaged in distribution and 2 times as many firms engaged in services as in the production of commodities.

The time for starting a new enterprise is very important and any one thinking of doing so should consider carefully general economic and business conditions. Among these, he can consider the possibilities of (1) new businesses to take the place of those which have discontinued, and (2) having expanding production and distribution in excess of pre-war levels.

Studies of the United States Department of Labor, Bureau of Labor Statistics indicate immediate postwar increases in construction activities and smaller increases in retail, wholesale and service fields. Also, immediate increased postwar activity is indicated in the paper, lumber, and furniture industries in addition to the manufacture of consumer durable goods such as refrigerators, automobiles, etc.

How about the risks? Business is a hard competitive struggle and the yearly mortality is high. Nearly as many businesses discontinue each year as start up. In the ten-year period from 1932 to 1941, both inclusive, approximately 3,600,000 enterprises discontinued business, whereas during the same period there were approximately 3,700,000 new enterprises.[1] In normal times more than 1,000 new concerns open their doors each business day and about an equal number close. Mortality rates in the first year of life are high. In retailing, 1 out of 3 new concerns do not survive the first year and 2 out of 3 close their doors within 6 years. In wholesaling and manufacturing, 1 out of 5 concerns discontinue in the first year and 2 out of 3 close within 9 years.

A study of retail stores in 207 Indiana towns showed that 25% of the retail stores closed their doors in the first year of life, another 18% in the second year, another 10% in the third year, an additional 7% in the fourth year, another 5% in the fifth year, another 5% in the sixth year, and 3% in the seventh year, leaving only 27% still in business after seven years.[2] Another study showed that of slightly more than 10,000 enterprises established in Poughkeepsie, N. Y., between 1844 and 1926 a total of only 47% lasted for three years or more and almost 80% were out of business within ten years of starting.[3]

Similar studies made in other parts of the country show essentially the same facts.

Many and varied reasons are given for failure. But practically the only one recognized in the business world is lack of experienced and intelligent management. In the final analysis, management makes

[1] *Vital statistics of industry and commerce, Dun & Bradstreet, Inc.*
[2] *A study by Starr & Steiner published in Dun's Review.*
[3] *Business Life and Death in a Hudson River Town by R. G. Hutchinson, A. R. Hutchinson, and Mabel Newcomber, published in Dun's Review.*

or breaks the business enterprise. This fact can not be stressed too strongly. To repeat it in another way, management ability is the simple reason for the difference between success and failure in the business world.

Some types of risks, such as floods, storms, fires, etc., can be insured against. But other risks of business depend entirely upon the experience and the ability of the management to cope with them. So, although many reasons are given for failures, these usually represent the *occasions* for the failure rather than the *causes*. Had the management been efficient, it would have anticipated and controlled them. For example, the United States Department of Commerce made a study of 487 business establishments which went into bankruptcy in New Jersey. Of the total number of businesses studied, 23.5% kept no books, 29.4% kept inadequate books, and 39% never took an inventory. Although many of those who failed blamed the failure on a business depression, an analysis of the data indicates that business depression was the occasion rather than the cause of the failure and that inefficient management was the real cause.

The following, taken from a study of 570 cases of businesses that became bankrupt, shows the causes or occasions for failures as expressed in the opinions of the owners of the bankrupt businesses and as expressed by the creditors of the businesses:[1] (Many listed several causes.)

Causes or Occasions of Failures	*Owners' Opinion Percentage of Enterprises Affected*	*Creditors' Opinion Percentage of Enterprises Affected*
Business depression	67.7	29.1
Inefficient management	28.2	58.7
Insufficient capital	48.2	32.9
Adverse domestic & personal factors	35.1	28.1
Bad-debt losses	29.8	17.6
Competition	37.9	9.1
Decline in value of assets	31.6	5.8
Dishonesty and fraud		33.7
Excessive overhead expense	24.0	8.9
Too rapid expansion	10.5	7.2
Losses from speculation	11.6	5.8
Poor business location	14.6	2.7
Buying too much on credit	9.5	3.9
Excessive interest charged on borrowed money	11.1	2.1
Unfavorable changes in trading area	11.2	1.9

[1] *Study of 570 cases of business that became bankrupt from "Business Principles and Management" by Bernard A. Shilt and W. Harmon Wilson, published by South-Western Publishing Co.*

All of these reasons for failure expose the poor quality of management. For example, insufficient capital is given by the owners of the business as one of the causes of failure in 48% of the cases and by creditors in approximately 33%. Yet this is entirely due to management not properly analyzing the financial requirements of the business. It is poor management which is responsible for concerns either starting up or expanding without sufficient capital.

Certainly a business can not know where it stands if it doesn't keep books and the number of concerns that either keep no books or keep inadequate books or who never take an inventory is extremely high. It shows up repeatedly in various studies of bankruptcies and failures.

For all of the above reasons a veteran considering starting a business should determine if his education qualifies him for the business, what experience he has had to qualify, and what management ability he possesses. *Experience in business and managerial ability* are two prime requisites for the veteran to make a success in business. If he doesn't have experience, the best course is for him to get it by working for some one else before going into business for himself. Actually, failure to do so would be evidence of lack of managerial ability. Management ability also includes full knowledge of financial requirements, both as to invested capital and working capital. Those contemplating applying for a Government guarantee of a loan should note that the application cannot be approved unless the Administrator of Veterans' Affairs finds *that the ability and experience of the veteran, . . . are such that there is a reasonable likelihood that he will be successful. . . .* [1]

BUSINESS "OPPORTUNITY" SCHEMES TO AVOID

The great amount of war savings in this country, together with the problems which will be faced by millions of people during the reconversion period, offer the swindling fraternity unusual opportunities for their schemes and promotions. Veterans will be high on their list of prospective victims. Many will have ready cash in mustering-out pay, in savings, or invested in war bonds. Only a few have had business experience and are aware of the many schemes which the unscrupulous endeavor to promote at all times and among all prospective victims. The swindler will try:

1. To rush veterans into taking hasty actions.
2. To prevent veterans from making investigations.
3. When this is impossible, to discredit what the swindler knows in advance will be the outcome of such investigations.

[1] *Sec. 503 Servicemen's Readjustment Act of 1944 (G.I. Bill of Rights).*

Better Business Bureaus have records of over 800 schemes of various sorts. Not all of these relate to business "opportunity" schemes. For the purpose of this booklet, therefore, we are confining the discussion to those types of schemes which the veteran, looking for an opportunity to go into business, should avoid. A few highly speculative "opportunities" are also included. The list is not intended to be all-inclusive.

ABSENTEE FARMING The offering of land in a distant state on a co-operative arrangement to raise fruits or nuts, has its share of racketeers. Some sell land at exorbitant prices, minimize the hazards and quote misleading figures.

ADVANCE FEE If your business needs financing, don't fall for an unscrupulous promoter who offers to arrange a loan if you first pay his expenses. Front-money operators may offer to incorporate your business and assist in selling stock. But, when advance fees have been paid to them or their associates, service usually stops or is found to be worthless.

BUSINESS BROKERS Some business brokers, in acting as agents for sellers of businesses, are irresponsible, unfair to prospective purchasers, avoid all liabilities, and are interested only in collecting a fee. Do not be rushed into a deal. Go to the neighborhood in which the business is located and interview business men there. Get all verbal understandings in writing from the seller. Put the deal in escrow with a third, reputable, disinterested party. Before you sign an agreement to purchase, have all papers checked by your attorney and all books and records showing earning capacity, past profits, inventory, equipment, obligations, etc., checked by an accountant.

BUY-BACK CONTRACTS Buy-back contracts, like money-back guarantees, are no better than the guarantors. They are frequently worthless promises made by dishonest promoters.

CASH BOND The advertising of attractive jobs by swindlers who request applicants to deposit a cash bond, is a vicious scheme that has swindled thousands.

FUR FARMS Animal breeding promotions or fur farms are sometimes designed only for the promoters' profit. They appeal for your investment through biological statistics which appear mathematically sound but which neglect to include the natural hazards incidental to such enterprises. Many include worthless offers to buy back the progeny at high but fictitious prices.

HOME WORK Lucrative home employment is often advertised in help wanted columns when the real and only purpose of the promoter is to make a tremendous profit on "Home Work" equipment which he has to sell.

JOB INVESTMENTS Invariably large earnings or a better than average weekly salary are offered to those who will "invest" in the business of a promoter who misrepresents.

LISTING FEE This is a variation of the Advance Fee Scheme. The fake business broker gets you to pay a fee for listing your name with him for finding the type of business you wish to engage in. Listing fees are sometimes disguised as expenses for advertising or circularizing prospects.

LOAN SHARKS "Loan Sharks" take advantage of borrowers by imposing very unfair if not illegal terms. Some get as high as 400% interest.

NEW PROMOTIONS Decide whether you can afford to lose before you invest in any new enterprise. A large number of new enterprises fail.

PARTNER WANTED Partner wanted propositions are sometimes nothing but deceptive frauds to get your investment in a supposedly profitable business claiming the need of new funds. In a partnership, each partner is responsible for all the debts of the firm. *Know* your partner.

PATENTS AND INVENTIONS Investments in new inventions, patents, or patent litigation ventures are usually risky speculations and sometimes frauds.

TERRITORIAL RIGHTS Should a high-pressure promoter lure you with the right to sell his product in exclusive territory, reserve your decision until you possess the facts. Some promoters misrepresent their products to get quantity orders and often sell several people the same territorial rights. Check.

VENDING MACHINES Some promoters of coin-operated vending machines for nuts, confections, etc., exaggerate probable earnings and otherwise deceive.

Inasmuch as the foregoing business opportunity schemes represent the activities of an unscrupulous minority of schemers masquerading under the good name of business, it is fitting to emphasize that nearly all business is fundamentally honest and anxious to help the veteran.

You can protect yourself by making sure you deal only with legitimate business, reliable persons, and responsible concerns. This you can be sure of doing by following the slogan of Better Business Bureaus, namely, "BEFORE YOU INVEST—INVESTIGATE". Before committing yourself, it will be useful to get the answers to the following questions:

1. What are the facts? Do they agree with the representations?
2. What are the promises or predictions? Are they reasonable?
3. What is the past record of the seller or his agent? Is he worthy of confidence?

Practically every business transaction involves a contract in some form. It does not always need to be in writing, although that is advisable in any important transaction because oral agreements are sometimes difficult to prove or may not be enforceable. You should not sign a contract without reading it and understanding its terms. A complete understanding serves to guard against ill-advised undertakings, as well as fraudulent or unfair schemes. If you do not understand certain terms, phrases, or fine print in a contract, delay signing until you have found out what they mean. The reasons are obvious. Your signature to a contract means that you have agreed to all its terms and provisions. Furthermore, the written document usually speaks for itself, holding participating parties strictly accountable for the performance of their mutual promises. Remember:

"READ BEFORE YOU SIGN AND KEEP A COPY"

SOURCES OF ADDITIONAL INFORMATION

This booklet, as stated in the introduction, covers only a few important "FACTS" that are not generally known. If helpful to the veteran, its purpose will be fulfilled. If the risks, disappointments, and schemes of business appear to have been emphasized, it is only because there is a lack of general and widely circulated information on these phases and because of the availability of extensive data on other phases, such as the rich rewards and satisfactions for those successful in business.

There are many thousands of worthy opportunities to start in business and the warnings are given only in an attempt to avoid disaster. The country needs growing and successful businesses and there is plenty of room for experienced and intelligent management. Service men and women can profitably study the success stories of individual businesses, most of which originally started as small concerns not so many years ago.

There is much more studying and investigating ahead of the veteran before and after he decides to go into business and he cannot start too soon. Fortunately, under the G.I. Bill, ample educational facilities have been made available to the veteran at Government expense at any *approved educational or training institution at which he chooses to enroll.* The veteran does not have to "rush" into business to obtain the guaranteed loan benefits of the G.I. Bill. He has at *least* two years in which to complete his plans and many veterans may, with profit, decide to spend some or all of this time getting a business education. Those now in active service should discuss their problems with their personnel officers, get the advantage of their advice and of the literature and courses on business subjects already available to him. He should also discuss with them what military training will have helped to prepare him to run his own business.

He must know the advantages and disadvantages of the various forms of organization; sole proprietorship, partnership, or corporate. He must decide the type or types of businesses he is best fitted for by experience and education and make a special study of the operation of these businesses. Trade journals and personal contacts with trade associations will help in these studies. An increasing number of businesses must be licensed by local, state, or federal governments. So, he must be familiar with the laws and regulations pertaining to such businesses and determine if he can qualify. He must be familiar and prepared to cope with the ever-increasing burden on business concerns by reason of increased Government controls and regulations of business. Indications are that some fields may be crowded while others offer better opportunities. For example, one small city discovered that 250 servicemen were planning to go into the "radio repairing" business in that community. So, the veteran must decide what the need is for his business in a particular community and keep abreast of present and prospective future conditions. He must understand that the period of early operation may be one of losses and that financial capital should be in sufficient amount to tide the new business venture over a period of early failure or small success. In some kinds of businesses it will be valuable for him to know what priorities make surplus property more easily available to servicemen. How the Government handles reconversion problems will affect business, either favorably or unfavorably. So, the veteran must familiarize himself with Government policies and practices on reconversion. There are but a few of hundreds of problems that, the more he knows about, the better his chances of success.

Many agencies stand ready to help the veteran and already there are extensive aids and literature available. Business men will welcome veterans into business and consider it a privilege to help them. Call on them for information and advice. Banks, of course, will be a particularly valuable source of helpful information and advice. Local

Credit bureaus have files showing people who are good credit risks and bad risks. Credit Bureaus can be consulted before, as well as after going into business. Better Business Bureaus, as representatives of business, will also help. They have extensive files on many rackets and racketeers. If they do not have information on a particular enterprise, they will endeavor to get such data for a veteran. Call upon the Better Business Bureaus at any time. They will make no charge for services, are keenly aware of the problems facing veterans, and are anxious to help them with unbiased fact information.

The following agencies, listed alphabetically, are all interested in helping the veteran. Some have national headquarters and in such instances, their headquarters addresses are listed. In most cases, however, there are regional, field, district, or local offices which may render more direct and personal service. The service man or woman can profitably contact these agencies, state his or her problem in some detail, and be assured of valuable help on the problem of establishing and managing a business. Communicate with each one, checking off the list as you do so.

SOUTHERN
REGIONAL CONFERENCE

THE COUNCIL OF GUIDANCE
AND
PERSONNEL ASSOCIATIONS

MARCH 15-16, 1946

REGISTRATION FEE
$2.00 Per Person

ATLANTA, GEORGIA
BILTMORE HOTEL

PROGRAM

GENERAL COUNCIL MEETING

March 15: Morning Session

Biltmore Hotel, Pompeian Room, 9:30 A. M.

Presiding: PAUL W. CHAPMAN, University of Georgia, Athens, Chairman, Southern Regional Conference Committee

OBJECTIVES OF THE SOUTHERN REGIONAL CONFERENCE—DR. HILDA THRELKELD, Dean of Women and Professor of Education, University of Louisville, Ky., and President of the National Association of Deans of Women.

POSTWAR EMPLOYMENT PROBLEMS AND OPPORTUNITIES IN THE SOUTHEAST, a symposium from the viewpoints of . . .

BUSINESS—W. E. MITCHELL, President and General Manager, Georgia Power Company, Atlanta, Ga.

AGRICULTURE—FRANK D. ALEXANDER, Regional Leader, Division of Population and Rural Welfare, Bureau of Agricultural Economics, USDA, Atlanta, Ga.

WOMEN—MISS ROCHELLE RODD GASHET, Director, Vocational Advisory Service, Alabama College, Montevallo, Ala., National Chairman, Committee on Education and Vocations, National Federation of Business and Professional Women's Clubs.

VETERANS—J. C. HOLBROOK, Regional Director, Vocational Rehabilitation and Education Service, Veterans Administration, Atlanta, Ga.

PLACEMENT—THOMAS H. QUIGLEY, State Director, United States Employment Service, Department of Labor, Atlanta, Ga.

ASSOCIATION MEETINGS

March 15: Afternoon Sessions

Biltmore Hotel: 2:00 P. M.

Group meetings of the following associations holding membership in the Council of Guidance and Personnel Associations will be held in the Biltmore Hotel in rooms designated on the bulletin board. The name of the chairman of each group is given below:

INTERNATIONAL ASSOCIATION OF ALTRUSA CLUBS—Mrs. Martha T. Fitzgerald, Columbia, S. C.

NATIONAL ASSOCIATION OF DEANS OF WOMEN—Miss Carrie Scandrett, Dean of Women, Agnes Scott College, Decatur, Ga.

NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS—Mrs. Odessa Henson, Rich's, Inc., Atlanta, Ga.

NATIONAL VOCATIONAL GUIDANCE ASSOCIATION—Mrs. Mary Huey, Atlanta Opportunity Schools, Atlanta, Ga.

GENERAL COUNCIL MEETING

March 15: Evening Session

Biltmore Hotel, Pompeian Room, 8:00 P. M.

Presiding: MRS. ODESSA HENSON, Southern Regional Conference Committee, representing National Federation Business and Professional Women's Clubs.

B. & P. W. Club Collect—MISS BESSILU MAULDIN, Georgia State President.

Vocal Selections.....MRS. PAUL MCGEE

Accomanist—MISS INEZ CALHOUN

PLANS FOR EFFECTIVE GUIDANCE AND COUNSELING IN RURAL COMMUNITIES—DR. ALICE M. BALDWIN, The Woman's College, Duke University, Durham, N. C., and representative of the Alliance for the Guidance of Rural Youth.

SUGGESTED PATTERNS FOR COMMUNITY COUNSELING—HARRY J. JAGER, Chief, Occupational Information and Guidance Service, U. S. Office of Education, Washington, D. C.

GENERAL COUNCIL MEETING

March 16: Morning Session

Biltmore Hotel, Pompeian Room, 9:00 A. M.

Presiding: DR. HAROLD H. BIXLER, Director of Guidance and Research, Atlanta Public Schools, Atlanta, Ga., Committee on Planning, Southern Regional Conference.

COMMUNITY ORGANIZATION FOR COUNSELING: Informal discussion of organization, methods, activities designed to improve and extend guidance and counseling services with special reference to Council Associations and the Southeastern Region:

INTERNATIONAL ASSOCIATION OF ALTRUSIA CLUBS—MRS. MARY KATE DUSKIN, President, Altrusa Club, Atlanta, Ga.

NATIONAL ASSOCIATION OF DEANS OF WOMEN—DR. ROSA LEE WALSTON, Georgia State College for Women, Milledgeville, Ga.

NATIONAL FEDERATION OF BUSINESS AND PROFESSIONAL WOMEN'S CLUBS—MISS BLANCHE R. LANCASTER, Chief Occupational Analyst, U. S. Department of Labor, United States Employment Service, Raleigh, N. C.

NATIONAL VOCATIONAL GUIDANCE ASSOCIATION—MRS. ELLA STEPHENS BARRETT, State Supervisor, Occupational Information and Guidance, State Department of Education, Raleigh, N. C.

SOUTHERN REGIONAL CONFERENCE RECOMMENDATIONS ON COMMUNITY COUNSELING: (Report of Reviewing Committee: To be presented, discussed, and, perhaps with changes and modifications, adopted).

Reviewing Committee Report: R. D. PULLIAM, Chairman, Regional Reviewing Committee and State Supervisor, Occupational Information and Guidance, State Department of Education, Atlanta, Ga.

You Are Cordially Invited to Attend

This Southern Regional Conference in Atlanta is being held at the request of the national Council of Guidance and Personnel Associations. Similar conferences are being held in other sections of the nation. All will give consideration to the same general theme. All persons interested in guidance, counseling, and occupational adjustment—including these services as they relate to the placement of Veterans—are invited to attend.

RELEASE FRIDAY, MAY 10, 1946

B'NAI B'RITH CHART SHOWS USE OF OFFICER TRAINING IN CIVILIAN JOBS

Washington, D. C.:---The only study so far made on the relationship of officers' jobs in the armed forces to civilian employment was completed toady as the B'nai B'rith Vocational Service Bureau, national occupational research agency, announced publication of a 38-by-48-inch two-color wall chart entitled WHAT YOU CAN DO WITH YOUR OFFICER TRAINING IN A CIVILIAN JOB.

The fourth of a series of postwar research projects by the national Jewish service organization, the chart follows two previously issued charts dealing with the civilian counterparts of jobs for enlisted men in the Army and Navy. More than 60,000 copies of the earlier charts have been posted at camps, installations, posts, bases, hospitals, ships and other points of concentration of American servicemen throughout the world, as well as in schools, selective service boards, employment offices, and other agencies serving veterans.

The new guide, which was prepared with the co-operation of the War and Navy departments, classifies officer jobs into 43 broad groups, such as welfare, public relations, flight administration, food, physical training, communications, accountancy, artillery, etc. Below each of these groupings is a list of the numerically significant Army, Marine Corps, Navy and Coast Guard officer jobs pertinent to it. Next to the service jobs are listed and described in three columns representative types of civilian employment for which the officer - veteran may be qualified with little or no additional training, with more training, or with extensive training.

For example, there is a broad group of service jobs for officers known as "Communications, Radar And Radio Operations." Specific service jobs listed in this category are Aircraft Warning Officer, Combat Information Center Officer, Intercept Officer, Radar Operations Officer, Radar Observer and Radio Officer. The chart indicates that with little additional training such officers may qualify in civilian life as Radar Equipment Operator, who operates radar transmitting and receiving, or other electronic equipment or they may qualify as Continuity Tester, who tests resistance of circuits of various parts and subassemblies of radio receiving sets. With more training, these officers may qualify as Manager of a Telegraph Office, or as Electrical Draftsman. With extensive training, officers in this group may qualify as Electrical Repairman, keeping electrical equipment and mechanisms in good repair and operating condition, or as Control Supervisor, co-ordinating work of traffic and program departments.

The officer-veteran is reminded that he may not want civilian work related to his officer job, or that he may not be able to get such work in the community in which he plans to live, or that there may be little relationship between his officer job and what he can do in civilian life. "Maybe you'd rather go back to your old civilian job (if you had one)," it is suggested. "Or, you may want to train for or enter a different occupation after considering your interests, hobbies, and past training and experience both in and out of the armed services."

There is space on the chart for a local vocational counseling agency to insert its name and address. The chart is being made available as a public service to all agencies rendering professional service to veterans. It may be secured from the B'nai B'rith Vocational Service Bureau, 1746 M Street, N. W., Washington 6, D.C.

Hazards of Retailing

Could you make
a success of a retail store?
Some facts, figures and
requirements

A
Public Policy Bulletin published by
THE TWENTIETH CENTURY FUND
330 West Forty-second Street · New York
NUMBER 10

Hazards of Retailing

IF YOU WANT to risk your money—open a store. That is, unless you have had a lot of experience and a thorough training in the scientific fine points of modern retailing practice, you will do better to get into something comparatively easy and simple, like selling on commission. If you fail at that, you will lose only your time, not your savings.

Gloomy? Consider these facts.

In one prosperous city nearly half of all newly-opened grocery stores went out of business before they were one year old. Forty per cent of the shoe stores, about a third of the drug stores and a quarter of the hardware stores never saw their first birthdays. Some closed not because of business failure but because of the death or ill-health of the proprietors, fires or similar causes. But at least three-quarters died of malnutrition and were buried by the bankruptcy court.

In another large town it was found that regardless of how long they had been established, 36 per cent of the grocery stores went out of business every year. The figures for the shoe stores were one out of every five; hardware, one out of six; and drugs, one out of every eight. A large number of these "withdrawals from business" were out-and-out failures—due to poor planning in the first place, insufficent capital to tide over lean periods or inexperienced trial-and-error management.

The Urge to Try

But no matter how rapidly stores fold up, there are always other optimists anxious to take a chance. Store keeping looks so easy.

What could be softer than to buy a carton of twenty-four candy bars for 65 cents and sell them for a total of $1.20? Or a man's hat for $5.75 and sell it for $10? Or to pay 38 cents for a bottle of an alkaline remedy and sell it for 89 cents?

If your leaning is toward a little shop selling women's clothing and millinery, it looks like easy and sure money to buy cotton dresses for $1.88 and pass them on to the customers for $2.95. The hats you pay $2.75 for, you sell for $5. And if you think you can build up an "exclusive" clientele you may sell for $39.50 a dress that cost you only $18.75. That certainly sounds like a quick and easy way to make $20.75.

Then there's the retired farmer who for years has complained about the difference between what he got paid for his butter and eggs and the prices they charge in the stores. He thinks he might as well cash in and open up a cheese-butter-and-egg store of his own.

A couple of college girls who can't find jobs open a book store for no better reason than that they are "book-conscious" and, in the light of their inexperience, have an inflated idea of the neighborhood market for books. Or a widow who is a good cook and has brought up a large family thinks it would be easy to make a success of a small bakery shop. And so it goes.

Where the Money Goes

Unfortunately many of these people do not know or find out in time that there is a lot to retailing besides buying cheap and selling dear. Very little of what appears to be an attractive difference between cost and selling price seems to stick to their fingers. Some of it goes for rent. Some is paid out as wages to clerks and delivery boys. Insurance, light, telephone, wrapping paper, interest on bank loans, and dozens of other unforeseen but necessary expenses take a slice out of the "profit."

Some of the merchandise you paid your good money for does not sell, and has to be marked down below cost. That is especially true of apparel, and accounts for the relatively high markups in those lines. Fresh fruits and vegetables spoil and so reduce the grocer's anticipated profit.

To meet competition, or oblige a good customer, the store will probably extend credit. But the average store owner does not have the facilities for investigating credit standings, so some of his "profitable" sales turn into bad debts.

Profit—and Loss!

All in all, these costs of doing business are so large that the average profit of the million and a half retail stores in the United States is estimated by authorities to be only from one to two cents out of every dollar of sales. The Harvard Bureau of Business Research studied the operation of a group of several hundred department stores over a period of eight years. In 1929 the group made a profit of 1.2 cents on the dollar of sales, and in 1936, 1.6 cents. In all of the other years the group lost money. In 1932 the loss was 6.4 per cent of sales.

These are average figures and give only a general picture of what may be expected in the way of profits in retailing. Some well-managed stores make profits in "good years" that exceed this level—profits which help to keep them in business during the bad years. And, of course, some of the newer lines and branches of retailing have been conspicuously profitable.

But for every outstandingly successful distributor there are thousands who barely break even or who operate at a loss. Unluckily, not many people who open a small store realize just what they're up against. They don't realize, for instance, that in most lines it costs more per dollar of sales to operate a small store than it

does a large one—perhaps the large, established store on the same block.

When poor management, due to inexperience, is added to this initial disadvantage, it is no great wonder that so many small retail businesses fail to survive the first year.

Some Chief Mistakes

It is evident that a poorly managed store has practically no real chance. Incompetence and poor management can be seen in poor location of stores, bad layout, unattractive display and lighting, poor selection of merchandise, slow stock turnover and inadequate inventory control, bad credit losses, losses from returned goods, excessively expensive service, poorly trained help, inefficient advertising, wrong pricing policies, and, most common and dangerous of all, lack of knowledge of actual costs.

But suppose that the beginner has been trained and has had experience. Suppose he is skillful enough to do as well as the average of our 1,500,000 stores, and make say two per cent profit on his sales. It is reasonably certain that he will start small, hoping to grow. How will he fare in the early years, if he survives?

Too Little to Go 'Round

One of the chief hazards of retailing is caused by the small amount of business done by the average store. A study of distribution by The Twentieth Century Fund showed that 60 per cent of all stores—900,000 of them—had annual sales of less than $10,000 a year each. Two per cent of this amounts to the not impressive profit of $200 a year.

Worse yet: there are hundreds of thousands of stores—many of them run by one man with the help of his family, perhaps—that ring up sales of less than $15 a day. Out of this, the stock

must be paid for and replenished; rent, heat, light and upkeep provided for; and the storekeeper's day-to-day living expenses met. This can't be very profitable business—or even a good living—for the small store owner, even though it's quite possible that storekeeping seems to offer the only job open to him at the present time.

It Can Be Done

But let's look at the other side of the picture.

Retailing is an essential part of our economic system and well-qualified people can and do make a success of it. First of all, one reason so many people try it is the relatively small amount of capital required to start a retail venture. To get any kind of business on its feet takes time, however, and you need enough money to carry over at least a year. Today more than ever before, cash on hand is necessary. It enables the retailer to take advantage of a two per cent discount for paying cash for his stock. This discount for cash may itself constitute a large share—or all—of his total net profit on sales.

Some knowledge and experience in the kind of business you intend to enter is essential. A meat market, tea room, grocery store, millinery shop all seem simple enough to run, but actually each has its special problems and special requirements. Also, you should make sure that a real need exists for the kind of store you plan to open. In many communities there are already too many garages, beauty shops, drug stores or other types of stores—far too many for the available supply of customers.

What It Takes

Training in merchandising, store management and cost accounting is available, although much more could be done by high schools, colleges and government bureaus to prepare people to

enter the retail field. For instance, the Department of Commerce takes a Census of Retail Business periodically which gives information about all lines of trade and is free to everybody. Special retailing courses are given in some cities. Many studies of retailing problems have been made by the government and other groups.

Perhaps the greatest need among retailers is for better management and knowledge of costs. A great many stores don't know whether they are actually making or losing money. They don't know which lines or products are profitable and which are losing. Improved cost-accounting methods are badly needed.

When retailers are better prepared to do their job than the average of them now are, the prospects of the individual will be brighter, and retail trade as a whole will be greatly improved. After all, the Census shows that even a retail business with total sales of $12,000 a year can make a modest living for the proprietor if he is competent, works himself, and has enough money so that he needn't borrow and can take cash discounts. It is on such a basis that thousands of stores do survive and give the owner $25 a week or so return for his time and investment. Done right, it can be done.

Public Policy Bulletins

THIS BULLETIN is one of a series of leaflets being published by the Twentieth Century Fund. The Bulletin is designed to make readily available, in popular, non-technical form, some of the results of Fund surveys in current economic problems.

THE TWENTIETH CENTURY FUND is an organization for research in economics. It was established in 1919 by the late Edward A. Filene and endowed by him as a philanthropic foundation. It has for its broad purpose the promotion of human welfare, and is administered by a Board of Trustees made up of representative leaders in various fields.

ACTIVITIES OF the Fund are entirely non-partisan and non-political. It conducts scientific fact-finding surveys of important economic problems and offers practical suggestions for their solution. "Improvement" of our economic life is defined by the Trustees as any advance that will increase the employment and purchasing power of the people as a whole.

THE TRUSTEES appoint a special committee of recognized authorities to take charge of each survey. A staff of expert research workers is retained to assemble and analyze the facts involved. On the basis of these factual findings the committee makes recommendations for action.

AS EACH study is completed, the factual findings and the committee's program for action are published by the Fund on a strictly non-profit basis. The main survey volumes are supplemented by a variety of materials treating specific points and offering condensations in simple, non-technical language for reading and study by schools, organizations and the general public.

THE MATERIAL in the present Bulletin is based on a two-year survey of the costs of distributing goods in the United States. This survey was directed by the special Committee on Distribution, whose members are listed on the back page of this Bulletin. The complete report, describing costs in the distribution system as a whole and presenting the Committee's recommendations, is published in book form under the title: *Does Distribution Cost Too Much?*—A Review of the Costs Involved in Current Marketing Methods and a Program for Improvement.

COUNSELING AND EDUCATION FOR THE VETERAN IN RURAL COMMUNITIES

Edgar A. Schuler, Bur. of Agric. Econ., USDA, and
Douglas Ensminger, Bur. of Agric. Econ. and Extension Service, USDA

Published in
THE BULLETIN OF NATIONAL ASSOCIATION OF SECONDARY-SCHOOL PRINCIPALS
Vol. 29, pages 24-28, March, 1945

> In short, the real work of rehabilitation must be done in the local community. There are two points that can never be stressed too much: That every veteran is in need of some sort of rehabilitation, and that the job must be done in the local community. It is the job of the local community to make the veteran a civilian again, to train him to think, feel, and act like a civilian once more.1/

It may well be that Waller is overstating the problem when he says "every veteran" will need rehabilitation to become a civilian again. But without doubt this country can look forward to substantial readjustments, either on a planned or an unplanned basis, when its most vigorous 10 per cent returns to civilian life.

It is the purpose in this article to raise some of the questions which will confront every rural community in its attempt to deal adequately with the educational needs of these returning servicemen. We shall consider primarily the problems of servicemen coming from or returning to rural areas.

WHO IS THE RURAL VETERAN?

A study made by the Information and Education Division, Headquarters, Army Service Forces, gives some idea of the proportion of servicemen who now plan to return to farms--a substantial proportion of those planning to return to rural communities. "Among a group approximating in most respects a cross-section of white enlisted men (except illiterates) in the Army, ten per cent of the men reported that they were seriously considering farming as a full-time occupation after the war."2/ Furthermore, "...the great majority of men seriously considering farming have a fairly substantial background of farm experience."3/ Of this group classified as "planning definitely to farm" the percentage distribution of schooling completed was

1/ Waller, Willard, "The Veteran Comes Back", New York: the Dryden Press, Inc., p.270. Quoted with permission.
2/ See "Soldiers' Plans for Farming After They Leave the Army," Post-War Plans of Soldiers Series, Report No.B-131, Dec. 20, 1944, p. 1.
3/ Ibid., p. 12

as follows: eighth grade or less, 43; some high school, 24; graduated from high school, 26; college (any amount), 7. These data, it is true, pertain to prospective farmers rather than to men now definitely planning full-time education immediately after leaving the Army. But if servicemen planning to farm should want specialized short courses or part-time education, for example, two out of three would not be qualified to take work of college grade. Under these conditions a new and appropriate type of adult educational program would be needed.

But anticipation of this need, and development of the requisite facilities if the demand develops, should not be left to guesswork. We need to know not only what are the serviceman's present occupational and educational intentions but also, on the basis of current and continuing studies, what is actually happening to veterans who are now returning to civilian life. The numbers already discharged--over 1,500,000--while not fully representative of those to be discharged later are adequate to make significant analyses now possible.

WHAT CHARACTERISTICS HAVE THESE SERVICEMEN?

Whether such studies are made or not, we can be fairly sure that the discharged serviceman returning to his local rural community will have certain characteristics.

First, as a veteran he will be a member of the military fraternity. The duration, type, and intensity of military experience to which he has been exposed will naturally vary tremendously from person to person. But always he will have behind him the experience of having functioned in a military machine, and as a result he is likely to have some common characteristic reactions. For example, as Waller points out:

> ...in school, as elsewhere, the veteran who has had his belly full of discipline, rebels against authority. Teachers, accustomed to their own strange world in which they maintain without too much trouble their ill-defined authority over a room full of fraternity men, football-players, non-entities and big men on the campus, do not quite know how to cope with this surly and unpredictable fellow who comes back from the wars, who sits apathetically through a dozen good lectures and then reacts with violence to some casual remark. To the veteran, the professor is just another civilian who has not been anywhere or seen anything, who does not know war and, therefore, does not know much. But the teacher who can establish a favorable relationship with the veteran finds in him a confused and bewildered boy in need of help.4/

4/ "The Veteran Comes Back" p.153

Second, whether the serviceman had actual combat experience on the islands of the Pacific or in the front line fighting of Europe, or whether he stayed within the continental United States, he is certain to have had his fund of experience and background broadened and deepened. He will probably have been more places, done more things, seen more people, and had a greater variety of experiences generally not only than the other members of his family, or than his teachers, but greater than almost all other members of his rural community. He is not likely to be willing to step meekly back into the role which he played as a youngster before he entered the armed services.

Third, since we are dealing with the returning rural veteran, we can be sure that he will in general have another set of common characteristics--those of the rural civilian. He is likely to be interested in farming, but he will not necessarily plan to farm for the rest of his life. The report referred to above contains a very interesting table which shows the relationship of plans to farm to the amount of farming experience reported by the sample of over 15,000 white enlisted men.5/ More than one fourth stated they had had full-time farming experience for a year or more; this category doubtless contains most of the servicemen who subsequently will become farmers. An additional seventeen per cent had had part-time farming experience for a year or more. Altogether 45.6 per cent of the sample had had some farming experience. We should not expect, however, that all or even most of these men would be planning to go into farming on their return to civilian life, for many through choice or necessity will be taking up various types of non-farm work. It is probably safe to say, however, that anyone interested in predicting who will be coming back to live in a particular community after the war would be making a good beginning if he determined exactly who left it to go to war.

WHAT DO RETURNED SERVICEMEN NEED?

While it is possible to speak in these general terms about the characteristics, desires, or needs of the returning veteran, it must be recognized that whatever is undertaken in his behalf as a person must be done on the basis of individual rather than group characteristics, needs, and experiences. Accordingly, he is going to require a sympathetic and informed adviser--one who will not only be able to deal with him as a person, but who will be in a position to draw on the resources of the immediate community, possibly of the state, and perhaps even of the nation, in order to care adequately for his various needs.

As a veteran he needs help and encouragement in picking up the burden of responsibilities which accompany the great liberties of civilian life. As a rural breadwinner he is likely to need some type of vocational training or a refresher course whether he returns to life on the farm, or to non-agricultural work in the village, or chooses to prepare for migration to the city. As a citizen he needs a broad reorientation into the civic life from which he has been separated and in which, because of his youth, he may never have played a significant role. As an adult family member--

5/ "Soldiers' Plans for Farming After They Leave the Army," p.11.

in his various roles as son and brother or as husband and father--he may need a wide range of types of assistance in learning to understand himself and his relations with the other members of his family. He may require special help in connection with health problems not so serious as to require hospitalization. He may have peculiar psycho-social difficulties which could be minimized with the aid of sound principles of mental hygiene. In any case, his needs as an adult will require far more than an orthodox academic or a strictly vocational type of training. And though the Veterans Administration and the Retraining and Reemployment Administration have certain responsibilities in this connection--which they will doubtless fulfill to the limit of their resources--they will also doubtless welcome qualified voluntary supplementation where their own facilities are not available.

WHAT COUNSELING AND EDUCATIONAL PROGRAM IS NEEDED?

In the light of the foregoing, what sort of counseling and educational program will be needed in the rural community? While such a question cannot be answered satisfactorily in general terms a few concrete suggestions are in order. First, an inventory should be made of the needs for counseling services and educational programs in terms of the probable needs of serviceman returning to the community. Second, having determined the probable needs, the counseling services and educational facilities now actually available should be inventoried. Third, striking a balance between needs and available resources will indicate clearly the needs remaining to be met by the creating of new facilities. Furthermore, this procedure may show how existing facilities can be brought into mutually helpful working relations, thus reducing the chances both of duplication of effort and of competition between agencies.

The available resources of rural communities are bound to vary from place to place. But the rural high-school principal should consider at least the following types of potential aids if he would play a constructive and creative role in postwar education for returning veterans, and civilians too, for that matter.

1. The local representatives of the U. S. Department of Agriculture, with its vast but flexible social and technical machinery, are the county agent and the home demonstration agent. Through them it is possible to open up channels of information, guidance, and varied assistance both to the serviceman and to his wife, children, parents, fiancee, or whatever the case may be--and all may have their special problems in relation to the needs of their returning veteran.

2. These same channels will bring help from the responsible land-grant college and its three main branches: the Agricultural Extension Service, which may be able to assist in organizing series of meetings on special rural problems, and in mobilizing resources and services such as the Extension subject matter specialists from within and outside the

community which will be needed to solve these problems; the College of Agriculture and Mechanical Arts, which may, as for example does Iowa State College, provide course work for grade-school graduates as well as for those who have taken some or all of the regular high-school work; and the Agricultural Experiment Station, which can initiate specialized research projects or programs if the need is shown to exist.

3. In many communities, in addition, there will be the teachers of vocational subjects, such as agriculture and home economics. They too are local representatives of a vast educational network, including the respective state departments of education, with the U. S. Office of Education in the Federal Security Agency providing national leadership.

4. Finally, there are the general extension systems of state and private universities which, with their varied offerings, bring the university campus right into the community.

Rare will be the rural community, given informed and aggressive leadership, which will be unable to reach out through one or more of these channels and place at the disposal of its returning veteran the very best the nation has to offer in the solution of his individual problems. The time to make preparations for his return, however, is not after he has returned and begins asking for help--the time is now.

4-1945

On-the-Farm Training

3/18/46

TENTATIVE OUTLINE OF TRAINING VETERANS IN AGRICULTURE

I. Types of Programs in Agricultural Education and Training.

Agricultural education and training courses are offered under three main types of programs:

1. Institutional programs offered primarily on the campus of agricultural schools, with some off-campus inspection trips and projects of a supplementary nature sometimes being included.

2. On-the-job training programs offered by employers with some off-the-job instruction of a supplementary nature usually included. The responsibility for the accomplishment of the training rests with the employer rather than a school. The trainee trains for a position existing in the employer's establishment.

3. Combination training programs offered by agricultural schools, consisting of combinations of institutional instruction and on-the-job instruction, the two being so planned that each supplements the other and both contribute definitely to the accomplishment of the trainee's vocational objective. In this type of training, the responsibility for offering and providing the entire course rests with the school. The shcool offers institutional instruction and selects or approves the place where the trainee pursues the on-the-job portion of his program. This place is considered an extension of the school's facilities. The school furnishes both portions of the program, and when the job taining porition of the program is not under an employee-trainer, the staff of the school offers all of the necessary job instruction.

II. Training Veterans on Farms.

1. Wherever possible and practicable training veterans on farms will follow the plan set forth in paragraph numbered I-3 above.

   Wherever this is impossible, the training should follow a plan made up of a combination of training described in paragraph numbered I-2 above, supplemented by courses chosen from the best possibilities available from the types of training described in paragraph I-1 above.

2. In order to secure the best possible guidance and services in technical problems of the program of each veteran, the Veterans Administration through the Senior Agricultural Training Officer will organize state and local committees to be known as the Veterans Agricultural Training Committee. Wherever a state is divided by regional office boundry lines, the regional offices will coordinate their approach to the state agencies. The nucleus of these committees will consist of representatives of Vocational Agricultural Education and agencies of the United States Department of Agriculture active in the area. The membership of the committees will be increased if expedient by adding such other persons as leading farmers and representatives of other institutions operating in the area. The state committee will assist in organizing county committees and, if necessary, community committees with the same agencies represented. All committee members will serve without remuneration from the Veterans Administration.

In order that each agency may make its maximum contribution to the training program of each trainee and in order that the instructor may schedule these contributions into the training program at the time, rate and in the manner to effect maximum results with the trainee, instructors and Agricultural Training Officers will use the services of these committees in an advisory capacity for the following purposes:

a. Coordinating the services and technical information to be offered by the agricultural agencies with the teaching agency

b. Recommending farms as to suitability for training.

c. Assisting in developing individual training programs for veterans.

The work of this Committee will be closely coordinated with the work of the Veteran's County Agricultural Advisory Committee which has been created by the Agricultural Extension Service pursuant to an agreement between the Veterans Administration and the United States Department of Agriculture (See all Regional Office Letter, with attachments, June 19, 1944.) This coordination may be effected by the Committees having common membership or by holding occasional meetings in common.

III. Training Veterans on Farms under Plan Described in Paragraph I-3 above, Public 16, 78th Congress.

An eligible veteran with employment objective of "farmer" (farm manager or farm operator) will be enrolled with an institution for full-time training when the institution is using as a part of its facilities:

a. A farm under the management of the trainee when requirments of Paragraph A below are met specifically and other applicable instructions are met in general.

b. A farm of an employer-trainer when it has been established, with reasonable certainty, that the trainee will have an opportunity at the end of the training period to enter into self-proprietorship operation of a farm with operational control to be established through ownership, lease, management agreement, or other tenure arrangement which will fully protect the welfare of the veteran trainee.

An eligible veteran, whose employment objective as an employee is "farm foreman", "farm manager", or "farm hand", may be placed in training under an employer-trainer when those objectives show that attainment will require sufficient training in agriculture, skills or managerial ability to insure employability, and, as far as possible, to insure a continued demand for the trainee's services at a satisfactory income. The objective of "general farmhand" does not ordinarily meet these requirements.

A. Self-Proprietorship.

1. Enrollment.

Eligible veterans, with employment objectives of "farmer"(farm manager or farm operator) will be enrolled in a full-time course with an agricultural school or an agricultural teaching agency which institution must

provide satisfactory organized instruction in agriculture and related subject matter in the classroom, laboratory, shop or other satisfactory facility and additional operational instruction on the veteran's farm.

2. Training program.

A training program will be prepared by the Veterans Administration training officer with the assistance of the teaching agency, the Veterans Administration Agricultural Training Committee, and the veteran, which program will include organized classroom instruction and operational instruction, both based on a complete farm and home plan. The farm and home plan will be developed, after the trainee's farm has been surveyed, to include:

a. Financial statement.

b. Budget of income and expenses.

c. Schedule of production and disposal of crops, livestock, and livestock products.

d. Inventory of livestock, equipment and supplies.

e. Statement of family living to be furnished by the farm.

3. Farm Requirments

Before approving a farm as a proper place for a trainee to take the on-farm portion of his course of training, the Veterans Administration should be assured of these general requirements.

a. The veteran must have complete control of the operation of the farm through ownership, lease, management agreement, or other tenure arrangment which fully protects the welfare of the veteran.

b. The farm must be of sufficient size and suitability for full-time instruction in all farm management operations necessary to the particular type of farming selected and of sufficient size and suitability so that the operation of it together with the course of training will occupy the full time of the trainee.

c. The size and quality of the farm must indicate that it will be sufficiently productive to insure the trainee a satisfactory income under normal conditions at the end of the training program.

4. Instructional Requirments.

The veteran shall be enrolled with the institution for a full-time course of instruction including:

a. Off-farm instruction of not less than 200 hours per year in agriculture and related subject matter, not less than eight hours of which shall be given in any month.

b. On-farm instruction of not less than 100 hours per year, at least 50% of which must be made applicable specifically to the veteran's individual farm by visits of not less than twice a month.

c. Instruction, guidance and assignments of work and study covering all phases of the operation of the farm between visits of the instructor.

The instruction both on and off the farm must be given at a time, rate and in a manner best suited to the needs of the trainee as indicated by his farm and home plan and the operation of the plan.

In order to properly assist the veteran to organize, interpret and apply instructions and information to his own needs and farm conditions, the instructor who gives the on-farm instruction should also give the off-farm instruction.

5. Supervision by the Veterans Administration.

Veterans Administration Agricultural Training Officers are required to supervise all veterans in training. This shall include visits to the farm at least once a month and visits as frequent as feasible to the off-the-farm classes. The training officer will coordinate his supervision of the trainee with the agriculture teacher, who will assist the training officer in determining the conduct of the trainee and his progress toward rehabilitation. This type of training should be carefully appraised to determine if the instruction:

a. Is timely and is based on the trainee's farm and home plan.

b. Is of a practical nature and in accord with recommended local farm practices.

c. Assists the veteran to solve his current problems.

d. Develops the trainee's ability to make plans and to make managerial decisions relative to the management and operation of the farm.

e. Is making maximum use of the information and services available to the trainee from other agricultural and educational agencies.

B. Training under an Employer-Trainer.

1. Enrollment.

An eligible veteran whose employment objective as an employee is "farm foremen", "farm manager" or "farm hand" will enroll for a full-time course of instruction with an agricultural school or agricultural teaching agency, which institution must provide on-farm instruction and organized instruction in agriculture and related subject matter in the classroom laboratory, shop or other satisfactory facility. In addition, the Veterans Administration will secure under Form 1904 agreement, a successful operating farmer who will train the veteran in all the elements of an adequate individual training program, under his direction, and pay the trainee a wage commensurate with the value of his services under training conditions. The employer-trainer will agree to cooperate with the institution, with which the trainee is enrolled, in order to effect maximum results with the training program.

2. Training Program.

A training program will be prepared by the training officer with the assistance of the teaching agency and the Veterans Agricultural Training Committee. The program will provide:

a. Organized classroom instruction.

b. Instruction on the job.

c. Coordination of "a" and "b" by the instructor of the institution with which the trainee is enrolled.

3. Selection of the Employer-Trainer.

Selection of the employer-trainer is the responsibility of the Veterans Administration and approval will be given on an individual basis will full consideration for the direct relationship to the trainee and his ultimate rehabilitation.

Farmers who have demonstrated their ability as outstanding general farmers or as farmers who have successfully specialized in phases of the occupation pertinent to the trainee's objective and who possess the ability necessary to assist in the training of the veteran will be approved to provide the on-the-job portion of the course. The employer-trainer's farm should be of sufficient size and suitability for full-time instruction.

4. Instructional Requirements.

The veteran shall be enrolled with the institution for a full-time course of instruction, including:

a. Off-farm instruction of not less than 200 hours per year in agriculture and related subject matter, and not less than eight hours of which shall be given in any month.

b. On farm instruction by the instructor of the institution of at least 50 hours per year and not less than one farm visit per month. This instruction will include the relating of the off-farm instruction with that which the trainee receives from the employer-trainer.

c. Instruction from the employer-trainer in various farm operations, as indicated by the trainee's Training Program Form 1905a.

The instruction both on and off the farm must be given at a time, rate, and in a manner best suited to the needs of the trainee as indicated by his individual training program.

In order to properly assist the veteran to organize, interpret and apply instruction and information to his own needs and farm conditions, the instructor who gives the instruction on the farm must also give the off-farm instruction.

5. Supervision by the Veterans Administration.

Veterans Administration Agricultural Training Officers are required to supervise all veterans training in agriculture. This shall include visits to the farm at least once a month. The Training Officer will coordinate his supervision of the trainee with the agriculture teacher who will assist the training officer in determining the conduct of the trainee and his progress toward rehabilitation.

This type of training should be carefully appraised to determine:

a. If the instruction is timely, practical, and in accord with recommended local farm practices.

b. If the instruction off-the farm is being related to that which the trainee is receiving from the employer-trainer.

c. If the trainee is receiving compensation communsurate with his services under training conditions.

d. If the employer-trainer is instructing the trainee in all the different phases of his training program as listed on Form 1905a.

e. If the course of instruction is making maximum use of the information and services available to the trainee from other agricultural and educational agencies.

IV. Training Veterans On Farms under Plan described in Paragraph I - 3 above. Public 346, 78th Congress.

Training under this plan, offered to veterans eligible under Public 346, may follow the same pattern as outlined for veterans eligible under Public 16. In accordance with the Law and Regulations, the following fundamental differences must be observed:

1. The course of instruction will be provided by agricultural schools or other teaching agencies which have been approved by the appropriate state agency for giving this type of training under Public Law 346.

2. Selection of the course which the veteran desires is a matter of his own choice.

3. The length of the training period is determined by the predetermined length of the course and by the extent of his entitlement under the law.

4. Preparation of the training program will be the primary responsibility of the institution offering the course.

5. Approval of the farm and/or the selection of the employer-trainer, where the veteran will receive his on-the-job instruction, will be the responsibility of the training agency.

RECOMMENDED CRITERIA FOR APPROVAL OF ESTABLISHMENTS OFFERING AGRICULTURAL ON-THE-JOB TRAINING FOR VETERANS

ADOPTED MAY 29, 1946

By

INTERAGENCY COMMITTEE FOR DEVELOPMENT
OF CRITERIA AND STANDARDS
FOR ON-THE-JOB TRAINING

RRA 46–146 1

June 10, 1946.

TO THE GOVERNORS OF ALL STATES
AND TERRITORIES:

On April 8, 1946, I had the privilege of submitting to you the first report of the Interagency Committee for Development of Criteria and Standards for On-the-Job Training. This report was issued under the title "Recommended Minimum Criteria for Approval of Establishments Offering Non-Agricultural On-the-Job Training for Veterans." Since that time, the committee has been engaged in the preparation of basic criteria for agricultural on-the-job training programs. These criteria have now been formulated by the committee, and I am pleased to submit them for consideration by the State agencies which have the responsibility of approving establishments for on-the-job training. The Retraining and Reemployment Administration clearly recognizes that such agencies have full responsibility for devising their own criteria and standards for approval, and that many States have established higher standards than those developed by the committee as a minimum.

The agricultural on-the-job criteria represent the combined thinking of Federal agency representatives and have been discussed with, and general approval has been obtained from, representatives of the following agencies:

American Council on Education.

American Farm Bureau Federation.

American Federation of Labor.

American Legion.

American Veterans Committee.

American Veterans of World War II.

American Vocational Association.

Congress of Industrial Organizations.

Council of Chief State School Officers.

Disabled American Veterans.

National Education Association.

National Farmers Union.

National Grange.

Veterans of Foreign Wars.

It is hoped that the State approving agencies will see fit to adopt these criteria as a minimum basis for the selection of units participating in agricultural on-the-job training. The nonagricultural criteria have received an encouraging response from all over the country. I feel, therefore, that the enclosed statement of minimum standards for agricultural on-the-job training will be of material aid in promoting uniformity of these programs throughout the country. It is believed that such uniformity in the on-the-job training programs will serve the best interests of the veteran, the employer, the State, and Federal Government.

Your appraisal of these criteria, or any suggestions which your State approving agency may wish to offer, will be most welcome to the Interagency Committee and to the Retraining and Reemployment Administration.

Sincerely yours,

G. B. ERSKINE
Major General, USMC
Administrator

General Statement

Subsistence allowances have been provided under Public Law 346, Seventy-eighth Congress,[1] as amended (GI Bill of Rights), to assure economic security to veterans who want to learn a job which will increase their earning capacity and their opportunity for employment and advancement. The subsistence allowance is not a dole to the veteran nor is it intended as a subsidy to the employer. The value of the program in preparing veterans for agricultural pursuits would be lost and its integrity discredited if it were used as a scheme to obtain farm hands cheaply or if the period of subsidized training were prolonged unnecessarily or if the veterans were training for nonexistent employment or farming opportunities.

Some jobs in agriculture are not of such nature as to require a bona fide course of training and therefore do not justify the use by the veteran of his training entitlement. This is not intended to disparage any job, but where the amount of training is slight, and there is little or no differential between the beginning wage and the rate paid a trained worker, there would be little, if any, advantage to veterans in the approval of such training programs.

All groups concerned with the employment or training of veterans have recognized the need for greater uniformity among the States in approval of on-the-job training programs. Acting upon the request of State approving agencies and the evident need for common approach to criteria for on-the-job training, the Retraining and Reemployment Administration appointed an interagency committee under its Order No. 4 to develop suggested criteria for on-the-job training. The purpose of this document is to set forth recommended minimum criteria for approval of agricultural on-the-job training. Similar recommended minimum criteria for approval of establish-

[1] These criteria do not apply to disabled veterans receiving training under Public Law 16, Seventy-eighth Congress.

ments offering nonagricultural on-the-job training were adopted on April 8, 1946, and forwarded to the governors of the various States and Territories for consideration.

Definition of Agricultural On-the-Job Training[2]

As used herein, "agricultural on-the-job training" means any form of training under an employer-employee relationship in a specialized skill or job in any agricultural occupation such as dairy tester, chick sexer, budder in a nursery, nurseryman, or herdsman, and the like, (1) which requires full-time training work experience and related or technical training of at least 3 months' duration to attain reasonable competency, and (2) in which there is a differential between the beginning wage and the wage paid a trained worker.

Advisory Committees

It is recommended that advisory committees composed of representatives of State and Federal agricultural agencies, local educational authorities, and of leading farmers be established. In the organization of such committees recognition should be given to the veterans' county agricultural advisory committee. These committees should evaluate and periodically re-evaluate the situations on farms and in agricultural establishments to determine suitability for use in training veterans.

The Application for Approval of Agricultural On-the-Job Training

A farmer or agricultural establishment desiring to undertake an on-the-job training program under Public Law 346 should be required to submit to the appropriate State approving agency a written application setting forth the course of training for each job

[2] Institutional-on-farm training refers to a combination of institutional training and work and study assignments on a farm. This type of training is exemplified by the program that has been set up by agreement between the Veterans' Administration and certain State boards for vocational education or local boards of education.

for which a veteran is to be trained. The written application covering the training program should include the following items:

1. The title and description of the specific job objective for which the veteran is to be trained.
2. Length of the training period in months.
3. Schedule listing various operations for major kinds of work or tasks to be learned and showing for each the job operations or work tasks to be performed and the approximate length of time to be spent on each operation or task.
4. Wage or salary (including fair value for any subsistence supplied by the employer) to be paid at the beginning of the training program, at each successive step in the program, and at the completion of training.
5. Wages or salary (including fair value for any subsistence supplied by the employer) paid by the farmer or agricultural establishment to employees already trained in the kind of work for which the veteran is to be trained.
6. Number of hours of related instruction required, subjects to be covered, who will give the instruction, and where it is to be given.

Criteria for Approval of Agricultural On-the-Job Training

The State approving agency should consider for approval only those farms or establishments offering training programs which are submitted in conformity with the above specifications and should approve only those found upon investigation to have met or made provision for meeting the following criteria:

1. Establishments and farms should not be approved for operational and managerial training, for general farming, or for specialized types of farming, such as dairy, poultry, truck farming, if institutional-on-farm training is accessible or practical.

2. The application for approval of training has been endorsed by the appropriate advisory committee if such committee exists in the community.

3. The training content of the program is designed to qualify the veteran for employment in the job for which he is to be trained.

4. There is reasonable certainty that the particular job, or a similar type job, for which the veteran is to be trained will be available to him at the end of the training period, as is evidenced by such factors as the ratio of trainees, veteran and non-veteran, to trained workers.

5. The job is not in a standard wage classification in which progression and appointment to the next higher classification are based upon such factors as length of service and normal turn-over, and not upon skills learned through organized training on the job.[3]

6. The wages to be paid the veteran for each successive period of training are not less than those customarily paid on the farm or by the establishment to a learner in the same job who is not a veteran.

---

[3] Training should not be approved where a job is set up according to a standard wage classification with prescribed duties and where advancement to the next higher job depends on length of service, and seniority.

7. In the case of specialized jobs, there is customarily required a period of training which justifies the setting up of a complete program of not less than 3 months of training. If the training objective is for full-time specialized or diversified farming, the minimum program for training should be the equivalent of a full cycle of production and marketing.

8. The length of the training period is not longer than that customarily required in the community to provide the trainee with the required skills, arrange for acquiring of job knowledge, technical information, and other facts which the trainee will need to learn in order to become competent on the job for which he is being trained. The length of the training period for each veteran should take into account the previous experience of the individual.

9. Provision is made for necessary related or technical instruction. Such instruction may be provided in adult farmer classes, short courses, by correspondence, or by selected individuals.

10. An employer-farmer who is to provide the training of the veteran—

    (*a*) Is recognized as a successful farmer —one who has depended on farming for most of his livelihood.

    (*b*) Is considered capable of instructing the veteran, or, where possible, is given special aid in the use of techniques for training.

    (*c*) Has a special interest in training the veteran rather than getting a hired hand.

11. An employer's farm where a trainee is to get his on-the-job training—

    (*a*) Is a farm or agricultural establishment which provides the facilities for the special type of training needed under practical conditions.

    (*b*) Is a farm which is operated with equipment, techniques, and practices consistent with economic production.

    (*c*) Provides satisfactory living conditions and conveniences for the veteran in case he lives on the farm during the training period.

12. In the case of an agricultural establishment, other than a farm, there is adequate space, equipment, instructional material, and qualified personnel to provide satisfactory training on the job.

13. Adequate records are kept to show the progress made by the veteran toward his job objective.

14. Appropriate credit is given the veteran for previous job experience, whether in military service or elsewhere, and his beginning wage adjusted to the level to which such credit advances him.

15. A copy of the training program as approved by the State agency and agreed to by the veteran and the person giving the training is provided to the veteran by the employer.

16. Upon completion of the training the veteran is given a certificate indicating the length and type of training provided and attesting to his competency in the job for which he was trained.

17. Other employees of the establishment are advised of the training program.

18. The approving agency has access to the establishment for the purpose of assisting in the development and improvement of the training program.

Adopted on May 29, 1946, by the Interagency Committee for Development of Criteria and Standards for On-the-Job Training established pursuant to Retraining and Reemployment Administration Order No. 4.

Approved for transmittal to the governors of all States and Territories.

Dated: June 6, 1946.

APPLICATION FOR APPROVAL OF FARM TRAINING OF VETERANS

The _____ Board of Education hereby applies
(County - City)
for approval of a farmer training program for veterans who qualify for such training under public 16 and public 346.

The classroom and shop instruction will be done in accordance with the terms of the contract as previously outlined at _____ school.

The following veterans are qualified and have agreed to enroll for the training program:

_____

_____

_____

_____

_____

_____

The instructor is _____ and has the following qualifications:
(Name)

_____

_____

_____

_____

_____

Salary to be paid per month $_____; year $_____.
He will work under the immediate supervision of _____ Vocational Agriculture teacher at _____.

This program, the instructor and the veteran's name have been approved by the county committee _____ Yes _____ No

This program if approved will begin _____
(Date)

Signed _____
Supt. of Schools

Mail this application in triplicate to G. E. Freeman, Director, Vocational Education, State Department of Education, Nashville 3, Tennessee.

On several occasions when Sergeant Rivers' tank became disabled, he dismounted, climbed into another, and continued fighting. It became a popular theme that when Company A entered battle, "Rivers Led the Way," for he was always there first.

The official citation states, in part: "During the daylight attack on ---, France, Staff Sergeant Rivers, a tank platoon sergeant, was in the leading tank when a road block was encountered which held up the advance. With utter disregard for his personal safety, Staff Sergeant Rivers courageously dismounted from his tank in the face of directed enemy small arms fire, attached a cable to the road block and had it moved off the road, thus permitting the combat team to proceed.

"His prompt action prevented a serious delay in this offensive operation and was instrumental in the successful assault and capture of the town. His brilliant display of initiative, courage and devotion to duty reflects the highest credit upon Staff Sergeant Rivers and the Armed Forces of the United States."

GOING'S TOUGH FOR 92ND,
HEROIC MEDIC TESTIFIES

ALLIED FORCE HEADQUARTERS, Italy---Private First Class Hugh Galloway Warren, son of Mr. Frank Warren, Route 1, Belewis, North Carolina, thinks that the 92nd "Buffalo" Division is as great an outfit as can be found on any front in this war. This Negro youth is a front line medic with the 365th Infantry Regiment, and wears the Bronze Star Medal.

"There aren't many of us original medics left," said Warren who landed in the Mediterranean Theater with the Division. "We came over last October, and I've been on the line since early in November.

"It's been tough all the way." He pressed his hand to his chest, and simulated a gasp. It is a little habit he has when driving home his points.

"And--I think the 365th has had more than its share of the rough stuff. You hear a lot about Highway 65, and I guess it was pretty hot. But you should have gone up Number 12 with the 92nd Division. That's a coastal highway, not as many mountains as some places, maybe--but I believe I'd rather have the cover in the hills than always be pushing out across the open country.

Men Die Quicker on Plains

"It's on the plains that men die, that's where the casualties pile up, and where the medics really have to work. Yes, it takes a lot of guts to go where our infantry boys have gone. And where the infantry goes we have to go too. But I've never seen one of our medics lay down on the job."

Warren, asked how his Southern buddies liked this Italian winter, said, "They take it fine. We're in the mountains now, and I can like the snow as good as anyone else." The hand went to his chest. "And, brother, I can hate it just as good as anyone else too."

How He Won Bronze Star Medal

What about the Bronze Star Medal?

"Well, that was a bad day--pretty bad," he said.

"At six o'clock in the morning the First Battalion pushed off to attack. They never made it. That battalion suffered heavy casualties. Then the Second Battalion pushed off. I was out with the rest of the medics. We were between the Germans and the Second Battalion--patching up the wounded, giving first aid, evacuating what we could. The battle lasted till three in the afternoon, when the Germans started to take off.

MORE

"I don't know how many trips I had to make after wounded men--but I must have done a pretty good day's work. They gave me the medal for it.

"But all of us had to work. Three of my buddies (medics) got the Bronze Star Medal too that day. Two more of us were killed. Another one had both feet blown off.

"Yes, the 92nd sees a lot of fighting."

INJURED CORPORAL AIDS BUDDY
WHEN NAZI SHELL BLASTS TANK

141ST GENERAL HOSPITAL, England---Wounded by enemy shell fragments last December while advancing with an armored unit toward Bastogne, Belgium, Corporal Charlie W. Brooks, 25, of 1152 Monroe Street, Norfolk, Virginia, is convalescing at this United States Army hospital in England. He has been awarded the Purple Heart.

"I was riding in a tank toward the town, giving support to the infantry," said Corporal Brooks. "German 88-mm shells were dropping like raindrops all around and when one of them hit alongside the tank, it blew the doors off and several of us got hit. I managed to get out and, after helping one of the men, whose leg was broken, out of the tank, I crawled about 75 yards to another tank where I was given first aid."

Corporal Brooks entered the Army February 16, 1942, and received his basic training at Fort Meade, Maryland. His brother, Private Samuel Brooks, is in the Southwest Pacific with an infantry division. He is the son of Mrs. Mary E. Brooks of the Monroe Street address.

* * * * * * * *

SOLDIER'S MEDAL TO FOUR GI'S
FOR HEROISM ABOARD TRANSPORT

U.S. ARMY FORCES IN THE SOUTH PACIFIC---"For heroism on board an Army transport," following a series of explosions when their ship hit a mine field, four Negro soldiers have been awarded the Soldier's Medal, it was announced today. The awards were presented at appropriate ceremonies by Brigadier General James W. Barnett, Commanding General of the New Caledonia Island Command.

The recipients were Staff Sergeant Peyton B. Givens, son of Mrs. Minnie Givens, Oakridge, Louisiana; Private First Class Edward McDowell, son of Mr. and Mrs. Joe McDowell, Tallulah, Louisiana; Private Lester White, Napoleonville, Louisians, and Private Milton Green, Sandersville, Mississippi.

According to his official citation, Sergeant Givens, "with utter disregard for his own safety, went to the aid of an injured comrade who was pinned beneath a pile of debris. Despite continuing explosions, he carried the soldier to safety. After thus rescuing his comrade, he freed a life raft and pulled other men, who were struggling in the water, to safety. He rowed back to the sinking ship several times to pick up survivors." Private First Class McDowell received the same citation.

Private White's citation said, in part, that he, "with utter disregard for his own safety, displaying remarkable coolness and leadership, rescued some of the men who could not swim and then boarded the sinking ship to aid his commanding officer in freeing some of the fouled life rafts."

"Unhesitatingly and with utter disregard for his own safety," said Private Green's citation, he "dived from the top deck" for a drowning soldier and swam with him to safety. "After rescuing his comrade, Private Green swam after four life rafts which had broken loose from the vessel, bringing them back one by one, so that other men trapped in the sinking vessel could reach safety."

MORE

TRUCKERS' PERFORMANCE WINS
PLACE IN ANNALS OF SUPPLY

WITH U.S. FORCES IN FRANCE---Maintaining its spectacular performance record set during two years of operations in Africa, Sicily and Italy, the 426th Engineer Dump Truck Company has carved out a niche for itself in the history of supply operations in Southern France.

Hampered by severe maintenance difficulties and working against a deadline that at times seemed impossible, the 426th played a vital part in supplying pipe needed to construct the pipeline that kept the armies moving up the Rhone Valley to the German border. All through this important supply operations, the 426th's truckers maintained a 24-hour delivery schedule, making 12 and 15-hour trips with a minimum of halts and snatching what sleep they could in their trucks.

Spare parts for their overworked vehicles were almost unobtainable, but the maintenance crews kept 'em rolling by improvising what parts they could and by "cannibalizing" from burnt-out motors where improvisation was impossible. Equipped only to perform first and second echelon maintenance, the battle-tried mechanics carried out complete fourth echelon repairs when Ordnance services were not available.

The 426th prepared for its supply role in France with combat trucking experience in Africa and Italy, where Luftwaffe strafings and runs through minefields were daily occurrences. The gradual elimination of the Luftwaffe and the speed of the southern advance made thier work in France less hazardous but more difficult since they shared the responsibility for maintaining the flow of supplies that kept the southern forces moving.

"DUCK" MECHANICS FINISH 5,000TH
REPAIR JOB AT KEY SUPPLY PORT

WITH 486TH AMPHIBIAN TRUCK COMPANY, France---Largely responsible for keeping a large fleet of amphibian trucks ferrying high priority war cargo from Liberty Ships heaving on the harbor swells to shore, a crack crew of company maintenance mechanics recently completed their 5,000th major repair job.

Because thousands of tons of ammunition, food, clothing and equipment for American forces battering their way into Germany have been brought into shore by the "Ducks"--as the sea-going trucks are termed--their repair and maintenance in peak operating shape are tasks of great importance. They also are complex tasks, for the two-in-one vehicles have the mechanism and six-wheel drive of a 2½-ton, heavy-duty truck, plus the hull, rudder, and propeller of a powerful speed-boat.

Led by Technical Sergeant Willie McCain, motor sergeant, of Atlanta, Louisiana, this picked group of skilled mechanics work on round-the-clock schedules, sometimes under blackout conditions, to insure smooth performance of the Ducks. In the critical period of von Rundstedt's December offensive, when Nazi defeat depended heavily on additional tons of supplies rushed by the Ducks toward the resisting American forces, the crew toiled into the small hours of the morning with little rest.

Members of the maintenance team, who have worked together to keep war equipment streaming toward the front from this port, include:

INDIANA: Indianapolis--Sgt. James A Hutcherson, welder, 2826 Sangster St.

MICHIGAN: Detroit--Cpl. Evans Collier, welder, 1344 Palmer Ave.

MISSISSIPPI: Coldwater--Sgt. Thomas Phillips, mechanic, Route 3; McComb--Cpl. Charles H. O'Neal, mechanic, Box 716.

NEW JERSEY: Newark--Sgt. Edward Gladden, mechanic, 48 High St.

MORE

NEW YORK: New York City--Staff Sgt. Lloyd A. Archer, machinist foreman, 107-37 Princeton St., Jamaica; Sgt. Alfred T. Cornelius, body repair specialist, 76 West 113th St.; Sgt. Leroy Harleston, mechanic, 108-07 160th St., Jamaica; Cpl. David Thomas, mechanic, 6 East 115th St.; Sloatsburg--Cpl. Woodrow J. Terry, welder.

NORTH CAROLINA: Greensboro--Sgt. Amos R. Caldwell, parts clerk, 1304 East Market St.; Kinston--Cpl. Edward M. Keys, mechanic, 617 Oak St.

OHIO: Cincinnati--Cpl. Willie H. Newton, mechanic, 955 Richmond St.

PENNSYLVANIA: Philadelphia--Cpl. William Robinson, mechanic, 2524 Turner St.

SOUTH CAROLINA: Abbeville--Cpl. Robert L. Rhodes, mechanic, 9 Harrisburg St.; Lexington--Sgt. Vandles Gardner, mechanic, Route 2.

TENNESSEE: Chattanooga--Cpl. Willie L. Todd, mechanic, 910 Poplar St.; Knoxville--Cpl. Robert L. Collier, armorer, 270 Court B, College Homes.

VIRGINIA: Portsmouth--Cpl. William M. Reynolds, mechanic, 1039 Calvert St.

NEGRO WACS SPEED LETTERS
TO GI'S ON WESTERN FRONT

UNITED KINGDOM BASE, England---Most people realize that mail is morale with fighting GIs, but few people do as much about it as WAC Sergeant Betty Jane Smith, of 2054 Hallock Street, Kansas City, Kansas, and Privates First Class Winona and Jacquelyn Fuller, sisters, of 135 N. Campbell Street, Chicago, Illinois.

Sergeant Smith and the two sisters are members of the Postal Directory Section of the all-Negro Wac Postal Battalion in England which handles the mail for the entire European Theater of Operations.

Under the supervision of Sergeant Smith, 56 Wacs are steadily engaged in redirecting mail to our fast moving soldiers on the Western Front.

Keeping the girls supplied with mail and seeing that it leaves their desk in the shortest possible time is only part of the sergeant's job, for she is also platoon sergeant and responsible for her platoon at company formations and training functions.

The daughter of Mr. and Mrs. Lucas Smith of the Hallock Street address, Sergeant Smith was a student nurse in the City Hospital of Cleveland, Ohio, before she entered the Women's Army Corps.

The Fuller sisters in going overseas with the Wacs, are merely keeping up a precedent already set by the men of their fighting family in this war.

Their father, Mr. Jake George Fuller, discharged from the Navy last June, is a wearer of the Purple Heart and their two brothers, Seaman Second Class Donald Fuller and Private Ellison Fuller, with the Navy and the Army respectively, are both serving in the Southwest Pacific.

The sisters are graduates of John Marshall High School in Chicago, Illinois. Jacquelyn graduated from the Arts Institute of Chicago and was a clerk-typist in civilian life. Winona was a postal tube clerk at a department store in Chicago.

NEGRO GUARDS KEEP NAZI
POWs BUSY IN ENGLAND

A U.S. ARMY GENERAL DEPOT, England---German prisoners of war, who have exchanged their weapons for shovels and other implements of constructive

MORE

endeavor, perform their tasks at this depot under the watchful eyes of Negro guards, detailed from the 3226th Quartermaster Service Company.

Armed with carbines, these Quartermaster guards escort the POWs from early in the morning until late at night. Dispatched on a rotation basis as chasers, each guard is assigned to no more than 10 prisoners. His orders are to escort them from the stockade to their work assignments, keep them busy and return the same number.

A day generally lasts eight to nine hours, but frequently guards are required to maintain their alertness and vigilance over two groups of POWs for as long as 15 hours.

Under the command of Captain Edward Rappaport, of Clarksdale, Mississippi, the unit received basic training at Camp Gordon, Georgia, and went through maneuvers in Tennessee. Before D-Day in France, the company built camps for invasion troops along the south coast of England.

Up until the first of the year the outfit had been operating as a Quartermaster Supply Distributing Point, issuing supplies and rations to thousands of transient troops en route to the front. During an emergency last September, the men worked day and night loading 10,000 tons of fuel that were flown to General Patton's Third Army troops during their push across France.

24 VETERANS FLOWN HOME
FROM POSTS AROUND WORLD

MIAMI, Florida---Speeded home in one of the Air Transport Command's huge transocean planes, 24 Negro soldiers, who have been on overseas duty for periods ranging from 14 months to nearly three years, this week felt the thrill of setting foot on home soil again.

Flown into the ATC terminal here, they have cleared the field and gone on to their homes for furloughs. They came from 14 States and the District of Columbia.

They were: Pfc. Percival A. Niles, son of Mrs. Louise Niles, 518 Jefferson Ave., Brooklyn, N.Y., 14 months in the Middle East with a Quartermaster detachment; Cpl. Edward Christian, Jr., son of Edward Christian, Sr., 28-01 42nd Road, Long Island City, N.Y., 30 months in India and Burma; Pfc. William A. Greene, son of Mr. and Mrs. Willie Greene, 1219 Sumner Road, S.E., Washington, D.C., 34 months in Africa and the Middle East; and Tech. 4th Gr. Virgil Cato, son of Mr. and Mrs. Lem Cato, 541 School St., Daytona Beach, Fla., 25 months in Africa and the Middle East.

Sgt. Johnnie Rainge, son of Mr. and Mrs. Isaiah Rainge, Route 1, Elmore, Ala., 33½ months in the Middle East; Staff Sgt. Joseph C. Robinson, son of Mrs. Marzette Robinson, 909 25th St., Bessemer, Ala., who came home from the China-Burma-India Theater; First Sgt. James L. Howell, whose parents, Mr. and Mrs. Willie Howell, Sr., live at 260 Fairview St., Athens, Ga., and whose wife, Shirley M. Howell, lives at 421 Third St., Moultrie, Ga., spent 29 months in the CBI Theater; and Pvt. Willie J.T. Young, son of Mrs. Annie Willard, 1503 W. Savannah Ave., Valdosta, Ga., 27 months in India.

Staff Sgt. William B. Hall, whose wife lives at 1117a Vandeventer, St. Louis, Mo, and whose father, Robert H. Hall, resides at 219 Second St., Greenville, Miss., 32 months in the African-Middle East Theater; Pfc. Andrew Moses, son of Mrs. Genevieve West of Farmerville, La., 27 months in India and Burma with the Engineers; Tech. 5th Gr. E.F. Jackson, Alcom College, Miss., 28 months in India and Burma with the Medical Corps; and Tech. 5th Gr. Lee P. Camper, son of Mr. and Mrs. Henry Camper, Route 1, Shivers, Miss., 26 months in Africa with a Military Police unit.

MORE

Pfc. Harry J. Watts, whose wife, Alyce L. Watts, lives at 407 West 25th St., Indianapolis, Ind., and whose mother, Mrs. Lillie Watts, lives at 1018 Edgemont St., in the same city, 34 months in the Middle East with an MP Unit; Tech. 5th. Gr. James H. Scober, whose father lives on Route 4, Wallace, N.C., 34 months in the Middle East with the Engineers; Tech. 5th Gr. Leroy Knighton, whose mother resides on Route 1, Seabrook, S.C., 34 months in the Middle East with the Engineers; and Tech. 5th Gr. James W. Brown of Spartanburg, S.C., 33 months in the Middle East.

Staff Sgt. Henry J. Hollier, son of Mr. and Mrs. Henry Hollier, Sr., Rural Route 1, Beggs, Okla., 26 months in the India-Burma Theater with the Engineers; Sgt. James L. Davis, son of Mrs. Josephine Davis, 1550 Virginia St., Gary, Ind., 29 months in the India-Burma Theater with the Quartermaster Corps; Tech. 3rd Gr. Dave Ballard, son of Mrs. Bessie Oliver, 1350 South Racine Ave., Chicago, Ill., three months in the Middle East with an Ordnance outfit; Tech. 5th Gr. Hebert S. Henson, of Philadelphia, Miss., 34 months in North Africa with the Engineers.

Tech. 5th Gr. Louis Cains, whose parents and wife reside at 2304 Dennis St., Houston, Texas, 26 months in China-Burma-India with the Engineers; Tech. 5th Gr. Howard E. Archer, of 1508 Willard Ave., Philadelphia, Pa., and whose wife resides at 2560 Wheeler Road, Augusta, Ga., 27 months in the CBI with the Engineers; Cpl. Aaron L. Finley, son of Mrs. J.Green, 1301 East 49th Place, Los Angeles, Cal., 27 months in the CBI with the Engineers; and Tech. 5th Gr. Vanel L. Hooser, whose wife resides at 2743 Laclede Ave., St. Louis, Mo., and whose mother, Mrs. Hattie L. Hooser, lives at 2834 Laclede Ave., 31 months in the Middle East with the Engineers.

* * * * * * * *

"THE ROAD FROM SALALA"

(Note to Editor: Negro Engineers, already famed for their part in the construction of the Ledo Road in India and the Alaskan Highway, are now engaged in building one more vital road in another corner of the world--Liberia. The following story, written by Sergeant Ossie Davis, formerly with the Public Relations Office, Headquarters, United States Army Forces in Liberia, gives a vivid picture of the conditions our troops are facing in building this artery. Sergeant Davis was recently returned to the United States.)

LIBERIA---The men of the 899th Engineers are building a road in Liberia. They are sweating, digging, blasting, clawing, and scratching their way along 86 miles of the God-awfullest country that ever improved a GI's cuss vocabulary.

The road is being developed over a stretch of several miles simultaneously. Thus, on a stretch at a time you hear the bark of the caterpillars and the groan of the tournapulls, huge, awkward metal beasts of burden. They echo back from hills only little less steep than sheer walls.

Here and there like a tangle of frightened ants, the graders and scrapers, bulldozers and big trucks, jeeps and scoops, are busy digging, slicing, hauling, loading, dumping, grinding and chopping, filling in and smoothing out, coaxing this long red scar into a passable road.

Liberia is bound on the northwest by French Guinea, the two countries being separated by the St. John River. When this road is finished, a bridge will be thrown across the river linking the new road with one that runs through French Guinea. Thus a continuous trade route will be laid from the northern country through the southern one to the sea.

The terrain is by no means uniform. It ranges from one real mountain to numerous hills and stony knobs, and to lowlands, marshes and swamps. But every foot of the way is covered with high bush and jungle undergrowth; stuff so dense that a crew of 20 native laborers, working all day blazing a foot-wide trail, may walk back in 30 minutes over the trail it took them a whole day to blaze.

MORE

32 Bridges Must Be Built

In addition, 32 bridges, ranging from 20 feet to 150 feet in length, will be built. There will be concrete abutments and piers for each bridge. And steel beams will be laid with floors of thick wooden planks lashed to them. Gaps and draws will be spanned by logs carried into place on the heads of natives united into gangs 50 or 60 strong.

A number of the heavier timbers used on the bridges are cut from the tall tropical trees studding the jungle through which the road is passing. These trees, some of which stand 100 to 120 feet high, are sometimes so large at their base that TNT must be used to blast them out of the way. The usable sections are cut up by native sawers, into pieces about the length of a railroad cross tie. They are then placed on a six-foot scaffold where two sawers split them to the proper thickness with a rip saw.

Between the modern and ancient methods of road building lies a world and an age of difference, and this method of cutting timbers is but one of the many ways in which the old and the new methods are combined in this constructionn job.

Before the coming of the Americans with modern equipment, scoops of metal, and sometimes of bamboo like a pipe split down the middle, were used to cut down hills and rises. The soil was then loaded into baskets woven of palm leaves and holding at the most about a peck. These basket loads, carried by a long line of laborers, were then dumped into the low places.

The acme of native skill and patience is reached in the primitive method of cutting through large rocks which obstruct the right of way. A huge fire is built on top of the rock. When it has been heated to a high temperature, water is poured over it causing it to split and crack. Fragments are then chipped away with sticks and the process is repeated. Cuts 10 feet deep and 18 feet wide have been made by this ancient method.

No Accurate Maps of Interior

There are no accurate maps of the Liberian interior because it has not yet been fully surveyed. All the mapping and planning that preceded the actual trail-blazing for the road from Salala had to be done from scratch.

Engineer officers first went on foot along an old trail from Salala to Baila, to the St. John River, to get a general idea of the terrain to be crossed. Then a plane reconnaissance was made over the area. Compass bearings were taken and the route surveyed. Next a trail was blazed to guide the Engineers. After that a group of native laborers began to cut the right of way, always keeping a mile or so ahead of the actual work.

With the right of way indicated, the work for the 899th began in earnest. Today, bulldozers bite, dig, and scrape their way forward, pushing up trees, uprooting stumps, and clearing away the top soil. These are followed by tournapulls, or, when tournapulls are unusable because of mud, by a caterpillar with a large scoop pan attached, called by the men, "cat'n pan." These will cut the grades down to the desired depth and carry the excess dirt down to the swamps, marshes and other places which must be filled. A six-inch layer of laterite is then spread over the surface, after which the graders and scrapers level and pack and smooth the road down to a finished state.

When the Engineers began the job, at least half of the heavy equipment was out of order. It had to be repaired. And even now, maintenance ranks with supply as the two chief scourges of the 899th. The rough nature of the terrain makes for excessive wear and tear on tractor, bulldozer and scraper. But for the ingenuity of some of these GIs, the job would often be brought to a standstill.

Keeps Equipment in Shape

One man in particular has done more to keep the heavy equipment in top shape than any other. He is Staff Sergeant Richard Short, East St. Louis,

MORE

Illinois.. Once, when a big tractor was held up with a cracked frame because there were no welding rods to do a mending job, Sergeant Short experimented until he found that galvanized wire would do just as well. In a few hours the "cat" was back on the job. As to supplies, all rations, gasoline, fuel oil, spare parts, crushed rock, machine replacements, tentage, and most timber, must be hauled in by truck from supply stocks on the coast.

Every care and precaution is used to protect the Engineers from the dreaded tropical diseases which are ripe among the native populations.

Seasons in Liberia come in extremes. Extremely dry, or extremely wet. In the dry season the heat is almost unbearable. Dust hangs over the road like a thick cloud of smoke, and all the drivers and catskinners are forced to wear goggles and oftimes a dust filter to keep the fine red particles from their eyes and lungs. Due to the high hills and thick woods in the area, a breeze is practically a stranger. During the seasons of torrential rains, the average rainfall on the coast is 180 inches a year, and last year, July alone brought a 56-inch rainfall--a record said to surpass the record for Burma or Alaska. Streams swell into floods, threatening incompleted bridges. Often when culverts are too small, roads are swamped with water. The highway becomes a mass of slimy mud, and heavy equipment must operate in conjunction with tractors or not at all.

Sometimes, of course, the problems are purely local ones. Once the projected path of the road happened to run through a village burying-ground. The Engineers had to make an unplanned turn, driving the road through the center of the village instead, because the town chief would not permit the rest of the dead to be disturbed.

To Link Hinterlands, Coastal Areas

The Salala-Baila road will average about 25 feet in width when it is finished. It will link the Liberian hinterlands with the coastal areas, thus facilitating trade, communication, and travel. For centuries all trade goods brought to the coast from the interior, or vice-versa, had to be head-loaded in. Rice, the country's most important staple food product, ivory, gold, skins, cloths, basketry, mahogany, and other stuffs were brought in by porters carrying prodigious loads on their heads. Visitors were carried into the interior in hammocks. Due to these conditions, development and trade have been retarded. The new road will change all that by opening a trade route clear across Liberia, from French Guinea to the coast.

No one can safely predict when the important task of building this road will be finished. So many imponderables are to be considered, weather conditions, lack of replacements and supplies etc., that even a good guess is hazardous. But soon--a year, or more, or less--tired and grimy-faced engineering GIs, who have sweated out nearly three years in Liberia, will throw a one hundred and fifty foot truss span across the St. John River. The first load of trade goods, this time by truck, will start its journey across Liberia--the first such trip in the history of the Republic.

* * * * * * * *

SKILLED WACs AT FORT LEWIS PERFORM TECHNICAL ARMY DUTIES

FORT LEWIS, Washington---The 97 Negro women comprising Company F of the Women's Army Corps in the engineer section, Fort Lewis Army Service Forces Training Center, are engaged in a widely-diversified field of activity, with some performing highly-specialized tasks. The list includes hematologists, truck drivers, typists, and warehouse clerks.

Many have learned new skills since entering the service and some are utilizing knowledge acquired in civilian life, thereby adding invaluable experiences to their future capabilities.

MORE

The group includes a college-trained social worker, an artist, a dietician, and a graduate nurse. Thirty-three have soldier husbands; two are married to veterans. Some have degrees from universities.

Captain Irma J. Wertz, 1506 Albany Street, Brunswick, Georgia, company commander, is the wife of Lieutenant William J. Wertz, executive officer in the reconditioning service at Fort Huachuca, Arizona. She earned a B.A. degree at Fisk University in Nashville, Tennessee, then went to the Atlanta School of Social Work at Atlanta, Georgia. She attended the Chicago Academy of Fine Arts, and also completed a course in business administration at Bryant-Stratton business college in Chicago. Before the war, Captain Wertz was active in social work as case supervisor and assistant director of Chicago's Parkway Community House.

Entering the Army in July 1942, the captain was in the first officers' training class to graduate at the WAC training center, Fort Des Moines, Iowa, She came to Fort Lewis last November.

Private First Class Emily Harris, 4305 St. Louis Avenue, St. Louis, Missouri, wife of Sergeant Thomas H. Harris with the 372nd Infantry Regiment at Fort Huachuca, completed three and a half years of pre-medical training at Lincoln University, Jefferson City, Missouri. She is now a medical Wac working in the hematology laboratory at Madigan General Hospital at Fort Lewis.

"As a civilian," states Private First Class Harris, "I had the training but not the experience. Now I am getting the experience and intend to complete my necessary half year in college after the war." As a medical Wac, she checks blood counts and differentials.

Technical Sergeant Marguerite Wallace, 918 South Fourth Street, Monmouth, Illinois, a professional dietician before joining the WAC, is, appropriately enough, mess sergeant with Company F. She holds a B.S. degree in domestic science from Bradley Polytechnic Institute at Peoria, Illinois. With the professional dietician's authority, she declares:

"Ingenuity in preparing a meal is the Army mess sergeant's greatest asset. In the two years and eight months I have been in the Army, I find Wacs are just as particular about the things they eat as their civilian sisters."

Women in outside work that requires physical exercise eat more than office workers, she pointed out.

Acting as first sergeant of the company is Staff Sergeant Frances R. DeCourcey, 13906 Linden Boulevard, Jamaica, Long Island, a graduate nurse. She was formerly on duty at the Harlem Hospital in New York

One of the most popular girls in the company is the mail orderly, Corporal Georgia Cheatam, 609 West 13th Street, Indianapolis, Indiana. Though she majored in physical education at Indiana University before enlisting, she has established a reputation as a free-lance commercial artist, having studied at the John Herron Artists' Studios at Indianapolis. Samples of her work adorn the company orderly room.

VOLUNTEER NEGRO DOUGHBOYS PROVE
AGGRESSIVE, COURAGEOUS FIGHTERS

WITH THE U.S. 1ST INFANTRY DIVISION, EAST OF THE RHINE---The Negro soldier in the European Theater has long since proved that he is a capable and conscientious worker in the role of combat engineer, truck driver, artilleryman, and countless other Army assignments. Now, in his debut as a front-line infantryman, he has demonstrated beyond all doubt that he is an aggressive, courageous and resourceful fighter.

At least that's what the men of Company B of the 16th Infantry Regiment claim, and from the story they tell it seems reasonable to believe that the Jerries would echo a fervent "Amen."

On March 20, with Company B poised to jump off in the attack against Oberpleis on the east banks of the Rhine, the Fifth Platoon, composed entirely of Negro personnel, was about to get its battle initiation. Lieutenant Vincent J. Kachnik, of 4715 South Loomis Street, Chicago, Illinois, the platoon leader, oriented his men carefully and explained in detail what was expected of them after zero hour. He emphasized that speed and aggressiveness were essential—and apparently his audience took the words to heart.

Came zero hour and the fifth platoon took off, but fast! Throwing care and caution to the winds and quickly out-distancing their lieutenant, the Negro GIs headed for the objective. Ignoring the first burst of fire from the amazed Germans, they completely overwhelmed the opposition and in the space of a few minutes were astride the objective and looking for new towns to conquer.

When Lieutenant Kachnik finally caught up with his fighters the first sight that greeted him was that of a Negro soldier emerging from a house leading a most willing Kraut whom he had by the arm. Spying his platoon leader, the jubilant soldier shouted, "Look, Sir, I've got another Heinie."

NEW YORKER NEW COMMANDER
OF AA GUN UNIT IN PACIFIC

WITH U.S. TROOPS IN NEW GUINEA---Lieutenant Colonel De Maurice Moses, of New York City, on March 6 assumed command of the 742nd Antiaircraft Artillery Gun Battalion, a crack all-Negro outfit, Headquarters, Southwest Pacific Area, announced today.

In introducing the new commander to the battalion personnel, Colonel Carl F. Tischbein, Chief of Staff of the 14th Antiaircraft Command, said, "He is an excellent, experienced artilleryman, and an outstanding leader."

In addition to Colonel Tischbein, other high-ranking officers who spoke at the ceremony were Colonesl Charles G. Dunn and John Alfrey, both of the 14th Antiaircraft Command general staff. They were generous in their praise of the record established by the 742nd, and extended congratulations to its new commander. Major Wilfred P. Eaton, former commander of the unit, stated that the 742nd was honored in receiving Lieutenant Colonel Moses and his staff. This move makes the 742nd a 100 per cent Negro outfit.

Lieutenant Colonel Moses has been on field duty since January 1941, when he commanded a Coast Artillery Battalion. After nine months in Hawaii, he returned to the States and took over the command of an Antiaircraft Automatic Weapons Battalion—in which capacity he served for 21 months. Eighteen of these months were spent overseas.

The new commander is a graduate of Fordham Law School and a former practicing attorney in New York City, where his wife, Mrs. Doris R. Moses, and three children, De Maurice, Jr., Merle Charlotte and John R., now reside.

MORE

Captain Clarence M. Davenport, Jr., a 1943 graduate of West Point, and a native of Arkansas, comes to the battalion as its new executive officer. Formerly commander of an Antiaircraft Automatic Weapons Battery, he makes his home in Detroit, Michigan.

List Other Officers

Other members of the new staff are: Captain William H. Taylor, New York City; Captain Sylvester R. Bly, Galesburg, Ill.; First Lieutenant Alexander Pitts, Jersey City, N.J.; First Lieutenant Buford Gordon, Memphis, Tenn.; Second Lieutenant Wesley M. Jacobs, New Orleans, La.; Chief Warrant Officers Laydell Buckmon, Detroit, Mich., and George Greene, Jamaica, Long Island, N.Y., and Russell T. Crawford, Philadelphia, Pa.; Warrant Officer (Junior Grade) Walter P. Tate, Washington, D.C.; Captain William H. Wilson, battalion surgeon, St. Louis, Mo.; and Captain Kenneth R. Williams, Chaplain, Winston-Salem, N.C.

Captains James F. Veal, New York City; George A. Adcox, Rome, Ga.; Guy M. Fultz, Brooklyn, N.Y.; and First Lieutenants Frank A. Nicholson, Davenport, Iowa; and Leon J. Penny were assigned as battery commanders.

Battery officers include: First Lieutenants Robert Byrd, Baltimore, Md.; Neville Harper and Lester Davis, both of New York City; Evans S. Walker, Chicago, Ill.; David J. Smith, Syracuse, N.Y.; Richard S. Bennett, Macon, Ga.; Second Lieutenants Bernard S. Phillips, New York City; Owen Jefferson, Philadelphia, Pa.; Warrant Officers (Junior Grade) Russell T. Barger, Springfield, Ill.; Edward F. Carpenter, New York City; Andrew Hayden, Birmingham, Ala.; and Chester Reavis, Brooklyn, N.Y.

TOP-KICK WINS BRONZE STAR
FOR LEADERSHIP IN ITALY

WITH THE 94TH ENGINEERS IN FRANCE---First Sergeant William R. Wilson, of 4927 South Parkway, Chicago, Illinois, was recently awarded the Bronze Star Medal for meritorious service in connection with military operations in direct support of the Italian campaign from June 5 to September 12, 1944, it was announced today.

The actual presentation was made in France by Brigadier General Ralph M. Immell, Deputy Commander of the Army Service Forces Advance Section, which supplies the Seventh Army front.

"Sergeant Wilson's outstanding performance of duty," his citation reads, "in assuming the responsibilities of a company administrative officer while his unit was engaged in rehabilitating a critical rail communication line proved his exceptional ability as a leader."

"By his excellent planning and foresight," the citation continues, "Sergeant Wilson procured and delivered many tons of engineer and railway supplies from a base 250 miles away, maintained a courier service with higher and adjacent elements of the regiment and performed special service functions for his company. Sergeant Wilson's efforts contributed materially to the successful completion of the unit's mission within the allotted time."

Sergeant Wilson, son of Mrs. Beatrice Seymour of the Chicago address, is now in France as first sergeant of Company F, 94th Engineer General Service Regiment. He has been in the Army for four years and has been overseas for 23 months, serving in North Africa, Italy and France.

CORPORAL WHO LOST LEG IN BULGE
TELLS HOW OUTFIT WON CITATION

STARK GENERAL HOSPITAL, CHARLESTON, South Carolina---All the world knows what a great fighting combination the famed 101st Airborne Division and the

MORE

fighting 969th Field Artillery Battalion made at Bastogne during the "Battle of the Bulge," but few people know that this battle was the second time that these two fighting units had joined hands in battle.

Corporal Namois Terry, of New York City, a gunner of C Battery of the 969th, who had his left leg blown off by a German land mine after firing his gun around the compass at Bastogne, revealed this fact here today at Stark General Hospital where he has just arrived from the European Theater of Operations.

In speaking of the hell that was Bastogne, where his unit won the coveted Unit Citation, in the name of the President, by fighting gun-to-gun with the 101st Airborne Division, the Negro artilleryman said, "I was a machinegun corporal and when we moved up within 18 miles of Bastogne I was put on a 6-inch howitzer, because we were short of men.

"We had set up on a valley and zeroed our guns in on a small town just over the hill when the order came down to hold our fire because the 101st Airborne was coming in. I asked an infantryman what was going on up there and he said the Jerries had a little patrol up in the town and the Yanks were going up with a few tanks to wipe it out.

"About an hour after they moved out with the tanks, I looked up and saw the infantry and the tanks rushing back toward us. Then it looked like everybody in that town was coming out way. I knew when I saw those tanks retreating that our artillery guns should have been gone long ago. But we couldn't leave then so we started firing point blank.

"The infantry was running about in confusion and when the doughs got near where my gun was set up, a colonel, who had been wounded, with blood running all over his face, started to rally them around my gun. He called for every man there to get a gun and dig in. The guys started to form a line and we continued to fire at every Kraut that appeared.

"Some of the artillerymen from my outfit grabbed rifles and dug in with the infantry, but we kept out howitzer going. Some guys dug foxholes two feet in front of my gun and I was just thinking that that was a hell of a place for an artilleryman to be when a Tiger tank broke through and reached the top of the hill looking down on us.

"Everybody had to leave then. You don't sit in a valley and look a Tiger tank in the mouth. We got the hell out of there with the infantry and took our big guns with us. Nobody would have said anything if we had destroyed our guns because it looked like all of us would be captured when that Tiger topped the hill. But we don't destroy our guns in my outfit. We take them with us or stay there and fight.

"We set up in front of the 101st Headquarters and started blasting away again. That was the night we lost so many men. They bombed us that night from 9 until 4 and Battery A really was hard hit.

"The next morning which was Christmas Day, we opened up again and knocked out an ammunition dump and a platoon of Jerry infantry with one barrage. By this time our ammunition was running low. You can imagine how good we felt when some C-47s flew over that evening and dropped packages containing 155-mm shells complete with powder, fuse and primers. It was the best Christmas gifts we ever got.

By this time the Jerries had the range on our guns and we moved them to keep the 101st headquarters from being destroyed by Jerry artillery fire. In moving around I noticed that A Battery was firing in one direction, B Battery in another and C Battery in still another direction. That left only one more direction and I took stock and found that we had just been firing in that direction, so I knew that we were completely surrounded.

Asked what his thoughts were when he found he was surrounded, Corporal Terry replied: "I didn't have time to think--I had to keep that gun going."

MORE

It was late in the evening of that bleak Christmas day when Major General Anthony C. McAuliffe, now known to the world for his famous "Nuts" answer to the Germans' demand for surrender, came around to visit the 969th at their guns and told them of the Nazi ultimatum and his reply.

"We told him that we would keep firing as long as we had a round left for the big guns and then when the big stuff gave out we would fall in beside his boys with rifles and tommies. He knew we had a good outfit and we knew they could fight for the 101st Airborne had battled with us for Hill 88 in Normandy. Nobody was thinking of surrender but the Germans."

Going back to the loss of his leg after the Bastogne battle, Terry said, "I guess it was just my time, that's all. I've had my share of narrow escapes. One time a white looey from the 9th Armored and I were going through the woods to find a wire switching center so that we could hook up our wires with theirs and coordinate our artillery fire when a shell hit the treetops around us. I I did not get a scratch that time.

"Another time, I was sitting by my gun firing away when a Tiger tank broke through the woods and started across an open field directly toward my gun. I didn't even fire at him for I knew my 6-inch shells would just bounce off his front. Just about the time I figured he had me in his sights, one of our M-8 tank destroyers came up behind him and knocked him out. That wasn't my time either.

"The third lucky time came when a German 170 shell landed so close to me I thought it was an earthquake, but I ended up unhurt.

"But this shoe mine," said the corporal as he shook his head, "it was just due for me, I guess. I had my gun set up in a German minefield. We had cleared out enough places for the guns and everyone was careful. There was a pillbox near by and I passed that pillbox on its right side for three days, but when we decided to move out of the area and advance forward, I walked on the left side of that pillbox for the first time and stepped on a German shoe mine. It took my leg right off."

The son of Mrs. Viola Terry, of 216-18 West 143rd Street, New York City, Corporal Terry, who is just 20 years old, was inducted into the Army in November 1942. He went overseas in April 1943.

NEGRO UNIT FIRES
10,000TH ROUND

WITH THE 578TH FIELD ARTILLERY BATTALION---Ten thousand rounds of high explosive represents a lot of misery to Jerry. That's two million pounds, and Staff Sergeant Mack Leonard, Chief of Section of "C" Battery, 578th Field Artillery Battalion, is proud of his 4th Section which recently fired the battery's 10,000th round somewhere in the Schnee Eifel, Germany.

Only one thing worries the sergeant: How many of those 10,000 whackeroos were base hits, advancing Johnny Doughboys toward home plate. But he puts as the figure in the hits and runs column the word--"plenty."

The 578th FA Battalion is a Negro unit commanded by Colonel Maurice Diehl, of Minneapolis, Minnesota. The battalion participated in the battle of Northern France, the Siegfried Line and aided in pushing Rundstedt's Belgian Bulge back to the Rhine.

GI DROVE 10,000 MILES
IN INDIA WITHOUT MISHAP

ATLANTIC CITY, New Jersey---Corporal Ulysses Williams, of Detroit, Michigan, drove a 2½-ton truck over 10,000 miles of rough India terrain without

MORE

an accident. The 26-year-old Negro veteran hauled ammunition, food, airplane engines, gasoline and all sorts of equipment on every kind of road there was.

"And sometimes," he said at the AAF Redistribution Station Number 1 here, "there was no road at all—just mud."

Mountains, valleys, rice paddies couldn't stop this GI, and only once did he fail to arrive at his destination on time.

"That," Williams recalled, "was while I was on a lone night run to Calcutta. The thermostat in the radiator burned out, and the whole truck quit. I had to park there all night long. Finally, in the morning, a wrecker came along and towed me into town."

Now after 14 months overseas, Williams is awaiting his next Air Force assignment at this station. While here he will be examined by doctors and interviewed by personnel specialists to determine where he can best fit into the AAF set-up.

He is the son of Mr. and Mrs. Willie E. Williams, who reside at 2816 Rivard Street, Detroit, Michigan. The corporal's wife, Lorene, lives at 3124 Brush Street, in the Motor City.

* * * * * * * *

COME HELL OR HIGH WATER,
TRUCKERS DELIVER THE GOODS

WITH THE 28TH QUARTERMASTER BATTALION IN FRANCE---Veteran drivers of six campaigns participated in by the 3421st Quartermaster Truck Company of this Negro battalion were singled out today by Headquarters, Continental Advance Section, as figuring prominently in hauling supplies to the Seventh Army front during a railway traffic jam in Northeastern France last winter.

Although many of the GIs experienced driving in show for the first time in France, they came through the emergency with a minimum of accidents. Hauls were so long that drivers often had to stay in their cabs for three or four-day stretches.

"My drivers carried on in the tradition they established while hauling ammunition at Mateur, North Africa, and on the Anzio beachhead," said Lieutenant Colonel James T. Stewart, battalion commander of Danvers, Montana.

The 3421st made 19 round trips by water to Anzio. They drove their huge trucks on LSTs, accompanied them to the beachhead where they were put ashore, and drove to supply dumps in forward areas under withering artillery fire.

First enemy fire faced by the veteran drivers was on landing in North Africa with the Western Task Force. They still tell jokes on each other about their first experiences as drivers in the trackless desert of North Africa.

On being told to report one dead-black night to British Headquarters in a certain town, they traveled for hours back and forth over a road studded with mines before they discovered that the town was a lone Arab hut and British Headquarters an armored car parked in front of it.

And today they laugh at what at one time was not funny at all. They tell of Corporal Joe Wainwright of Titusville, Tennessee, who jammed on his brakes when he saw German planes zooming right above him. Fortunately, he was near a bivouac area---or so he thought. Spotting another soldier running up a hill, Joe scrambled after him thinking the fellow was making for a fox-hole. Just as they both reached the top of the hill in a dead heat, the soldier turned to Joe and moaned: "Now where in the hell am I gonna go?"

MORE

Speaking of foxholes always reminds Corporal Sylvester Royal, Kerryville, Tennessee, of his experience. Glancing up ahead one day, Royal noticed a Stuka flying towards him right over the road. Definitely not a road-hog, Royal jumped out and made an almost perfect swan dive for a foxhole. He was still in mid-air when a British ack-ack gun popped out of the hole and started blasting the plane.

With sections fanned out on detached service all over North Africa, the outfit of which the 3421st was a part drove 4,000,000 miles, won a commendation for their work from Lieutenant General General George S. Patton, Jr.

Things have improved since North African convoy routes. Time was when a truck driver coming in after a hard drive was lucky if thrown a can of cold "C" rations. Now, in France, he can stop off during the haul at any of a number of roadside lunch stands operated by Continental Advance Section and get a piping hot dinner. Drivers still do their own minor repairs, but now the company has a smooth-working maintenance section that knows how to nurse a broken-down truck back into action.

NEGRO TROOPS SIGN UP
FOR ARMY STUDY COURSES

WITH THE 865TH QUARTERMASTER COMPANY IN FRANCE——With an eye to the future, members of this Negro Quartermaster company in northeastern France are the first to subscribe 100 per cent to U.S. Army correspondence courses among thousands of troops under Continental Advance Section, it was disclosed today by Major Ralph G. Smith, Conad Special and Information Services Officer.

"Although many Conad soldiers study correspondence courses in spite of long hours and strenuous duties, this is the first company called to my attention that subscribed 100 per cent," said Major Smith, a Philadelphian. "They have shown a highly commendable spirit in using their spare time for studying, and I'm sure that it will be repaid when they return to civilian life."

The program was established at the request of the men by Lieutenant Frank J. Valenta, of Cedar Rapids, Iowa, when the company first arrived overseas in November 1944. A class in beginners' reading, writing and arithmetic based on courses from the U. S. Armed Forces Institute is taught by Corporal Earl Brooks, former teacher of Carbondale, Illinois.

Members of the company who completed their formal education before entering the Army show a preference for advance studies in business correspondence and administration. Others are taking courses in music, art, and engineering.

The program is part of the War Department's policy to encourage soldiers to continue their education interrupted by the war. Most leading colleges and correspondence schools in the United States cooperate with this program, making it possible for the soldier to study any subject from beginners' reading to advance courses for college degrees.

Names of the officers and men taking the courses follow:

SO MANY JAP BOMBS FELL,
GI THOUGHT LUZON WOULD SINK

MIAMI BEACH, Florida---For dogged determination when a mean job has to be done, Corporal Henry D. Hawkins, of Birmingham, Alabama, will take his old outfit, the 870th Aviation Engineers.

Those Negro troops served through New Guinea campaigns, then moved up to Luzon Island when General of the Army Douglas MacArthur returned to the Philippines. And they were always on hand when the going was rough.

"The base commander in New Guinea thought enough of our work to write us a letter of commendation," Hawkins declared at the AAF Regional and Convalescent Hospital, Miami District, where he is resting and recovering from operational fatigue after 20 months overseas.

"He said that when it came to working men and working materials we were the best outfit in New Guinea."

Hawkins, who was a core maker for an iron pipe company in Birmingham before he became a GI, served as a mechanic with the 870th.

"It was just between times that I kept trucks and bulldozers in repair," the 37-year-old corporal said.

"When the going was rough, every one of us pitched in to do the job that had to be done.

"Our toughest assignment was at Finschafen, New Guinea, when our troops kicked the Japs out of there in the fall of 1943.

"We followed the infantry in and our job was to build an air strip. We were given a month to get it finished, but within 18 days fighter planes were taking off and landing. And a week later, bombers were using the strip.

"Despite all the handicaps, we completed the work we had been given to do. And we also built roads that led from the harbor to the air strip, bridges and a floating dock."

Hawkins left his outfit to return to the States shortly after it moved to Luzon, landing in the third wave behind the assault troops.

"Jap planes really gave it to us there," he said. "For several days there were so many raids and so many bombs dropping I thought the whole island would sink."

MEDICS AWARDED PLAQUE
FOR MERITORIOUS SERVICE

HEADQUARTERS, 703RD MEDICAL SANITARY COMPANY, England---The Meritorious Unit Service Plaque, the first such award given a unit of this type, has been presented to this Medical Sanitary Company, "for actively participating in the evacuation of battle casualties from the Continent from 6 June 1944 through 6 August 1944, in an exemplary manner," Headquarters, United Kingdom Base has announced.

MORE

This duty was performed under the most adverse conditions of weather, time and unfavorable circumstances. Captain Paul E. Johnson, Jr., 32, of 3509 South Parkway, Chicago, Illinois, commands the company which has handled more than 75,000 patients since D-Day in Normandy.

The plaque is a dark mahogany shield, 14 inches in height, upon which appear a green laurel wreath, the word "Service" above, and the words "Award of Merit" below in gold letters.

The insignia prescribed for the right sleeve of the service coat consists of a two-inch olive-drab square on which a golden-yellow laurel wreath is embroidered. For every additional six-month period of meritorious service, a gold star will be awarded.

Much of the credit for the training of personnel and the success of this unit's operation goes to the following officers, who in addition to numerous other duties serve as litter officers: First Lieutenant James W. Summerower, of Chicago, Illinois; First Lieutenant John C. Alnutt, of Kansas City, Missouri; and First Lieutenant John R. Ritchie, of Springfield, Illinois.

The personnel of this unit are:

ALABAMA: Eutaw--Cpl. Ennis Johnson, 26, Box 333; Midway--Pfc. Mitchell Tarver, 25, Route 2, Box 78; Russellville--Pfc. Tom Williams, Jr., 31.

FUTURE RELEASE

PLEASE NOTE DATE

WAR DEPARTMENT
Bureau of Public Relations
NEWS DIVISION
Washington, D. C.

FOR RELEASE MONDAY, MAY 7, 1945

* * * *

"My BAR (Browning automatic rifle) put four, and probably more, Japs out of business," he said in an interview at a West Coast debarkation hospital. The young rifleman was evacuated from the Pacific by ambulance plane after suffering a severe leg injury while on a combat patrol.

"What we'd do was find a Jap bivouac, shell the place with mortars, and then lay for them with rifles and machineguns. Not many of them will ever surrender. They're funny people. They'd rather kill themselves first."

Operating as a separate unit, his regiment saw action early in the Bougainville campaign, more than a year ago, he went on.

"I wasn't in much combat on Bougainville myself," he related, "but some of our men were decorated for bravery there. A staff sergeant named Johnson was awarded the Silver Star for gallantry in action.

"Sergeant Johnson led his platoon on a mission across the bay where a couple of pillboxes had been making trouble. His men said he personally was responsible for knocking out the pillboxes. He was shot twice doing it, but he swam three quarters of a mile across a part of the bay after he was wounded."

Private Williams, who has the Combat Infantryman Badge, earned by exemplary conduct in action against the enemy, has been in the service since January 1941. He received his basic training with his regiment while it was stationed at the Infantry School, Fort Benning, Georgia.

He is the son of Mr. and Mrs. Joe Williams, Sr., of 300 Railroad Street, Cartersville.

GENERAL PATTON COMMENDS
NEGRO COMBAT ENGINEERS

WITH THE U.S. THIRD ARMY ON THE WESTERN FRONT---Fighting GIs of the 193rd Engineer Combat Battalion have been commended by General George S. Patton for superior performance in assisting the relief of Bastogne last December. The 183rd was the first Negro organization of its kind to go into action in the European Theater of Operations under the Supreme Command of General Eisenhower.

In spite of the cold, snow storms and enemy resistance, the 193rd Engineers continued to effectively execute their assignments with the famed Third Army. Their work consisted of building snow fences, improving main supply routes, constructing bridges, clearing mine fields, filling bomb craters, and making forward area reconnaissance under enemy fire.

For meeting their responsibilities with resourcefulness and effectiveness, the officers and men received additional praise from other high ranking commanders, including Major General John Millikin, Commanding General of the U.S. Third Corps; Colonel George A. Morris, Group Commander, and Lieutenant Colonel Lawrence J. Fuller, their immediate commander.

The 183rd Engineer Combat Battalion was activated in October 1943, at Camp McCain, Mississippi, the original cadre coming from experienced soldiers of the 379th Engineer Battalion. The bulk of the reinforcements came from the Infantry Replacement Training Center, Camp Wheeler, Georgia.

After the completion of basic training, the battalion was returned to Camp McCain for advanced training. From there the organization was transferred to Camp Robinson, Arkansas, and shipped overseas shortly thereafter.

MORE

BUILDERS OF ALCAN HIGHWAY
CARRYING ON IN NEW GUINEA

SOMEWHERE IN NEW GUINEA---It was back in early 1942 while the Japs were nibbling at the vital Aleutians, and the Alcan Highway was being blasted through the brutal terrain of Alaska, that the 97th Engineer General Service Regiment first adopted as its motto, "No Task Too Great."

No one who remembers the engineering history made by the 97th in this momentous undertaking will question their right to this motto. For it was in this campaign when men were pitted against the roughest and toughest terrain this side of hell, that these Engineers really earned the label.

In the face of lashing winds, and cruel temperatures of 50, 60, and even 70 below, the earth-eating men and machines of the 97th roared through a sea of forest, moving mountains, conquering glaciers and gulleys, and transforming obstinate hills and muskeg into an orderly strip of earth.

Everyone remembers with a sigh of relief, the results that dreary October day of 1942 when Corporal Refines Sims of Rockhill, South Carolina, driving the lead bulldozer of the 97th, met the lead bulldozer of the white 18th Engineers, and thus fittingly closed the last gap in the Alcan Highway, and a glorious chapter in the history of the 97th.

Today, Corporal Sims and his buddies are overseas once again. But this time, instead of the frozen wastes of Alaska, they are facing the steaming jungles of New Guinea. For a year now, these men have been working in the sweat, mud and mire that is the tropics, and still foremost in their minds is their motto, "No Task Too Great."

Their record here has been amazing. This base--one of the largest in New Guinea--from whose bowels are streaming the continuous flow of men and materials that is today carrying the war to the Imperial Sanctums of Nippon, was built almost entirely by the 97th.

They have established pumping stations, water purification systems, and laid miles and miles of water lines for this teeming, portable, Army city. They have thrown up Bailey and ponton bridges in record-breaking time, when floods wrecked the roads and minutes meant lives. They have hauled dirt, and rock, and coral, and even mud, until it must have seemed to them that the whole earth was being moved.

And when it was decided that valuable shipping space could not be spared for necessary construction lumber, it was these Engineers who pushed into the jungles, felled trees, and set up a modern sawmill which has been quickly transforming New Guinea palms and other trees, into neat piles of lumber.

Equipped before leaving the States with the latest and heaviest engineering equipment, these men quickly learned how to operate and coordinate it expertly so as to accomplish the maximum. Their shovels alone scoop up 1,500 pounds of earth in one operation. Their heavy bulldozers weigh 22 tons, and the tractor-drawn carryalls will gouge out 30,000 pounds at a time. With their heavy ditch-diggers, road rollers, cranes, road-scrapers, concrete mixers, and air compressed machinery, moving mountains becomes not an impossibility, but a daily job.

Other than Chaplain (Captain) Albert L. Smith of New York City, there are no Negro officers in the outfit, though one or two have come and gone.

The relationship between the officers and men has been summed up as follows by the Commanding Officer, Lieutenant Colonel W.J.W. Winter, of Iowa City, Iowa: "We all are one team with one job to do, to get this war over with as quickly as possible. I am thoroughly proud of the contribution that the 97th has made to this job, and will not tolerate for one minute any officer, or non-commissioned officer for that matter, who fails to treat the men with the respect and dignity due a soldier who is offering his life for his country, his home, and his fireside."

MORE

The colonel gives great credit to the key non-commissioned officers upon whom much responsibility rests. Administration is capably headed by Master Sergeant Otho Freeman, Regimental Sergeant Major, of New Orleans, Louisiana, and Technical Sergeant Anthony Baldwin, Personnel Sergeant Major, of Corona, Long Island. Regimental supply is headed by Master Sergeant Edward Allen, of Savannah, Georgia, while Staff Sergeant Lionel Martin, of Ithaca, New York, heads the Medical Detachment. Two of the most important jobs are those of Construction Supervisor and Regimental Motor Sergeant, handled by Master Sergeants Carroll P. Boswell and George E. Spriggs, of Newport and Chester, Pennsylvania, respectively. First Sergeants of the various companies are O.M. Hill, of Chattanooga, Tennessee, Clifton B. Monk, of Wilmington, North Carolina, Thurkiel Graham, of Gaffney, South Carolina, James Ward, of New York City, Willie Hansom, of Buffalo, New York, Augustus Chandler, of Chicago, Illinois, and Noah Williams, of Brooklyn, New York.

NIPS ARE NO "SLOUCHES,"
DOUGHBOY FROM 93RD AVERS

LETTERMAN GENERAL HOSPITAL, SAN FRANCISCO, California---Wounded during a skirmish in which his 93rd Infantry Division patrol killed five Japs on a jungle trail, Private Lamond Jackson, 31, of 4473 Enright Avenue, St. Louis, Missouri, has been returned to the United States after more than two years in the Pacific.

The Doughboy rifleman, whose wife, Mrs. Patsy Jackson, lives at the above address, was en route to Winter General Hospital, Topeka, Kansas, for treatment, when interviewed at Letterman General Hospital, San Francisco, California.

"We had waited one day to ambush Japs we knew were visiting a shack in the hills for food," he related. "I was up there the second day, with a 15-man patrol, when we caught them. We killed five before the rest of them got away from us, but one of them put a rifle bullet through my right hand."

Private Jackson first fought the Japs in March 1943, early in the Solomons campaign, and later saw months of action on Bougainville, where the Negro Infantry Division helped immobilize thousands of enemy troops.

"Although we had good training and a lot of it," he said, "we learned things from battle and we learned them fast. The Japs are no slouches at jungle fighting, and we had to be better than they were.

"They had a good set-up of pillboxes and positions, too. One of our toughest fights, taking Hill 75, was not long after we got to Bougainville. We were a whole week digging them out of their holes on that one hill."

Seldom seen in the daytime unless they attacked, the Japs used the cover of night for most of their fighting, he said.

"Their favorite trick," he declared, "was trying to sneak a few men into our perimeter with grenades at night. We always had to watch for that.

"I remember one night when a Jap officer and a Jap soldier were almost up to our foxhole before my buddy and I spotted them just in time and shot them."

Before entering the service in June 1941, Private Jackson was employed by an electrical appliance sales store in St. Louis. He received his basic training at Fort Huachuca, Arizona, with the Infantry Regiment in which he went overseas in January 1943, as part of the 93rd Infantry Division.

In addition to the Purple Heart, he has the Combat Infantryman Badge, awarded for exemplary conduct in action against the enemy.

He is the son of Mr. and Mrs. Golden Jackson, of 4032 Finney Avenue, St. Louis.

WOUNDED VETS TELL HOW
92ND TOOK "HILL ALASKA"

McGUIRE GENERAL HOSPITAL, RICHMOND, Virginia—Two battle-scarred veterans, one a doughfoot and the other an artilleryman, shook hands today at McGuire General Hospital in Richmond and said "Thanks" to each other in a way that only men who have faced death together can—and therein lies another story of the bitter struggle of the 92nd (Negro) Infantry Division to crack the Gothic Line in Italy.

Early on the morning of December 5, 1944, B Company of the 366th Infantry Regiment of the 92nd Division was ordered to take "Hill Alaska."

Infantry Sergeant Waften Stewart of 1159 James Street, Newark, New Jersey, had orders to take his communications section along and maintain radio connections with Battalion Headquarters so that the forward movements of the platoons could be coordinated.

B Company jumped off at 0400. At 0405 the men of B Company had reached the foot of the hill without incident. At 0410 they were half way up the hill--then the earth exploded.

The Germans struck with burp guns, machineguns and mortars, and the casualties skyrocketed. Something had to be done in a hurry.

Sergeant Stewart and his radio crew knew just what to do. They got their radios to working and called back for artillery. A mortar shell landed a few feet from Stewart, the concussion twisting his leg out of place. Shrapnel tore through his right arm. Both radios went dead. B Company was cut off from Battalion Headquarters.

Then began the longest sweat of the young infantryman's career. Unmindful of his wounds, he lay there praying that that last call for artillery had been received before the radios went dead; he knew it was life's only hope.

The years ticked by. Actually it was only a matter of seconds. Meanwhile, back at Headquarters the call had been received and B Battery of the 598th Field Artillery, which stood ready and willing with its 105s, was given the mission.

The rest of the story is a matter of bloody record. Encouraged by the murderous fire of the guns of the 598th, B Company renewed the attack on "Hill Alaska" and pressed the fight until it was taken.

Despite his wounds, Sergeant Stewart stayed in the fight. It was a time for bravery. Captain Charles F. Gandy of Washington, D.C., whose story has been told before, won his Silver Star that day. Private Steve Gibson, runner for Sergeant Stewart's Comminications Section, started out to Headquarters in a vain attempt to reestablish connections with them but he went down with bullets in both legs. Men died that day on every part of "Hill Alaska."

At McGuire Hospital where they are both convalescing, Sergeant Stewart, who lives at 1318 8th Street, South Philadelphia, Pennsylvania, gripped the hand of artilleryman Walter C. Clark of B Battery of the 598th Field Artillery, and said, "It sure was nice having your outfit backing us up over there."

Returning the compliment, Sergeant Clark, of 1422 C Street, S.E., Washington, D.C., said, "It's a good feeling to the Artillerymen to know that companies like yours are up there in front of them, too." Sergeant Clark was wounded near Lucca when a German shell landed near him while he was on a reconnaissance mission.

Both men are wearers of the Purple Heart and the ETO Campaign Ribbons with appropriate Battle Stars. In addition, Sergeant Stewart has been awarded the Combat Infantryman Badge and the Expert Infantryman Badge.

QUARTERMASTERS COMMENDED
FOR CAPTURE OF 40 NAZIS

WASHINGTON, D.C.---A special commendation from Third Army Headquarters in Europe has been given the 4404th Quartermaster Service Company, a Negro unit, for its capture of 40 German paratroopers during the Nazi breakthrough in Belgium last December.

Since landing in France in mid-July of 1944, members of the 4404th have seen their share of action. They have fully lived up to the tradition of their branch of the service, demonstrating capability to fight as well as to provide supplies.

In addition to their regular duties of providing necessary supplies to combat troops, members of the 4404th have served as stretcher bearers at an evacuation hospital, and have carried out many other assignments not ordinarily expected of a Quartermaster Corps service company.

The company crossed the Rhine recently with an armored unit and at last reports was not far behind advance units heading across Germany.

Last December the Germans dropped paratroopers in great numbers in the vicinity of the 4404th. With many civilians and several Army units in the area it was difficult to determine identity of either friend or foe.

One of the 4404th's men, a native of Brooklyn, captured two of the paratroopers when he noticed German boots sticking out of GI trousers worn by the Nazis in their disguise as American troops. "My feet had been bothering me, and I reckon I must have been foot conscious," the Brooklyn GI said in explaining how he happened to notice the Germans' footgear. "I knew then that I had me a couple of prisoners," he added.

GIs WOUNDED AT REMAGEN
RECOVERING IN ENGLAND

HEADQUARTERS, UNITED KINGDOM BASE---Wounded in action at the Remagen bridgehead, Private James E. Patton of 5543 Prairie Avenue, Chicago, Illinois, and Private First Class Clearmoneas Jackson of 153 Christian Street, Shreveport, Louisiana, are now recovering at United States General Hospitals in England.

Private Patton, a rifleman, was hit by shell fragments while crossing mountainous terrain under heavy artillery fire. Wounded in the thigh, he walked back to his battalion command post after receiving first aid from a company aid man. He is convalescing at the 93rd General Hospital.

Jackson, a patient at the 68th General Hospital, was wounded first by shell fragments and then twice by machinegun fire before he was put out of action.

"The day I was hit we had just overrun a village and it was necessary to take the high ground overlooking the village," he said. "We started up the hill, meeting machinegun and rifle fire. All of a sudden, a huge barrage of shells came over and fragments from one hit me in the ear, but I kept going."

"We came to a clearing where only two or three of us could cross at a time because a Jerry machinegun was spraying the field. While a few of us crossed, the others kept the machinegunner busy. I was the last one to cross, so there was no cover for me. I managed to get almost to the other side before I was hit in the leg by a machinegun bullet. As I fell, I was hit again in the arm. I dragged myself the rest of the way across the field and was given first aid."

Private First Class Jackson is the husband of Mrs. Esque Jackson of the Christian Street address and the son of Mr. and Mrs. Willis Jackson of Alemeda, California.

MORE

Patton's wife, Mrs. Aretha Patton, lives with her parents, Mr. and Mrs. Julius Byers, of 905 Muller Street, Gainesville, Texas.

Both men are wearers of the Purple Heart.

UNITS SHARE ASSIGNMENTS
FROM ALASKA TO GERMANY

WITH U.S. FORCES IN BELGIUM---Adverse climatic conditions and difficult terrain have ceased to be problems for the 95th and 341st Engineer General Service Regiments, Advance Section, Communications Zone. These two veteran units have worked on assignments from the Alcan (Alaska) Highway to the Rhine and beyond.

After becoming separated upon leaving Alaska, the 95th and 341st met again last July in Normandy where they matched efforts in the repair of the peninsula's shell-torn roads.

Later, during the breakthrough at Bastogne in Belgium, they were united in an Engineer Group for the purpose of repairing bridges and railroad tracks to make possible the drive of U.S. Armies through France, Belgium and Germany.

The 95th, commanded by Colonel Edward J. Finnell, Tuscaloosa, Alabama, is one of the oldest Negro Engineer General Service Regiments in the Army. It was activated April 15, 1941, at Fort Belvoir, Virginia. The 341st is composed of white personnel.

* * * * * * * *

NEGRO TROOPS BUILD,
GUARD POW STOCKADE

WITH U.S. FORCES IN FRANCE---A prisoner of war camp large enough to accommodate 20,000 captured Germans has been erected by Company E of the 1313th Engineer Regiment, stationed in the Oise Section, Communications Zone, France.

Captain George B. Cropper, of Ocean City, Maryland, is commanding officer of the company which has been adjudged the best construction company in the regiment by Colonel John H. Carruth, commanding officer.

A detail from the company guards this immense area, where German soldiers captured during the lightning advance of the American Army through France are detained.

Among members of the company are the following:

ALABAMA: Lafayette--Pvt. B. T. Jackson, Route 4.

GEORGIA: Groveland--Staff Sgt. Joseph N. Stephens; Savannah--Staff Sgt. Carl A. Kemp, Route 3.

MICHIGAN: Detroit--Staff Sgt. Roland Pugh, 528 Leichester St.

NEW JERSEY: Long Branche--Cpl. Joel B. Daniels, 199 Monmouth Ave.

NEW YORK: Brooklyn--Cpl. George Savage, 309 Halsey St.

OHIO: Springfield--Staff Sgt. Marvin Anderson, 255 Johnson Ave.

PENNSYLVANIA: Philadelphia--Pvt. George F. Dorsey, 3813 Powelton Ave.; Cpl. Norman Penn, 3829 N. 17th St.

RETURNEE WAS SWAMPED
IN ITALY--WITH SHOES

ATLANTIC CITY, New Jersey---Civilians finding it hard to get one pair of shoes have the sympathy of Sergeant Ambrose Lyles, of 63 L Street, N.W., Washington, D.C., an AAF supply sergeant from Italy, who has handled a lot of shoes.

It was the returnee's job to keep nearly a thousand men of the 332nd Fighter Group well supplied with foot wear on jobs in a climate that was particularly hard on leather.

"Shoes were my most important and hardest item of clothing to get, with trousers ranking a close second," said the sergeant. "I kept getting worn out brogues repaired until it was virtually impossible to fix them before I'd let the men turn them in for salvage. It took only two weeks to fix a pair but we had to wait a month or more for a new pair to come through."

Sergeant Lyles said that he had his greatest difficulty keeping the men's foot gear in condition during November, December and January, the three rainy months in Italy.

Now at AAF Redistribution Station No. 1 for reassignment, the sergeant spent 15 months in Italy. He entered the service in February 1942 and was sent overseas in January 1944, after receiving training at McKay Field, Mississippi.

* * * * * * * *

COMPLETES COACHING COURSE
IN MEDITERRANEAN THEATER

ALLIED FORCE HEADQUARTERS, Italy---First Lieutenant Leonard M. Jordan, former Knoxville (Tennessee) College basketball player, recently completed a course in coaching at the central sports school sponsored by Special Services, Mediterranean Theater of Operations.

Lieutenant Jordan is the husband of Mrs. Maureen I. Jordan, 1312 Dora Street, Knoxville, Tennessee, and son of Mr. Frank Jordan, 4618 Evans Avenue, Chicago, Illinois. He is a platoon leader with the 371st Infantry Regiment of the 92nd Division.

Students attending the sports school will serve as instructors and coaches in a post-war athletic program for soldiers. Classes are held in gymnasiums and stadiums once used by Mussolini to train Fascist troops. Immediately upon completion of the course, men are returned to their outfits to begin expansion of unit athletic programs.

* * * * * * * *

ARMY BAKERY TURNS OUT
14 TONS OF BREAD DAILY

WITH U.S. FORCES IN FRANCE---The 4362nd Quartermaster Baking Company, one of many serving overseas troops, operates day and night to bake more than 14 tons of bread every 24 hours for American Army messes in a Communications Zone district in France. Since last fall, the company has turned out more than 2,500,000 pounds of bread.

The bakery machinery used by the company is of British manufacture, and is entirely movile, with ovens, automatic mixers, dough dividers and rounders mounted on trailers. The unit can pull its convoy off the road and within 8 hours have the first loaves of bread ready for delivery. Power is furnished by the unit's own electric generators and engines.

MORE

Captain John J. Gallen, of Cathedral Mansions, Pittsburgh, Pa., commander of the unit, was employed by the National Biscuit Company before entering the service.

Men working in the bakery are:

ALABAMA: Birmingham--Staff Sgt. Willie E. McCracken, 913 North 31st St.; Castelberry--Pfc. Hood L. Betts, Route 1; Decatur--Pfc. Nathaniel Pleasant, 913 West McCarthey St.; Demopolis--Pvt. Jack Lawson, 303 Monroe St.; Montgomery--Pfc. Willie Larkins, 20 Harriet St.; Newbern--Pfc. Nathaniel Norfleet, Route 1.

ARKANSAS: Hot Springs--Pvt. George Hightower, 420 Church St.; Lake Village--Pfc. Willie Williams.

CALIFORNIA: Richmond--Sgt. Charles Bradshaw, 5019 State St.

DELAWARE: Harrington--Pvt. Hallie E. Coleman, Jr., 113 W. Mispillion St.

DISTRICT OF COLUMBIA: Washington--Pfc. Louis L. Nutt, 200 Irving St., N.W. Pvt. Emanuel Watson, 1823 Vermont Ave., N.W.; Cpl. William H. Turner, 503 G St. N.E.

FLORIDA: Crystal River--Cpl. Chester Scriven; Orlando--Cpl. Walter G. Orr, 707 S. Division St.; Pvt. Theodore Boyd, 817 Long St.

GEORGIA: Augusta--Cpl. D. Stallings, 507 Houston St.; Watkinsville--Pfc. Joseph Johnson, Route 2.

ILLINOIS: Chicago--Pfc. John B. Miles, 704 W. Maypole Ave.; Murphysboro--Cpl. Curtis Davis, 106 S. 4th St.

INDIANA: Muncie--Staff Sgt. Theodore H. Phillips, 1824 E. Highland Ave.

KANSAS: Garden City--Tech. Sgt. Marcellious Gladney, 709 Ida St.

LOUISIANA: Dodson--Pfc. William M. Copeland, Route 1.

MARYLAND: Baltimore--Pvt. Ellwood T. Harris, 518 W. Lee St.; Pfc. Albert R. Saunders, 422 N. Poppleton St.; Cpl. William P. Valentine, 1633 Booker Court; Cpl. Joseph L. Bell, 1317 N. Stockton St.; Frederick--Pvt. John S. Palmer, 122 East St.; Sykesville--Cpl. Earl A. Norris.

THREE VETERANS HOME;
DID STINT IN LIBERIA

MIAMI ARMY AIR FIELD, MIAMI, Florida---A trio of Negro veterans, two with three years' overseas service behind them, today had cleared Air Transport Command's Miami Army Air Field and were en route to their homes on furlough.

Members of an Aviation Engineer Company, they were flown here from Liberia in an ocean-spanning ATC plane.

The two three-year men were Sergeant Felton L. Thomas, 27, 488 Putman Avenue, Brooklyn, New York, and Sergeant Luther Woodard, 24, Bailey, North Carolina.

The junior member of the trio in point of overseas service, Technician Fourth Grade Harry Friedman, 23, Esmont, Virginia, said he thought he'd done pretty well, too, since he was overseas more than two years, 28 months to be exact.

Sergeant Thomas is the son of Mrs. Sarah F. Thomas, 233 Burron Street, Pittsburgh. His wife, Mrs. Mary E. Thomas resides at the Putnam Avenue address.

Sergeant Woodard's mother, Mrs. Mary Woodard, is a resident of Bailey.

Friedman, a student before he entered the service, is the son of Mrs. Katherine E. Friedman of Esmont.

FOR RELEASE FRIDAY, MAY 11, 1945

* * * *

Moving about in Jap territory in the daytime is a risky operation, with the enemy holding every advantage. There was a real danger of ambush this morning on the narrow trail down which the patrol drove, but a thorough search of the underbrush was possible only in daylight.

The men rode in the truck until they reached the first Jap bivouac area. It was surprisingly close to our outposts. There was a cluster of wooden buildings which the Japs apparently had been using as a point from which to observe our movements. The buildings had been practically destroyed, probably during the fighting when the island was first "secured," but their frames of hand-hewn timbers had withstood even our flame throwers.

Although it was doubtful that the Japs would remain close to our positions in daylight hours, security had to be maintained every minute on the patrol. Lt. Sprouce sent Ross and a few other men out to search the undergrowth.

At the side of one of the skeleton buildings the Japs had recently built a crude lean-to with a thatch roof, capable of keeping them dry in the worst weather and providing cover for their little fires. Just in front of the lean-to the men found a large cistern. Sgt. Charles Blackwell of Anniston, Ala., the demolition man in the squad, was left with a guard to blow up the cistern. The rest of the patrol moved into the building.

At the entrance Cpl. Frank Wright of Montgomery, Ala, found two dead Jap soldiers wearing GI leggings and shoes. They evidently had not been dead many days, for their skins had not begun to decompose. There were indications that other Japs had been living in the building while the bodies lay at the doorway, and it was possible that the bodies had been booby-trapped. No one touched them.

In the area the men also found a chicken coop made from a 50-gallon GI gas can cut in half, with a strip of chicken wire in front of it. Inside a hen was sitting on 15 eggs.

When the men on security reported no Japs hiding in the vicinity, Lt. Sprouce ordered gasoline poured over the thatch lean-to and lighted. Though it had been raining almost steadily for a week, the thatch caught fire instantly. But the timbered frameworks refused to be destroyed. Pfc. Luther Walker of McKamie, Ark., tried without success to knock down some of the corner posts with a sledge hammer, and the patrol had to move on and leave the job for later.

Since the trail was wide, the men continued in the truck. They passed the site of a building which already had been destroyed and kept going until they reached a small Shinto shrine at the side of the road. Here the lieutenant had the truck halted and everybody climbed out.

The trees and shrubs bordering the trail were so thick at this point that it was impossible to see more than a few hundred yards into the underbrush. But the lieutenant had a map which showed a building of some sort just above on the rise to the right. Pfc. Joe Scale of New York City first made a search of the hillside to the left, and when he had reported all clear the patrol began moving through the trees toward the point indicated on the map. Lt. Sprouce and Ross led the way, with Cpl. Roosevelt Brown of Memphis, Tenn., the radio operator, just behind. For the moment the patrol was cut off from contact with headquarters. Cpl. Brown tried to raise the radio man back at the OP, but the portable radio wasn't powerful enough to reach over the ridge and through the dense woods. The men spaced five yards apart moved quickly, hoping to finish the job in a hurry and get back into an open area where the radio again could make contact. The OP was reporting a lot of movement among bushes which could not be seen by the patrol.

The objective shown on the map turned out to be a frame shack and a thatch lean-to. There weren't many signs that the Japs had been using the spot recently, although some breadfruit and potatoes were scattered about.

MORE

At the rear of the shelter there were some empty C-ration and K-ration cases and many strands of wire, indicating that this may have once been an American CP.

The lean-to was set afire, and no sooner had it begun to burn than a supply of small-arms ammo, which was hidden in the thatch, began to explode. There was a mad scramble to get out of the area, and on reaching a clearing Brown managed to radio back to the OP again.

Security was called in and the patrol moved on once more. The road led down a hill, and the men proceeded on foot, searching every yard on each side of the road carefully, with the weapons carrier following at a safe distance. With the explosion of the ammunition, it was impossible for Japs in the area to be unaware of the patrol's presence, and the men were alert for an ambush.

The next bivouac area showed signs of having been abandoned this morning, possibly only a few minutes before the patrol arrived. A fire had been recently laid. On a little shelf just behind the fireplace were the shells of about a dozen eggs and on the ground nearby was a can of American coffee. Behind the buildings another cistern was found. Blackwell used two pounds of TNT in an attempt to destroy it, but the concrete didn't even crack.

Just beyond a thatch hut appeared the final objective, another group of buildings. Since it was apparent that the Japs were nearby, the truck remained behind, with Pfc. James Colbert of Newellton, La., as guard. This was not the safest job, for the Japs would attack the truck first. Ross, who was leading the patrol, reached the buildings first and immediately noticed in the soft rain-soaked earth the footprints of at least 10 persons. The Japs had made no attempt to disguise the direction in which they had fled. The path led directly to a sharp cliff on the side of a high ridge.

The patrol formed a skirmish line and started toward the cliff, the scouts moving out ahead. It was abnormally quiet. No one dared make any noise even though the Japs certainly knew of the patrol's movements. The ridge loomed up menacingly. The Japs were in a wonderful defensive position--a couple of grenades from the heights could have wiped out the entire patrol.

Suddenly the air was full of smells. Hiding in the woods for months, the Japs hadn't had a chance to take any baths. At the very base of the cliff the men came to a large bivouac area built around a huge shoulder of rock. Caves had been dug into the rock, and in these the Japs had been doing their cooking. Some of the fires were still hot, though they had been hurriedly covered with dirt and rocks.

The Japs were well stocked. Fresh coffee, rice, water, canned fish and meat and fresh vegetables were found in quantity. Some of the food was American, but most of the supplies must have come from gardens in the area which the Japs apparently cultivated at night. There were also blankets and articles of clothing.

It was getting late. Before leaving, the men destroyed all the food and equipment. That night the mortars zeroed in on the targets the patrol had marked with fires. The next day the cannon company fired hundreds of shells into the area.

Other men on the patrol were Pfcs. Eddie P. Stile of West Point, Miss., and Charles Jackson of Phoenix, Ariz., who went as aid men, and Staff Sgt. George McNeal of Edwards, Miss.

Although the patrol did not make actual contact with the enemy, the Japs were undoubtedly hard hit by the mission.

MORE

The 24th Infantry's mopping-up operations are being aided by a propaganda campaign conducted by the language section of G-2, using leaflets and broadcasts from portable loudspeakers. Between February 14 and March 3 of this year, 58 Jap soldiers and 86 civilians have been induced to come out of hiding and surrender.

The loudspeakers are usually set up on high ground overlooking the caves and underbrush where Japs are known to be lurking. Every half hour, for four or five hours at a time, a spoken appeal in the Japanese language is made over the loudspeaker. Before and after each speech, recordings of Jap folk songs and children's songs are played. This music is chosen to make the listeners homesick.

The spoken appeal is made by Cpl. "Ike" Miyamoto of Honolulu, a member of a 10-man language team. Miyamoto never uses the word "surrender." His tone is reassuring, and his spiel runs something like this:

"Hello, hello. This is your friend speaking. Did you hear the music just played? Wasn't it sweet? Weren't they beautiful songs? I am sure the songs brought back memories of home. I have a message for those of you who are still hiding in the mountains. We want to help care for the wounded and sick. We are especially anxious to see that the women and children are brought out to safety.... Those who have already come out of the mountains are being treated well. They are well satisfied and very happy to be with their friends in the camp and the stockade.... There is plenty of good food, cigarettes and candy...." Then directions are given on how the fugitives may turn themselves in.

Several individuals who surrendered after listening to such broadcasts have volunteered to return to the hills and bring back their friends. One who was sent back with cigarettes and candy showed up the next morning with 14 civilians in tow, among them two women and three children. Another, a soldier, made two trips into the hills. Each time he came back with a group. In one of these were an infantry lieutenant and five other soldiers.

It is believed that Jap resistance on Saipan is led by a little fellow who stands about 5 feet 5 and weighs around 130 pounds. He wears a U.S. khaki uniform, leather leggings and a Jap officer's cap and carries a type-94 Jap automatic pistol with a white tassel tied to the holster. Most of his followers are said to fear him as much as they do the Americans, and he apparently maintains his control over them by a mixture of threats and promises.

Early this year he promised his followers that on February 11, which was Empire Day (Kigen Setsu), the Jap fleet would sail into Saipan's harbor and drive the Americans away. On that day a U.S. fleet of some 800 ships arrived off Saipan on its way to Iwo Jima. The "boss" lost a lot of prestige on February 11.

DESPITE THEIR THINNING RANKS
DOUGHS HELD THE LINE IN ITALY

McGUIRE GENERAL HOSPITAL, Richmond, Virginia---When First Lieutenant James H. Edwards was a junior at Baltimore's Morgan College back in 1937, he could clip off a hundred yards in ten seconds flat, but today, at McGuire General Hospital in Richmond, he lay in his bed and told how it took him over five hours to go less than 200 yards in Italy. What's more, he feels that under the circumstances he was traveling pretty fast at that.

A platoon leader in Company K of the 366th Infantry Regiment of the 92nd Infantry Division in Italy, Lieutenant Edwards left his Command Post about noon one day to go out and sketch a mine field freshly laid by his men.

It was a particularly dangerous mission for the mine fields sprawled in plain view of Jerry lines. Nevertheless, the area had to be sketched and the lieutenant was not exactly a new hand at dangerous assignments, having fought his way from the Arno River up to the Gothic Line. So out he went with his sketch pad. But he'll have to tell what happened:

"I completed my sketching without drawing fire and returned to a group of my men who were waiting near an old shack on the edge of the woods where we had a large ammo dump," the lieutenant began.

"It was damn cold and I had just sat down inside the shack to take off my combat boots and warm my feet when the Germans let go with their 88s.

"They had the range alright for the first shell tore away half the joint and a piece of shell got me in the chest.

"Knowing that if a shell landed in that bazooka ammunition we had stored in the shack all of us would be killed, I ordered the sergeant to get all the men out and away from the house as quickly as possible.

"The sergeant ushered the men out but three of them hung around and started over to where I was. I couldn't move but I again ordered them to withdraw without me. It was going to be tough enough for them to escape alone, to say nothing of trying to carry a 170-pound wounded man like me.

"I had written myself off the list. I figured Jerry would hit that 1,000 rounds of 'zooka ammunition with his next shot and the shack and I would go to 'Kingdom Come' together.

"Private First Class Green Smith, Sergeant Johnny Tyler, and Sergeant Neil Gordon picked me up and carried me with them through that murderous open space between the house and the woods. I don't know how we made it but we did. Then they started crawling and dragging me through the woods to Battalion Headquarters which was only a few hundred yards away.

"After we had gone about 100 yards, we came to a point where it was impossible to go farther without exposing ourselves because there was a small bare hill which we had to cross in order to get to the CP. I've seen Jerry fire four of their big 88s at one man. The men stopped and went into a huddle as to how they were going to get me across that open area.

"Private First Class Smith, who weighed 200 pounds, had a solution. He yelled, 'Hell, I'll pick him up and run across that hill,' and as he spoke, he picked me up like I was a baby and charged over that hill standing up in full view of those 88s.

"Once over the hill, they began crawling again and when we arrived near our Headquarters aid men came and got me. By this time it was seven o'clock. It had taken over five hours for us to cover that 200 yards.

"That's a grand bunch of guys in the 92nd Division. They are used to having it tough. I can remember a time about four miles south of Massa when

MORE

my battalion had only 300 men holding 2,200 yards of area that stretched from the Ligurian Line eastward all the way to Highway Number One. Our line was so thin that in my platoon I had to put my mortars up in the line beside the riflemen because most of my light machinegunners had been called back to Headquarters to operate heavy machineguns.

"But they held that line," the lieutenant concluded.

Wearer of the Purple Heart and the Combat Infantryman Badge, Lieutenant Edwards is the father of two children, Delbert, aged 9, and Diana, aged 3, who live with his wife, Mrs. Louise P. Edwards, at 2306 Madison Avenue, Baltimore, Maryland.

Inducted in September 1941, he received his commission in September of the following year and after completing two courses at the First Army's Tactical School at Surbridge, Massachusetts, he sailed overseas in March 1944.

GI BLOWN FROM FOXHOLE
BY MORTAR SHELL IN ITALY

McGUIRE GENERAL HOSPITAL, Richmond, Virginia---Although he is still waiting for his twenty-first birthday, big, husky Private Elbert Walker, 31 Elwood Avenue, Montclair, New Jersey, has been wounded twice in action against the Germans in Italy. In addition to the cluster on his Purple Heart ribbon, he wears the Combat Infantryman Badge.

Convalescing from his wounds at McGuire General Hospital, the youthful infantryman told how he had been first wounded in the knee on October 3, 1944, when he was hit by a German bullet while on a daylight patrol mission with the 92nd Infantry Division.

Going back into the fight as soon as he was released from the hospital, Walker was wounded again on October 29 when a German mortar struck a tree just in front of his foxhole.

"That was the one that almost got me," he said.

"I was a member of the 507th Reconnaissance Company when we jumped off to attack Vagrant Hill in Italy.

"Between our position and Vagrant Hill was another unoccupied hill, so we were told. Our orders were to cross the valley, surmount the other hill and dig in at the foot of Vagrant Hill for the attack.

"However, just as we reached the slope of the hill that was supposed to be unoccupied, the Jerries hit us with terrific mortar fire. I dug in as fast as I could but just as soon as I got my hole deep enough, a mortar shell hit a tree about a yard away."

Walker, who weighs well over two hundred pounds, was literally blown from his foxhole. Shell fragments cut through his helmet, penetrated his skull and slashed his left hand. First Aid men, faithful followers of the infantry, dragged Walker back up the hill to safety.

The son of Mrs. Hattie Mae Wright of the Montclair address, Walker was returned to the United States in March. He was in school at the time of his induction in February 1942.

CONTRIBUTIONS BY NEGRO GIs
TO ALLIED SUPPLY SPED VICTORY

WITH U.S. FORCES ON THE WESTERN FRONT---Negro and white soldiers worked side by side in staff sections and among the troops of the Army's latest heavy trucking network which supplied the materials of victory to spearheads plunging toward Berlin.

MORE

The Highway Transport Divisions, initiated March 24 to replace the ABC road cargo system transporting supplies and equipment from Antwerp to the Belgian, Luxembourg, western France, and Rhine areas, have been carrying their 10-ton loads across the Rhine and as much as 200 miles into the heart of Germany, delivering 16,000 to 18,000 tons a day, plus thousands of gallons of gasoline and oil, to the American Armies. Autobahns (super highways) speed them.

In the absence of total figures, it may be said that one outfit—the 467th Quartermaster Truck Battalion--hauled 15,000,000 gallons of gasoline and oil in the Rhine area during March. On a sample day--April 9--all the Highway Transport Divisions delivered a total of 1,692,050 gallons, about 20 percent more than their original estimated capacity, in addition to the tonnage of ammunition, weapons, clothing, rations, and other solid materials. On return trips from forward depots, the trucks carry as many prisoners as they can hold, in addition to the empty gas cans. On April 9, for example, the division serving the Third Army removed 13,460 prisoners cluttering the combat outfits behind the front.

When General of the Army Dwight D. Eisenhower, Supreme Commander, Allied Expeditionary Forces, declared at a recent briefing that supply of his Armies would determine the speed of victory, he referred to the various means of transporting vital materials as armored spearheads smashed at record speed ahead of the service elements. And in this supply establishment, which includes trucks, boats, planes, pipe lines, and railroads, Negroes have had a vital role.

In the Highway Transport Division are many Negro truck companies and battalion headquarter units, and one Negro-staffed group headquarters. This group is the 470th Quartermaster Group (Transportation Corps), with catch-as-catch-can headquarters somewhere well within Germany.

At this headquarters, the bullets and beans acquire specific destinations; the maintenance of trucks is checked; the types of load are analyzed; and convoys dispatched from companies are recorded. This is the transmission that keeps the wheels rolling smoothly, so that combat troops of the Ninth Army do not lack food, clothing, ammunition, or fuel for their armored steeds.

In the operations section, reports of tonnage and use of the vehicles, as well as schedules of training for the staff personnel, are planned and evaluated by men like Staff Sergeant Oliver O. Gaines, 24, of 324 West 21st Street, Indianapolis, Indiana, and Staff Sergeant Herman Baxter, 25, of 1520 Adams Street, Cincinnati, Ohio. They do their work on German stationery with headings like "Die Deutsche Arbeitsfront"--an ironic letterhead of the German "Work Front." It helps to save American paper stocks.

The group headquarters also depends on men like Corporal Robert Temple, 20, of 2670 East 4th Street, Detroit, Michigan, a clerk who fills in as substitute switchboard operator for Private Frank Hooks, 20, of 3815 Pennsylvania Avenue, East Chicago, Indiana, regular operator.

These men know well the need of other soldiers for the supplies being transported by their units. Sergeant Baxter has two brothers who are non-commissioned officers at other stations: Corporal Temple's brother, Robert, is a tank gunner in the Third Army, while another brother, Jasper, is in the Army, too.

Supervising the work of these men is the sergeant major, Master Sergeant William I. Randolph, 26, of 1526 North Arsenal Avenue, Indianapolis, Indiana, formerly an employee of the Indiana Bell Telephone System on Meridian Street, Indianapolis.

The staff's non-operational duties are under the management of the top-kick of the headquarters detachment, First Sergeant James M. O'Neal, 25, of 36 Pleasant Way, Montclair, New Jersey, who takes great pride in his outfit.

MORE

"They're the finest bunch of fellows in the ETO," he says, "claiming a record of three superior grades in four inspections of the men and their quarters, and only one case of venereal disease in two years."

* * * * * * * *

SOLDIER'S MEDAL TO PRIVATE
FOR RESCUE IN NEW HEBRIDES

WITH U.S. ARMY FORCES IN THE NEW HEBRIDES---Private First Class Robert S. Gibson, Quartermaster Corps, U.S. Army, has been awarded the Soldier's Medal for heroism in rescue work in the New Hebrides.

While crossing a local river with servicemen, the boat carrying the group capsized and sank, throwing all personnel into the water. One of the men who was unable to swim became excited, seized another man around the neck, causing both to sink beneath the surface and endangering both their lives. Gibson unhesitatingly rushed into the swiftly flowing river and swam to the spot where the men had submerged.

He brought one man to the surface and towed him ashore, thereby saving his life. He courageously returned to the spot and kept diving until exhausted but was unable to locate the other men.

The Soldier's Medal was presented to Private Gibson by Commodore Howard B. McCleary, United States Navy, in an award ceremony which preceded a review of troops at this island base.

The recipient of the award is the brother of Mrs. Florence Braithwaite, 301 West 113th Street, New York City.

NEGROES FORM VITAL LINK
IN CHEMICAL WARFARE WORK

WASHINGTON, D. C.---The successful use of smoke screens to hide important ports from air attack and to cover river crossings and other troop movements, thereby helping to reduce American casualties, is due in no small measure to trained and efficient Negro troops of the Chemical Warfare Service who operate mechanical smoke generators, the War Department announced today. Sixteen CWS Smoke Generator Companies have Negro personnel.

Various other chemical companies, originally organized for specialized work in event of gas warfare, are meanwhile performing a variety of duties useful and applicable to current needs. The list of Negro units in this category includes five Chemical Decontamination Companies, two Chemical Processing Companies, and two Chemical Service Companies spread out around the world.

One of these outfits won a Clasp to the Fifth Army Plaque for providing a protective smoke screen in Italy. More than four-fifths of the men of this company were on the job nightly for an entire month in maintaining 38 mechanical smoke generators and thousands of smoke pots at 100 different firing points.

On the other side of the world, a Chemical Processing Company was awarded a Meritoricus Service Unit Plaque "for superior performance of duty, and the achievement and maintenance of a high standard of professional and military proficiency.

While there are no Negro Chemical Mortar Battalions, the CWS has one crack Negro Mortar Company which is highly proficient in operating the "goon gun" (4.2-inch rifled chemical mortar) which fires 25-pound shells of white phosphorus or high explosive with remarkable accuracy.

12 VETERANS FURLOUGH-BOUND
AFTER TOURS OF DUTY IN AFRICA

MIAMI ARMY AIR FIELD, Miami, Florida---Mrs. Henrietta Washington can get out the red plush carpet at 2716 Randolph Street, St. Louis, Missouri, because her son is headed home after nearly three years overseas.

Flown here trans-ocean from Africa along with eleven other veterans, her soldier son, Sergeant Eli Washington, 32, today had cleared Air Transport Command's Miami Army Air Field en route home on furlough.

A stone-mason before he donned Uncle Sam's khaki, Sergeant Washington wears a Good Conduct ribbon as well as an Africa-Middle East Theater bar. He was overseas 34 months.

Two of the other furlough-bound veterans, Technicians Fourth Class in the Medical Corps who served together 35 months in a station hospital, were John L. Wright, 25, 1013 Summer Street, Augusta, Georgia, and Eugene Kitrell 25, 1504 Bellefontaine Street, Indianapolis, Indiana.

A student in civilian life, Wright is the son of Mrs. Ben Wright, of Augusta.

Kitrell, who was a molder and mechanic before he signed up with the Army, is the son of Mr. and Mrs. Clinton Kitrell of Indianapolis.

One of the group, Technician Fourth Grade, Bolivia B.W. Wiggins, 24, Rock Bluff, Florida, was a member of an Army Band. Mrs. Ruby Wiggins, Route 1, Box 24, Rock Bluff, is his mother.

Others in the group served with an Aviation Engineer Company. Veteran among them was Corporal Frederick Monroe, 24, a former carpenter, who was overseas three years. His mother, Mrs. Rose Monroe, lives at 1224 Canal Street, Washington, D. C.

Two from the same outfit tabulated their overseas time as 35 months and exactly four days, each. They were Technician Fifth Grade Malcolm Sherrill, 27, 1221 H. Cumberland Road, Harrisburg, Pennsylvania, and Technician Fifth Grade James Little, 24, R.F.D. 2, Box 45, South Hill, Virginia.

Sherrills' parents are Mr. and Mrs. A.E. Sherrill, Harrisburg.

A singer in civilian life, Little is the son of Mr. and Mrs. Emanuel Little of South Hill.

Thirty-three months overseas duty was recorded by Technician Fifth Grade Walter B. McCue, 33, R.F.D. 1, Box 16, Plantersville, Alabama, a former farmer.

One month over two years in the African Theater was chalked up by Private Alfredo E. Cummings, 28, 672 Jefferson Place, the Bronx, New York, where his wife, Mrs. Irene Cummings, awaits him. His father, Mr. Alfred Cummings, lives in the Virgin Islands.

Veterans of 35 months were Corporal Benjamin F. Allen, 28, 2223 Mahon Street, Pittsburgh, Pennsylvania, and Private Robert B. Cobbs, 212 Grand Berry Street, Franklin, Tennessee.

Corporal Clyde D. Ates, 29, 2301 E. 8th Street, Austin, Texas, figured he was overseas exactly 34 months and 26 days.

* * * * * * * *

MORE

29 MONTHS IN ITALY,
GI HEADS FOR HOME

MIAMI ARMY AIR FIELD, Miami, Florida---Twenty-nine months in Italy was a long time for any man to be overseas, but with it behind him, Corporal Walter Harris, Baltimore, Maryland today was a happy veteran.

Flown here from Europe in an ocean spanning ATC plane, Corporal Harris, 37, was clearing Air Transport Command's Miami Army Air Field en route home on furlough.

A farm hand before he entered the service, he is the husband of Mrs. Mary Harris, Mount Holly, New Jersey.

Corporal Harris served in the Mediterranean Theater of Operations with a Quartermaster Corps.

* * * * * * * *

NEGRO PLATOON MAINTAINS
250-MILE SUPPLY ROUTE

WITH U.S. FORCES IN FRANCE---Landing on famed Omaha Beach during July of last year, Negro Engineers of the First Platoon, Company B, 377th Engineer General Service Regiment went right about their business of building and repairing roads behind the rapidly-advancing Allied fighting troops despite Jerry's bombs and shells.

Now, with less than three-quarters of a year on the Continent, this platoon has built and repaired many miles of road, aided in the construction of eight Army hospital installations, and are now maintaining over 250 miles of road leading from the heart of the Oise Supply Section of France to the borders of Switzerland.

With the larger portion of the regiment engaged in construction and repair in more advanced areas of another country, first platoon men, although anxious to get right up behind our victorious Armies in the field, realized that their weekly routine of patrolling and repairing the 250 miles of supply route roads was as important as any construction or mine-deactivating job they might undertake nearer the front.

Staff Sergeant Wiley H. Hymon, of Clarksdale, Mississippi, is in charge of the forty-man detachment and daily sets and directs the working schedule of his men. He is the son of Mrs. Rosie Hymon who resides on Route 2, Clarksdale. Now 25, Hymon was a farmer in civilian life.

* * * * * * * *

ANZIO VETERANS SUPPLIED
7TH ARMY FRONT IN GERMANY

WITH THE 28TH QUARTERMASTER BATTALION IN GERMANY---Negro truck drivers, veterans of the Western Task Force in North Africa and the Anzio beachhead in Italy, were revealed today by Continental Advance Section Headquarters as figuring prominently in getting supplies from base depots in eastern France, across the Rhine River, to the heart of Germany.

Gasoline and ammunition make up the bulk of the cargo hauled by the 28th Quartermaster Battalion, one of the oldest trucking outfits in the European Theater.

Landing with the Western Task Force in North Africa, the 28th began driving as soon as they hit shore. They had a 24-ton truck convoy on detached service with the Rangers. Not only did they frisk the Rangers around enemy flanks and bring them back, but some of their members went along on the Ranger night forays "just for the hell of it."

MORE

In North Africa the battalion drove four million miles. Much of this was hauling ammunition right up to the front lines. For this they won a commendation from General George S. Patton, Jr.

In December 1943, the battalion was assigned to the Fifth Army in Naples, Italy. There the men drove trucks filled with supplies on to LSTs and were disembarked at Anzio where they drove directly to supply dumps. For this they won the Fifth Army's Meritorious Service Award.

After Anzio, they were again assigned to the Seventh Army for the invasion of southern France last August. They were the first truck units to arrive in the great harbor of Marseilles. From there they hauled supplies to the Seventh Army during their rout of the German Army in a few weeks from all of southern and central France.

Lieutenant Colonel James T. Stewart, of Danvers, Montana, 29-year-old battalion commander, pointed out that officers and men combined to make an excellent team. "The officers' understanding of and sympathy toward the enlisted men's problems, and the understanding and interest in the racial differences, have welded this battalion into a team that gets the job done," Colonel Stewart said.

* * * * * * * *

PORT MEN'S PERFORMANCE
WINS MERITORIOUS PLAQUE

A SOUTH COAST PORT, England---The Meritorious Service Unit Plaque has been awarded to the all-Negro 554th Port Company, stationed here on the coast of southern England, for "superior services" performed during the period of June 6 to August 6, 1944.

Issued from Headquarters, European Theater of Operations, the citation reads as follows:

"The 554th Port Company performed superior services in the out-loading program of the port during this period, in loading a total of 13,167 vehicles weighing 45,246 tons and 6,201 tons of supplies on a total of 101 ships. Without the assistance of this company, the port would have been unable to load and sail the required number of ships with troops and vehicles to the invasion area. The 554th Port Company showed extraordinary stamina and willingness to accomplish its objective, working long hours, often twenty-four hours continuously to complete loadings in record time."

Figures of this or that, hard, iron words like "ton" and "vehicle" and "out-loading," are not very faithful recorders of the human story behind this record of clock-circling work. The men in this company worked at all kinds of jobs, to hang up the record that won for them the Meritorious Service Unit Plaque.

"They worked in the holds of the ship, packing away safely and quickly the many and varied types and kinds of equipment that were picked up on the quay sides and swung over the ship's rail to them; they operated the cranes, those super-big "paws" that can pick up anything and everything and put it "where it wasn't before"; they checked in the freight arriving all the time, day and night, and then just as promptly loaded it on the waiting ships.

The uniform insignia, worn on the right sleeve of the service coat, with points of laurel wreath up and the lower edge four inches from the cuff, is a two-inch olive-drab square on which a golden-yellow laurel wreath is embroidered.

Personnel of the 554th are as follows:

ALABAMA: Armstrong--Cpl. Roosevelt Reese, 23 E. 23rd St.; Bellamy--Pvt. Davie R. Watson; Berry--Pfc. Johnnie Waldrop, R.F.D. 2; Bessemer--Pfc. Thomas Rogers, 2731 Fairfax Ave.; Birmingham--Cpl. Fred D. Borders,

STATEMENT BY LT. GENERAL IRA C. EAKER TO THE
OFFICERS AND MEN OF THE 477TH BOMBARDMENT GROUP,
GODMAN FIELD, KENTUCKY, THURSDAY, 21 JUNE 1945.

The farther up one goes in the chain of command, the less frequently he has opportunity to visit in the field with units and to talk with officers and enlisted men. The fact that those of us who have been at this flying business for a long time cannot get around as often as we desire is not an indication of any lack of interest on our part. We steal as much time away from our desks as we possibly can to get with you, and we at all times follow you with interest.

Along with other officers in the Army Air Forces, I have followed closely the record of Negro pilots. As the Commanding Officer of the Mediterranean Allied Air Forces, I had under my command the 99th Fighter Squadron, and later the 332d Fighter Group. I watched closely as the pilots progressed through the P-39, P-40, P-47, and P-51 aircraft. I likewise watched their assignments develop from routine but necessary coastal patrol missions to important heavy bomber close-escort missions.

The 99th Fighter Squadron and other squadrons of the 332d Fighter Group have done well. They have carried out the missions assigned to them and they have destroyed enemy aircraft both in the air and on the ground. By their efforts and performance they have won a place on the great air forces team. They came on the hard way.

The fact of discouragement, doubt, and difficulty didn't stop them any more than did the Jerry aircraft or flak that they encountered. They pressed on to the final and satisfactory accomplishment of the missions assigned them with a laudable singleness of purpose. They demonstrated in this the stuff from which champions are made. Anybody can coast along when the going is smooth. It takes heart and guts to push on when the way ahead is rough and rocky.

After what I have seen of the men who fought in my command overseas, I would be unpleasantly surprized if you men do not push on and make this unit one of which you and the air forces can be proud.

There is a tough war going on and you are going to be in it. Changes have been made in this organization that we, in Headquarters Army Air

Forces, believe will start you off with every possible advantage. Your new commander, whom I am here today to present to you, is Colonel B. O. Davis, Jr. He is known to all of you. I know him as a fighting leader of his men and a group commander of proven worth and ability. He wears the Silver Star and the Distinguished Flying Cross. These decorations are evidence that he has been willing to go up and take his part in the fighting. Being able to present Colonel Davis to you gives me a great deal of personal pride. His father, who is with us today, served with me several years ago in the Philippines. I knew General Davis, then a Lt. Colonel, as a good soldier, a widely read gentleman, and a friendly counselor to all of us younger officers. Incidentally, I found then that he possessed a surprizing knowledge of Napoleon which I am certain he has brushed up on during his tour of duty in France. From my observations of Colonel Davis and my close association with him, I can say that the son is a worthy successor to the father.

Colonel Davis will select his own staff. Therefore, those among you who are ambitious, can go as far as your ability and performance will take you.

This group will be reconstituted immediately into a composite fighter-bomber group consisting initially of two B-25 squadrons and one P-47 squadron. These squadrons will be expanded as additional personnel become available. The group will furnish close support for our ground forces in the Pacific.

The fighter squadron selected initially to carry on in this new group is the 99th Fighter Squadron. This is particularly appropriate since this was the first organization of Negro pilots committed against the Nazi.

Just a word about the B-25 airplane. I am aware of the many stories circulated about its discontinuance. Don't let this talk mislead you. The B-25 is a good aircraft. General Kenney and other commanders feel very strongly that there are many places in that war over there where this type of aircraft can be advantageously used.

In both Italy and the Philippines our medium bomber groups have asked us to let them keep the B-25s as long as they last. They favor this airplane - those crews which have used it against both Germans and Japs.

We hope to start you off to the war in the fall. From here on you are on your own. Your success in training and in combat will mean that the forward start given Negroes in the air forces by the 332d in the Mediterranean Theater of Operations will be accelerated. Those of us who have watched Negro fliers have every confidence in you.

End.

IMMEDIATE RELEASE

NEGRO OFFICERS AT GODMAN FIELD
TO BE TRIED BY GENERAL COURT

Charges pending against three officers of the 477th Composite Group have been referred for trial to a General Court Martial which will convene on Monday July 2, 1945 at Godman Army Air Field, Kentucky, the War Department announced today. The three officers to be tried are Second Lieutenants Roger C. Terry, Marsden A. Thompson, both of Los Angeles, California and Shirley R. Clinton of Camden, New Jersey.

The charges which were preferred by Colonel Robert R. Selway, Jr., who formerly commanded the 477th, arose in connection with controversy over the use of certain officers club facilities by Negro officers at Freeman Field, Seymour, Indiana. All three officers are charged with violating the 64th Article of War by refusing to obey the order of a superior officer not to enter a certain officers club and mess and by pushing aside the officer.

In addition, Lieutenants Clinton and Thompson are charged with violating the 68th Article of War by refusing to obey when they were ordered into arrest at the time of this occurrence. A common trial was ordered for these two officers on both charges. Major General Frank O. D. Hunter, Commanding General of the First Air Force, of which the 477th is a part, detailed ten officers from the Group to the court which will hear these charges.

Included in the detail is Colonel Benjamin O. Davis, Jr., who now commands the Group. Other officers of the court are Captains George L. Knox, James T. Wiley, John H. Duren, Charles R. Stanton, William T. Yates, Elmore M. Kennedy, Fitzroy Newsum and First Lieutenants William R. Ming, Jr. and James Y. Carter. Captains James W. Redden and First Lieutenant Charles R. Hall have been detailed as Trial Judge Advocates and Captain Cassius A. Harris, III, and Second Lieutenant William T. Coleman, Jr. as defense counsel.

First Lieutenant William Robert Ming, JAG, of Chicago, Illinois, a former Assistant Attorney General for the State of Illinois will be the Law Member of the Court.

A Graduate of the University of Chicago Law School and a member of the Order of Crof, National Honorary Legal Society, Lieutenant Ming was designated as Base Legal Officer for Godman Field on June 23.

Starting with the Illinois Commerce Commission in 1933, Lieutenant Ming rose to the position of Assistant Attorney General for the State of Illinois, where he appeared before both the Illinois and United States Supreme Courts in handling gas rate litigation for the Illinois State Commerce Commission.

In 1938 he resigned his position to become an assistant professor of Law at Howard University in Washington, D. C. and taught at Howard until he was appointed Senior Attorney for the Office of Price Administration in Washington. Inducted in the Armed Forces in 1943, he was sent to the Judge Advocate General's school for Officer Candidates at Ann Arbor, Michigan and received his commission in the Judge Advocate General's Department in 1944. Upon being commissioned he was assigned to the Industrial Services Division of the Army Service Forces at Washington, D. C. and was serving in that office when he received his new assignment. Lieutenant Ming is married to the former Miss Irvena Harvey of Indianapolis, Indiana.

APPENDIX I.	A Selection of Federal and State Laws of Importance to Commanders of Negro Troops	96
II.	Suggested Readings	101

FOREWORD

War Department concern with the Negro is focused directly and solely on the problem of the most effective military use of colored troops. It is essential that there be a clear understanding that the Army has no authority or intention to participate in social reform as such but does view the problem as a matter of efficient troop utilization. With an imposed ceiling on the maximum strength of the Army it is the responsibility of all officers to assure the most efficient use of the manpower assigned.

It is recognized that the proportions of Negro troops in some military activities will be low, because Negro education and experience have been severely limited. The fact that race prejudice does exist cannot, in the interests of efficient operation, be disregarded. Limited education and experience, however, can be offset in part by training, and the restrictive effects of race prejudice may be reduced by a properly planned informational and orientation program.

The issue is not whether the Negro will be used in the war; it is how effectively he will be used. This question cannot be evaded. Furthermore, it cannot be met successfully by uninformed judgments on the basis of civilian associations and personal views on the subject. The problems involved are as technical as any other problem of personnel, and can be solved only with the benefit of special study, full information, and a serious interest in their resolution.

SUPPLEMENTARY MATERIALS

This manual on the Negro soldier is planned to provide the main substance for a course of ten periods of instruction in schools for officers. Each of the eight chapters is intended for use as the basis for one period of lecture and discussion. Each should be supplemented by the instructor with material drawn from the reading list, from military experience, or from any other source of additional information available to him.

One period, preferably the second in the course, should be used to show the War Department Film No. *RF* 51, *the Negro Soldier.* Prints of this film may be obtained from post film libraries or service command headquarters.

The final period in the course should be given to the discussion of War Department Pamphlet 20–6, *Command of Negro Troops.* Copies of this pamphlet should be secured for each member of the class from the nearest adjutant general depot.

CHAPTER 1

BUILDING AN ARMY

When the expansion of the Army of the United States was planned in 1940, it was determined that this Army would be democratic in composition. It was to represent a cross-section of the country. All classes, all racial groups, all sections of the population of the United States and its territories were to be drawn upon in building our new Army. Millions of men have been placed in uniform and transformed into soldiers, sailors, and marines. Among these millions are hundreds of thousands of Negroes. Their importance to the solution of our manpower problems, how they can best serve in the allocation of manpower to both the home and the battle fronts, have been weighed in the same manner that the best services of all Americans have been weighed.

Good Leaders know their Men

Leadership principles are the same for all troops. But their application will differ as men differ. The good leader, therefore, learns as much about his men as he possibly can. This is true of the leaders of all troops, but it is even more important where the men and their leaders are as unacquainted with each other as is often the case with Negro enlisted men and their officers.

The average leader of Negro troops will not have an extensive fund of information about Negroes to rely upon. Despite the fact that in the 80 years since Emancipation Negroes have made tremendous progress, educationally, economically, and culturally, there are many significant areas in Negro life which differ somewhat from the majority American patterns. Of course, like all Americans, Negroes differ among themselves. Good leadership demands that the officer know his men as individuals. Yet, there are common problems in the backgrounds of Negroes as a group which affect their abilities, efficiency, and points of view and therefore affect the problems of leadership. This text provides the officer with information about the background of the Negro soldier and suggestions which will improve his leadership of Negro troops. This chapter reviews the manner in which our Army has been built.

THE SELECTIVE SERVICE ACT IS DEMOCRATIC

In total war, some one agency must divide the manpower pool according to the needs of the various parts of the war machine. The agency charged with dividing our manpower resources between the armed forces and industry is the Selective Service System of the War Manpower Commission, operating through its local boards. A review of its activities in the selection and rejection of Negro registrants reveals the way in which our democratic system has worked in building an Army in a time of National emergency. All officers should know something of the way in which the Selective Service System operates. The responsibilities of officers in command of troops can be met only if there is full appreciation of the purpose, requirements, and spirit of selective service legislation and of the manner in which millions of civilians have been placed in the charge of the Army for transformation into soldiers. This country believes that all should serve in the armed forces in time of need in accordance with their individual capacities and with due consideration for the requirements of the home front.

Congress recognized this fact and wrote into the first section of the Selective Training and Service Act of 1940 this paragraph:

> The Congress further declares that in a free society the obligations and privileges of military training and service should be shared generally in accordance with a fair and just system of selective compulsory military training and service.

In accordance with this principle, Congress inserted two prohibitions against racial discrimination. The first is contained in section 3(a) of the Act and protects the right of all citizens within certain age groups to participate equally in the privilege of volunteering for induction into the armed forces. The exact wording of this guarantee of democratic practice is:

> That within the limits of the quota determined—for the subdivision in which he resides, any person, regardless of race or color, between the ages of eighteen and forty-five, shall be afforded an opportunity to volunteer for induction into the land or naval forces of the United States for the training and service prescribed . . .

In section 4 (a) is found another definite prohibition against race and color discrimination. The proviso states that:

> In the selection and training of men under this Act, and in the interpretation and execution of the provisions of this Act, there shall be no discrimination against any person on account of race or color.

Any action, therefore, which brings an advantage or disadvantage to any person, or which makes any discrimination between persons because of their race or color would be in direct violation of the spirit and letter of this Act.

The Selective Service System has made every effort to carry out these racial provisions of the Act as conscientiously as it has sought to carry out any and every other provision. Not only has the Selective Service System attempted to be fair and impartial in its actions but all minorities are represented in its administrative functions. Eighteen hundred Negroes are serving as members of local boards, registrants' advisory boards, boards of appeal, medical advisory boards, and as Government appeal agents, examining physicians, clerks, and other employed personnel. This is a primary example of the way in which the democratic spirit of the Act is being carried out.

The significance of these provisions for the armed forces is clear. For, except during the period when direct enlistment was still possible, all increases in the personnel of the armed forces have been governed by these provisions of the Selective Service law. If all portions of the population were to be selected on the same basis, it is obvious that the composition of the armed forces would reflect the composition of the nation. It became obvious, therefore, that Negroes like every other group, would be inducted in numbers approximating their proportion in the population. This has been the case.

THE STRENGTH OF THE ARMY IS IN THE PEOPLE OF THE NATION

The United States Army has been small in peacetime. The nation has operated on the theory that its military strength lies in its people as a whole. The general populace believed that, with a small body of highly trained, professional soldiers composing the peacetime Army, the civilian population can be counted upon to increase our military strength sufficiently to meet the needs of wartime emergencies. Mobilization plans have therefore taken into consideration the necessity for an equal distribution of the task of defending the American nation.

Volunteers the Backbone of Past Armies

In colonial times, the several colonies reenforced the British Armies with their own colonial militias. In the Revolution, the Continental Army was raised by successive levies upon the individual states, each being given quotas according to its population. The system of state volunteers persisted down through the Spanish-American War. During this period, our Regular Army fought alongside these State troops. This system had several disadvantages. There was rapid turnover in short-term enlistees. Standard qualifications for officers were difficult to maintain. Federal and State Government competed in the same market for troops and matériel. State troops went into battle equipped with all types of nonstandard weapons. In the Civil War, the troops of one state fought with Austrian, Prussian, and Harper's Ferry muskets, Spencer and Sharp carbines, Belgian, Whitworth, and Minie rifles, Colt and Navy revolvers, and several other types of weapons. The problem of ammunition supply alone for troops so equipped was enough to baffle the best logistics experts. The need for a national centrally controlled Army became obvious to military experts before the end of the Civil War.

National Army Drafts

A National draft was first tried during the Civil War, but this draft was complicated by the fact that state recruiting continued. Individual states offered different types of enlistment bonuses. Men often shopped about among recruiting agents looking for the best offers before signing up. The national draft was extremely unpopular, resulting in riots in large cities and serious manpower troubles.

The World War I draft, however, was much more successfully handled. This was the Nation's first experience with a universal, nation-wide selective service system supplemented by carefully planned methods of classification, deferments, and calls. Even in World War I, however, the wartime Army was divided into three parts: The Regular Army, the National Guard, and the National (or drafted) Army. All three parts of the Army were united in the Army of the United States but the distinction between types of service remained.

The Army Today

As a result of the National Defense Act of 1920, the Army of the United States consisted of the Regular Army, the Organized Reserves, and the National Guard. National Guard troops were to remain state forces until called into Federal service. In 1940 the National Guard was brought into active Federal Service and the first peacetime selective training and service bill was passed. The present Army of the United States, therefore, consists of the units provided for under the National Defense Act of 1920 plus the civilians inducted under the Selective Training and Service Act of 1940. Nearly every unit contains men from every part of the country and from every walk of life. It is a completely national Army.

Negroes Have Been in the Army for Many Years

Since colonial times, Negroes have been in units of the American armed forces. Since the Civil War, four Negro regiments, the 24th and 25th Infantry and the 9th and 10th Cavalry Regiments have been units of the Regular Army. In the National Guard, Negro units had long existed in such states as New York, New Jersey, Illinois, Maryland, and Tennessee. In the Organized Reserve, as well, Negroes were represented. Therefore, in 1940, a sizable body of Negroes were already in the Army of the United States.

As might be expected in a nation made up of many races and nationalities, the Army was representative. In the Civil War, for example, there were units consisting mainly of first generation foreign-born Americans, Irish and French from the East, German and Scandinavian from the West. Often these units had high esprit de corps. Their officers spoke the language of their men—German or Norwegian or Swedish—and the units picked up colorful nicknames. New York's Irish Legion, the Irish Dragoons, Wisconsin's Schwarze Jäger, Illinois' 1st and 2d German Regiments, Kansas' Indian Home Guards (14th Regiment Kansas Cavalry, Company M), New York's French Regiment (the 55th New York Volunteers) were examples. Early Negro units in the Civil War paralleled this development and bore similar names: the Louisiana Native Guards, later the Corps d'Afrique, Payne's Liberia Guards (4th Regiment Arkansas Infantry, afterwards 57th Regiment, United States Colored Troops), Shaw's Black Regiment (54th Regiment Massachusetts Infantry).

As the minorities represented in the Civil War Army became assimilated into our national life, the urge to form distinctive units disappeared. Only the Indian Scouts of the days of Indian fighting remained until the 90's, when the Indian Wars ended. These unorthodox Army units, composed of friendly Indians, were then abolished. But Negro units, organized out of the Civil War's United States Colored Troops, were established as part of the Regular Army by Acts of Congress in 1867 and 1869. The Negro minority remains the one large racial group still in separate army organizations.

Not all minorities have been integrated into the mainstream of American life to the same degree. The largest of those which are not yet fully integrated into American life is the Negro minority. Negroes represent well over 85 percent of the nonwhite minorities inducted into the armed forces from the United States and its territories. The others include Puerto Ricans, American Indians, Filipinos, Japanese, Chinese, Hawaiians, and a miscellaneous grouping of other nationalities and races. Of these, Negro Americans and Americans of Japanese descent are the only ones now organized into separate units. The Philippine Republic has its own troops and there are some predominantly Filipino, Indian, and Puerto Rican units.

This means only that the Army, like any institution which is part of a larger social body, reflects the pattern of that larger body. *The Army does not by this policy, endorse any theory of racial superiority or inferiority.*

While the Army takes no position on the role of the Negro in American life, it does take a stand on his use in the Army. The Army's policy is to use its manpower, Negro and white, at the maximum level of efficiency which our present knowledge of training, leadership, and motivation techniques makes possible.

The officer will not be able to answer adequately all questions which Negro troops may ask concerning their relation to a democratic Army. But he can make certain that, within his own unit, the democratic principles which the Negro soldier has come to accept as an American ideal will operate. And he can assure his troops that Army *standards* of training, performance, and leadership of Negro and white troops are identical. To insure that these standards will remain the same, Negro officers and noncommissioned officers are trained in the same schools under the same instructors provided for white trainees. Most Negro units are trained in the same training centers with the same training schedules under the same direction that is given to all other units. It is up to the officer to provide the same intelligent and effective leadership that is given to all other troops.

NEGROES IN THE MANPOWER POOL

Not only the Selective Service Law and the operation of the democratic ideal but also the urgency of the manpower situation required that all persons be fully utilized in the war either in industry or in the armed forces.

The nation requires tremendous manpower to fight a global war. In the summer of 1944, the Army had reached the 7,850,000 mark and by the end of the year the Navy will have at least 3,200,000 men. In addition to the replacement requirements of the armed forces, industry needs tremendous numbers of men and women to provide the Army and Navy with tanks, ships, ammunition, planes and countless other items—over 700,000 in all—which are necessary to fight a global war. The civilian labor force increased from 47 million in the beginning of the emergency to 54 million in 1944. The problem was to add 7 million to the working force while taking 11 million out of it for the Army and Navy.

Distribution of Negroes

When our first national census was taken in 1790, Negroes comprised nearly one-fifth of the total population of this country. The Negro rate of increase has been only half that of the white population, so that while the total number of Negroes in the United States today is approximately 13 million, or 17 times the number found by the first census, Negroes now represent only 9.8 percent of the total population. Nevertheless, they are still the most important non-white minority group, since all the rest—Chinese, Indians, Japanese, Filipinos, etc.—comprise only one-half of 1 percent of our population. There are more Negroes in America than Canadians in Canada, Swedes in Sweden, Scots in Scotland, or Irish in Ireland. The potential importance of this large source of American manpower cannot be overemphasized. The services of this one American in ten are essential if the war is to be won in the shortest possible time.

Despite the declining proportion of Negroes in the total American population, the tendency over the past few decades has been for Negroes to migrate within continental America in such a way that they are becoming more widely distributed. Originally the bulk of Negroes lived in the rural South and in a few Eastern seaboard cities. About three-fourths of American Negroes still live below the Missouri-Ohio-Potomac line, but more of them have moved into the cities, both North and South. Northern and Western Negroes now live almost wholly in cities and towns, though many of these are not far removed from their Southern, rural backgrounds in their habits and ideas. This migration has had many important results. Negro labor has been available to a wider range of industry than ever before. And, the education, vocational background, health, and attitudes of Negroes have changed greatly even in the short period since World War I as a result of this shift from rural to urban life. As will be explained in detail in later chapters, these changes have affected the present generation of Negro soldiers in ways that are important to effective leadership.

Filling the Manpower Needs

The civilian labor deficiency has been made up by employing people who had not worked before in industry or on farms: women, old people, young people, the physically handicapped, the unskilled,

and minorities previously barred by tradition and custom. Every employable person had to be used, at the highest skill and proficiency he could muster. But the problem of Army manpower still remained, for here it was not simply a matter of quantity, but of quality as well. The Army requires the best men that it can get. These men must come from a limited age range. For modern warfare they must have certain minimum educational as well as physical requirements. All Americans who meet these requirements must serve together if the war is to be successfully prosecuted. As of 1 February 1944, about 876,000 Negroes had been enlisted and inducted into the armed forces. 831,000 of these were inducted through the Selective Service System, representing 11.1 percent of the total number of men inducted into the armed forces.

HOW NEGROES CAME INTO THE ARMED FORCES

During the 1930's, the strength of the Army was maintained by volunteer enlistments through recruiting stations established and maintained all over the country. Even after the Selective Service System began to operate in 1940, volunteer enlistments directly into the services continued, lasting until 5 December 1942. After this date all Army enlisted men between the ages of 18 and 38 were procured by induction. But even in the days before the Selective Service Act our small regular Army was unable to absorb all Negroes who tried to enlist. Until 1939, there were but four Negro regiments in the regular Army. These were the 9th and 10th Cavalry and the 24th and 25th Infantry Regiments referred to earlier. Their personnel, made up largely of career soldiers, changed infrequently. In 1939, two new Quartermaster regiments were added, but the six regiments together did not allow for large numbers of Negro enlistments. Beginning in 1940, additional Negro units — Field Artillery, Antiaircraft, Engineer, Chemical Warfare, and Quartermaster—were activated. But it was not until 1942 that plans for receiving and training large numbers of Negroes had been completed. As a result, between 1940 and 1942, only 1.8 percent of Selective Service registrants who entered the Army through direct enlistment were Negroes. In the early months of the present war, this fact caused an unfavorable reaction in many communities with large Negro populations when it was felt by the general population that a disproportionate number of white men were being taken into military service.

Some Negroes Volunteered through Local Boards

But there was a second method of volunteering which was open to Negroes. Men could request their local boards to induct them voluntarily instead of waiting to be called. As has been mentioned previously, section 3(a) of the Selective Training and Service Act of 1940, as amended, prevented restrictions upon registrants who desired to volunteer for induction through their local boards. As a result, thousands of Negroes offered themselves to their local boards for *voluntary induction* through the Selective Service System.

As early as 30 September 1941, 38,538 Negroes had gone into the Army through voluntary inductions. They represented, as of that date 16.1 percent of the total number of volunteers entering the Army through the Selective Service System. Even a larger percentage, 25.3, of the registrants awaiting voluntary induction at that time were Negroes.

The first annual report of the Selective Service System gives an explanation of the willingness of Negro registrants to volunteer for service. The report in discussing this fact, states:

> Negroes have been notably a loyal and patriotic group. One of their outstanding characteristics is the single-mindedness of their patriotism. They have no other country to which they owe or feel any degree of allegiance. They have neither cultural nor economic ties with kindred in any other lands. Therefore, they have built in America a fine record of loyalty and willingness to support and defend their native land. One state with a large Negro population over a period of several months filled every call made upon it for Negro selectees by volunteers. In large sections of other states also, this has been true. The Negro has availed himself as freely as possible under the conditions to volunteer for service in the armed forces.

Most Negro Soldiers were Inducted

Like most Americans, however, most Negroes entered the armed forces when their local boards called them up for examination for induction. Moreover, after volunteer inductions had been halted, there was no other way for a man to be taken into the armed forces. Local boards have combed the records of their 22,000,000 registrants over and over in an attempt to provide the armed forces with the manpower which they need. The rest of this chapter is devoted to a survey of the manner in which Negro manpower has been allocated to the home front and to the armed services. In some of the problems faced by Selective Service in the classification and induction of Negroes, the officer will find clues to solving the leadership problems which he faces with Negro troops.

On 1 February 1944, 57 percent of the white registrants and 64 percent of the Negro registrants had been inducted or rejected for armed forces service. Another 19 percent of whites and 21 percent of Negroes were eligible for processing toward induction. The balance consisted of 23 percent of the whites and 14 percent of the Negroes who had been deferred on occupational grounds, and 1 percent of each group deferred on hardship and other grounds. Today, the Negro part of the manpower pool which remains on the home front is divided as follows: Two out of every five have been examined and rejected for physical, mental, or moral causes; one out of five has been deferred for occupational reasons; and the other two are either 1A registrants waiting to be called, or registrants in miscellaneous groups. The classification records of the Selective Service System show significant similarities and differences among white and Negro registrants. These emphasize certain features of the Negro soldier's civilian background.

Few are in Essential Occupations

In Class 2A, Negroes are found about one-third as frequently as whites in proportion to their total numbers. This class consists of registrants in occupations that support the war effort. The difference is slightly greater in Class 2B, composed of registrants engaged in essential or critical occupations in war production, excluding agriculture. Negroes deferred in industry are performing for the most part heavy unskilled and semiskilled labor in essential war-industry. As detailed in chapter 4, Negroes are employed in skilled industrial jobs in relatively small numbers. This means as well, however, that many Negroes who may be *capable* of holding such skilled jobs but who have been unable to get this type of work are available to the armed forces.

A Larger Number are Agricultural Workers

The occupational deferments of Negroes have been largely among farmers who are raising food, cotton, and other essential war commodities. In those parts of the country where Negroes are a principal source of farm labor, local draft boards have been strongly urged to defer Negro farm hands.

A larger proportion of Negroes than whites is deferred in Classes 2C and 3C as essential in agricultural production. This is to be expected, since such a large proportion of Negroes are farmers. In certain states, the proportion of Negroes deferred in Classes 2C and 3C is from 1 percent to 9.9 percent higher than for white registrants.

Dependency Deferments

The rate of deferment of registrants in Class 3A for family dependency is only slightly higher nationally for whites than for Negroes. Although Negro wives, because of the generally low economic status of their husbands, are gainfully employed to a larger extent than women of other groups and the earning power of wives was frequently given great weight in determining dependency deferments, this close balance in dependency rates indicates that the Negro husband is as essential to the support of his family as the registrants of other groups.

Few are in other Deferred Classifications

Less than 4,000 registrants are classified in Class 4B, major public officials deferred by law, and Negro registrants comprise a negligible one-half of 1 percent of these. The proportion of Negroes exempted from military service because of their status as ministers and theological students is small also; of the 103,795 registrants so deferred 7,526 or 7.3 percent are Negroes.

Very few Negroes are conscientious objectors to military service because of religious training and

belief. The total number of registrants who have been granted this Class 4E deferment has been unexpectedly small, less than 10,000 out of 22,000,000 registrants — and Negroes are only 2.2 percent of this small number. All conscientious objectors have been assigned to camps and approved projects under the direction of the Selective Service System without regard to their race or color.

Rejections Are High

The Negro rejection rate, both at local boards and at induction stations, has been considerably higher than that of whites. The Negro rejection rate suggests many of the problems which will face the officer of Negro troops. Many of the causes of the high rejection rate reflect major problems in the soldier's civilian background. At the same time, they give clues to some of the problems which Negroes face as soldiers.

Local board rejections have been mainly for such manifestly disqualifying defects as hernia, tuberculosis, grave mental disorders, amputations, etc. Induction stations pass upon the selectee for final induction or rejection. Nevertheless, since 1940, induction standards have changed at different times. These same men who were once rejected might later be reexamined and accepted. This is markedly true of illiterates. They could be inducted only in limited numbers prior to 1 June 1943. After this date all restrictions on the number of illiterates who could be inducted were lifted, with the result that many previously rejected illiterates are now in the Army.

The difference between the rejection rates of white and Negro selectees reflects the poor conditions under which many Negroes live. During 1943, for example, local board rejection rates averaged 6 percent throughout the year. The rejection rate for white selectees remained at about 5 percent through the year, but that for colored selectees ranged from over 15 percent in the early months of the year to about 7.5 percent in the latter months of the year.

Rejection rates at induction stations were much higher, especially in 1943 when local boards, hard pressed to meet their quotas, began to send previously rejected men who might pass the new and lower standards. This is especially true where illiteracy and venereal diseases were involved. For a time these poverty-connected disabilities were the chief factors in the excess rejection rate of Negro selectees. But, with increased provision for overcoming illiteracy and treating venereal diseases within the Army, the number of Negro inductees in both groups has increased. Methods of dealing with these potential command problems are treated in chapters 3 and 5.

Illiteracy Decreases a Man's Usefulness to the Army

The educational standard for induction has changed from time to time, but it has generally meant the ability to read and write English at about the fourth grade level. Many people have difficulty in understanding why illiterates are not used by the armed forces. The explanation is simple: A man must have a reasonable amount of education to be of value to the services. Waging modern war is a much more complex undertaking than the fighting of past years. The modern army and navy are highly mechanized with such equipment as planes, tanks, radio, rockets, and the almost fabulously intricate war machine which is the present day battleship, cruiser, or submarine. The man who cannot read and follow simple written directions is hampered in the proper handling of such equipment. He is also a hazard both to himself and to those with whom he might be associated.

Beginning 1 June 1943, literacy was eliminated as a test for induction. Psychological tests directed at discovering levels of native capacity without reference to literacy were substituted. Since that time the proportion of Negro illiterates inducted has increased. Many Negro illiterates are men who simply have not had a chance to learn. In most instances, their illiteracy does not mean that they are unable to learn to read and write. The rejection figures before 1 June reflect the inadequate educational opportunities of Negroes. Since 1 June these inadequate opportunities have not stood in the way of Negro inductees as much as formerly, and the proportion of Negro inductions to all inductions has increased.

Special Training Units

Illiterate Negro and white selectees who meet the Army's minimum standards of intelligence, phy-

sique, and mental stability are sent to Special Training Units within the Army where they undergo an intensive period of rounded military and academic training designed to fit them for successful performance in basic training.

The working of the special training units should be familiar to every officer, but particularly to officers in command of Negro troops. The operations of these units, which have been successful in preparing nearly all illiterate but intelligent men for modern warfare, are described in detail in the chapter "Educational Background of the Negro Soldier." It is enough to say here that the Army thinks it has been successful in eliminating at the reception centers all men, white or colored, who do not have the native ability to become good soldiers; and it has shown that those men whose opportunities have been limited can be brought up to a satisfactory level of performance by a relatively short period of intensive training.

Psychiatric Disorders

A substantial number of men have been rejected for army service because of neuro-psychiatric disorders. The proportion of Negroes in this class is about equal to the proportion of whites (11.8 percent for Negroes, 10.6 percent for whites in the last quarter of 1943). Few disabilities are more difficult for people to understand than those which have to do with the mental and nervous systems of seemingly healthy persons. The return of these men to their home communities as rejectees often raises serious questions in the minds of their neighbors. Usually it is thought that the armed forces have been unduly strict or harsh in their decisions and that men who have been able to maintain themselves and their families in a fairly normal manner and keep gainfully employed, even if they did move rather frequently from job to job, should be able to carry a responsibility in the military service.

The action of the medical officers in rejecting such men, however, is based upon long study and experience, especially the experience of World War I and of the armies in the present conflict. As Army psychiatrists have become more skilled in detecting these men, and as the importance of keeping them out of the Army has become more generally recognized, the number of rejections has increased. Men who are maladjusted to life in the civilian community are almost certain to break under the stress and strain of military training and service, frequently before encountering combat conditions. What this means in terms of hospital facilities and care is shown by the experience of United States Veterans Administration in its treatment of soldiers who broke down during the last war or who have since become hospital cases largely because of the strain to which they were subjected while in military service. It was estimated about 2 years ago that each such veteran had cost the Government more than thirty thousand dollars for his treatment and care since the last war. What is even more important is that such casualties are generally the most difficult to rehabilitate. The armed forces must necessarily be very careful to eliminate as far as possible selectees with existing or potential neuro-psychiatric disorders.

There are few Delinquents

The proportion of Negroes who are delinquent in reporting for calls has been relatively low. The largest single reason for delinquency is failure to receive notices. Although Selective Service regulations require registrants to advise their local boards of changes of address, many registrants, particularly among those who have limited education, fail to do so. Men on the low economic levels move their residence so frequently that it is difficult to keep up with them. The next largest reason for delinquency is probably ignorance as to the meaning of the notice to report for induction.

Evasion is Slight

Although the records are not yet complete in this regard, it is believed that only a few hundred individuals among nearly 3 million Negro registrants have been indicted for evasion of the Selective Service Act. Some of these men were accused of such offenses as failure to register, falsifying questionnaire returns, failure to return questionnaire, and using incorrect name and address on registration card. The small number of cases involved indicates that evasion of the Selective Service Law is not a serious problem among Negroes.

Malingering

Some of the failures to pass the induction station tests have been due to malingering. While the

number has not been large, it has been fairly well established that some selectees intentionally fail to pass these tests. These malingerers come usually from the larger urban communities where information is passed around regarding ways to make low test scores and thus obtain rejection. This practice accounts, however, for only a small percentage of the rejections for failure to meet educational and intelligence standards.

In general, Negroes have responded well to the Selective Service Act. This is an index to their desire to serve just as all other Americans are serving.

WHAT THIS MEANS TO THE ARMED FORCES

As a result of the working of the democratic ideal, especially as it is represented in the Selective Service Act, Negroes are more widely distributed among the armed forces today than in any previous war. Because it is the largest of the armed forces, the bulk of Negroes are to be found in the Army, but they are also in the Navy, Marines, and Coast Guard.

Negroes Are Serving Widely in the Army

The Army has received approximately 750,000 Negro soldiers. They are serving in practically every branch of the military service. After three years of what might be termed experimentation, the Army is well enough satisfied with the Negro as a soldier that initial hesitancy in his use in the more technical services is rapidly diminishing. The recent announcement of the training of Negro bomber crews and the activation of Negro paratroop units are illustrative of this trend.

Not only are Negro troops distributed throughout all parts of the Army, but they are also spread widely throughout the world. American Negro soldiers are now serving in every region where there are American soldiers — regions where climates range from Arctic cold to the steaming heat of equatorial jungles. They have shown excellent adaptability to all sorts of climatic conditions.

When the Alcan Highway was cut through, it was a Negro engineer soldier bull-dozing down from the north who met and shook hands with a white engineer soldier working from the south as the two sections of this vital military artery were joined. Negro pilots bombed Pantelleria, were part of the air cover of the landing on Sicily, and are at present flying combat missions in Italy. Negroes are helping to build and defend the new Ledo Road in Burma. They have built airstrips in New Guinea, manned ports in England, fought Japanese on Bougainville. Their work on the Anzio-Nettuno beachheads has been commended highly. In North Africa, Sicily, France, India, Australia, and more than a score of other places throughout the world, they are serving with great effectiveness.

There are about 5,000 Negro commissioned officers in the Army. Of this number, nearly 500 are Medical and Dental Corps officers, and more than 150 are Chaplains. There are approximately 200 Negro officers in the Army Nurse Corps. Not all of these are junior officers. Promotions are being won rapidly and the number of Negro officers holding field rank is increasing.

The records of the Army Service Schools show that Negro officers do creditable work and frequently show marked ability. Some have graduated with superior grades. No racial differentials have been discovered in their ability to lead troops. Good Negro officers made good troop leaders. And, as among white officers, poor Negro officers are poor troop leaders. The criterion as to whether or not a man will make a good leader is whether he is a good officer and not whether he is a white officer or a Negro officer. The same principle holds for noncommissioned officers.

Negroes in the Other Armed Forces

The Navy has more than 100,000 Negroes at the present time. During 1944, the number will be increased rapidly as the Navy, under its expansion program, increases its calls for Negroes in an effort to bring them up to approximately 10 percent of its total personnel.

The Marine Corps began to accept Negroes as volunteers in June, 1942. In February, 1943, the first Negroes were inducted into the Marine Corps through the Selective Service System. There are now more than 16,000 Negro marines. Their training record has been excellent.

The Coast Guard has had Negroes in its personnel for many years. When it began to expand to meet war demands, the number of Negroes was increased proportionately. The total number of Negroes in the Coast Guard as of 1 February 1944, was about 3,600.

CONCLUSIONS

Military Efficiency Requires Democratic Treatment for All

First of all, the officer must never forget that he is the leader of men who but a short time ago were private citizens in a country which prides itself on its democracy and individual liberty.

Negro Americans no less than others have been taught the national ideals of the Declaration of Independence and of the Constitution of the United States. Limitations on their civilian activities and opportunities contrary to these ideals growing out of tradition, custom, and personal beliefs concerning group differences should not be transplanted into Army life. So far as they involve discrimination on the basis of race or color, they are contrary to specific provisions of selective service legislation. They are also fatal to military efficiency.

Manpower Cannot be Wasted

Second, as a matter of practical expediency, manpower problems are such that this country cannot afford to waste any portion of it.

One man in ten in this country is a Negro, and it is obvious that inefficient use of this tenth man would materially influence the effective prosecution of the war. Every effort has been made to induct men into the armed forces with proper regard for the needs of industry and agriculture. It is up to those who train and command troops to see to it that the portion of the Nation's manpower intrusted to their leadership makes its greatest possible contribution in the fight for victory.

Men have been well Selected

In the third place, officers should have confidence that the men assigned to them have been selected with all possible care.

Local boards, induction stations, and special training units do their best to weed out the men who are not fitted to become good soldiers. The high rejection rates for Negroes are an indication of this. In spite of all preliminary precautions, however, some slip through the physical and psychological examinations who cannot by any kind of training be used efficiently in modern warfare. These can be discharged from the Army, upon discovery, through the procedures outlined in AR 615-360.

There is no excuse, though, for failure to take advantage of Army training facilities in developing the military usefulness of those who are handicapped only by lack of education and work experience, nor for failure to make maximum use of those civilian skills men may be found to possess, even though transfer to and from other units may be involved. The Army needs practically every kind of civilian skill, and is already using Negroes with satisfactory results in all possible varieties of military tasks.

Men want to serve Fully

Fourth, the records of Selective Service show negligible malingering and delinquency in responding to requests for personal information or to calls for service among Negro registrants. *This evidence of loyalty, supported by the record of voluntary enlistments and voluntary inductions, should leave no doubts in officers' minds concerning the willingness of Negroes to serve as soldiers.* Indeed, in spite of continued complaints from the Negro public about the treatment of Negro soldiers and civilians both by the Army and in civilian communities, there has been great pressure exerted by Negroes themselves to secure opportunities to participate more fully in all aspects of the military task, including combat.

LEADERSHIP REQUIRES UNDERSTANDING

Leadership in such an army of transformed civilians for whom military duty is a temporary assignment in time of national crisis requires understanding of men in terms of their background and its relation to their military efficiency.

Building an Army is not an easy job. The selection and induction of men is but the first step. Training the new soldier and welding the whole into a unified battle force is by far the most difficult part of the job. *How* the background of the Negro soldier affects the problem of the leadership of Negro troops is the subject of the following chapters.

CHAPTER 2

ADJUSTMENT OF NEGRO SOLDIERS TO THE ARMY

All Soldiers Must Adjust

The moment an officer takes command of troops, be they white or Negro, he is confronted with the problem of adjusting his men to the Army way of life. This problem has four essential aspects from the officer's point of view:

a. How can the men who think and act as civilians be made to think and act as disciplined soldiers of the Army of the United States in the shortest possible time?

b. How can civilian skills, interests, and attitudes be fully mobilized and redirected toward the single common goal, successful completion of the job to be done in the least possible time and with maximum efficiency?

c. How can previously untapped *reservoirs* of capabilities and aptitudes be quickly channeled in useful directions so that the vast manpower of the United States Army can be most efficiently harnessed for the purpose of conducting war?

d. How can these things be done quickly and efficiently with least jeopardy to the personalities of the soldiers?

Challenge of Commanding Negroes

These four essential aspects of the problem of Army adjustment apply equally to all soldiers, black, brown, and white. The adjustment problems of Negro troops differ only in *degree* from those of other troops. Specifically, and for reasons stated later, the officer assigned to command Negro troops faces a greater challenge to his abilities as a leader than if he were assigned to command white troops. If he is indeed a leader, he should welcome this challenge.

Two conditions are responsible for this greater challenge that confronts him:

a. Because of more limited opportunities in civilian experience, a much larger group of Negro than white soldiers can be expected at the outset to be skeptical of and to lack enthusiasm for the Army venture.

b. Certain situations will exist, both in and out of the Army, that inevitably will raise questions and doubts in the minds of many Negro soldiers as to the worth of the venture and the reality for them of the goal.

These two conditions are bound to accentuate the problem of adjusting Negro troops to the Army way of life. To be successful, the officer cannot ignore them in his plans for and discussions with his men. He must face them as his men face them, as hurdles to be taken in the process of making good soldiers. But they are not, and never should be viewed as insurmountable hurdles. The officer who is willing to accept these hurdles as personal challenges to his ability to lead men will achieve the greatest success in meeting the problem of adjusting Negro soldiers to the Army.

To be meaningful, adjustment of the individual soldier must be thought of in terms of concrete situations and day-to-day experiences. Men do not adjust to the Army in general. They make adjustments to squads, platoons and companies. It is only within these fields of experience that Army adjustment can take place. The company officer on the other hand, therefore, must focus his attention on the life of the unit.

For a man to adjust to his unit, he must find a situation favorable to adjustment. His doubts about the importance of the war and the reality of war aims are only heightened when conditions within the unit are in contradiction to these aims. On the other hand, if he finds that his company officers and NCO's recognize the conflict between expressed aims and civilian experiences he has had to face, if he learns that they view these aims as real goals that apply to him, and if he achieves some of these goals in the day-to-day life of the unit, then and only then can he feel himself a part of the venture that he is called on to participate in.

Attitudes of Negro Soldiers

To do his job as a leader, the officer must know how the men in his outfit feel about the Army and the war. He must approach his duties with a sympathetic understanding of their points of view. Thus a description and interpretation of the attitudes of Negro enlisted men in the Army as a whole is useful as an introduction to the problem. In the final analysis, however, no amount of theory will suffice; the officer must learn the attitudes of the men in his outfit at first hand if he is to cope with the problems of adjusting these men to the life of the unit.

A study by the Research Branch, Morale Services Division, made in the spring of 1943, among both white and Negro enlisted men gives us a better understanding of the differences between white and Negro soldier attitudes than does any other data available. About 13,000 men belonging to 92 different Army organizations and constituting a representative cross section of white and Negro enlisted men in the Continental United States were selected by lot in such a way as to give proper weighting to all types of military installations, branches of the service, and regions in which the men were stationed.

The men were assembled in class rooms, day-rooms, etc., in small groups. They completed questionnaires under the supervision of trained enlisted men. The questionnaires were entirely anonymous, and no names or serial numbers were taken. No officers were present when questionnaires were filled out. Men with low education were assisted by specially trained enlisted men in the filling out of questionnaires. Since pretests had shown that many Negro enlisted men did not express their opinions frankly to white interviewers, only Negro enlisted men were used as class leaders for Negro groups and as interviewers to assist Negroes of low literacy in the completion of questionnaires.

Carry-Over of Civilian Attitudes

In civilian life every Negro, at one time or another, has either been told, or has read, or has been made to feel that he is considered inferior by the majority of white people. The limited status that he has acquired in civilian life from the fact that he was born with a darker skin than other Americans, has influenced most of his thinking and behavior from infancy. Every Negro soldier in civilian life has had to face to a greater or less extent (depending upon his community of residence and his family's financial position) limited opportunities for education, employment, recreation, housing and participation in the life of his community. In short, his chances in America have been restricted not only by native ability and economic position—as would be the case for most other individuals growing up in the United States—but also in some part by the limited position designated for his group.

His entrance into the Army, like that of most soldiers, was not a matter of free choice. But more Negro enlisted men than white enlisted men have doubts as to whether this war is their affair and whether the United States is fighting to give everybody a fair chance for a decent living. This is apparent from the accompanying charts showing enlisted men's attitudes in spring of 1943.

"Do you think that after the war soldiers in your outfit will find it easier or harder to get jobs than they did before the war?"

Despite these doubts, more Negro soldiers than white soldiers are optimistic about their chances for greater opportunities after the war. This greater faith in the future, however, exists only for a minority of both groups. Furthermore, many Negroes added that the greater opportunities en-

"Do you think the war is as much your affair as it is anybody else's"

"Do you think that one of the things the United States is fighting for is to give everybody a fair chance to make a decent living?"

visaged would not come as an automatic consequence of the war.

In the Army, the Negro enlisted man finds himself in a separate outfit from white enlisted men. Most of his officers are white, and what Negro officers he does have, are predominantly of junior grade. The chances are that he receives his training at an Army post in a southern state, even if he was drafted from a northern state. These conditions are dictated by military necessity. But in many cases they serve to reinforce and support his civilian doubts about the effect of the war on him.

"Do you think white and Negro soldiers should be in separate outfits or should they be together in the same outfits?"

"After the war, do you think you yourself will have *more* rights and privileges or *less* rights and privileges than you had before the war?"

A sizable minority of Negro soldiers think white and Negro soldiers should be in separate outfits. The written comments indicate that these men believe friction can best be avoided this way, al-

though they are opposed to *segregation* in principle.

Those who think white and Negro soldiers should be in the same outfits are more often better educated and from the North. Many of this group see no justification for the present practice, either in principle or practicability.

The great majority of white soldiers favor separate outfits for Negro and white troops. This holds for both northern and southern whites.

Camp Locations Present a Problem

Negro troops vote strongly against southern camps for their training. This is true even of southern Negroes, in spite of the tendency for all soldiers to want to be stationed near home.

Among white troops, 71 percent of the northern men would like best to be stationed in the North and 73 percent of the southern men would like best to be stationed in the South. In contrast, among Negro troops 94 percent of the northern men would like best to be stationed in the North and only 35 percent of the southern men would like best to be stationed in the South.

These negative attitudes of Negro troops toward southern camps stem primarily from the possibility of tension and conflict with white civilians and police.

Question: In general, where would you like best to be stationed?

The northern Negro feels most keenly about his being stationed in the South, as on the whole he has been accustomed to greater freedom of movement and security of person in his home community. Specifically, he has generally not suffered definite segregation in public conveyances, public eating places, and in theaters. He has, for the most part, been treated indifferently by the white population in the North, rather than with condescension, or hostility. He has had the protection of the law to a greater extent than he expects in the South. His opportunities for wholesome, cultural contacts within the Negro community are on the whole greater in the North.

The southern Negro, though frequently disturbed by conditions in the South, has had to make some sort of an adjustment to these conditions during his civilian life. He is, therefore, not as likely to show as great concern as the northern Negro over day to day experiences, but the presence of a deep seated antagonism toward the Southern situation is exhibited when he feels he can talk freely without fear of penalty or bodily harm for expressing his thoughts.

Question: How do you feel about the bus service to and from camp for the soldiers in your outfit?

	In Southern Camps	In Northern Camps
Negroes from the *North*		
Very poor	65%	35%
Poor	19%	24%
Undecided (7%) (5%)		
Fairly good (6%)		28%
Very good (3%) (8%)		
Negroes from the *South*		
Very poor	33%	21%
Poor	20%	20%
Undecided	10%	10%
Fairly good	21%	32%
Very good	16%	17%
Whites		
Very poor	19%	18%
Poor	20%	19%
Undecided (6%)		16%
Fairly good	40%	33%
Very good	15%	14%

It must be explained to the Negro soldier that the selection of training sites in the South is a matter of taking fullest advantage of climatic conditions favorable to year-around training. It has nothing to do with consideration for the preferences of individuals, white or Negro. The final decision in war has to be based on military expediency, under which personal desires per force come second.

Soldier or War Worker?

The grave doubts concerning the meaning of the war effort for Negro enlisted men, which arise both in civilian and Army experiences, are reflected in their attitudes toward the soldier role and combat. their country, but many of them are not eager for combat or for oversea assignments. This attitude cannot definitely be attributed to any one cause, but it can undoubtedly be rectified in many instances by fair treatment and proper orientation by their leaders.

The better educated men are more likely both to want to be soldiers and to have oversea assignments than are those with less education. This is true both of northern and southern Negroes.

Question: Do you think town police usually treat soldiers fairly or unfairly?

	In Southern Camps	In Northern Camps
Negroes from the *North*		
Usually *Not* fair	48%	25%
About half are fair, half not	27%	38%
Undecided	10%	6%
Usually fair	15%	31%
Negroes from the *South*		
Usually *Not* fair	36%	24%
About half are fair, half not	30%	34%
Undecided	10%	13%
Usually fair	24%	29%
Whites		
Usually *Not* fair (5%) (3%)	20%	15%
About half are fair, half not		
Undecided (6%) (6%)		
Usually fair	69%	76%

Men Who Think They Are Fairly Treated Accept the Soldier Role

Negro soldiers who think the Army is fair are more likely to accept the soldier role than those who think otherwise. In the survey referred to on page 12, Negro and white soldiers were asked to choose between the merits of being a soldier and a war worker.

Question: If it were up to you to choose, do you think you could do more for your country as a soldier or as a worker in a war job?

The Negro soldiers were also asked three questions about the fairness of their treatment in the Army. Their answers divide them into three groups. The questions asked were:

Do you think a Negro soldier with ability has a good chance for promotion in the Army?

Do you think a Negro soldier with ability has a good chance to become a commissioned officer in the Army? (When this question was asked the demand for officer candidates was still great.)

Do you think white M.P's usually treat Negro soldiers fairly or unfairly?

1. One group consists of Negroes with the most favorable attitude toward Army fairness. Men in this group—a fifth of all Negro soldiers—say the Army is fair to Negroes on each of the three questions. 39 percent of the men in this group—almost the same proportion as among whites—say that they are more useful to their country as soldiers than as war workers.

2. A second group consists of men who say the Army is unfair to Negroes on one or two of the three questions. Three-fifths of the Negro soldiers are in this group. 25 percent of the Negroes in this group feel they are more useful as soldiers than as war workers.

3. The third group, containing a fifth of the Negro soldiers, say the Army is unfair on all three questions. Only 21 percent of the Negroes in this group feel they can serve their country best as soldiers.

Before leaving this chart it would be well to note that the three questions on fairness of treatment in the Army concerns situations in which the company officer can have considerable influence on the men's opinions. An officer who gives promotions when they are deserved without favoritism and who sees that his men get just treatment on and off the Post is most likely to have men with favorable attitudes toward the Army.

The two previous charts indicate the importance of convincing Negro soldiers of the role which they and their outfits have in the winning of the war. This is especially true of noncombat troops. The importance of supply and construction must be emphasized if troops are to get an accurate picture of the nature of global warfare. It is unnecessary to add that the officer himself must know and take seriously the functions of his own arm or service if he is to convince his troops of their importance to the war.

SUGGESTIONS TO THE LEADER OF NEGRO TROOPS

When a man enters the Army, his experiences are circumscribed by the specific situations in which he finds himself. Army adjustment, therefore, as has been noted before, is in actuality adjustment to the life of the unit.

Responsibilities of Leadership

The responsibility to see that Army adjustment takes place is shared by all echelons, from the Chief of Staff down to the noncommissioned officer. The junior officer, however, who is responsible for the unit and whose duties are most likely

to bring him in face-to-face contact with all members of the unit, bears the brunt of this responsibility.

An officer who knows the principles of good leadership and who is able to put such knowledge into execution will be successful in helping his men, be they Negro or white, adjust to the life of the unit and thereby to the Army. On the other hand, an officer who fails to recognize the universal application of the principles of leadership to all soldiers, or who fails to put such knowledge into practice when dealing with Negro troops, no matter how well-meaning his reasons may be, is doomed to failure and is very likely to run into serious difficulties from the very beginning of his service.

Careful study and restudy of official Army guides to leadership will serve the officer in command of Negro troops to good advantage. The necessity for this is especially great for those officers who either have had little previous contact with Negroes or who think either consciously or unconsciously that there is some special way of dealing with Negro troops. Both types of officers run the risks of failure on the job assigned.

Some Cardinal Principles

A few cardinal principles of leadership taken from FM 21-50, sections I, II, and IV, are worthy of careful examination by all officers, and should prove especially useful to officers who lead Negro troops. In brief these cardinal principles are:

a. Know your men.
b. Set the example.
c. Care for your men.
d. Keep the men informed.
e. Set high standards and develop pride in outfit.
f. Stimulate initiative and self-respect.
g. Reward the men for jobs well done.
h. Establish and maintain military discipline and courtesy.
i. Serve unselfishly.

Brief amplification of each of these principles of leadership is supplied in the remainder of this chapter. Use it as a check list in reviewing again and again your day-to-day activities as an officer. Because of the brevity of the discussion in this chapter you may feel that it gives you an inadequate basis for meeting the responsibilities of command. The later chapters, however, offer background material and more detailed information as an aid in obtaining the full cooperation of Negro troops. Make a constant effort to relate what you read in the subsequent parts of this book to the specific leadership principles just listed.

PRINCIPLE 1: KNOW YOUR MEN

> Paragraph 26a, FM 21-50: "Make it your business to know the name, habits, peculiarities and social background of every man in your organization. Let all your direct dealings with him be influenced by this knowledge."

Every officer assigned to command Negro troops is likely to be plagued by personal ideas about what his men are going to be like, about their maximum capabilities, about their limitations, and about how he can best get along with them. It is a natural, human trait to anticipate situations. The best officer will recognize this tendency and guard against it.

Many civilian beliefs and prejudices are based on unfounded but widely accepted myths. These have no place in the Army. The officer must remember that his success, happiness, and possibly his life will depend on the relationships he establishes with his men. He must assume his new responsibilities with the firm conviction that regardless of the limitations some of these men may have brought with them into the Army from civilian experiences, while under his command he can and must make them into the finest, most alert and capable soldiers that ever wore the uniform of the United States Army. Only such faith in his own capabilities and the capabilities of his men can lead to the development of a first-class unit.

No Two Men are Alike

With this objective in mind, it is the duty of the officer to get a first-hand knowledge of each man's interests, attitudes and past experiences in order to determine the nature and magnitude of the specific challenge he faces as a leader of the Negro troops. He will find a wide variety of men under his command. No two will be alike. Each will be the product of unique individual capabilities, previous opportunities for training and development, and earlier civilian experiences. No accurate list of general characteristics of Negroes can be made. The officer's job is to take his men, study them as individuals, and tax their capabilities to the utmost so that they will become soldiers in the United States Army worthy and aware of the privilege.

The Need for Trust

The officer cannot expect troops to accept him wholeheartedly or to take him into their full confidence until he has proved his loyalty to them. At the outset he should depend on the other officers in his company, commissioned and noncommissioned, to help him gain that confidence so necessary for a leader. The officers of lower rank should be made to feel free to come to their superior officer with their own problems or those of their men, personal or otherwise, at frequent intervals. Through intimate contact only can the organization be welded together into a single, indivisible unit.

Most of the Negro officers and many of the Negro noncommissioned officers will be men who are more accustomed to speaking frankly and openly to white people, because of their previous contacts with whites, often in responsible positions in civilian life. Anything suggesting a spy system should be flatly forbidden. If, however, the white officer is quick to gain the confidence of the Negro officers through frequent and frank discussions of problems with them, word will soon get back to the troops that this is an officer who can be trusted to be understanding and fair.

Meeting the Men

As soon as good relations have been established with Negro officers and NCO's in the outfit, the next step—and it should be taken as soon as possible—is to establish similar relations with the troops. No matter how pressing regular duties may seem to be, the company officer must find time to talk with each man in his outfit. The interview need not be more than ten minutes, but it should be extensive enough to give a clear idea of the man's abilities, problems and anxieties.

Interviewing Procedures

The following procedure has proved helpful in conducting such interviews:

1. Before the man arrives, look over his Form 20 card for such personal information as:

a. How old is he?
b. How much education has he had?
c. What did he do on the AGCT?
d. What parts of the country has he lived and worked in?
e. What kinds of jobs has he held?
f. Is he married or single?
g. Does he have any children?
h. What are his main interests or hobbies?

2. Conduct the interview informally. Set him at ease. Mention that you want to talk with him personally about how he is getting along.

3. Ask him about his family.

a. Are the allotments coming through regularly and on time?
b. Is additional help needed?
c. If so, does he know about such organizations as the Red Cross and Army Emergency Relief?

4. How is he getting along in his present Army assignment?

5. Are there any problems that he would like help with, either relating to his Army job, training, or personal matters?

6. Does he know all of the pass and furlough regulations?

7. Is he aware that he can come to you or to any of his officers if he needs help or advice? Has he met the chaplain? Does he know what religious services are available for enlisted men?

Results of the Interview

From the interview and the examination of the Form No. 20 card, the officer should be able to determine whether the man is learning to think and act as a soldier, whether his civilian skills are utilized in his Army job, whether his assignment is such as to develop capabilities shown by his record and by his performance on the Army General Classification Tests, and whether he is adjusting to the life of the outfit without too many conflicts and problems.

Men who won't Talk

With some of his men the officer may gain the disquieting feeling that they are deliberately withholding information during the interview. If this is the case, these are the men who have not yet decided that the officer is to be entirely trusted. This is a natural reaction of men who in their whole civilian environment have learned to distrust the motives of white people, especially those in authority.

Many of these men will have adopted so-called "techniques of survival" in order to get along in

the civilian world. These are the men who, in order to keep out of trouble, avoid contact with whites as much as possible, answer their questions evasively, or merely smile and grin in the hope that the interrogator will not press his point too far. These men are neither pathological liars nor dull-witted. They may try to guess the answer which the officer wants, and then give it to him in the hope of ending the interview before anything goes wrong. If the officer realizes that every concurrence does not mean absolute agreement, that every smile does not mean pleasure, and that with these men he must continue his efforts to gain confidence and trust, little harm will be done by their ingratiating technique. If, however, he decides that they are unapproachable or constitutionally untrustworthy, he will never be able to lead them with success.

Singling Out Potential "Problem Cases"

Where misassignments have occurred, corrections should take place immediately. Special attention should be given to men of low educational level or with low AGCT scores. These are the men most likely to slow up the development of the outfit and to cause problems of discipline if enough time is not taken to explain things simply and in detail to them. They are also most likely to need help in handling personal problems, such as family allotments and additional assistance. The officer should be on the lookout for men who have health problems or who are seriously maladjusted. Such men should be referred to the medical officer for treatment as soon as they are discovered so as not to jeopardize the performance and well-being of the unit.

Study of all the following chapters will help you in putting the first principle of leadership, *know your men,* into practice. Do more than just read the words; think out the application of what is said to your own command. Chapters 3 and 4, on the education and vocational experience of the Negro soldier, will be especially helpful in gaining an understanding of the individual qualities of your men.

PRINCIPLE II: SET THE EXAMPLE

> Paragraph 24a, FM 21-50: "Absolute loyalty is fundamental and that loyalty should extend downward as well as upward."

The Men Will Watch You

From the day an officer assumes the responsibilities of a leader to the day he is disassociated from his outfit, he is under the surveillance of his men just as much if not more than they are under his surveillance. He must demonstrate through action his loyalty and devotion to his men if he is to gain their full loyalty and devotion. Such loyalty "downwards as well as upwards" is necessary if he is to succeed in developing a topnotch outfit that is willing to go through anything with him. Such loyalty is essential to soldiering and mandatory for the quick execution of orders.

An officer who raises any doubts in the minds of the Negro soldiers he commands as to his loyalty or devotion to them, either through what he says or does while in command, is certain to gain disfavor and ill will. This can lead to disaster. The only guarantee of loyalty "upward" is loyalty "downward."

The officer who sets out to make his the best outfit in the Army and dedicates himself to that end, will think, speak and act in a loyal and devoted manner at all times. He who thinks that his men are inherently inferior to any other group of men, is not deserving of their trust and devotion and can never achieve such a goal. Furthermore, the men possess more intelligence than he grants them. As soon as they sense his attitude, they will demonstrate their lack of trust in him as a leader.

In general a Negro soldier should be addressed and treated in the same manner one would address or treat any other soldier. It is impossible to characterize all behavior which is resented by Negroes. Individual Negroes will differ as to what they consider offensive behavior, depending upon the inferences they draw with respect to that which lies back of specific types of behavior. Perhaps the simplest rule is that troop morale will suffer if the words or acts of the officer imply either racial hostility or a patronizing, condescending attitude.

Obtain and study a copy of the War Department Pamphlet No. 20-6, *Command of Negro Troops.* This pamphlet contains the best available statement of the Army's point of view on the responsibilities of the officer commanding colored men.

PRINCIPLE III: TAKE CARE OF YOUR MEN

All Soldiers Want the Best

The Negro soldier, like any other American soldier, desires and appreciates the best. This applies

to his officers, his outfit, his uniform, his equipment, his training, his food, his recreation and his medical care. It is his officer's job to see that he gets the best available of everything.

Mess is one of the most important items in the daily routine of soldiers. The Army recognizes it as a factor in troop morale. Most soldiers are getting better food and a much better balanced diet in the Army than they had in civilian life. As in all groups of low economic status, many Negro soldiers will not have been used to eating the quality and variety of foods provided by the Army. The diet of many Negroes, for example, is known to be deficient in fresh fruits, eggs, milk and certain fresh vegetables. These foods, however, are essential to the maintenance of good physical and mental health. Men can be taught the value of an adequate diet. Poster campaigns and well prepared dishes will help the men to learn to eat the necessary foods to which they may not be accustomed.

A good mess officer will see to it that the men get what they like plus what they need. The company officer can solve the food problem to a large extent if he has a capable and intelligent mess officer. Eating mess with the men can serve as a check on how well the mess officer is doing his job; at the same time, it indicates to the men that their officers are concerned about the quality of their meals.

Handling Special "Tensions"

Tensions and crises are bound to arise, probably more frequently with Negro than with white troops. Many tense situations where the civilian population is involved can be avoided if steps are taken in advance. An officer assigned to a new Post should make it his duty to determine civilian attitudes toward Negro troops and opportunities for wholesome recreation in the area. The people in the community may often have undue fears as to what the presence of a large group of Negro troops in their community will lead to. Such fears often can be allayed by someone in authority at the post assuming full responsibility for the conduct of troops off-post, in exchange for guarantees of civilian cooperation and respect for the troops.

Where community atitudes are hostile and likely to produce friction, every effort should be made to obtain well equipped service clubs, PX's and theaters if they are not already in existence. Attractive entertainment should be provided at frequent intervals on the Post, so as to reduce the need for soldiers going into the community for their recreation.

Good and adequate special transportation that will take the men directly to large Negro areas which offer adequate theaters, eating places and dance halls will often reduce the necessity for contact with white civilians. Similarly, through USO, Civilian Defense and the cooperation of church groups, Negro girls can be brought from nearby cities to the camp one or more nights a week for dances and other social activities. Officers should be careful to supervise such activities personally, in order to insure continuing good relations with the civilian sponsors of such affairs.

Planning Off-Duty Activities

In planning the free time activity program for the men, get them in on the plans as often as possible. Let the men express their own opinions as to what they like with respect to entertainment and try to provide it for them.

Guard against the popular conception that all Negroes can and like to sing and dance. This is far from the truth. The American Negro, like other rural peoples, has developed a folk culture in this country that is unique and something to be proud of. To many Negroes, however, these cultural contributions of the group are no more a part of their own personal experiences than the square dance, hillbilly songs, and corn husking bees are a part of the experiences of many white youths.

At an appreciable number of camps, particularly among those located in the North and West, but also at some southern camps, it has been possible to conduct group activities involving both Negro and white troops. At some posts, Negro and white soldiers play together on the same athletic teams, including those which represent the post before the public. Such joint participation on any level, whether it be athletics, group discussions, drills, or training, makes for understanding and teamwork among the men who have to work and fight together in this war. The officer will have to use his judgment in fostering such activities, depending on conditions at the camp to which he is assigned.

In general, personal contacts of Negro and white troops should not be blocked. It should be remem-

bered that when the men get into combat areas later on, the Negro and white soldiers may be interdependent. Any increase in the feeling of understanding and cooperation between them during the training period will reap dividends later in combat areas. It is most significant that wherever white and Negro troops serve side by side in actual combat they build up a strong feeling of mutual respect and understanding.

When They get in Trouble

If any of the men should get into trouble with town police, it is the duty of every officer to see that they get full protection of the law in accordance with Changes No. 1, 27 August 1943, AR 600-355.

The officer should make it clear to the men that he as well as they have to abide by the laws of the state and community in which they are stationed. The same holds for Army regulations and policies. However, with full regard for the law and Army regulations, it is his responsibility to see that his men get just treatment and are not made to suffer unnecessary discomforts and hardships because of their group identity.

The responsibility of caring for your men involves both duty and off-duty activities. Watch their health, as discussed in chapter 5. Familiarize yourself in detail with the camp community, make the acquaintance of key civilians who can help you, and keep a constant eye on the potential trouble spots as suggested in chapter 6. Learn the legal rights and obligations of men in the armed forces as indicated in the appendix. Do not take the attitude that your men are on their own or that their welfare is someone else's responsibility when they are not in camp.

PRINCIPLE IV: KEEP THE MEN INFORMED

> Paragraph 29, FM 21-50: "Nothing irritates American soldiers so much as to be left in the dark regarding the *reason* for things. There is much about Army life that is new to the majority of them—old customs and traditions, and strange ways of procedure for which there are good and cogent reasons. Don't 'talk down' to them, but explain in terms and illustrations with which they are familiar. Make them feel that the work in which they are engaged is important by showing them the relation between it and the large picture of the national effort."

Soldiers Want to Know "Why"

In civilian life, many Negroes have not been afforded the opportunity of asking the reason why. They will not ask questions and may seem to lack interest in their jobs until they are convinced that you are both competent and willing to explain *reasons* to them. Others, however, are accustomed to asking questions when they feel their welfare is directly or indirectly involved. As Americans, whether or not previous situations have permitted them to raise questions, the desire to know the reason why is ever present.

It is up to you as a leader to give them the answers. Much that has been marked off as "Negro traits" in civilian life, such as lack of initiative, mental laziness, lack of ambition, and irresponsibility, may be traced back to the limited opportunities afforded the Negro to obtain information and to see the relevance of his job to some goal which has importance to him. By keeping the men informed and encouraging free discussions with and among them on subjects pertinent to the life of the unit, the officer can gain and hold the respect of his men for his judgment.

If They Can't Read—Tell Them

The Form 20 cards of most Negro outfits reveal a high percentage of men who are either illiterate or just barely literate. This is not a conclusive index of native intelligence, nor does it mean that these men lack the ability to learn how to read and write. It usually means that they did not have a chance to go very far in school. Such troops will require considerably more oral explanation of Army rules and practices than better educated men who can read printed matter for themselves.

The officer will have to see that these men are acquainted with the rules and that they get their instructions and orders orally. He cannot depend on bulletin board notices and printed matter to keep them informed.

Explanations should be phrased in clear, simple, forceful language. For men who have had little previous formal training in group living and teamwork, such as most Americans gain in schools, boys' organizations, and on athletic teams, new

words and concepts should be explained in plain, direct words. This is especially true of the military meanings of terms like esprit, echelon, file, magazine, or of abbreviations like AGCT, CP, or SOP. Terms which are thoroughly familiar to you are difficult for many an enlisted man to grasp even after months of training.

If terms are carefully explained when first used, much of the "slow learning" in outfits will disappear. "Slow learning" is often synonymous with "poor teaching." Be certain that your men understand what you say. Use the NCO to the fullest in this connection, but do not turn over to him the responsibility which is yours.

Teaching Slow Learners

Naturally, the less educated men will slow up somewhat the progress of the outfit. The War Department has recognized this by extending, in many cases, the time allotted for training Negro units. This can be reduced to a minimum by holding special classes for the men who are likely not to keep up with the group.

The work of Special Training Units with illiterates is discussed in the chapter on education. The United States Armed Forces Institute provides instruction materials on the elementary level which are available to all military personnel. Abundant use should be made of training aids, film strips, etc. Visual instruction is often most effective. Use the materials issued by the Education, Information, and Orientation Branches of the Morale Services Division. Patience and care in seeing that the less educated men get the fundamentals at the outset will permit the unit as a whole to move more rapidly later on.

PRINCIPLE V: SET HIGH STANDARDS AND DEVELOP PRIDE IN OUTFIT

> Paragraph 30, FM 21-50: "Set high standards in performance of all duties and insist on their attainment. Your men must be convinced that their outfit is the best in the regiment, and that the responsibility for its good name rests on every member of it."

Personal Adjustment and Army Adjustment

It is essential that the officer who leads Negro troops view Army adjustment as distinct from personal adjustment, even though the latter is an important means of arriving at the former. By personal adjustment is meant the happiness, good-spirit, contentment, the morale of the man. As suggested in the first section of this chapter, as much of this as is possible must be preserved and developed while the man is in the Army. But the end toward which all training and Army life must be constantly directed is the development of the man into a soldier. Personal adjustment is a means toward this end, but not the goal itself.

The Fallacy of Coddling

Some officers have made the mistake of coddling and pampering Negro troops in a way that they would not treat white troops, because they believe this is the way to make Negroes happy. While this practice may succeed in making a few Negroes happy, it will antagonize the great majority. In general, it will not make any of them good soldiers. Rather, it can only lead to problems of discipline, and slow development. Negroes have as much pride as any other human beings and very naturally will resent being treated as "problem children." In the Army, the enlisted man must learn to work hard, train hard, and "be on the ball" in all earnestness when on duty. His off-duty free time is the time to let up and play.

Negroes have High Pride

Negroes generally take great pride in the achievements of their own group. This is an asset to the Army and not a liability. This pride in group also extends down to the outfit itself. In the Army as a whole, Negro soldiers indicate more pride in their outfits than do white soldiers.

Question: Do you feel proud of your company (battery, troop, squadron)?

	Very Proud	Fairly proud	Undecided	Not proud
Negroes	56%	27%	5	12%
Whites	50%	33%	6	11%

Question: Do the men in your company (battery, troop, squadron) cooperate, and work well together?

Take fullest advantage of this great asset. Make every soldier feel honestly that his outfit can outmarch and outdrill any other, that it runs the best mess, keeps the cleanest barracks, has the neatest supply rooms and best-kept arms and equipment and, above all, has the finest leaders of all grades, and that pride will leave no room for dissatisfaction. Competition, with an equalized distribution of awards among units wherever possible, is especially valuable in creating esprit de corps.

PRINCIPLE VI: STIMULATE INITIATIVE AND SELF-RESPECT

> Paragraph 30, FM 21-50: "You must make every effort to build up his self-respect by laying emphasis on the proud traditions of the soldier in general and of your organization in particular . . ."
>
> Paragraph 33a: "It is your duty to develop among your noncommissioned officers genuine respect for their positions, and pride in their chevrons. Encourage initiative and self-respect by frequent conferences with them on administrative and training problems — give them definite responsibilities for the training and work of the men under them."

Drawing Inspiration from Negro History

The Negro soldier has a rich history and tradition of loyal and outstanding performance in every war the United States has fought, from the American Revolution to World War II. Most white people are unfamiliar with this history. Many Negroes do not know the details. An officer in command of Negro troops should make it his duty to learn the facts concerning the history of the American Negro soldier. He should be prepared to recite to his men the numerous stories of bravery beyond the call of duty shown by Negroes in America's past wars. These epics of valor are sure-fire to catch the imagination of the men and to serve as inspirations for their own endeavors. It is from knowledge of the traditions and successes of one's own group that self-pride stems, that confidence in one's own abilities flows when doubts arise.

The officer should encourage his men to learn more about the part Negroes have played in the development of this country into a great nation. He should see that they have reading materials and periodic discussions of the Negro's contributions to American civilization. This holds for peacetime as well as wartime contributions in the past. Effort should be made to keep the men up-to-date with the exploits of Negro troops on oversea fronts during the present war. Heroes take on important symbolic meanings to minority groups, since the majority group is often too likely to overlook a job well done by a member of a minority group.

The longest chapter in this book is the one on "The Negro Soldier in American History." Its length is an indication of how important it is believed to be to all soldiers, Negro and white, that they know the record of the colored troops in every war in which the United States has fought. Knowledge of this record will give the Negro soldier increased confidence in himself as a fighter, and will build respect in the white soldier for the Negro's military potentiality. Similarly, Negro achievements in the present war should be given the same circulation as those of other troops.

The Negro Press

Negro soldiers show great interest in Negro newspapers which keep them informed of the activities and achievements of the group. Some officers have made the mistake of forbidding Negro newspapers on the Post out of fear that they would lower the morale of the men. Such action is against Army policy and is unwise, for it creates lack of confidence in the officer and leads to serious dis-

content among the troops. The rights of free speech and freedom of the press are taken for granted by every American, and must never be infringed. Further information about the Negro press is given in Chapter 7 on "Rumor, Fact, and News."

PRINCIPLE VII: REWARD THE MEN FOR JOBS WELL DONE

Section I, Paragraph 1, AR 615-275: "Except in cases of great emergency it is the policy of the War Department to encourage the taking of furloughs by enlisted men. It is the duty of commanding officers having authority to grant furloughs to encourage enlisted men to take an average of 30 days' furlough a year when it can be done without manifest injury to the best interest of the individuals or the service."

Paragraph 31c, FM 21-50: "Promotions are a potent means of showing your appreciation of faithful performance of duty. Since the manner in which promotions are made gives the company a good occasion to pass on the judgment of the company commander, it is important that you never permit yourself to be deceived by false pretenses of any sort . . . Well-considered and justified promotions will go a long way toward sustaining the respect and loyalty of your subordinates."

The Importance of Rewards

The Negro soldier like any other soldier expects praise and rewards when they are due. Week end leaves, furloughs and promotions are very important to him. They go far in maintaining a high level of morale. Leaves and furloughs are privileges that all soldiers appreciate and expect. Promotions serve as recognition for jobs well done. Such rewards, judiciously and impartially administered serve as incentives for ambition.

All men respond to the competitive spirit. Barrack against barrack, squad against squad, company against company in friendly competition in drills, inspections, AWOL and VD rates, area beautification, projects, etc., will often add just enough incentive to make the difference between a "good" and an "excellent" outfit. Plaques, banners, streamers for guidons, etc., may be awarded in contests of this sort.

Selecting Noncoms

In selecting Negro noncommissioned officers, men should be chosen who exhibit high traits of leadership and who are respected *by the men.* These considerations often outweigh technical ability in making selections. Surveys of the Research Branch, Morale Services Division, have shown that the men have very clear ideas as to what they expect from a noncommissioned officer. This evidence suggests that attention should be paid to the men's opinion of the candidate as expressed in their attitude toward him in addition to the officers judgment of his abilities as a leader.

One mark of the good commander is his ability to select good subordinates. Noncommissioned officers of proved responsibility are indispensable to the success of any outfit. In paying attention to the men's opinion of the noncommissioned officer, be certain to distinguish the man who is respected as a leader of ability from the man who is just generally liked for his amiable qualities alone. It may be necessary to spend as much time selecting and training your noncommissioned officer as on any other task. No other will pay you greater dividends later.

PRINCIPLE VIII: ESTABLISH AND MAINTAIN MILITARY DISCIPLINE AND COURTESY

Paragraph 3a, FM 21-50: "Military discipline can be attained only by careful and systematic education and training. All types of training which develop positive qualities of pride, honor, loyalty, confidence, initiative, and teamwork are essential. There is no perfect formula for such training, as no two groups or even two individuals will respond in the same manner. It is essential that the civilian environment of a soldier be kept in mind, since it may differ radically from that of the Army."

Paragraph 5b, FM 21-50: "The courtesy rendered a leader by his subordinates is rendered to the responsible position he holds. It expresses an appreciation of the importance of his contributions to the group effort. The courtesy of the leader toward his subordinates expresses his realization of their importance in the same effort."

Discipline Must be Learned

Soldiers will differ greatly in the ease with which they conform to established patterns of military discipline and courtesy. Some Negroes have never had the opportunities for training in those areas fundamental to military discipline. Once in the Army and given the necessary training, however, experience has proved that the Negro soldier develops the characteristics essential to discipline as readily as any other soldier of similar background. The transition from civilian habits learned over many years of limited opportunity to smart military habits is of necessity a slow and painful process for many. Nevertheless persistence and maintenance of high standards for the outfit will eventually lead to success.

Habitual military courtesy comes as the natural consequence of the officer setting the example of being courteous to his men, and of the officer's ability to convince his men of the importance of the group effort to which both officers and men contribute.

It is especially important that all military courtesies be fully and cheerfully extended to all Negro officers on the Post. The Negro enlisted man takes pride in the fact that members of his group have made achievements in the Army. Failure on the part of white troops or officers to render military courtesies where Negro officers are involved, violates Army Regulations and is bound to be detrimental to the morale of Negro troops.

Orders and their quick execution are essential to military efficiency. The officer must give these firmly and take full responsibility for them. However, the good leader wants his men to obey him not because he has superior rank, but because he is convinced and has convinced his men that he is acting in the best interest of the unit.

Quick and willing response to orders comes with time. The Negro civilian is used to taking orders, but frequently unwillingly. In the early stages of training, therefore, it is well for the officer, where time permits, to explain to the men why things have to be done the way they are done in the Army. He must convince them that rules, regulations and the carrying out of orders are mandatory to the success of the group in its undertakings. Too much emphasis should not be placed on the efficacy of severe penalties for violations. If the men are sold on the importance of their duties, there will be few violations deserving harsh penalties.

PRINCIPLE IX: SERVE UNSELFISHLY

> Paragraph 35: "Approach your duties yourself only after your men have been cared for. Through unselfish service, earn the respect and loyalty of your men, and they will cheerfully and willingly 'take care of the old man'—that is the essence of the American system."

> Paragraph 35: "Approach your duties in a humble spirit with firm intention of taking every opportunity for acquiring the broad knowledge necessary to success. In your personal life, live up to the standards of an old and honorable profession. Be loyal to your superiors; firm, impartial, and human in your dealings with subordinates; diligent in duty. Be a leader in the true American tradition, by always setting the example."

The Good Officer can't be Aloof

The good officer has to feel that the unit is a part of him and that he is a part of the unit. He cannot be aloof if he wants the cooperation and support of his troops during training and combat. He should recognize that their accomplishments are his accomplishments, their failures his failures. When the men are in trouble he must see them through. He must suffer their indignities with them as well as their joys. It is only through the development of group solidarity and pride within the organization, through setting and attaining group goals in the day-to-day life of the unit, that Army adjustment takes place.

This is the challenge to the officer entrusted with the command of Negro troops. It is a great challenge that has been successfully met in the past by competent leadership. The officer who proves himself equal to the task will have an outfit that he can be proud of. At the same time he will have served his men and his country well.

CHAPTER 3

EDUCATIONAL BACKGROUND OF THE NEGRO SOLDIER

Education and War

Modern warfare requires educated men. Facility in reading, writing, and arithmetic at about the fourth grade level is the minimum educational requirement for the man in the ranks. Men with these minimum requirements, however, must be supplemented by many more enlisted men and officers with advanced and specialized knowledge of practically every conceivable variety. There has been so much talk about the alleged mental inferiority of the Negro that doubt has been created in the minds of many individuals concerning the educational suitability of the Negro soldier for full participation in modern warfare. In order that doubts so inspired may not hamper any officer in the training and utilization of his troops, the general theory of racial superiority and inferiority in terms of educational capacity must be discussed as a preliminary to more realistic and specific consideration of troop education problems.

Enemy attempts to cause confusion in the United States through the spread of racial doctrines have made it particularly necessary that there be frank and objective discussion of this subject during the present war.

Theories of Racial Differences in Educational Capacity

The doctrine of "Aryan" superiority has become one of the dominant factors in the present world struggle. Hitler has made this doctrine the "'reason" for untold aggression and devastation. He has succeeded in making his followers believe that their "superiority" not only justifies, but demands the subjugation of less favored peoples. Development and progress throughout the world, he has said, will depend upon the extent to which "Aryan" leadership is followed. The peoples of the world already have had ample opportunity to examine the validity of this concept while they are experiencing the results of Hitler's crusade.

Likewise, on the other side of the world, the Japanese have been trying to demonstrate their inherent superiority. Their leaders allege that Americans are gullible where Japanese are clever, soft where they are hard and physically fit, weak where they are enduring and courageous. They have set out to secure their destined place in the sun at the expense of anyone who stands in their way. And they have declared themselves the saviors of the colored peoples in all lands and under all governments.

Belief in theories of racial differences in inborn group abilities has been relatively common for some time throughout much of Western civilization, including the United States. It has been easy for the dominant peoples to approve such theories and thereby claim their own inevitable superiority. The American Negro has lived for generations under the influence of such beliefs, and at the same time he has been taught, and has been benefited by American democratic ideals and practices.

The Army accepts no theories of racial inferiority or superiority for American troops but considers that its task is to utilize its men on their individual merits in the achievement of final victory. A realistic and impartial examination of the evidence on racial differences in ability supports this position.

National doctrines of inborn race superiority are the product of a variety of specific situations. That they represent a prejudice, can be shown beyond any reasonable doubt. Scientific knowledge does not support the idea of the inherent superiority of any one race over another. Students of history, psychology, biology, and anthropology are in general agreement that the progress of civilization has

had little or no relation to alleged inborn, biological characteristics of particular races or nationalities.

Civilizations have risen and fallen without changing the fundamental physical characteristics or supposed abilities of their people. Japan is an outstanding example. Until the middle of the last century, Japanese culture was slow-moving and ceremonious, high in its appreciation of aesthetic values, feudal in its organization. Japan was one of the more backward nations; then the old way of life was replaced, and Japan set out to become more up-to-date and to take advantage of Western culture. Now the modern rush of commerce and imperialistic wars govern what was once a sedate and peaceful nation. But the people of Japan have not changed their inherent natures; they have modified only their purpose and their way of living.

Biologists and physiologists are now generally agreed that only biological traits are inherited and that cultural characteristics are not. Thus, while heredity may account for certain marked mental similarities within a family, it does not explain similarities in behavior of entire national groups. Such national characteristics are formed under social and economic development, not through heredity. Thus, if a survey of the United States were to be made to select the most intelligent or energetic or emotionally stable of our population, all races would be represented in the group. In spite of the negative conclusions of scientists, some members of self-styled superior races are still finding it useful to cherish the illusion of their own hereditary excellence. And they are being successful in keeping alive some false convictions and prejudices.

Hidden Causes of Frictions

As has been the case throughout history, present day frictions are not truly racial, however often racial superiority is advanced as an excuse. Since World War I, we have been watching the development of galling frictions throughout the world: nationalistic rivalries have been embittered by economic losses; other social and economic problems have been left unsolved; poverty, unemployment, and war have been the result.

Desperate men have cast about for some scapegoat on which to blame their failures. In a country aroused with emotional fervor, it became easy for Hitler to persuade his people that the Jews were a major source of their troubles. Riots, persecution, and cruelty became widespread. By encouraging anti-Semitism, Hitler gave his people an outlet for their bitter rivalries and a safety valve for resentment against the political terror he used to seize and maintain power.

To justify the terror Hitler voiced the claim of the "master-race" to the property of "non-Aryans," to the territory occupied by "non-Aryan" sovereign states; and to slave labor of "non-Aryan" populations. In this manner Hitler used the false "science" of race and history to justify his aggression, although science and history proved nothing of the sort.

Doctrines of racial inferiority have sometimes been supported by the use of inapplicable and unscientific approaches and by wrong interpretations of data. Many and varied are the abuses of science that have accompanied the widespread use of intelligence tests. For too long, psychological testers assumed that they were measuring inborn intelligence. Gradually, as evidence mounted showing the effect upon intelligence test scores of physical, emotional, and cultural factors, they became convinced that nurture, as well as nature, has a great deal to do with so-called "intelligence."

Recently, interpretations of intelligence test data have been offered in terms of social and educational opportunities. The result is not only a new understanding of the nature of intelligence but also an appreciation of the reasons for the relatively low test ratings of certain underprivileged groups.

With this new knowledge, a changed attitude toward heredity in relationship to racial characteristics is gradually evolving. We have known for a long time that pedigree alone will not insure the development of a prizewinning horse or dog. Care, attention, and proper nurture will improve the less promising specimens. Now we are applying this same wisdom in an attempt to understand and improve people.

We take into account the individual's present way of life; we study his history to see how his past experience may have influenced his development and affected his characteristics. We do not ascribe to race and heredity what is really the result of poor environment and inadequate nurture. We have seen what several generations of poor living

in America have done to retard the Negro. We need now to investigate further what he has been able to salvage of his biological and cultural heritage.

Negro Intelligence and Educational Achievement

In the face of the present emergency and shortage of manpower for winning a war against aggression and racial discrimination, our problem with regard to the Negro is three-fold.

(1) What are the mental abilities of Negroes?

(2) To what extent are these abilities inherent, and to what degree are they the results of environment and limited opportunity?

(3) To what extent are these abilities capable of improvement; more specifically how educable is the average Negro who is eligible for service with our armed forces?

Mental Abilities Differ Within Races

Negroes differ greatly among themselves, as one would expect in view of the known differences in the stature, color, body build, and so on, of the African groups from which they originally came; but in this respect they do not differ appreciably from whites, who also display similar intraracial variations.

Negroes have been alleged to be lazy and slow-moving. Certain studies have shown that they are slower in speed of reaction than whites. When one analyzes the mode of life and the environmental backgrounds of each group however, it is seen that the cultural pattern rather than the racial predisposition is the outstanding reason for manifested differences in speed. Life in rural areas does not require speed. But in large cities, where speed is more essential, both Negroes and whites react more quickly. It has been shown that Negroes in southern rural areas react more slowly than Negroes in northern urban areas. But so do whites. Evidently people are influenced by and react to the necessities of their environment.

Much of the controversy on racial intelligence arose as a result of testing done in World War I. The use of group testing procedures made it possible to examine approximately 1,700,000 men. The analyses of the test results were presented in several comprehensive studies of race, locality, nationality, and length of residence in the United States.

Environment as a Factor in Test Scores

In a study of immigrant stocks, it was found that the test scores of Italians, Greeks, Poles, Russians were low, while those of the English, Scots, Irish, Scandinavians, Germans, and native-born Americans were higher. These findings seemed to lend strength to the concept of "Nordic superiority" until further study called attention to the fact that length of residence in this country seemed to account in part, at least, for the difference in scores. Men who had been here for some time tended to make higher scores than those who had entered the country at later dates. In fact, the scores of the foreign-born groups tested during World War I increased with the length of time the groups had spent in America.

Supplementary studies further denied the assumption of Nordic superiority. For example, when the scores for American-born white soldiers were recorded by states, it was found that the southern white soldiers made lower scores than northern whites. Yet the southern states contained the higher percentage of white people having north European ancestry. And soldiers from New England, with its very heavy percentage of foreign born, made higher scores than men from southern states where the white population was more "Nordic" in origin.

This test data also showed that the mental age of the average white American-born recruit was approximately three years higher than that of the average Negro. When Negro and white soldiers of the same school grade were compared, white soldiers again were found to obtain higher average scores than Negroes in the same grades. From such evidence, it was concluded by some that Negroes were born inferior to whites. Again, relevant contributing factors such as the amount or character of educational opportunity were overlooked or disregarded.

Educational Opportunity Differences

But when the conclusions with regard to the Negro-white differences were questioned further, it was shown that Negro and white men of the same school grade had not been provided with

equal educational opportunity. No child develops solely through what he is taught in school. Obviously, group comparisons on the basis of intelligence tests are valid only when backgrounds of equal opportunity have been assured.

It soon became clear that factors such as length of school term, classroom equipment, and teacher preparation were often disregarded when educational opportunities were evaluated. Likewise living circumstances and customs had so affected the vocabularies and thinking habits of the two groups that a test which had been made by and for one group could not be a fair measure of the other.

Furthermore, when the tests of the Negroes were assembled by states and the averages of the states compared, it was revealed that Negroes in the northern states had attained higher scores than those in the South. The proper explanation for this difference was found when other studies were designed to determine how much scores on the Army mental tests reflected educational experiences and opportunity. The average scores were ranked by states. These were then compared with the quality of the schools in these states.

Generally speaking, men from the states with the best schools had the highest scores. It was found, also, in an analysis by states, that there was a close relationship between scores on mental tests, the amount of state income, and the amount spent on education. The averages were higher for men from urban areas than from rural communities, where educational facilities are usually not so good as in cities.

In the light of these studies, the following general conclusion seems inescapable: the 1917 Army tests indicate the working mental level of a man at the time of testing, but not his inherent mental ability. Moreover, the differences in the average scores of various groups might be accounted for by differences in opportunity and other factors.

Post-World War I Studies

In the period between the two World Wars, many more studies were made on Negro-white intelligence. Several investigators who originally assumed that innate differences in the intelligence of whites and Negroes could be proved by mental tests modified their positions. However, a few students reported findings in agreement with the earlier conclusions concerning Negro inferiority. It was pointed out that Negroes of mixed Negro-white ancestry obtained better mental test scores than those of pure Negro parentage. Some students alleged that the greater the amount of white ancestry the greater the intelligence. This conclusion was based upon studies which showed that lighter colored Negroes made higher scores than Negroes whose pigmentation was darker. In such studies it was assumed that the degree of pigmentation affords a valid clue to the amount of white ancestry in a Negro. But this conclusion was of doubtful validity as one investigator pointed out: "The relationship between test scores and physical traits denoting greater or less amounts of Negro blood is so tenuous as to be of no value in drawing conclusions as to the comparative native ability or relative intelligence of the Negro when compared to the white." Furthermore, lighter Negroes are usually descendants of individuals who had greater initial advantages over darker Negroes, and they, themselves, had relatively greater opportunities. There are also many situations today in which the lighter Negroes are favored over the others.

One investigation conducted during this period was focused on the significance of relatively superior mental test scores of northern Negroes. It was designed to determine whether Negroes who migrated northward were superior in general to those who remained in the South. The achievement in southern schools of Negro children prior to moving northward was compared with that of Negro children who remained in the South. The migrant group in this case was found to be actually inferior in test performance, as long as they were in southern schools, to the children who remained in the South. Moreover, this study showed that the mental ratings of the migrant children improved as the length of their residence in the North increased.

Another study revealed that there are large numbers of Negro children whose superior mental ability goes unrecognized. Lack of early identification of such superior Negro children results in their not being offered the type of educational program which would contribute to their maximum development. Furthermore it was shown that these children possess the same characteristics as superior white children. The two groups were similar in developmental background, educational achievement, and personal traits.

In a recent summary of research dealing with inter-race testing, it was concluded once more that where there are differences between the races and in subgroups within each race, there are differences in test performance—not in innate or inherited intelligence.

AGC Tests

The need for proper classification of men in World War II has reawakened an interest in mental testing. The Army General Classification Tests have now superseded the Army Alpha and Beta general intelligence tests. The new tests were designed to provide a quick and reasonably dependable measurement of an enlisted man's *working level* and *ability to learn.* These tests were not developed to measure a man's native intelligence and they should not be interpreted in that way.

Two recent studies have been made from AGCT data for whites and Negroes. The first includes 508,529 white and 57,063 Negro selectees inducted into the Army in the period from June 1941 to February 1942. According to these data, 78 percent of the Negroes and 29 percent of the whites fall in Army Grades IV and V, the lowest categories. Five percent of the Negroes and 39 percent of the whites fall in Army Grades I and II.

These findings do not necessarily reveal inherent racial differences. Instead, they reflect, as did the results of the Army Alpha tests in World War I, the influence of factors such as educational opportunities and motives for learning. For example, only 16 percent of the white group had less than an eighth grade education, as compared with 43 percent of the Negroes. And 42 percent of the whites had completed high school, whereas only 17 percent of the Negroes had achieved this status.

In a more recent study of all men processed at reception centers from June through December 1943, the following facts were disclosed: 20 percent of the Negroes and 74 percent of the whites were rated in Army Grades I, II, and III; and 80 percent of the Negroes and 26 percent of the whites were assigned to Army Grades IV and V. Moreover, it was found that a higher percentage of both whites and Negroes from the North ranked in Army Grades I, II, and III, while Army Grades IV and V contained high percentage of both Negroes and whites from the South. The two service commands which contained the lowest percentage of white men in Grades I, II, and III also contained the lowest percentage of Negroes in these grades. It is of interest that almost 60 percent of the Negro inductees in the Fourth Service Command were classified as Grade V or illiterate, while in the First Service Command only 15 percent were so classified. A very high percentage of illiterate and Grade V Negroes was found also in the Eighth Service Command, which receives relatively large numbers of southern Negroes.

Educational Development and Background

It has been shown again and again that the educational achievement of the American Negro is considerably lower than that of other American groups. The education development and status of the Negro can be properly understood, however, only after his environmental background is evaluated. Again, the interpretation of these data should be based upon a careful examination of the effects of educational opportunity and other factors as they operate in the home, school, and community. Adequate food, clothing, and hygiene, as well as vocational opportunity and interest, do much to affect the growth and development of any group of people.

Differences in the educational achievement of groups of people in the United States appear to be directly proportional to the amount and nature of their educational facilities. In the South, for example, the educational opportunities afforded Negro children are inferior to those provided for white children. And it is in the South that such a relatively high proportion of Negro adults are classed as illiterate.

The average yearly expenditure per Negro pupil in nine southern states was $18.82 in 1939-40, while the average for the white pupil was more than three times as great, $58.69. Moreover, Negro teachers generally are paid much smaller salaries than are white teachers. These conditions are found in their most acute form in those states which have the highest percentages of functional illiteracy.

The poverty of the schools for both groups is seen when expenditures are compared with the average per pupil throughout the United States as a whole, which in 1940 was $88.09.

The scant expenditures for Negro education are easily explained. The South as a whole has a much smaller income and per capita wealth than other

regions and a much larger proportion of children of school age. While southern states, in proportion to their wealth, tax themselves more for schools than the richer states do, they still have only one-third as much per pupil as the average for the nation. And the South spends on the Negro only one-third of its third of the national average.

Illiteracy Among Negroes

An improvement in educational opportunity generally results in an increase in educational achievement and status. In 1910, only 44.7 percent of Negroes between the ages of 5 to 20 were in school. At that time, 30.4 percent of Negroes 10 years old and over were illiterate. In 1930 when 60 percent of the 5 to 20 year age group were attending school, only 16.3 percent of Negroes 10 years old and over were illiterate.

This high percentage of illiteracy among Negroes still contrasts strikingly with the relatively low percentage (2.7) for the whites in the same age group. Further steps to equalize educational opportunities will probably lead to greater improvement in the Negroes' educational achievements and tend to reduce illiteracy among Negroes to the level which obtains for whites.

In sections of the country where identical or nearly identical educational facilities are offered Negroes and whites, the percentage of illiteracy is approximately the same in both groups. For example, in 1930 in the West, 75.1 percent of Negroes and 76.9 percent of whites ages 5 to 20 were in school. In the North the percentages were 68.2 and 72.8 for Negro and white pupils, respectively. In the North, 4.7 percent of Negroes 10 years old and over were classed as illiterate as compared with 2.5 percent of the white population in the same age group. In the West, 3.3 percent of Negroes were illiterate as compared with 0.8 percent of the white group. But in the South, where proportionately more white than Negro children are in school, the percentages for illiteracy are 3.9 and 19.7 respectively.

Although opportunities for Negroes have been extended and enriched, their educational status is still low. The number of years of formal education attained by the average Negro adult, as revealed by the 1940 census, is 5.7 years while that of the native white adult is 8.8 years. Moreover, 41.3 percent of Negroes have completed less than five years in school as compared with 7.4 percent of whites. The average amounts of formal schooling of foreign-born whites and other racial groups also exceed the average for Negroes.

"Functional Illiteracy"

Educational opportunities are more limited for the Negro in certain states than in others. These are the states in which the greatest incidence of illiteracy is found. Thus, in four southern States, over 30 percent of adults had completed less than five years of school work (1940 census). This group is sometimes described as "functionally illiterate." In these states, the amount of formal schooling completed by most adults was only six to seven years. On the other hand, in states such as Wisconsin and Massachusetts, the average amount of schooling completed was 8 to 9 years; and only 9 or 10 percent of adults were found to be functionally illiterate.

Rural-Urban Differences

The plight of the Negro with regard to educational opportunities is further illustrated by a comparison of the distribution of Negroes and whites in rural and urban areas. It is known that most rural areas provide fewer educational oportunities than urban areas. The fact that over 95 percent of the total rural Negro population reside in southern rural areas, as compared with 39 percent of the total rural white population, suggests the meager educational provision made for Negroes. The average urban Negro receives 6.8 years of education, while the rural Negro attends school only 4 or 5 years.

The poor educational achievement shown by Negroes at the secondary school level is likewise due in large part to limited facilities. In the first place, the number of public high schools for Negroes is small. Many counties in the South have no public high schools for Negroes. Some have only one such school for an entire county and make little or no provision for transporting pupils to and from this school. The Negro youth who desires to attend the secondary school may have to walk many miles each day. And when he gets to school, he is likely to find an inadequate building with little equipment. A shortage of teachers also exists in many southern communities. Hence, very large classes are the rule.

Progress in Secondary and Advanced Education

Progress has been made in offering secondary education to Negroes. For example, the number of public high schools for Negroes increased from 64 in 1915 to 2,305 in 1935. More than 350,000 Negroes were enrolled in high school in 1939. But there is still much to be done before Negro adolescents will generally be given an opportunity for education at the secondary level.

First class colleges and universities for Negroes are few indeed. It is true that, in the North, Negroes may attend many great universities. But in the South, where the majority of Negroes live, they are customarily denied entrance to state universities as well as to private institutions. Negro colleges and universities have been established in the South, but they are commonly handicapped by small endowments and inadequate support.

Nevertheless, attendance at colleges and graduate schools is steadily and swiftly growing. About 200 have received the Ph. D. degree, and an equal number have been elected to the high scholarship society of Phi Beta Kappa. More than 100 Negroes have become sufficiently prominent in American life to be listed in *Who's Who in America.* During the past six years, 24,000 Negroes have been graduated from colleges, more than the number graduated during the entire previous history of the race.

Studies already mentioned of the educational achievement of bright and gifted Negroes (IQ's 120 and higher) indicate that the attainments of these individuals as measured by standard tests, teachers' marks, and rank in graduation class are similar to those of white boys and girls of comparable intelligence. And some of these pupils display extraordinary accomplishment. For example, there was a Negro boy who completed the eighth grade at the age of 10 years and 6 months. He was graduated from the University of Chicago when he was 16. The degree of doctor of philosophy was conferred upon him when he was only 19 years old.

Negro Professional Workers

Further evidence of the potentiality of the American Negro is furnished by the fact that over 135,000 members of this race have achieved professional status. This number includes more than 60,000 teachers, 25,000 clergymen, 10,000 musicians and teachers of music, 5,700 trained nurses, 3,800 physicians and surgeons, 2,300 college presidents and professors, and 1,700 dentists in addition, nearly 700,000 Negroes are engaged in proprietary, official, semiprofessional managerial, and supervisory pursuits.

Conclusions from Scientific Investigations

Studies and facts considered in this section point to the following conclusions:

(1) Competent scholars in the field of racial differences are almost unanimous in the opinion that race "superiority" and "inferiority" have not been demonstrated despite the existence of clearly defined and tested differences between individuals within every race.

(2) It is agreed also that most of the differences revealed by intelligence tests and other devices can be accounted for in terms of differences in opportunity and background. The important consideration at this point, then, is how to offer increased opportunities—both physical and cultural—to all handicapped groups, regardless of race, since these variables account in large part for poor performance and achievement in every group.

It is true that in certain areas Negroes show relative inferiority, but this is not necessarily inherent inferiority. There is always the deadening difference of inequality of background and opportunity. Moreover, although the intelligence and educational scores are lower for Negroes than for whites, there is a very large overlap in these scores; the test performance of many Negroes is equal or superior to that of many whites even under present conditions. The military potentialities of these Negroes should be utilized by the Army just as in the case of white troops of similar ability. Special provisions should be made also to enable the lower scoring group of Negroes to attain their full stature. These are considerations which should influence the development of Army training programs.

The Negro in Special Training Units

The Army has already shown the desirable effects obtained in one program of this sort. Possibly for the first time on a large scale, adults who are found to be functionally illiterate are being given the opportunity to learn to read and write. Since

a soldier has to have these skills before he can render military service, the Army has set up, through its Special Training Units, the machinery for instructing men along these lines. The results obtained in these units do much to refute the theory of innate Negro inferiority.

Data on turnover of trainees from Special Training Units for the 7-month period, 1 June through 31 December 1943 illustrate this point. Of 20,000 white trainees who have been separated from these units, 84.5 percent have been assigned to regular training and 15.5 percent have been discharged from the Army. The corresponding figures for 29,000 Negro trainees are 90.7 percent assigned to regular training and 9.3 percent discharged.

Thus, a slightly higher proportion of Negroes than whites have successfully completed special training. Moreover, the figures showing the time spent in this training disclose that a slightly higher proportion of Negro (32 percent) than of white trainees (28 percent) were ready for reassignment in a short period of time (less than 30 days). The fact that Negroes have succeeded fully as well as white trainees in Special Training Units suggests significant implications for the further training and utilization of Negroes in the Army. It certainly tends to show the Negro needs only the chance to learn.

Negro Success in Special Training Units

The reasons for the success of the Negro in the Special Training Unit are not hard to arrive at in terms of what we have already seen of his nature and cultural background. Many of these men simply have not had the chance to learn. For most of these men, camp life offers a decided improvement in environmental background. They are eating and sleeping regularly and well. Their general health is improved by these factors as well as by hygienic practices to which many of them have not hitherto been exposed. Their standard of living, in short has been brought up to what the Army considers essential for the development and maintenance of adequate strength and resistance for military service. The Army is providing for many of these men a range of opportunities which have hitherto been denied them. Most of the men are appreciative of these privileges, and recognize the responsibilities that go with their acceptance.

It is pertinent to note here that the proportion of men in Special Training Units separated from the services according to section VIII procedures is slightly lower for Negroes than for whites. The application of group and individual procedures in educating and reorienting the Negro soldier has resulted in a surprisingly great success. It appears that the Negro's motivation for learning and serving in the Army is no less than that of the white soldier. Perhaps he may view this situation as one which offers him an opportunity not only to do his part in the present emergency, but also as a chance to demonstrate essential worth.

At any rate, the foregoing studies demonstrate and establish the educability of Negroes under the best conditions. These studies shift our focus away from the problem of Negro capability toward an estimate of the conditions under which learning best takes place, and how these conditions may be provided. The Army has already made special provisions for certain important types of deficiency; still other adjustments may be necessary.

Summary Points for Officers

The Army is not concerned primarily with problems of race, social and economic justice, or civilian educational opportunity. It is concerned with the development of soldiers out of the available manpower. The answer to this problem lies in *giving each man his chance to show what he can do.* In order to make certain that you are not operating on the basis of erroneous psychological and educational theories, review your own work with your men in the light of the following summary points:

1. *Doctrines of inborn racial inferiority and superiority are not supported by scientific evidence.* The Army cannot function efficiently on the basis of theories that individual capacities are definitely fixed by a man's race. Its concern must be with the military potential of the individual soldier.

2. *Differences in the scores of Negro and white soldiers on the Army General Classification Test do not indicate differences in inborn ability.* The AGCT is not a test of native intelligence; scores on it should *not* be viewed as IQ's. The AGCT is a classification test which shows the working level of the soldier at the time the test is given. It must be taken into account in planning the training and utilization of the men in your outfit, but not as a fixed ceiling above which men can not rise. In some cases a low AGCT score, after further

observation and investigation, may be found to reflect intelligence so low that the man should be discharged from the Army. In most cases, however, knowing the scores of your men will be helpful in the development of training programs and in the proper assignment of men.

3. *Negroes in Special Training Units have given a most creditable performance.* Most of the men who go into special training units rise to Grade IV after completing the course. A few make Grade III, II or even I. You will find it worth while to familiarize yourself with the work of Special Training Units with both white and colored troops even though you may not need to assign any of your men to such training, for their experience demonstrates dramatically what can be done with men who at first seemed to be unpromising military material.

4. *Character and personality traits unsuitable in the soldier which may exist among your men are principally the result of environment, not of race.* Such traits need not be permanent. In most cases proper training in military duties and behavior will modify or offset any such traits you may find among your men to the point where they will not interfere with their duties as soldiers. Beyond this point the matter is of no concern to the Army.

5. Although scientific evidence does not support the theory that racial inferiorities exist as inborn traits, there are differences in custom, experience, education, and behavior between racial groups, just as there are such differences between individuals within any group. If you are in command of men whose backgrounds are materially different from your own, *do your best to gain an understanding of their points of view, of their likes and dislikes, and of their limitations and advantages. Learn about their history, their families, their ambitions and fears. Such intimate knowledge is basic for successful training and leadership.*

6. *Encourage your men to take advantage of the many training and educational opportunities offered them by the Army.* Most of these are designed to make men better soldiers, and your outfit will improve with the individual improvement of your men. Furthermore, both military training and off-duty education on a voluntary basis pay big dividends in morale as well as in soldierly skills.

CHAPTER 4

VOCATIONAL EXPERIENCE OF THE NEGRO SOLDIER

Effective utilization of the occupational experiences of soldiers is a major command function in all echelons. For commanders of Negro troops it is a problem best met by an understanding of significant factors in the occupational history of American Negroes, specific trends in and categories of Negro job experiences, and by thoughtful application of basic tenets of Army administration and training. The specific patterns suggested for utilization of the Negro soldier's job experiences are the same as those applicable to any group of troops. The problem is simply one of good versus poor leadership.

The present chapter is intended to provide a body of facts relating to the character of Negro occupational experience in America; a summary of job experiences of Negro selectees; and suggestions for the utilization of civilian occupational experiences in the field.

Negro Occupations Before Emancipation

The first Negroes brought to the colonies were few and served largely as indentured servants. Many of these, like white Americans in similar status, gained their freedom and formed, in all of the colonies, the free Negro class. In the occupational experiences of this group, together with slave labor experiences, are to be found many facts significant for a more complete understanding of the occupational history of the American Negro.

Slavery and Agriculture

Although there were Negro slaves in all of the American colonies, the great bulk of them were engaged in agricultural pursuits in the South. It was not until the latter part of the 18th century, however, with the more extensive development of tobacco and cotton culture, that Negro slavery became a major system of farm operation.

There had been a strong trend from about 1750 to 1830 toward the abolition of slavery, induced in part by economic considerations and in part by political considerations associated with 18th century liberal concepts of the rights of man. This trend, however, faded rapidly after the turn of the century with the adoption of the cotton gin and other mechanical appliances of the industrial revolution. By simplifying the processing of cotton and by releasing labor for its production, the cotton gin, the spinning jenny, and the power loom caused the States of the South to become attached to slavery as an economic system supplying the cheap and permanent labor it required.

Slaves in Cities

All slaves were not field hands engaged in basic agricultural labor. The census of 1850 indicates that of a total slave population of 3,204,313, some 400,000 were urban dwellers and about 300,000 more were in rural occupations not directly concerned with large-scale agriculture. While the average level of workmanship among Negro artisans and craftsmen was low and suited to rough plantation life, it is nevertheless true that in many towns and cities there were first class Negro skilled workmen.

Owners realized considerable profit in hiring their slave mechanics by contract to others who needed them. There was scarcely any craft in which slaves did not participate, often to the exclusion and at the expense of free labor, both white and black. Carpenters, bricklayers, blacksmiths, wheelwrights, painters, harness makers, tailors, sailmakers, tanners, millers, weavers, shoemakers, and spinners were found in every community and frequently on a single plantation. Urban slaves were often coachmen, jockeys, fishermen, sailors, draymen, and peddlers. In some cases slaves were employed

under the supervision of Negro master mechanics who took contracts, managed enterprises, and reported to the master periodically. Slaves were also employed as workers in tobacco factories, iron works, and in lead and salt mines.

Free Negroes Developed Their Own Enterprises

From 1800 until the Civil War the free Negro class always constituted from 10 to 13 percent of the total Negro population in the United States. Not all of these were on the same economic and social plane; some came to possess a considerable amount of property, others became mechanics and artisans, while still others were ordinary laborers living with difficulty as marginal workers.

In addition to occupations already indicated as followed by slaves, free Negroes were also tavern and hotel-keepers, storekeepers, teachers, bookbinders, doctors, druggists, jewelers, printers, silversmiths, contractors and architects. Approximately half of the American seamen in 1850 were estimated to have been Negroes. At least ten newspapers were published by Negroes during the period 1827 to 1860. New York Negroes, around 1840, operated two first class restaurants in the downtown financial district, six boarding houses, a cleaning and dyeing establishment, two dry goods stores, three tailoring establishments, and two coal yards.

Certain enterprises came to be a virtual Negro monopoly. By 1869 for example, Negro caterers of New York had such a large share of this business that the twelve leading ones had formed The Corporation of Caterers, a pool to control the conduct of the business. River shipping furnished midwestern Negroes with opportunities; many who had become boat stewards made large sums for themselves by placing contracts for supplies. The small colored planter class, descendants largely of old Spanish and French masters and their slaves, owned sizable sugar and cotton plantations. Colored farm owners increased rapidly after the Civil War.

Occupational experiences of Negroes before the Civil War illustrate the degree of achievement and development of skill possible whenever circumtances were favorable. The antebellum Negro, slave and free, adapted himself to diversifications in occupations as the opportunities to do so developed. There were always cases which served to demonstrate the latent skills of both groups. Where highly skilled pursuits were opened or restricted in favor of the Negro workman, he readily qualified as a master craftsman. There is no valid evidence to show that even in the days of slavery he was incapable of mastering any pursuit open to him.

Negro Occupations After Emancipation

Over three million Negro workers were added to the nation's free labor pool at the end of the Civil War. The Negro then entered a new economic status which posed tremendous problems and difficulties.

Many freed men remained on southern plantations and farms. Notwithstanding the later migration of tens and hundreds of thousands of Negroes from southern farms to northern industrial areas and southern cities, rural pursuits, principally agricultural, maintained their traditional hold on the race. Many Negro farmers became land owners. By 1910 they owned over twelve million acres of land valued at over six hundred million dollars. The vast majority of Negro agricultural workers, however, became tenants, renting land under a share system. By 1930 Negro farm operators numbered over 800,000, 95 percent of them in the South. Approximately one-fourth of these were owners. The rest were tenants, constituting by 1940 nearly half of all southern share-croppers.

Migration to the Cities

As early as the 1880's Negro farm hands had begun to drift to the cities of the North and South. Larger numbers, including tenants and owners, followed after 1900. By 1910 the number of Negroes in the North was reaching significant proportions. The greatest waves of Negro migration to the North and the West, however, came between 1916 and 1919 and between 1921 and 1924, when hundreds of thousands migrated to the industrial centers. These migrations have continued so that the present decade finds the Negro no longer a predominantly rural dweller. Increasingly large numbers of Negroes now live in urban areas, both in the North and in the South.* As more and more came into the cities their occupations

*In 1940, the Negro population of 11 cities had passed the 100,000 mark. These cities, in order of the size of their Negro population, are: New York, Chicago, Philadelphia, Washington, Baltimore, Detroit, New Orleans, Memphis, Birmingham, St. Louis, Atlanta. Their combined Negro population is over 2 million. In 1910 no city had as many as 95,000 Negroes.

became diversified along urban lines.

Adjustment to the new industrial economy of the North and West was not easy. New labor techniques, unknown to masses whose previous occupations were mainly agricultural, had to be learned. Just as emancipation had intensified competition between Negroes and whites on the lower levels of production in the South, similarly in the industrial North the great influx of Negro workers evoked conflict between the new workers and the native and foreign-born white workers.

The Struggle to Learn Craft Skills

During the period prior to the first World War repeated efforts of Negroes to become skilled workers in industry were practically futile. Reliance upon European immigrants who had streamed into America for a century, doubts as to the steadiness of Negro workers and as to their ability to learn the new required skills, racial antagonisms, and exclusion from labor unions blocked the way. However, the tremendous industrial demands generated by the war and the sudden checking of immigration after the war opened the door.

During this period Negroes came to be engaged in heavy work requiring little skill or experience in the steel mills and blast furnaces, the foundries, the automobile and car plants, the packing houses and stockyards, and the unskilled branches of the building and construction industries.

The "Negro Job"

Large concentrations of Negro workers in unskilled pursuits and in the industrial labor pool, coupled with tradition, have in large measure fostered the development of the so-called "Negro job." These jobs generally include the "hot jobs" of iron and steel mills and other unskilled jobs considered less desirable by reason of the relatively great muscular exertion and fatigue involved, exposure to the elements and unclean and unhealthful surroundings, and low wages.

Conversely in other types of traditional Negro jobs, the Negro worker came to be displaced by white workers; the Germans, Irish and Swedes made serious inroads as domestics and caterers; Greeks became competitors in the shoeshining business; and English servants supplanted them as butlers and coachmen.

Even in the South where Negro workers had almost had a monopoly since the Civil War in carpentry, plastering, brick masonry, barbering, elevator operating, bellhopping, cooking and waiting, competition from white workers meant that the Negro's share in such jobs became smaller and in many cases disappeared. Technological changes making work less strenuous, less dirty and generally more attractive often caused a re-definition of the occupations from "Negro jobs" to "white man's work."

The decline of handicrafts associated with the rapid mechanization of industry and the beginnings of new industries, together with the parallel development of labor unions in such industries, also contributed to the decline in the numbers of Negroes who had previously been employed. Often such occupations were completely closed to Negroes, except on the unskilled levels.

Significant decreases in Negro employment occurred over a number of years in textile and cigarette factories, in the skilled building trades, saw and planing mills, turpentine farms, railroad maintenance work, the oil and gas industries, the paper and pulp industry, gas and electric works, public transportation, telephone and telegraph companies, and automobile servicing trades.

Although the proportion of Negroes engaged in skilled work is still low, the total number of Negroes employed in industry has consistently increased. In 1923 the United States Department of Labor reported that Negro steel and iron workers in Pittsburgh had increased from less than 100 in five plants in 1910 to 16,900 in 23 plants in 1923. In August of that year the Carnegie Steel Company alone employed 6,758 Negro workers. The Ford plants in Detroit employed 11,000 Negro workers. Great gains were shown in the Chicago iron, steel, and meat-packing industries.

Depression Years

The depression of the 1930's reduced the rate of increase of Negroes in industry. The traditional complaint of the Negro worker—"last hired, first fired"—became a serious reality. The low occupational status of the colored worker in terms of wage rates and skills and restrictive racial attitudes which had always confronted him now com-

bined to accelerate his displacement in industry. Having little seniority and only the beginnings of skilled status in basic industries, he was often replaced by white workers. The general national decrease in income forced many persons to release their Negro domestic and personal employees. The disruption of the nation's agricultural economy brought foreclosures for Negro farm owners, unemployment of farm workers, and an accentuation of all the hardships of tenancy and sharecropping. Negroes came to constitute a far greater proportion of persons on relief than their proportion in the population. After the lean years when employment again increased, Negroes on relief were the last to regain employment.

During the closing years of the depression, large numbers of Negroes joined labor unions. Unskilled workers in the main, Negroes were attracted to and were accepted in the new industrial unions. Many of the older established unions continued restrictive and exclusionist policies, but others abolished such practices.

Vocational Education

One of the traditional handicaps in the Negro worker's efforts to secure and maintain a foothold in American industry and to improve his status as an agricultural worker has been the lack of systematic occupational education. Much, however, was accomplished during the depression years to ameliorate this condition. Thousands of Negroes found opportunity through the Works Progress Administration, the National Youth Administration, and the Civilian Conservation Corps to demonstrate their talents and to receive training as clerks, stenographers, typists, statisticians, operators of business machines, draftsmen, map makers, mechanics, electricians, pipe fitters and layers, steel and sheet metal workers, tractor and bulldozer operators, air hammer and compressor operators, welders, tree surgeons, radio technicians, etc.

Such occupational training constituted a distinct innovation in the education of Negroes. Although public schools had long been offering instruction in vocational education, the Negro school generally continued to offer its traditional curriculum with little emphasis on occupational training. Under the auspices of the President's Advisory Committee on Education, a study of federally aided programs for vocational education of Negroes in the seventeen states and the District of Columbia where Negroes are required by law to attend separate schools, showed, in 1938, that the opportunities for Negro students along these lines were, in general, approximately two-thirds as extensive as for whites.

Occupations of Negroes in 1940

The 12,865,518 Negroes in the United States in 1940 were 9.8 percent of the population. On the basis of their proportion in the population, Negro men in 1940 were overconcentrated in agriculture and domestic service, providing 15.5 percent and 45.8 percent, respectively, of workers in those fields. A further analysis of 1940 census data reveals that Negroes provided 22 percent of forestry workers, 17.2 percent of loggers, 24.2 percent of tobacco factory workers, 26.3 percent of sawmill and planing mill workers, 20.2 percent of hotel and lodging place workers, 16.6 percent of structural clay products workers, and 14.9 percent of water transportation workers.

Census data for 1940 also show proportional under-employment in many other fields. Negroes in that year constituted 0.1 percent of workers engaged in aircraft and aircraft parts manufacturing, 0.5 percent of crude petroleum and natural gas production workers, 0.6 percent of wool and worsted workers, 0.6 percent of workers in the electrical machinery and equipment industries, 0.7 percent of footwear industries (except rubber where the percentage was 2.7) workers, 0.9 percent of knit goods workers, 1.1 percent of silk and rayon workers, 1.4 percent of telephone and telegraph workers, 1.5 percent of radio broadcasting and television workers, and 1.7 percent of workers in printing, publishing, and allied industries.

Of the 534 different occupations listed in the last census, however, all but four were practiced by Negroes.

Negroes in Business and Professions

Negro professional workers in 1940 included 80 architects, 504 authors, editors, and reporters, 254 chemists, assayers, and metallurgists, 2,339 college presidents, professors, and instructors, over 1,700 dentists, 283 engineers, over 1,000 lawyers, 3,524 physicians and surgeons, 2,608 social and welfare workers, and over 63,000 teachers. In 1941 more than 4,800 Negroes received college degrees in engineering, chemistry, various sciences, and the liberal arts.

Retail sales of 29,827 Negro-owned stores amounted in 1939 to $71,466,000. In addition to large numbers of cleaning, dyeing, pressing, and clothes repair shops and barber and beauty shops, these stores and service establishments included baths and masseurs' establishments, laundries, photographic studios, dental laboratories, automobile repair shops, radio, refrigerator, and furniture repair shops, bottling works, and custom slaughtering establishments. These establishments provided employment for 1,200 full-time and 3,558 part-time employees and had pay rolls totaling $6,241,000.

Skills of Negro Inductees

A survey of all armed forces inductees over a selected ten-month period listed 428 specific occupational specialties acquired by enlisted men in civilian life. All of these 428 skills, trades, and professions had been practiced by white inductees, or had been taught them in high schools and colleges. Approximately 85 percent of the 428 skills, trades, and professions had been practiced or learned by Negro inductees. Some idea of the range of skills may be obtained from the lists below, although in some of the occupations listed, the numbers of Negro inductees were small.

MAJOR OCCUPATIONS FOLLOWED BY NEGROES INDUCTED OVER A TEN MONTH PERIOD

PROFESSIONAL

Actors
Artists
Cartographers
Chemists
Editors and reporters
Engineers
(chemical, civil, electrical, industrial, mechanical, mining)
Lawyers
Meteorologists
Musicians and music arrangers
Pharmacists
Social and welfare workers
Teachers, professors, and county agents
Veterinarians
Writers

PROPRIETORS, MANAGERS, AND OFFICIALS

Advertising agents
Credit men, store department heads, floormen
Farmers and farm managers
Government officials
Hotel and restaurant managers
Jewelers
Purchasing agents and buyers
Store and chainstore managers

CRAFTSMEN AND FOREMEN

Airplane fabric and dope workers
Automobile body repairmen
Automobile painters
Bakers
Blacksmiths, boilermakers, forgemen hammersmiths
Carpenters and cabinetmakers
Compositors and typesetters
Construction foremen
Diesel mechanics
Electricians
Electroplaters
Electrotypers, stereotypers, lithographers, photoengravers, photolithographers
Gunsmiths
Inspectors
Locomotive firemen and mechanics
Machinists
Masons, plasterers, and stonecutters
Mechanics, airplane engine
Mechanics, automobile
Millwrights
Molders, metal
Motion picture projectionists
Patternmakers
Pneumatic riveters
Pressmen and plate printers
Radio repairmen
Railway towermen
Refrigeration mechanics

CRAFTSMEN AND FOREMEN (cont.)

Riggers
Roofers and sheet-metal workers
Shoemakers and shoe repairmen
Shop maintenance mechanics
Stationary engineers cranemen, and hoistmen
Tailors
Telephone and telegraph cable testers and splicers
Telephone inspectors
Teletypewriter mechanics
Tire rebuilders
Toolgrinders
Upholsterers
Watch and clock makers

SALESMEN

Sales agents and brokers
Canvassers, peddlers, newsboys
Salesmen, retail

SEMIPROFESSIONAL

Aviators
Chiropractors
Dancers, showmen, and athletes
Draftsmen
Embalmers and undertakers
Laboratory technicians and assistants (chemical, criminal identification, dental, medical, psychological, sanitary, surgical, veterinary, x-ray)
Librarians
Nurses
Podiatrists
Photographers (aerial, news, etc.)
Surveyors
Technicians, except laboratory

CLERICAL

Accountants and auditors
Bookkeepers
Cashiers
Crew dispatchers
File Clerks
Mail clerks
Shipping and receiving clerks
Statistical clerks
Stenographers, typists, and office machine operators
Stock and stock control clerks
Telegraph operators
Telephone operators
Teletype operators
Traffic rate clerks

OPERATIVES AND KINDRED WORKERS

Attendants, filling station, airport, parking lot, etc.
Brakemen and switchmen, railroad
Cargo checkers
Chairmen, rodmen, axmen, surveying
Chauffeurs, truckdrivers, deliverymen
Conductors, bus and railway
Filers, grinders, buffers
Firemen (stationary)
Furnacemen, smelters, and pourers
Laundry machine operators
Linemen and servicemen, telegraph, telephone, and power
Lumber graders
Meat cutters
Motormen
Mine operatives
Operatives in manufacturing and nonmanufacturing industries
Oilers, machine
Painters
Photographic process workers
Power station operators
Sailors and deckhands
Welders and flame cutters
Signal operators
Water supply filter operators

PROTECTIVE SERVICES

Firemen, fire department
Guards and watchmen
Policemen
Police radio dispatchers
Traffic patrolmen

OTHER SERVICES

Barbers
Cooks
Domestic service
Janitors and porters
Waiters and bartenders

SPECIFIED LABORERS

Fishermen and oystermen
Gardeners and groundskeepers
Laborers, manufacturing and nonmanufacturing industries and services
Longshoremen and stevedores
Teamsters

High school students among these Negro selectees were enrolled in drafting, manual arts, academic, mechanical, commercial, vocational, and agricultural curricula. College students inducted had been preparing for vocations in dentistry, medicine, architectural, chemical, electrical, civil, mechanical, mining, and aeronautical engineering, veterinary medicine, business and public administration, psychology, pharmacy, geology, journalism, sociology, modern languages, and geography.

For commanders of Negro troops the lessons to be drawn from the preceding data are several. The Negro soldier has brought with him into the Army broader and more varied occupational experiences than many people realize. There is only one way to check upon the vocational backgrounds of Negro soldiers: with the men themselves and from their classification cards and service records. Given the opportunity, Negro soldiers, like all other groups in the armed forces, are adaptable to a great variety of military needs.

The Utilization of Negro Skills

Military opportunity must not be misinterpreted as being limited to training in military matters. While true for all troops this is of even greater importance in the training of Negro soldiers.

Military opportunity implies the purposeful development of a great body of attitudes, understanding, and techniques associated with the utilization of skills already possessed. It also implies training in new specialties, absent in civilian experience but essential for the Army.

The remainder of this chapter is therefore devoted to a consideration of practical techniques whereby more effective specialized utilization of all Negro military personnel may be accomplished.

Taking Acount of Individual Differences

The Army is committed to the principle that men have individual differences and that these differences must be taken into account in their assignment to specific duties. This requires that leaders of all echelons, and particularly junior officers whose contacts with troops are more frequent and direct, must become acquainted with the variations of physique, temperament, mental alertness, knowledge, previous training, integrity, interest, skill, and stamina of all troops in their charge. Such knowledge must be systematic and thorough. Everything that individuals have done, are doing, and plan or hope to do must be considered and oriented in terms of military needs in general and the specific unit's mission in particular.

Using Form 20 Cards and Service Records

The soldier's classification card (W.D., A.G.O. Form No. 20) and his Service Record (W.D., A. G.O. Form No. 24) are basic records of background and achievement with which officers must be familiar. These records furnish data relative to the soldier's personal, educational, occupational and military history.

Many commanders prepare abstracts on each soldier from these records, often on systematized data card forms (mimeographed for the purpose) or in notebooks devoting separate pages to each man. In addition to personnel data, other pertinent information concerning the soldier's training achievements and deficiencies, adjustment to army discipline, esprit, off-duty interests, passes and furloughs, home problems, and health are included on file cards used by many officers.

Periodic additions to such data cards provide the officer with an always-current soldier's profile, a great aid to efficient utilization of the soldier. The importance of such data in the immediate possession of the platoon leader is heightened in those organizations whose official personnel records are located at distant parts of installations or where training requirements make frequent checking of official records impracticable.

The use of personal and educational data in relation to the command of Negro troops is discussed in other places in this text. However, these data have direct bearing in job training and utilization of the soldier's skills. Information pertaining to the amount and kind of schooling may be utilized as a guide to the amount and kind of military specialty training which the soldier should be given. Marital status and dependency data may be

suggestive of relative home and community responsibility. Considerable care must be exercised, however, in the interpretation of these data. No one item by itself is necessarily decisive. All items must be combined and balanced if true perspective is to be gained.

Occupational Data

"Intelligent use of available skills and leadership contributes materially to the morale of the Army. The placement of men in duties for which they are qualified prevents discouragement and a feeling of futility evident when assigned duties are either beyond or below the capabilities of the individual." (See par. 2*b*, AR 615-28.)

Many civilian occupations have direct counterparts in the Army. Direct assignment and utilization of soldiers who have been employed in such occupations is a simple matter. However, the proportions of men trained in these civilian occupations are often either in excess of or less than military needs. Therein lies the tremendous task of utilization of related civilian skills through conversion and the development of completely new ones on the basis of the individual soldier's capacities.

The grievances of soldiers, both Negro and white, concerning their work in organizations and military occupations bearing little or no relationship to their civilian skills are without end. The responsibilities of commanders in this connection are mainly three.

Assignment and Misassignment

Where assignment of personnel is obviously wrong, a condition best revealed by careful checking of the soldier's classification card and by interview, a complete report of all facts involved in such misassignment should be made to the next higher commander.

The best interests of the service demand especially that men possessing strategic, scientific, professional, or technical skills not be continued in assignments which do not make for the most effective use of these abilities. Where reassignment cannot be accomplished locally, report on each extreme case should be forwarded to the headquarters having personnel placement or assignment jurisdiction over the unit concerned, and request should be made for the transfer of the personnel concerned to organizations in which his skills may be more effectively utilized.

Mutual Exchange

In other situations, where the degree of skill and its relation to the soldier's present organization may not warrant reassignment procedures and a shortage of specialists exists, steps may be taken to arrange for a mutual exchange of personnel. Platoon leaders, company commanders, battalion and regimental commanders and staff officers can easily ascertain from officers of comparable responsibility in other organizations the extent to which transfer "by exchange" may help solve their mutual personnel problems. Higher headquarters normally welcome such proposals and facilitate the necessary administration involved. It must be emphasized however that this technique should not be used to unload "undesirables" on other units.

All troops have the right to feel their officers are concerned with their natural desire to increase their military efficiency within their units or by transfer to other units when this is necessary. The Negro soldier, reared in an environment where restriction of opportunity has been the general rule, has generally entered the Army expecting to find this situation at least somewhat ameliorated. Like other Americans, he wants continually widening opportunities. Blanket policies which summarily forbid requests for changes in assignment or for specialist training impede the effective utilization of all personnel. So do procrastination and the excuses offered by some officers. Statements that certain procedures are "dictated by War Department policy," that "those people up in headquarters won't permit it," are not adequate or satisfying answers to a soldier's legitimate queries. Enlisted men are notoriously quick in sensing evasions—the white and the Negro soldier share alike this capacity. Moreover, the Negro soldier has been made extra sensitive to such practices by his civilian experiences.

Training

Superior military training is the most important means through which the maximum utilization of skills may be attained. After solving the more serious personnel problems through transfer of personnel and reassignment, the bulk of utilization problems must be met and solved within the troop unit.

After becoming familiar with the backgrounds of their personnel, all officers, and particularly commanders of Negro troops, should read, re-read, and re-study FM 21-5, *Military Training,* and TM 21-250, *Army Instruction.* These manuals are indispensable as check-lists and guides to effective training methods. The commander should check his present training procedures against the detailed information contained in these manuals, with a view toward determining the effectiveness of his instruction. The serious and imaginative officer will find that many of his problems in the utilization of his troops' skills and the development of new ones are merely functions of training procedures, and will develop his methods accordingly.

Training Soldier Instructors

Special attention should be given to the sections of these manuals dealing with the selection and training of instructors (pars. 61 through 63, FM 21-5; pars. 118 through 143, TM 21-250). There are in all units enlisted personnel who may be successfully trained as instructors in many phases of training. Where suitable personnel are inadequate or have not yet attained sufficient proficiency, instructors, both commissioned and enlisted, may often be borrowed for specific tasks from other organizations. Post, camp, and station Ordnance, Chemical Warfare, Quartermaster and Medical Departments are often sources of such personnel. For example, the possibilities of having gun mechanics observe Ordnance specialists at work may be explored, or a Chemical Warfare enlisted specalist might well be the man to assist in instruction in that branch.

Aiding Soldiers to get Special Training

Tables of organization of all units include specialists whose training may best be secured at Specialists Training Schools. Officers should be acquainted therefore with the mechanics of securing such training for qualified personnel. Quotas are often assigned to individual units, but more often to large headquarters, which in turn decide how these quotas will be utilized.

The troop leader should secure from the unit adjutant, personnel officer, or training officer a list of service schools whose offerings are related to his unit's specialist needs and in whose quotas the unit may be expected to share. ASF Manual MT–3 lists available specialist courses. Even where quotas are not automatically made available, inquiry will often reveal that, where the need can be justified, key men can be sent to such schools for special training.

Realizing that enrollment at all service schools is dependent upon the enlisted man's possessing, in addition to demonstrated interest, certain test scores, the officer should determine how his troops measure up to these requirements. Should the test scores of a soldier in whom he has confidence be less than the school requirement the officer should request the unit personnel officer or adjutant to arrange for retest.

In addition to their importance as criteria for Service School attendance, tests are valuable in providing a standardized, objective estimate of a man's abilities and aptitudes. The desirability of such data in supplementing personal, educational, and occupational information about the soldier is apparent.

Some Army Classification Tests

Army classification tests measure a variety of abilities and aptitudes. TM 12-260, Personnel Classification Tests, discusses principles of testing and catalogs tests. Specific tests which should interest officers in their search for supplementary data in determining the best utilization of their personnel include the following: Aptitude Tests: Mechanical Aptitude Test, Clerical Aptitude Test, Radiotelegraph Operator Aptitude Test, Code Learning Test, and Test for Combat Intelligence; Educational Achievement Tests, measuring achievement in twelve school subjects; Trade Knowledge Tests: General Automotive Information Tests; Special Tests: Typing and Dictation Tests, Driver Selection and Qualification Test. Requests for testing services, when justified by training requirements, should be made through regular military channels.

Unit Schools

Schools within the organization constitute another important aid in assuring the exploitation of every available skill. The ideal situation is one in which unit schools are organized within battalions, regiments, or groups. Separate companies will necessarily make their own adaptations; the general outlines of operation, however, are applicable in

all cases. Administration schools for clerks, first sergeants and sergeants major; supply schools for supply sergeants and assistants; ordnance schools for gun and artillery mechanics and artificers; operations schools for headquarters operations personnel and platoon sergeants; and mess schools for mess personnel are examples of such schools.

Varying training requirements will determine whether such schools will be operated during normal training hours or during off-duty time. Where large numbers of personnel are involved, groups may be divided, one group receiving formalized school instruction while the other group is engaged in normal training, maintenance, or administrative work.

War Department Teaching Materials

War Department Field and Technical Manuals and Training Circulars constitute the main sources of teaching materials for unit schools and instruction should be based thereon. The imaginative officer will, however, explore many other possible sources.

A great variety of teaching materials is available from replacement training centers, the service schools of all arms and services, and from civilian agencies. Much of the material published by the United States Armed Forces Institute will be found helpful. In addition to training films and film strips listed in FM 21–7, privately produced films, catalogs of which may be found in post libraries, should be checked and appropriate selections made. For instructor orientation, Training Films 7–295, *Military Training,* and 71–100, *Tips for Teachers,* and TM 1–1000, *Vocational Teaching,* are invaluable aids.

Enlisted men are quick to recognize teaching which reflects thorough planning. Their responses and learning vary in direct proportion to this factor. The alert officer will exploit this condition to the full.

Slow Learners

Chapter 3 of this text discusses in detail the Army Special Training Units under which men of limited capacities and backgrounds are trained in rudimentary subjects. Two considerations connected with this phase of Army training are especially important for officers in troop units.

The high degree of success now being attained by special training units in salvaging illiterates and slow-learners for military service vividly illustrates the great possibilities attainable in troop instruction when opportunity and good teaching are provided. Graduates of these units are taking their places in many branches of the Army. Many of them after assignment to troop units will desire to continue their learning and should be encouraged to do so. The most practicable materials for such a continuation program are obtained through the Armed Forces Institute.

War Department Pamphlet No. 20–2, *Teaching Devices for Special Training Units* is an excellent guide to techniques in the instruction of slow learners and illiterates. Many of its principles are extremely pertinent to general instructional methods. It is essential, moreover, in those units which must establish their own rudimentary schools for the instruction of personnel who require such teaching and who cannot be returned to Special Training Units.

America's armies have always been civilian armies. As such their training has come to be largely a matter of direct or indirect use of skills acquired through civilian occupational experiences; or the development of military skills consistent with the occupational, educational, physiological, and psychological backgrounds of the soldier. An army which will fight the most effectively and efficiently evolves only when men are doing the things for which their background and experiences best fit them. The best use of the Army's manpower depends on the troop leader's knowledge of his men's occupational experiences and his skill in adapting them to Army needs.

CHAPTER 5

HEALTH OF THE NEGRO SOLDIER

Health of Whites and Negroes

Any comparison of the health of the soldier with that of civilians is weakened by the fact that soldiers are a selected group living in a different environment. While soldiers are subjected to different types of hazards than civilians they are, at the same time, provided with a uniform medical care and health education which is seldom available to civilians. However, a discussion of the health of white and Negro civilians followed by a comparison of the health of white and Negro soldiers is of value to the officer.

Such a discussion reveals that many of the conditions which have produced wide gaps between the health of white and Negro civilians do not operate in the Army. Even more than the marked improvement in Negro civilian health in the past generation, the health of the Negro in the Army indicates that many of the old ideas about Negro health no longer apply. The officer should be aware of the Negro soldier's civilian health problems in order to appraise properly the job of health education which the Army can and does provide. It will help him to deal effectively with the one area in which the health of the Negro soldier is significantly different from that of the white soldier.

It is believed by some that the number of Negroes in the United States is increasing more rapidly than the number of white persons because Negroes have a higher birth rate. This is only partially true. In 1790, Negroes comprised 19 percent of the total population of the country; in 1940, Negroes made up slightly less than 10 percent of the total population of the United States. Although, numerically, there were about 17 times as many Negroes in 1940 as in 1790, the number of whites increased 37 times during the same period so that the Negro proportion of the total population of the United States was cut nearly in half.

High Birth Rate—Higher Death Rate

At the present time the birth rate among Negroes is slightly higher than the birth rate of the white population. However, because of the higher Negro infant death rate and of the higher death rates of Negro children and young adults, the proportion of Negro infants who reach the age of adulthood is not much greater than the corresponding proportion of white infants.

In 1940, with prevailing birth, death, and marriage rates, 100 white females during the course of their lifetime would be expected to give birth to about 102 daughters, as compared with the 113 daughters expected of 100 female Negroes during their lifetime. However, the 113 Negro daughters do not have the same likelihood as the 102 white daughters of reaching the age of motherhood. For this and other reasons, both white and Negro groups have net reproduction rates only slightly larger than the rates necessary to maintain their respective populations.

Negroes Have Lower Life Expectancy

The average white infant born in the United States may expect to live about 65 years; the average Negro infant born in the United States may expect to live about 54 years — 11 years less. Higher death rates, especially in infancy and early adult life, account for the shorter life expectancy of Negroes. Within the first month of life 40 out of every 1,000 Negro infants are dead, compared with 27 out of every 1,000 white infants. By the end of the first year of life, 73 out of every 1,000 Negro infants, but only 43 out of every 1,000 white infants are dead. Out of the original 1,000 infants of each group, 120 of the Negroes and 70 of the whites die before the age of twenty-one. One half of the Negro infants will be dead before

their fifty-eighth birthday but one half of the white infants will live to celebrate three score years and ten.

Although the leading causes of death are much the same for both races, there are differences among them. Tuberculosis and syphilis rank higher as killers among Negroes while cancer and diabetes rank higher as killers among whites. During adolescence, tuberculosis accounts for more than one-fifth of all the deaths among Negroes and continues to take a heavy toll throughout early adult life. Prominent among the other causes of death which are relatively more frequent among Negroes are the respiratory diseases, pneumonia, influenza, and whooping cough. Most of the diseases which account for the larger numbers of Negro deaths are those in which poverty and a lack of health education and medical care play a great part.

The Negro death rate today is 13.9 per 1,000—less than half that of 50 years ago—but it is still more than 33 percent above the white rate. The Negro mortality rate from tuberculosis is more than three times that for whites, from syphilis over six times as great. Death rates from other major causes — maternal and child ills, heart disease, pneumonia — when compared with those of the white group, are in many instances ten times higher for Negroes.

Negroes Lack Medical Facilities

Death rates and life span are but indices of sickness and suffering. The toll of daily sickness (shown by sample studies to be over 40 percent greater for Negroes than for white Americans) is a heavier handicap than the high death rate. Facilities for care are greatly limited for Negroes. While there are 20,000 hospital beds for Negroes in the country, in some areas there are as few as 75 beds serving one million Negroes.

Environment, Income, and Health

The available evidence indicates that the major factor responsible for the higher death rate among Negroes as compared with whites is the less healthful environmental conditions under which Negroes live. It is well known that death rates are higher among the lower than among the upper economic classes. Not only poverty in terms of medical care but also in terms of adequate diet, housing, and recreation affects the low income groups. Since most Negroes are in the lowest economic class, their higher death rate is not surprising.

The National Health Survey conducted by the United States Public Health Service revealed that persons in families on relief reported more than four times as much time lost because of disabling illnesses as persons in families with an annual income of $2000 or more. When Negroes as a group were compared with whites as a group, the average amount of disabling illness was about 20 percent greater for Negroes. *However, when white and colored persons of roughly equivalent economic status were compared there was little or no difference in the amount of disabling illness.* Low income whites have about the same health problems as low income Negroes. Negroes with good incomes are as healthy as whites with similar incomes. But most Negroes have low incomes. In other words, the higher average illness rate among Negroes resulted primarily from the fact that a much larger proportion of the Negroes were in the lowest economic class where illness rates are highest for all. In the Army, then, where standards of living are the same for all, it would be logical to expect little difference in illness rates, provided the health education of Negro and white soldiers can be brought to the same level.

Lowering Death Rate

Additional evidence that the death rate can be lowered materially by improving social and economic conditions is presented by the decrease which has occurred in the death rate among Negroes during recent decades. The death rate from tuberculosis decreased more than 20 percent from 1920 to 1930 and nearly one-third from 1930 to 1940. Since 1928, deaths among Negro mothers at childbirth have dropped about 30 percent, and the loss of life among infants at birth is now one fifth less than 10 years ago. Syphilis and the other venereal diseases are responding to specific treatment. In a single decade the syphilis rate in one county was reduced from 40 percent to 10 percent. During the past decade the average expectation of life at birth increased for both whites and Negroes, but the increase for Negroes was more than twice the increase for whites.

The expansion of public and private health facilities during the past decades to include greater serv-

ice to rural and low-income groups has naturally benefited Negroes greatly. The result has been a general improvement in Negro health. Some of the public facilities are staffed with Negro professional personnel. There are 110 Negro hospitals in the United States, many of them showing increasingly high standards of service and of opportunities for Negro medical personnel. Congested areas of Negroes are being served by district health centers directed by Negro physicians, and Negro doctors and nurses are being appointed to the health services of northern cities and southern counties. Both public and private agencies are showing a new interest in the health needs of Negroes.

The past 40 years has been a period of general and steady improvement in the health of both Negroes and whites. The progress which has been made springs from advances in curative and preventive medicine and more widespread use of medical facilities by the public. The experience of the last few decades amply shows that Negro health can be improved by the same measures which have been successful in improving the health of whites. This is important to the Army, for it indicates that the excellent medical services provided by the Army, made available to Negroes as well as to whites, will result in eliminating any marked differences in health problems for Negro commands. An application of standard preventive and curative measures should keep a Negro command as healthy as a white outfit.

Three principal reasons have been advanced to explain the differences in death rates of whites and Negroes, (1) heredity, (2) a lack of acquired immunity to diseases which were unknown to the Negro before he came to America, and (3) environment. Discussions of the relative importance of these factors frequently have been affected by the belief that since the Negro looks different he really must be different biologically.

Heredity Has Little To Do with Death Rate

There is no reliable information which shows that any appreciable part of the higher death rates among Negroes is due to hereditary factors. This does not mean that hereditary biological differences may not exist; it means rather that existing differences in the frequency of disease among whites and Negroes can be explained more logically by other factors.

Immunity acquired from long periods of exposure to disease may play an important part in producing racial differences in the frequency of specific diseases. There are numerous instances where diseases which are relatively nonfatal to white persons have taken a heavy toll of lives when introduced into colored populations. Measles and scarlet fever, introduced into the Pacific islands, for example, took a heavy death toll, while in European countries deaths from these diseases are relatively rare. Although the exact mechanism is still unknown, it is thought that after many years of exposure, some degree of immunity to particular diseases may be acquired so that attacks of the diseases in question are less often fatal. There is no evidence, however, that variations in death rates among Negro and white Americans are influenced to any great extent by variations in acquired immunity to disease.

Equal Economic Level—Equal Health

As previously mentioned, Negroes and whites of the same economic level are equally healthy. This fact alone would tend to rule out the possibility that Negroes are inherently unhealthy. It is also true that the improvement in health during the past forty years has been shared by both whites and Negroes. As measured by death rates, average years of life, and other devices, during the latter part of this forty year period, Negro health has improved faster than white health. This is to be expected since the improvement in health facilities has been relatively greater for Negroes than for whites. Moreover, the educational and economic level has risen more rapidly in this period than among whites. As these three factors, among Negroes, approach more closely the white norms, it can be expected that Negro health will approach white health standards.

There is no reason to believe that the biological heritage of either whites or Negroes has changed substantially during such a short period. Rather, this improvement should be taken as an indication of the possible improvement in the health of all Americans, in which Negroes have shared.

Negro Soldiers Are as Healthy as White Soldiers

Unlike Negro and white civilians, Negro and white soldiers live in an environment in which the health facilities and the standard of living of the

two groups are nearly the same. Although a comparison of white and Negro soldiers with respect to the incidence of disease is not subject to the limitations of the wide differences in environment existing in civilian life, the backgrounds of the two groups will still be those of their civilian environment. The officer will find that the average Negro soldier will require more intensive education in good health habits than the average white soldier.

Contrary to the situation in civilian life, the admission rates for disease among Negro troops are about equal to or even slightly less than the corresponding admission rates for disease among white troops. The admission rate for all diseases except the venereal diseases has generally been less among Negro than among white troops.

Tuberculosis, which is a serious cause of disability and death among Negroes in the civilian population, is relatively unimportant as a cause of ill health among Negro troops, accounting for less than one-half of 1 percent of all admissions for disease. The death rate from tuberculosis is more than three times as high among civilians as among soldiers when Negroes of approximately the same age are compared.

The medical experience of the United States Army indicates that when Negro and white soldiers are subject to *substantially the same conditions* the health of the Negro soldier compares very favorably with that of the white soldier. But there is one important exception to this statement. Venereal disease is much more prevalent among Negro than among white troops.

VENEREAL DISEASE

Problem of Venereal Disease

The seriousness of the venereal disease problem among Negro troops is evidenced by the following facts:

1. An over-all Negro venereal disease rate which has varied from 7 to 10 times the white rate during the period of the present emergency—a rate so high that it may result in material interference at times with the full military utilization of Negro troops.

2. A Negro syphilis rate which has been about 15 times that for white troops. This is a particularly unfortunate situation in view of the time lost due to length of treatment required and the possibility of serious complications from this disease.

3. A requirement of over 1,000,000 hospital bed days for the treatment of the more than 100,000 Negro venereal disease cases in 1943.

4. Negro troops, representing 11 percent total strength of the Army, accounted for about half of all the venereal disease in the Army during 1943.

Many reasons have been advanced to account for this great discrepancy, but only two seem adequately pertinent to the Army.

1. Because of a lower average level of education, many Negroes have not yet come to realize the gravity of this situation as it affects them as individuals.

2. Law-enforcement officers and public health officials have failed to apply the same educational and clean-up policies and pressure to Negro communities that they have applied in the past few years to white communities.

Methods of Attack

The control of venereal disease among white troops is effected through measures aimed at reducing the sex exposure rate, increasing the use of prophylaxis, and controlling sources of infection in adjacent civilian communities. These same general principles are no less valid when applied to colored personnel, but their application presents many problems in addition to those encountered with white troops.

Often, the health and sex education of the Negro soldier has been neglected. It will be necessary to give him, by means of continued use of lectures, films, and discussions, a thorough knowledge of the dangers of venereal infection and the importance of preventive measures.

Some adjacent civilian Negro communities, because of long years of poverty and neglect, may have a higher venereal disease rate than that of the general community. Efforts to control sources of infection in the Negro community may be hampered by public indifference and laxity. Facilities for the treatment of proved carriers may be lacking in some communities, and cooperation from civilian authorities may be difficult to obtain. Moreover, because of limited recreational facilities for Negroes in camp communities, the only restaurants, stores, and theaters available to the

Negro soldier on pass may be located near the heart of a prostitution district.

Nevertheless, the venereal disease incidence among colored soldiers can be reduced and rates more nearly approximating those of white personnel can be achieved. This has been shown by the experience in certain posts and commands where venereal disease control programs have been developed. Good recreational facilities, improved educational techniques, good prophylaxis facilities, proper command support, and effective cooperation from the adjacent community will reduce venereal rates for Negro as well as white troops. With a little effort, all of these may be obtained for Negro troops as well as white.

Venereal Disease Control Demands Cooperative Effort

To put these proved principles of venereal disease control into effect requires the coordinated efforts of the line officer, the chaplain, the medical officer, and of the men themselves. For while the medical officer can supply the technical information and advice and the line officer and the NCO the command support and emphasis, the soldier in turn must assume responsibility for carrying out many of the procedures designed to protect his health.

This requires education both in venereal control and in responsibility. The degree to which the soldier carries out his responsibility is a rather close index of the morale, state of discipline, training, and administration of an organization. This in turn directly reflects the efficiency of the organization commander whose responsibility it is.

Principles of Venereal Disease Control

The frequency of venereal disease in a command depends largely upon these factors:

1. The number of sex contacts made with infected women by members of the command.

2. The proportion of these exposures unprotected by adequate prophylaxis.

Since neither of these factors can ordinarily be entirely eliminated from consideration, control measures should be directed at each.

Application of Specific Techniques

In order that command responsibility can be fully met, the commanding officer of each company or unit of similar size should designate a subordinate officer to function as the company venereal control officer. This officer should employ the company noncommissioned officers as assistants, thus fixing upon squad leaders the responsibility for carrying out the details of the program. The company venereal disease control officer and his assistants will work in close cooperation with the medical venereal disease control officer of the station or command and will utilize his advice and assistance in carrying out the program.

NCO's Responsibility

The greatest single step that can be taken in controlling venereal disease is to convince the NCO that his increased rank entails responsibility for the physical care of his men. If they have been selected properly, the line NCO's will be the best enlisted men in every unit. Such a distinction must necessarily involve their ability to lead and directly influence the actions of the private soldiers placed under their control.

Every NCO must be imbued with this personal responsibility for keeping his men fit for full duty —physically, mentally, and morally. To point out forcibly that a soldier "Absent Sick NLD" is as serious a loss to the unit as one "Wounded in Action" will usually suffice, provided the NCO is indeed a leader.

No officer who takes his commission seriously will associate intimately with his enlisted men off duty. Their private and personal lives do not include his active participation if he is to hold their respect. Therefore no officer may expect to be present when temptation presents itself to the enlisted man. However, the NCO may well be present. At least he is in a position to influence the private to avoid sex contacts or see to it that he uses adequate prophylaxis. It should be unnecessary to point out that the NCO must be an example—but this should be done, nevertheless.

Reduction of Sex Contacts

Reduction of the number of sex contacts made with infected women by members of the command

is generally followed by a decrease in the venereal disease rate. Reduction of sex contacts with infected women may be obtained by:

The growing prevalence of commercialized prostitution activity around some Army camps has become a fertile source of venereal disease. While the repression of prostitution is primarily a civilian function, the attention of commanding officers is called to the Army's policy with respect to prostitution in areas adjacent to military establishments, which applies to Negro as well as white prostitution activities.

"Where local authorities fail to cooperate in removing unsatisfactory conditions with respect to prostitution, commanding officers are enjoined to declare such areas off-limits to members of their commands and to follow the procedure described in Circular No. 12, War Department 1943, with a view to invoking the powers granted by the May Act." Circular No. 249, War Department, 1940.

The "red-light" district, or the so-called regulated, organized system of prostitution is a source of venereal disease because no adequate method of medical inspection of prostitutes has ever been successful and it can be safely assumed that practically 100 percent of professional prostitutes are infected at some time with one or more venereal diseases. Further, by providing ready accessibility the house of prostitution makes possible a higher sex exposure rate and with it the likelihood of a high venereal disease rate.

Prostitution Cannot be "Regulated"

Many are the fallacies that have been built up over the years about the benefits of "regulated" prostitution. Regulation does not reduce materially the prevalence of venereal disease among prostitutes. Every officer should be cognizant of the fallaciousness of such statements as closing houses of prostitution increases the incidence of rape, for the exact opposite has been found to be true. Nor does closing the houses scatter the prostitutes about town, for if the laws against prostitution are vigorously enforced prostitutes will go out of business or leave town. Stories about how prostitution was successfully regulated in France or Germany or some other country are false, for there is no recorded system of "regulated" prostitution that has ever been a success, nor has it ever been possible to segregate all of the prostitutes of a community in one district. "Regulation" is an invitation to promiscuous spreading of disease. Repression of prostitution is the only certain method of controlling this source of infection.

Declaring areas "off-limits" in the Negro sections of communities should be accompanied by a careful investigation of the effect which such a declaration may have upon off-duty recreation facilities for Negro soldiers visiting the community on pass. Often, in communities where segregation is the rule, the Negro shopping and recreation area may be crowded into a relatively small area. In such cases it will usually be more practical to declare individual shops, taverns, hotels, etc., "off-limits" rather than an entire area in order not to prevent legitimate use of those places of business and recreation which are not centers of prostitution. An increase in the MP patrol, carefully instructed to maintain "off-limits" regulations, may be used to diminish open soliciting in the area.

The Amateur Prostitute

Controlling the pick-up, the bar-girl, and other promiscuous women. The amateur prostitute is no less a danger than her professional sister in the trade. She is generally more limited in the number of contacts she is able to make, yet she is none the less a problem from the standpoint of venereal disease control for she is just as likely to be infected. She operates most often with the active or passive assistance of the juke-joint, the cheaper hotel, the tourist cabin, the taxi, and other facilitators. Frequently these girls are unaware that they are infected with venereal disease. Many offer their services to the soldier through misguided patriotic or other motives.

These girls usually operate successfully only with the assistance of a third party and efforts at reducing sex exposure from this source should be directed primarily at these third party interests. Use of off-limits power should be made against those taverns, hotels, etc., which allow their establishments to be used as places where pick-ups or sex contacts are made, and the attention of local law enforcement authorities should be called to such establishments.

Local health authorities should be stimulated to provide quarantine and treatment facilities for venereally infected females. Assistance should also be given to those civilian and governmental agen-

cies engaged in a program of suppression of Negro prostitution. Information from the soldier in regard to the source of his infection, which is recorded on MD Form 140, should be as accurate and complete as possible and forwarded promptly to the health officer of proper jurisdiction. Careful follow-ups to insure adequate measures to control the source must be made. MP's may have to be posted to insure "off-limits" restrictions.

The important role that recreation plays in the over-all venereal disease control picture arises from every man's need for wholesome activity to occupy off-duty time. If he does not have that, he turns to the often undesirable recreation offered by many civilian communities, frequently in an environment conducive to the spread of venereal disease. It is obvious that where off-duty time is taken up by wholesome recreational and diversional activities, the possibility of promiscuous sex exposure is lessened. Another value of recreation is its morale-building effect, an effect which is in itself reflected in a lowering of the venereal disease rate. Troops whose morale is high usually have a low venereal disease rate.

In cooperation with the Special Services Officer a program of athletics, dances, shows, and other entertainments should be provided. Because nearby civilian communities usually offer so few recreational provisions for Negro troops, a more intensive program than that provided for white troops will often be necessary.

Unit special services officers should be the most resourceful and adaptable officers available, for their jobs will often be exacting ones.

Venereal Disease Prophylaxis

Invariably the use of proper prophylaxis will reduce venereal disease. The goal should be a 100 percent use of prophylaxis in all sex contacts. In order for prophylaxis to be utilized as fully as possible the troops must first be educated in regard to its use, and second, prophylaxis facilities must be readily available at all times.

Venereal disease education has two main objectives, first, that of convincing the soldier of the necessity of avoiding venereal infection, and second, that of telling him *how* to avoid that infection. Pride, both individual and racial, patriotism, the competitive spirit, and the soldier's desire for future health and happiness are successful approaches to the first objective. In this type of approach the attitude of the line officer and the NCO is of extreme importance. The company officer who impresses upon his men that freedom from venereal disease is expected will receive a better response to instruction in how to avoid venereal disease. His men are much more likely to utilize that instruction when the need arises.

Instruction in the actual techniques of preventing venereal disease should be made plain and simple. Since many of your troops may be slow learners, demonstrations of the use of mechanical or chemical kits and of station prophylaxis will be helpful both from an instructional point of view and to overcome the fear of pain which often prevents full use of prophylaxis. It should be emphasized that *the only sure method of avoiding venereal disease is continence.*

The basic instruction of troops in venereal disease prevention is carried on by the use of films and Film Strips provided at intervals frequent enough to insure freshness of material. Lectures by the medical officer, the company officer, and NCO's should be utilized in conjunction with the showing of the films and Film Strips.

It is extremely important that the organization commander or the company venereal disease control officer talk to the troops at as frequent intervals as necessary in regard to venereal disease, particularly just before pay days or before furloughs. These talks should take the form of group discussions of the forum type whenever feasible in order that effectiveness and the interest of the men may be gained by their self-participation. In order to appeal to the religious background of the men in approaching the problem from a strictly moral standpoint, the assistance of the Chaplain may be secured.

Emphasis should be placed upon the periods of hospitalization required of venereal cases and the dangers of future ill-health facing the patient. Cost in man-hours lost, both in training and in combat, should be emphasized. Comparative rates for Negro and white soldiers, for Negro and white units on the post, for other Negro units may be cited as an incentive to lower venereal disease rates as a matter of race pride.

The noncommissioned assistants to the company venereal disease control officer should receive special instruction from the station or command venereal disease control officer so that they may in turn indoctrinate the men in small groups.

Minimum Requirements of Venereal Disease Instruction

This intensive instruction is designed to insure that every man of the command, no matter what his education or intelligence level may be, will learn the following basic facts about venereal diseases:

(1) The names and characteristics of the different venereal diseases,

(2) the course and the manner of their transmission and the dangers of promiscuous sex exposure,

(3) the chief symptoms, particularly those associated with the onset of the diseases,

(4) the methods of prevention,

(5) fundamentals of treatment and the dangers inherent in neglect, self-treatment, or improper treatment.

In addition to the basic instruction provided by the films, lectures and discussions referred to above, use should be made of "reminders" such as posters, Pamphlets, Bulletins, prophylactic station lists, etc., to keep before the troops constantly the dangers of venereal disease and how to avoid them.

Poster campaigns should be constant; posters should be changed frequently enough to insure that they will receive adequate attention. Usually, local soldier artists can be obtained who will execute posters suiting the local situation. Reproduction facilities are available in most posts or training centers.

Prophylactic stations off the post should be operated so as to permit their fullest possible use. They should be well located with respect to transportation and to the center of activity of troops, clean, well-ordered, and, if feasible, operated by Negro attendants. A prophylaxis station should also be operated in the Negro barracks area on the post, in a location most convenient for its use by the men. It should be made clear to the men that no stigma is attached to the use of prophylactic stations. Individual mechanical and chemical prophylactic kits should be purchased from unit funds and made freely available to the men at all times.

The need for early diagnosis and treatment of men who become infected should be stressed. The Army has the best drugs and methods of treatment available. Any concealment of his infection on the part of the soldier, with a resort to self-treatment with drug store remedies, or improper treatment at the hands of a "quack" is likely to impair his future health and delay his chances for a prompt cure.

If it is suspected that there is concealment of infection on the part of the men, surprise physical inspections early in the morning before the men have had a chance to urinate or otherwise "prepare" for them, will uncover the concealed cases. Failure to report the presence or the suspected presence of a venereal disease is ground for court martial at the discretion of the commanding officer.

Aside from the provision of court-martial for failure to report and the loss of time and pay while hospitalized, there are no other penalties attached to acquiring a venereal disease or for failure to take prophylaxis. It should be made plain to the men that *failure to report a venereal condition* is a much greater military offense than contracting the disease. In order to encourage prompt reporting, no other penalties are attached by the Army.

SUMMARY

1. The methods which public health experts use to measure the health of populations find white people to be healthier than Negroes.

2. But health is related to poverty and other economic disabilities, including education. When low-income whites are compared to low-income Negroes, one group is about as healthy as the other.

3. The experience of the last few decades shows that Negro health can be improved, just as white health can be improved. The death rate among Negroes has been lowered so much that there is every reason to believe that it can be lowered in time to the white death rate.

4. Contrary to popular impression, the Negro population is not increasing much more rapidly than the white population; and its proportion in the total population has been smaller every census period since 1790.

5. Under the conditions of Army life, Negro soldiers are not sick any more often than white soldiers.

6. With the exception of venereal disease, Negro soldiers have no health problems that are any more serious than those of white soldiers.

7. The principal methods of reducing the venereal disease rate for white and Negro soldiers are: (1) reducing the rate of exposure to infection, (2) increasing the use of prophylaxis, and (3) lessening the risk of infection from the adjacent camp community. Regulating prostitution has been shown many times to be an ineffectual method of controlling venereal disease.

8. An important aid to venereal disease control is healthy, home-like recreation in the communities near army camps. To provide it requires planning and cooperation between troop leaders and town leaders.

CHAPTER 6

CAMP COMMUNITY AND THE NEGRO SOLDIER

The Army Represents the Government

The armed forces are symbolic of the collective might of the nation, the most dramatic collective enterprise possible. For this reason, Negroes, no less than any other group, expect recognition commensurate with their sacrifice or willingness to sacrifice. Negroes associate the Army with the Federal government, the agency to which they have traditionally looked for the protection of their rights; they expect more from the Army and the Federal government than from any local community. To them a military reservation symbolizes the ideals of the national government as stated in the Constitution. So long as they remain on the military reservation, they traditionally expect to be treated like all other soldiers. But the camp town is a different matter. The experiences of the Negro soldier in the camp community are but in part the same as those of the white soldiers. For in addition to the experiences common to all soldiers there are experiences which stem from the various local attitudes and social patterns affecting the Negro soldier as a Negro. Hence, the Negro soldier has problems additional to and different from those of the white soldiers.

Much has been said concerning the importance of the camp community in morale of the soldier in training. It is the nearest civilian contact for him; thus it is the most frequent civilian contact. As a result, his experiences in the community and the attitudes of the towns-people in a measure shape his thinking toward civilians, and towards the country in general.

This, however, is tempered by the fact that each soldier likes to think in terms of his own home folks and surroundings as the "kind of people" for whom he is fighting. But the fact that the civilian contacts in the immediate community are more frequent than his contacts with his home or distant communities makes the camp neighborhood play a large part in determining his morale.

Why Soldiers Go to Town

A soldier goes to the nearby community primarily for relaxation from the rigors and discipline of military training and for a change from the limitations of camp life. He has been living a relatively new life in the camp. He wants, if possible, to recapture as much of the flavor of his normal life as he can during his off-duty.

The frequency with which the serviceman praises good community relations as being "so homelike" attests to this fact. He wants to meet people and talk with civilians. He wants to talk to girls, drop into a restaurant for a meal, or take in a movie. He wants to hang around the corner drug store and act as he does at home. He wants the people to know that he doesn't mind making a sacrifice, but he wants a little warm hospitality to make him feel that it's worth it. Not that there isn't the larger loyalty to the tremendous cause of freedom and democracy. But little things mean much and can help mould a soldier's attitude toward the bigger things.

Because of the existing circumstances, white soldiers stand a better chance of getting these necessary community benefits than do Negro soldiers. In order to understand this, it is necessary to go into the matter of varying community customs and attitudes, for it is within this framework that the immediate problem lies. In general it can be said that despite the inadequacy of facilities and services caused by overcrowding and despite actual indifference on the part of the community in some areas to the welfare of the white soldier, he is rarely confronted with the problem of whether he can make a purchase at this place, or eat a meal at that place, or go to a particular theater, or visit the canteen in the community. But this is a real problem for the Negro soldier. It is something that he must investigate before he ventures in.

COMMUNITY PATTERNS

Not all Towns are Alike

The problem stems from the fact that Negroes have been integrated into community life with differing degrees of completeness in almost every city. The range is from a high degree of exclusion to a relatively complete integration of Negroes in community life. The officer, before he can determine the possibilities of off-duty recreation open to his men in a particular town, must have some idea of the patterns of Negro life in that community.

In some camp communities the use of public facilities is governed strictly by segregation laws. There are separate and distinct Negro neighborhoods and business districts. If theaters are open to Negro soldiers, they must sit in a separate section. They must ride in the rear of the bus or street car. Job opportunities for the Negro civilian are in general limited. The Negro participates little in total community organization and planning.

There are other communities where law and custom require separation but where within this framework there is ready and understanding contact between the two groups. Negroes have become a part of the planning for community activities. Here as in the former case, the facilities are available on a separate basis, but they are more nearly adequate.

In other communities there are no laws that require separation of facilities, but long-standing custom has served to maintain separation.

Then there are communities where some of the activities and services are open to all groups while others are restricted. Here there is no definite uniform pattern of separation. Various activities, usually depending on the degree of personal contact, are handled on a separate or integrated basis, whichever way it has happened to work out.

In no one of the above categories do all communities function exactly alike. No two communities have the same approach to law, custom or tradition where race and segregation are concerned. The above list does not cover every situation. The officer who wishes to see to it that his troops benefit by wholesome and desirable community conditions so far as humanly possible must determine by close observation just where in this list his particular camp community falls.

Complications of Camp Community Problem

The problem of camp-community relations is also complicated by the varied background from which soldiers, both white and Negro, come.

Negro soldiers who come from communities where there is little separation of facilities or services on a racial basis may be located near a community where strict separation is the custom. These men often feel they should not be bound by local customs, since they are in the Army and are not living or working in the community. Their dislike of segregation is shared by many colored soldiers who are used to relatively complete separation in civilian life, but feel that being in the Army and wearing the uniform should free them from the handicap of rigid segregation, which they have frequently found means being restricted to the use of vastly inferior community facilities.

White soldiers who come from communities where there is a separation of facilities based on race may be located near a community which has a different pattern of race relations, a pattern which is not familiar to them and of which they disapprove. They may urge the customs of their home on the activities and services in the camp community. These situations have served and are continuing to serve as a source of difficulty in communities.

Military and Civilian Jurisdiction

In order to minimize this difficulty, soldiers, Negro and white, should be instructed that the Army has no authority to alter in any direction the existing community pattern as a matter of social reform, and that it will expect the soldier, when in the community, to abide by its laws. This, it should be emphasized, applies to all sections of the country and to all soldiers alike. Just as military reservation patterns are the business of the Army, so are community interracial patterns the business of the civilian community, so long as basic constitutional rights of all men in uniform are respected and there is no interference with the necessities of military efficiency.

Further, all officers should put forth every effort

to see that all law enforcing agencies exercise their authority with firmness, courtesy and justice, and without abusive language or racial references. Such action on the part of officers goes far to build up morale and confidence of colored soldiers in their officers' interest in their personal problems.

An appendix to this manual provides a brief discussion of laws and legal practices which will be of assistance to the officer. Where time permits, as the appendix makes clear, he should always consult his superior officer, a legal assistance officer, or a representative of the American Bar Association as provided for in Circular No. 74, War Department, 16 March 1943, before advising his men on legal problems.

The way these points are explained to the soldiers is most important. Officers should make it clear to their men that the Army assumes full responsibility for their welfare and personal security, and that while local laws and civilian attitudes are not subject to military control, every effort will be made to see to it that they have access to adequate off-duty facilities. There must be confidence that men in uniform have the support of the Army against abuse and mistreatment through neglect, indifference, or ill will.

Community Problems in Wartime

It is important to look in detail at what happens to a community of, say, 10,000 people when a camp is established near it. This will give the officer some idea of the problems confronting a community so that he will better be able to understand some of the difficulties and work intelligently through the proper channels toward a solution of this phase of Negro soldier morale.

Before soldiers arrive in the camp the routine life of the community probably has been disrupted by a great influx of construction workers, white and Negro. These people have overcrowded the housing, theater, shopping and other facilities. In general, higher wages are paid than normally prevail in the community; therefore, large numbers of employees of shops, stores, cafes and other business establishments have taken construction jobs at the camp. The accompanying hardship on the townspeople is commonly blamed on the camp, so that when military authorities move in the people are already blaming the camp for most of their ills.

If there is a Negro population in the community it generally happens that a balance of race relations has been worked out. Employment opportunities open up at the camp, new Negro and white workers come into the community, and the tenuous balance between racial groups is disrupted and tensions develop. These also are blamed on the camp. Then the soldiers, both white and Negro, begin to arrive.

Most of the camps are located near relatively small communities. Commercial recreational facilities such as theaters, bowling alleys, and pool rooms, are designed only to accommodate the people who live there regularly. The schools are probably just adequate for the townspeople. The water and sewage system is just about adequate. Eating houses are probably just adequate. Then 30,000 to 40,000 soldiers are brought in to a camp not 20 miles away. Probably several thousand of these are Negro troops.

Some communities react by getting all of their forces together and joining hands with the Office of Community War Services, the Federal Housing Authority, the Red Cross, the USO, and other organizations to meet as well as possible the needs of the soldiers. This may or may not definitely include the Negro soldiers, depending on the attitude of the community and its desire or lack of desire to do something for them. Other communities withdraw into themselves and sit on the side lines while Federal and other agencies try to do something and the soldier meanwhile suffers from the lack of normal, desirable community contacts. In general, the Negro soldier suffers most under such circumstances.

What Happened in One Community

Let's see what actually happened in one community of 15,000 people in a section of the country where law and custom require racial separation when an encampment of 30,000 soldiers, 3,000 of whom were Negro, was located nearby.

First of all, 16,000 construction workers descended on the community and disrupted not only the routine of the quiet peaceful community but also economic conditions and the wage system. Many of these workers brought their families and tried to maintain some semblance of normal life, but hundreds of them crowded the city during the week, collected their pay and went home for the

week ends. All available housing was pressed into service and unsightly trailer and tent camps surrounded the city. Sanitary conditions in the community began to deteriorate and such facilities as schools and restaurants and places of amusement were overcrowded.

Then the soldiers came in and the city was overwhelmed. It had made little preparation. The townspeople took the attitude that all this was beyond their control and did nothing about it. The city officials concluded that the problem was one of Federal responsibility and they withdrew into themselves. Federal agencies did come in. Over $1,500,000 worth of public improvements such as schools, sewage systems, water systems, and recreational facilities were provided by the Federal Government. The service organizations came in to provide recreation.

Although the community had taken no adequate steps to be prepared for the influx of servicemen, and even though Federal funds were expected for every additional community facility needed, the townspeople refused to cooperate with representatives of national organizations who came in to supply recreational needs. And without wholehearted community cooperation no recreational job for soldiers can be successful. As a result, at a time when a thoroughly effective program was needed for soldiers, the community withheld its support.

In addition to this, merchants in the community believing that the expansion at the post would be only temporary, refused to expand their facilities to meet the need. The shops and stores designed to serve 15,000 people were attempting now to serve over 40,000 people. This made for great congestion, shortages of merchandise and poor services, and served to irritate the townspeople. They felt that they were being shoved aside. Finally, outside merchants attracted by the tremendous amount of spending, came in. The local people resented this because they accused the outsiders of having no interest in the community other than to make as much money as they could.

"Soldier-Civilian Trouble"

With the community in a state of high irritability, the townspeople began to develop hostile attitudes toward soldiers. They were looked upon as undesirable persons because occasionally there was drinking to excess or because the Army found it necessary to locate prophylaxis stations in the town. Most citizens took the attitude that a nice girl should not be seen with a soldier. Others refused even to be polite to men in uniform because they blamed all their inconveniences on them. Transportation facilities were inadequate and local law enforcement officers, reflecting the community's attitude, were brusque and harsh in their treatment of soldiers. As a result, soldiers in general came to the conclusion that they were not welcome and this had a tremendous effect on their morale.

Negroes Hardest Hit

But the hardships confronting the Negro soldier in this community were in most respects more serious than those of other soldiers. Negroes in the community were anxious to do something for the Negro soldier. There was not as much antipathy as existed between the white soldier and the white civilian. But despite the will to do, there was precious little to do with. A few cafes, two or three juke joints for beer and sandwiches, the balcony of a theater downtown, and that was all. After some time a Federal recreation building was provided but it was not utilized fully because it was inconveniently located on the outskirts of town.

As a consequence, Negro soldiers were thrown into one of the worst sections of town. No organized community effort was put forth by anyone to provide facilities to meet their needs. And on top of this were three major sources of irritation:

(1) Discriminatory treatment by the civilian police,

(2) Inadequate transportation for Negroes to and from the community,

(3) Discrimination against Negro servicemen by the bus company operating buses between the camp and the town.

Negro soldiers' first complaint was the conduct of the civilian police authorities. Picked up for small infractions, they were on occasion roughly handled by the local police. Many times they were reminded that they were still Negroes even though they were soldiers in the Army of the United States and would be treated as all other Negroes by the local police. To help solve this problem an

agreement with the local authorities was worked out by the military police. Still later Negro MP's were stationed in the Negro neighborhood. As a result, clashes between Negro soldiers and local police officials decreased greatly.

Problems of Transportation

Again, Negro soldiers found that even though they secured a furlough for a few days, they were not sure but that they would have to spend a great portion of the time trying to secure a ticket and trying to get on a train. In the railroad station separate windows were provided for Negro passengers but the same ticket sellers also waited on white customers. In general, all of the white travellers were waited on first before the seller turned his attention to the Negroes. Given this situation, it generally happened that white soldiers were served in time to get on the train and Negro soldiers either got on without a ticket and paid full fare or waited to get a furlough ticket and were left behind.

The buses operating between the camp and the community usually filled up with white soldiers before getting to the section of the camp in which Negro soldiers were quartered; hence, these men were frequently left behind. Several hours of a precious pass were wasted just trying to get to town. The same was true in returning to camp. Later, the bus officials began to designate separate buses for Negro soldiers and for white soldiers. If the number had been adequate this might have solved the local transportation problem. On occasion bus drivers changed their designation from Negro to white before arriving at the camp. Since Negro soldiers could not ride on the buses with white soldiers they were often left at the camp. This situation got so bad that on several occasions Negro soldiers stopped and commandeered buses and forced the driver to take them to town. On one occasion a soldier and an MP were killed in a bus incident.

The Negro soldier had greater trouble than the white soldier in getting to town, but after he got there he found little to do that would not get him in trouble. He was treated as an outcast by the local law enforcement officers. In this camp the Negro soldier's morale was low. He was glad to be moved out of the community. Numbers of Negroes at this camp said that they would rather be any place they could think of than stay near that community.

The foregoing is not a rare situation. It is a common situation that faces the Negro soldier in a small community near an Army camp in some sections of the country. But this need not have been the case had it been possible for all of the responsible people in the community, in the camp, and from Federal agencies to get together and plan for the influx of Negro servicemen.

What Happened in a Model Town

Let us examine another community in the same section of the country, of about the same size, with the complement of troops, Negro and white, about the same.

When it became known that a camp would be established nearby, the local Chamber of Commerce, civilian officials and representatives of various organizations, both Negro and white, were drawn into a stock-taking enterprise. They determined that everything humanly possible would be done to make the soldier feel at home. Funds were raised to provide recreational facilities. Merchants took steps to increase their stocks. Outsiders were welcomed in to supplement the existing commercial facilities. The best citizens worked on the various committees and their wives and daughters were active in organizing parties, clubs, dances, picnics, and dinners at home.

Planning Ahead

Before the soldiers came to the camp a representative of the camp command held conferences over a period of weeks with local officials and organizations. He told of the camp and its activities and what the community could mean to the camp and what the camp could mean to the community. He met with the civic clubs and the church organizations. He talked with leading business men, both white and Negro. The editors of the local newspapers were impressed with the necessity for fair and adequate news treatment of soldiers. He stressed the fact that he would expect the Negro soldiers to be as fairly treated in the community as the white soldiers. Representatives of the Office of Community War Services and of the USO were given advance information about probable needs and asked to help. Interracial committees were formed in order to anticipate what the trouble spots might be and smooth them out before fric-

tion set in. After the actual plans of action began to shape up, the representative from the camp command took up some of the specific problems which would confront Negro soldiers. At his suggestion the city authorities called in police officials and asked them to have the local police officers understand that the city officials would tolerate no irregularities. Specific instructions were issued to the police and they were all asked to cooperate. Then the camp authorities worked out a general understanding concerning jurisdiction over soldiers in case they got into trouble. And as a final measure, Negro MP's were stationed in areas where Negro troops were likely to concentrate.

Next was transportation. The representative from the camp command discussed in detail the leave policy of the camp and told of the number of Negro troops that would be stationed at the camp. Considering the segregation laws, the bus company was asked to work closely with the camp for the first few weeks and months so that the available transportation would be fairly divided between Negro and white troops. A bus station was established conveniently in the colored district of town. The company not only agreed but bent every effort toward being as fair and as courteous as possible to all soldiers.

As to railroad transportation, while there was little that could be done about increasing the number of trains or coaches, it was possible to secure a better ticket selling arrangement so that the Negro soldier would only have to wait for service, on the whole, about as long as the white soldier. Equal consideration was all that was necessary in this case.

As a result of this activity on the part of the camp authorities in securing the good will and cooperation of the local townspeople and securing their help, when the soldiers came in they were taken care of with a minimum of difficulty. True, there was some difficulty. It is never easy for a small community to absorb so many more people. But the spirit of the townspeople, which was reciprocated by the soldiers, overcame the initial handicaps.

Two Important Conclusions

Two things are important here from the point of view of the Negro soldier in the community:

1. Negroes were included in the planning. Hence they felt a part of the whole community and used every resource at their command to make the program for Negro soldiers a success.

2. The camp authorities took active steps to prepare the way both for the white soldier and for the Negro soldier. They realized that there were special difficulties and took steps to eradicate most of them. Those that could not be eradicated were tempered by understanding and cooperation.

Trouble Between White and Negro Soldiers

There is another phase to this problem. In numerous instances, both in the United States and abroad, the Negro soldier has been welcomed into the community and has been invited to share in the programs and activities designed for servicemen. Too often, however, this cordiality has been disturbed by the attitude and actions of white soldiers who come from sections where there is rigid separation between the races. This seems wrong to the Negro soldier. Like all soldiers, the Negro is required to conform to the laws and customs of communities where he is stationed. It is difficult for him to understand why other soldiers should try to introduce restrictive practices in areas where there are no such laws or customs.

When this kind of difficulty arises it is a responsibility of command to remind individuals that the Army has no authority to attempt to change existing community inter-racial patterns in any direction at all because of social preference.

Incidents of conflict or even misunderstanding between white and colored troops have been so rare during this war as to warrant the conclusion that the principal source of trouble lies in relationships between the military and civilian communities. Certain individuals and troublemakers of both races will inevitably create isolated cases of friction. Such individuals must be disciplined immediately, completely and impartially so that all troops will understand that inter-racial troubles will not be tolerated for a moment within the military service.

On the other hand, countless cases where white soldiers have refused to take advantage of Negro soldiers and have defended their rights publicly against civilian efforts toward discrimination, show that a common purpose, pride in uniform, and mutual respect are increasingly helping to solve the racial problem. Wise leadership and firm, impartial, discipline will always lead the way in this respect.

This discussion of the camp community is focused on the problems of the Negro soldier in training in the United States. Throughout the war there will always be relatively large numbers of troops in such training situations, but as time goes on other types of camp-community relationships will be of increasing importance. The establishment of many new posts, camps, and stations in this country is not to be anticipated, with the result that there will be little or no opportunity to develop local patterns of civilian-military relationships with a clean start free from the complications of past incidents and mistakes. Attitudes and habits, both good and bad, will have been developed, and will have to be reckoned with in plans and activities designed to improve specific situations.

In such circumstances the starting point will be different, but the problems, the purposes, the approach, the people to be approached for cooperation, the facilities needed, all will be similar or the same. If good relationships have been effected, they may be expected to continue only if officers make a positive continuing effort to see to it that they do not deteriorate. If camp-community relationships are on an unfortunate basis, the most serious attempt possible to improve them should be initiated immediately.

Oversea Problems

As greater and greater numbers of troops move overseas, increasing attention should be paid to the problems of relations between American soldiers and the civilians and soldiers in the foreign countries in which they are stationed. No detailed information or advice on these oversea problems can be given in this manual, for there is no way of knowing where the officers and officer candidates for whom it is intended will ultimately be sent. Interracial customs vary so much from country to country that at least a separate chapter would be required for each nation, friendly or enemy, in which our troops may be located.

About the only generalization which can be made is that people may be found in practically all parts of the world who have prejudices against groups differing in appearance and manner from themselves, but the patterns of prejudice and intergroup relationships are never the same in any two regions.

The officer who is assigned to duty overseas must expect to find that American Negro troops will attract special attention. How they are received will depend partly on previous experiences of the country in question with colored people. Local attitudes and traditions in consequence of sheer lack of information and preparation guarding against likely sources of difficulty.

Negro troops overseas are indeed in a complicated situation. First of all, American troops in another country regardless of color, will inevitably find themselves looked upon as strange people because of their alien appearance and behavior, and they will themselves have difficulty in not giving offense because of failure to understand the people among whom they find themselves. Secondly, they will in many countries find that there are native subgroups, in some places including various colored people, with traditional patterns of intergroup relationships. Thirdly, the American Negro soldier will be a new experience for the citizens of these countries, and at the beginning there will of course be no common understanding or specific customary way of regarding him.

Here is a potential source of trouble which must be guarded against by the Army itself, for the citizens of a country in which our men are stationed will tend in the absence of any previous contacts with large groups of American Negroes, to follow the example of white American officers and men. If individuals wearing the uniform of the American Army abroad show disrespect for others wearing the same uniform who happen to be colored, an example will have been set which may lead to lowering of the morale of Negro troops, increased chances for open trouble with the local population, interference with military efficiency, and a nationally regrettable loss of dignity and respect for the uniform of our Army.

SUMMARY

While the effectiveness of any program designed to improve the civilian-soldier contacts and relationships in the camp community will rest in large measure on the initiative and imagination of civilian authorities, officers can do a great deal toward stimulating desirable relationships. Especially is this true where Negro soldiers are concerned. Based on the foregoing discussion, these are some positive steps that can be taken by those in command of Negro soldiers:

1. Determine what the prevailing community laws and customs are so far as recreation and public facilities are concerned.

2. Learn about the Negro population, its size, location and other characteristics. Check on the adequacy of the commercial, recreational and eating facilities.

3. Discuss the problems arising from the location of a contingent of Negro troops with the town officials and secure their cooperation. This includes the police officials, with whom mutual assistance must be arranged.

4. Meet with organizations of merchants and other civic organizations to secure their active participation in a program to make the Negro soldiers welcome. Be sure to include the editors of local newspapers among the people whose advice and cooperation you ask.

5. Seek out the outstanding persons, especially Negroes, in the community and determine what they can do through their organizations to help entertain the Negro soldier. Churches, schools, Y.M.C.A.'s, Y.W.C.A.'s, local war service commissions, and athletic clubs are often glad to help.

6. Get all the help you can from national agencies, particularly the USO, and the office of Community War Services. Their local representatives can often give valuable aid.

7. Tell the Negro soldier what steps have been taken to prepare the community for his coming and impress upon him his responsibility for good community relations. Lists of events and places open to him placed on company and day room bulletin boards will help.

8. Work out a fair distribution of the transportation facilities between the post and town with the bus officials.

9. Try to arrange for fair and adequate ticket-selling and other facilities in railroad stations for Negro soldiers.

10. See to it that the MP's are doing their work intelligently and effectively in full cooperation with the local authorities, fulfilling their obligation to protect the rights of all soldiers as well as to maintain law and order. Use Negro and white MP's if there are both Negro and white troops in camp .

11. Oversea duty requires an awareness that new problems of the Negro soldier's community activities and relationships inevitably arise in foreign countries, that although the officer's responsibilities and the basic principles of camp-community relations remain the same it is necessary to learn about local customs, traditions, and practices, and that extreme care must be taken to maintain respect for the American uniform whether worn by white or Negro soldiers.

CHAPTER 7

RUMOR, FACT, AND NEWS

The Soldier's Right to Information

The soldier who comes ino a citizens' Army such as ours is not and should not be insulated from the community at large. As a civilian, the soldier was a member of the American public, the most completely and freely informed body of citizens in any country. As a soldier, the former civilian has the inalienable right to read books and newspapers, listen to the radio, receive mail, and see visitors. Naturally, the closer the soldier gets to a fighting front, the less frequent and the more cherished these contacts with the "civilian front" become.

The home community, too, retains its interest in the man when he becomes a soldier. His family wants to hear from him and about him. The home-town paper has a page of soldier news. The news reels are eagerly watched for military shots of all kinds. And, as the soldier gets farther away from home whatever contacts are made with him by mail or through the news are again cherished even more than they would be under ordinary circumstances.

As a member of the armed forces, the soldier is part of an organization. This organization has plans and orders for him; has to teach him how to do his job, to fight, tell him what he is fighting, and why. The junior officer has the immediate and direct responsibility for assuring the flow of this information, for guiding the two-way soldier-civilian communication as the man learns his job; for passing along and interpreting the information materials provided by the War Department.

Adequate, truthful information to both the public and the soldier helps to build confidence and a sense of participation in a common cause. Mutual confidence and respect between the public and the Army help sustain the will-to-win essential to victory.

Rumors and How to Deal with Them

If the public and the soldier are not informed symptoms of uncertainty will quickly appear. And they can appear in both civilian and soldier groups. Rumors will begin to circulate. What difference if they are called "rumors" by the public and "scuttlebutt" by the soldier? They are the same thing and arise out of confusion, uncertainty, and misinformation.

The best way to deal with rumors is to prevent them from arising. Rumors are word-of-mouth information. They are usually passed on where people gather. They cannot be validated authoritatively or officially; they have to be taken on the say-so of the rumor-spreader. They are fostered by uncertainty, and spread in the absence of adequate, reliable, official information. If the maxim "Keep your men informed" is followed rumors are much less likely to arise and spread than if the men, their families, and the public are kept in the dark or allowed to speculate.

When rumors are circulating some officers immediately begin to look for a focus of infection; a civilian or soldier agitator, an enemy agent, a propaganda sheet. Such persons and influences may of course be at work, and if they are they should be reported to superior officers. But agitators and agents do not sow their seed successfully except in fertile ground. The officer who has a rumor problem in his unit and hunts only for agitators, and does not ask himself whether he has "kept his men informed" is taking the wrong way out. An outfit which is circulating rumors has something wrong with *it*. The clue to what is wrong may often be found in the rumors themselves. Collecting the rumors and studying them will often tell the officer what his men are uneasy about, or what piece of missing official information is being fabricated and spread. In tac-

tical situations information of the enemy and supporting troops is given to the troops; such a procedure should be followed as well in situations regarding rumor as opposed to news and fact. Rumor may easily be as much an enemy of morale and military efficiency as an army of enemy forces.

Five Types of Rumors

Rumors and rumor spreading have been studied by specialists in crowd psychology. One analysis of 4,500 rumors showed that they fell into five groups:

1. *Hate rumors.* These rumors expressed prejudice, animosity, or hostility for groups other than the enemy.
2. *Anxiety rumors.* These rumors reflected uneasiness or fear. They commonly had the form of unfounded reports of Allied disaster or weakness, or of overwhelming enemy strength.
3. *Escape rumors.* In the main, these reflected wishful thinking about the progress and duration of the war.
4. *Supernatural rumors.* There were a relatively few rumors of impending miracles or disasters.
5. *Curiosity rumors.* There were a number of novel tidbits, or supposed news items which were amusing and entertaining in their nature.

Hate Rumors

By far the most numerous and the most dangerous were the *hate rumors.* But a comparison of specific rumors with specific enemy-propaganda appeals showed little relation between the two. Enemy shortwave radio broadcasts, which reach a very small audience in the United States, have largely been ignored by the American public.

The evidence shows that many *hate rumors* originate in the United States as symptoms of domestic social and ecnomic problems. Enemy propaganda has often picked up these rumors and tried to increase their circulation, but it should not be assumed that hate rumors are only enemy-planted. On the contrary, *they grow at home.*

An Experiment with Rumors

To show the effect of rumors, in an experimental study a group of people were brought in to listen to a rumor-control program over the radio, which consisted of a dialogue in which a rumor was announced, followed by facts which proved it untrue. The listeners to the program were interviewed before and after the program. Their answers showed that the rumors should never have been repeated. For every rumor spiked by the program twenty-seven rumors were planted! Members of that audience gathered rumors from the program they had never heard before, and remembered the rumors even though they had forgotten the true facts.

There is a lesson to be learned from this experiment which has been put into application by some rumor clinics throughout the country, and which has proven practical. Never repeat a rumor *even to deny it!* To deny a rumor, repeat the facts. Don't repeat the rumor. Rumors are spread by word of mouth. When you repeat a rumor you are spreading a rumor.

Combating Rumors with Truth

This does not mean that rumors can't be handled. On the contrary it shows the right way to control rumors. Every officer should have regular channels for communicating information to his men. He can call his men together to talk to them; he can use bulletin boards in the barracks; he can use camp newspapers; he can distribute mimeographed material, and so on. Use whichever of these devices is the most suitable for passing on accurate, official information to your men on a regular daily or weekly basis.

If rumors begin to circulate and you are closely in touch with your men, you will know it. Don't try to deny individual rumors that will only give them greater circulation. Use your own knowledge or your regular information channels to supply information the rumors show is missing. If you feel you must refer to the fact that rumors are being circulated, don't repeat individual rumors.

Some Do's and Don'ts

Thus, if rumors are circulating in a unit to the effect that an interracial incident has taken place in a nearby town but is being concealed by the newspapers and the radio, and you decide to call the men together, do it the right way, not the wrong way.

Don't Say:

"Men, there has been a rumor floating around this camp that a policeman shot a Negro on the corner of 1st and C streets last night. There has been ugly talk about going into town and cleaning up on the townspeople and the local police. That kind of action won't get you anywhere. As a matter of fact, we have conducted an investigation and have found there was no shooting, although a Negro soldier was taken into custody there, and has since been turned over to the Military Police."

Do Say:

"Last night a Negro soldier was taken into custody on the corner of 1st and C streets after an argument which arose out of an automobile accident. He has been turned over to our Military Police. There has been ugly talk going around about going into town and cleaning up on the townspeople and the local police. The Army has its own regular, legal way of looking after soldiers and helping them in their dealings with the townspeople. I have investigated the matter and the case will be tried by our established military court. I have discussed the case with the post judge advocate and know that the man will receive an impartial military trial."

It is not enough that the officer investigate the rumor and discover that it has no basis in fact. He must communicate *the results of his investigation* to his men in a manner which will convince them that the rumor is without foundation.

If rumors are circulating in a unit which is about to move out, they may be innocent speculation, or they may be doing some harm. In the latter case the men should be called together, or a bulletin should be issued. In either case the men should be told as much about the movement as can be safely told, or they should be told flatly that troop movements are secret and nobody who pretends to speak authoritatively knows what he is talking about.

Avoid the temptation to call men together to discuss rumors and refute them verbally. To do so will only strengthen them and spread rumors, or provide someone with an opportunity to stand up and spread one in an official gathering. Call men together in this connection only for the purpose of passing on authoritative, truthful information.

Generally speaking, the rumor problem is the same for white and colored troops. Hate rumors are as likely to be circulated among white troops as among Negro troops. The best antidote for hate rumors is full information. Use the material in this text freely for that purpose. The American soldier can evaluate the truth but he must have it. Soldiers who know something about the Negro military tradition, Negro participation in this war, both in industry and in the fighting forces, the educational and occupational background of Negroes, and their role in the history of this country, are less likely to spread hate rumors than if they do not know these things.

Interracial incidents in the summer of 1943 brought a wave of anxiety rumors among troops stationed in many different parts of the country. On several occasions rumors spread that riots were taking place in cities near camps with Negro troops. The possibility that such rumors might lead to incitement and explosive action by white or Negro soldiers was present and dangerous.

Such situations should never be ignored. It is not enough to lock up guns and ammunition. The men should be *kept informed.* Concealment only inflames the situation. If there is no riot, issue a bulletin or call the men together and tell them so. If violence is taking place call the men together and tell them what is being done to control the situation, to protect their families and preserve law and order. Impress on them the duty they have not to take the law into their own hands. But do not repeat the rumors or give them a chance to do so. Give them the facts and tell them what is expected of them as soldiers.

The Axis Rumor Technique

One way to prevent the growth of hate rumors is to be familiar with and explain to the men the Axis use of divide-and-conquer tactics. The War Department film, "Divide and Conquer" can be used for this purpose. Be sure, however, that you do not misinform your men or misinterpret the enemy's methods. The propaganda line used by the Nazis and the Japanese militarists on race supremacy has been outlined briefly in the section "Educational Background of the Negro Soldier". It is sometimes said that the Nazis have tried to use the short-wave radio and other propaganda devices to set Negroes and whites against each other. This is only a partial truth. The Nazis have

used race riots as examples of what they call the "decadence of the pluto-democracies," as examples, they say, of the inability of the democracies to control their internal affairs. They also use Negro achievement stories as examples of "decadence." But generally speaking, the Nazis have paid little attention on the radio to race relations in this country. The degree of democratic participation afforded all racial and foreign nationality groups in this country does not fit well with the Nazi theories of the "master-race."

The Japanese have made much more use of racial material in their propaganda, not only to this country but also to Latin America and Southeast Asia. It fits their propaganda line to make use of any discrimination they know about, since they have tried to assume the propaganda role of the liberators and champions of colored peoples everywhere.

It is more accurate and potent to point out to troops that the man who spreads rumors, particularly hate rumors, about any group—racial, religious or national—is doing Hitler's or Tojo's work. The Nazis assumed that in this country they would find antagonistic groups who would spend their time fighting each other instead of the German armies. Goebbels said to one of his confidants: "Nothing will be easier than to produce a bloody revolution in America. No other country has so many social and racial tensions. We shall be able to play on many strings there." (Rauschning, *Voice of Destruction,* New York, 1941, p. 71).

Getting out the News

Soldier and civilian morale are closely related, and civilian morale is highest when the families and friends of fighting men have reason to feel pride in their soldiers' achievements.

On the other hand, it is destructive of morale if any civilian group feels that the sacrifice and honor of sharing in the enemy's defeat is unequally divided. Inequalities of both sacrifice and honor lead only to resentment, and eventually to a weakening of the will-to-win which makes morale.

In exercising the right and fulfilling the duty of the Army to tell the public what all soldiers are doing in the war, the junior officer as well as the public relations officer has a clear-cut job. In training and in action, whether in combat or as service troops, all soldiers, including Negro soldiers, are doing things that make news. Most of these do not make headline stories; but they are good reading on the soldiers' page in the home-town newspaper. The soldier's relatives and friends want to see these; and the soldier wants to see them or hear about them when the paper, his mail, or his visitors reach him. The guiding principle is, "PLAY IT STRAIGHT AND GET IT OUT!"

The way to "get it out" is to give the story to the public relations officer. His is the responsibility for seeing that the story is made available to newspapers, the radio and so on. But he can't go out and get all of the stories. He depends on the junior officers and NCO's to get the stories to him.

The Principal News Channels

Some information about the war reaches all Americans through standard news sources. People read newspapers and magazines, listen to the radio, and see feature films, newsreels, and short subjects. Today, more people than ever before are seeing nonfictional films because the Army is using them so extensively in its training program. But our primary concern is with the civilians, both white and Negro, who learn about the war and their part in the war, through what they see, hear and read.

Newspapers

There are about 1,750 daily newspapers in this country and about 11,000 weekly newspapers. Approximately 600 nationally circulated magazines have a combined annual circulation of 2,500,000,000. Reckoning the adult reading public at 100,000,000 this works out to an average purchase per year of 25 magazines per person. In 1942 the average attendance at moving picture theaters was 90,000,000 per week. Most theaters screen at least one newsreel weekly. More than 900 radio stations in the United States broadcast news as part of their regular activities. The number of their radio listeners is estimated at 100,000,000; the number of radio-equipped homes at 30,000,000.

Negroes are Americans, and like other Americans, they see newsreels, read papers, and listen to the radio. This is particularly true of Negroes who live in cities, just as it is particularly true of the urban whites.

There are about 300 Negro newspapers, which have a combined circulation in the neighborhood of two and a half million. These papers are widely read and are passed from hand to hand. More than three-quarters of all Negroes who live in cities read at least one Negro paper. Nearly as many read one or more white papers.

Radio and Movies

The number of Negroes who listen to the radio is even larger than the number who read newspapers. More than 90 percent of the Negroes who live in cities either own a radio or listen to someone else's.

In the states where law and custom require a separation of Negro and white audiences, and in Negro neighborhoods in northern industrial cities, there are about 450 theaters which have exclusively or predominantly Negro audiences. Their weekly attendance exceeds three million. Recently a newsreel has been developed which is designed primarily for Negro audiences, and features Negro subjects. It is now widely shown in Negro theaters and has been very popular.

In summation, information about what whites and Negroes are doing in the war, reaches members of both groups through newspapers, radio and films. Both whites and Negroes see, read, and hear the news as it is presented in films, in print, and over the air. But side-by-side with the papers, programs, and films that white people know and are familiar with, there exists another news world many of them have never heard of—Negro newspapers, and to a lesser extent, Negro radio programs and films. Negroes get their news through both types of media; whites get their news through only one. Are whites and Negroes getting a straight picture of each other's share in the war job through these media, or is the picture twisted and prejudiced? Are there omissions, deletions, censorship, and selection? If so, it is part of the job of the leader of Negro troops to handle news about his men in such a way that the straight news about his outfit does get in to the PRO and out to the news media.

Little About Negroes Through White Media

In the important media reaching white people, news about Negroes generally is either lacking, or does not concern Negroes in the war, or merely helps to fix an inaccurate picture of the Negro in American life.

Negro affairs are seldom mentioned editorially in white newspapers. In one count that was made, out of all the editorials and opinion columns, only six one-hundredths of one percent dealt with Negro subjects.

Negro affairs are mentioned much more frequently in news columns than in editorials. The subjects, however, are not usually connected with the war. For example, entertainments, sports events, and crime stories are more frequent than stories about Negroes in the armed forces. From the standpoint of the public relations officer, this is a serious enough matter to warrant more detailed discussion.

Out of one group of 494 Negro news stories in white papers nearly half dealt with social and sports events in the Negro community. The subject-matter of nearly one-third was relations between the races, but was not connected with the war. The balance was divided between crime stories and stories about Negroes in the armed forces; and there were 4 percent more crime stories than news stories about soldiers.

The line officer is not likely to have an opportunity to deal with the preparation of feature films. Yet they are so important as a vehicle through which public attitudes are formed that some mention of their handling of Negro themes may not be out of the way.

Negro Stereotype

Although Negroes are not commonly mentioned in news stories and newsreels, they are frequently characterized in feature films. About one out of every four feature films has Negro characters in the story. Most of the roles played by Negro characters portray Negroes as inferior, as domestic servants, as poor, or as entertainers. In real life in most of our larger cities an ordinary street view will include a few Negroes. In a construction job —a bridge, a dam, or a building job—some Negroes are usually working. Yet when these scenes are portrayed in films, Negroes are seldom included in the roles they play in real life.

The failure to portray the Negro in films and other information channels as an ordinary, normal American with a dark skin, has contributed heavily to what the psychologists call a "stereotype." By

this, they mean a fixed mental picture. When the Negro is portrayed in the movies, or elsewhere, as a lazy, shiftless, no-good, slew-footed, happy-go-lucky, razor-toting, tap-dancing vagrant, a step has been taken in the direction of fixing this mental picture of the Negro in the minds of whites.

This, of course, is not peculiar to the Negro. We have similar stereotypes of nationality groups. These portray the Englishman with a monocle, a stick, a top-hat, a moustache, and a clipped accent. The Irishman comes out with a brogue, loud clothes, a love for whisky and politics. Those of us who are not psychologists speak of these stereotypes as "stage Irishman," the "stage Englishman," etc.

The only significant way in which these portrayals differ from the stereotype of the Negro is this: 25 or 30 years ago in vaudeville, on the stage, and in the movies, nationality groups were very frequently portrayed in stereotypes. But about the time vaudeville was replaced by talking pictures, the movies began to portray Englishmen and Irishmen and other nationality characters as flesh-and-blood people, differing from one another in all sorts of ways: tall, short, good, bad; rich, poor; with the dozens of different accents which can be heard in the British Isles instead of the clipped speech of upper-class Englishmen from the South of England, and so on.

Movies became more true-to-life, but not where Negro characters were concerned. Movie and other writers still clung to the portrayal of the American Negro which they inherited from the days of the first Negro commercial entertainment, the minstrel shows.

Avoid Objectionable Stereotypes

One of the first jobs of the company and platoon leader who is handling colored troops, is to learn from his men what these objectionable stereotypes are and to avoid using them. In speaking to his men, the officer who avoids these stereotypes shows that he has followed the leadership maxim "*Know your men.*" His reward will be confidence and respect; and he will avoid distrust and suspicion. One of the best ways for the junior officer to convince his men that his knowledge of them is real and goes beyond the stereotype is to familiarize himself with the role Negroes have played in this country's military history. Negro soldiers should know this material; but the officer should know it even better. That is why a chapter on the subject has been included in this manual.

Magazine and Radio Coverage

Information about Negroes could but does not reach whites to any great extent through magazines. News magazines refer to Negroes the least frequently of all magazines. Fiction magazines contain material about Negroes somewhat more often, but 80 percent of the references are in stories in which Negroes are minor characters. Here the problem of the stereotype comes to the fore again, for these fictional portrayals almost always show the Negro as a comic character, not as an American like other Americans. This is especially true of action story magazines which have been shown many times to be influential in molding their readers' attitudes.

Another of the great opinion-influencing media is the radio. It has grown, particularly in the last ten years, to the point where the public has come to rely on it for news as well as entertainment. Negro subject-matter, however, is almost nonexistent on the radio. There are swing bands and other musical shows which everyone knows contain Negro performers, but Negro news and features, and comment about Negroes by commentators, make up a very small portion of the radio's daily output.

Over one period, only six out of 2,356 radio commentators' opinions mentioned Negroes. Only two of these were concerned with Negroes in the war. The other four were eulogies on the occasion of the death of the Negro scientist, Dr. George Washington Carver.

Daytime radio serials, like action stories and the movies, are influential molders of attitude and opinion. Negroes are frequently portrayed in serials, in nearly all instances in the roles of domestic servants.

Play it Straight!

Portrayals of the Negro in films, in stories, and elsewhere, almost exclusively as lazy, shiftless, and servile stereotypes are offensive to many. They do a positive disservice to the job before all of us as citizens—to unite all groups in the winning of the war. For they are an inaccurate picture of most of Negro life, and are completely unreal as far as the Negroes' role in the Army is concerned.

The leader of colored troops has a definite responsibility to avoid this kind of portrayal in his own language and thinking, and in preparing information for release to the public when that time comes. There is only one news rule for the man who handles information: *play it straight!*

Appeal of the Negro Press

As pointed out earlier in this section, most of the news channels which are open to white Americans are also open to Negro Americans. But the specifically Negro media—Negro newspapers, the Negro news reel, and radio programs which are designed primarily for Negro audiences—have a special appeal to Negroes through default. The daily press does not carry a large volume of Negro news and the radio carries hardly any. Hence, Negroes read the Negro press to get news and features which they cannot get any other way.

Three out of every four news items in the principal news pages of the Negro press are devoted to interracial news. These interracial stories cluster around four subjects: stories about Negroes in the armed forces; stories about jobs, business opportunities, and other economic problems of Negroes; stories about the granting or withholding of Negroes' civil rights; and stories which center around the relations between the races, but do not specify any particular field of relationships, or include several fields in one story.

In contrast to the white press, news about Negro crime is not voluminous. Only from one to 4 percent of news stories are of this type.

Grievance Items and Achievement Items

The attitudes presented editorially or reported in these news stories show an approximate balance between *grievance* items and *achievement* items. These are shorthand terms used in this chapter to describe two different kinds of news stories about Negroes. Grievance items are stories and editorials in the Negro press which report or discuss episodes in which Negroes are excluded from some form of participation in the war and in the wartime community. Achievement items are those which concern episodes in which Negroes participate in the war and the wartime community.

The distribution of these grievance and achievement items among the various subjects of news stories is highly significant to the public relations officer. A study of 2,687 Negro news stories which were either grievance or achievement items showed that they were divided almost half and half; 1,362 of them were achievement stories, 1,325 were grievance stories. The table below shows the way the stories stacked up in the grievance and achievement columns.

	1362 Achievement Stories	1325 Grievance Stories
Armed forces	28%	14%
Jobs	14%	22.5%
Civil rights	10%	22.5%
General race relations	9%	17.5%
All others	39%	23.5%
	100.0%	100.0%

Public Relations Officer's Opportunity

To the public relations officer this means that of all interracial news subjects, Negroes in the armed forces are the most interesting to Negro editors. Furthermore, their interests include achievement stories as well as grievance stories. The moral is simple: Get your Negro achievement stories out. You have a live market for them, a hungry market. The Negro papers will handle the stories if they get them, but they have to get them from you.

The editorial and opinion columns of the Negro press are much less actively concerned with Negroes in the armed forces than are the news columns. But nearly three-quarters of the stories of this type qualify as grievance items.

Other Negro Media

Other Negro media present a roughly similar picture. There are a small number of Negro magazines, published as commercial enterprises and as the organs of institutions or associations. Their articles and editorials most frequently are written about jobs and other employment problems. There are many fewer stories and articles about the armed forces.

Of all Negro media, the most frequent single user of armed forces material is the Negro news reel. In the first six months of its operations nearly one-third of its footage was devoted to Negro participation in the armed forces. All of these early clips showed drills, parades, and training activities.

The largest number of radio programs designed primarily for Negro audiences are produced by local stations, not as network programs. An analysis of a few of these programs show that they are entertainment or religious programs with practically no attention paid to news.

Summary: News of Negroes Is Not Widely Distributed

In summary, the important news channels which reach both white and Negro audiences—newspapers, radio, films, and magazines—contain very little news about Negroes; and of that little, only a small part is about what Negroes are doing in the armed forces and in other forms of war participation. Hence, so far as the ordinary sources of news are concerned, neither whites nor Negroes have any special reason to believe that Negroes are actively and fully participating in the war.

A number of news channels have attempted to redress this balance for Negro readers and audiences. The most important of these are the Negro newspapers, whose content is directed almost exclusively to matters of Negro community interest and to Negro participation in the larger community life. The war is of immediate concern to these papers, mainly from the standpoint of Negro participation in it.

Although it has been widely claimed that these papers are mainly concerned with airing grievances, detailed analysis does not bear out this charge. They are, however, little concerned with the larger war issues, or with information about our allies and our enemies. Of the other media, the Negro news reel, which came into being during the war period, has made Negro participation in the armed forces its special business. As far as can be learned through interviews, Negroes are anxious to get more straight news on the radio.

Attitudes toward Negro Participation in the Armed Forces

Since the news channels which reach whites do not contain much information on what Negroes are doing in the war; and since the news channels in which Negroes place the most confidence do not contain much information on war issues, or on our enemies and allies, it might be expected that many white civilians would have negative if not antagonistic attitudes toward Negro participation in the war; and that Negroes' interest in the larger issues of the war would be uninformed or unawakened. This is actually the case.

Are Most Negroes Satisfied? Most Whites Are Misinformed

The interracial disturbances in the summer of 1943 probably brought Negro dissatisfaction to the attention of many whites who had not thought much about the problem previously. As recently as four months before a serious riot two-thirds of the white respondents in the city concerned said in an opinion study, that most colored people are pretty well satisfied with things in this country. A similar study made a year earlier brought almost identical results.

This estimate of the situation was far from the feeling of Negroes interviewed at the same time. The Negro respondents were asked: "Do you think colored people are getting as much chance as they should to help win the war?" Approximately seven out of every ten Negroes interviewed answered: "No".

How Effective Publicity Helps

The important point here is not the opposition in attitude of whites and Negroes, serious as that is. To the public relations officer the point is that whites were asked a question about the attitude of Negroes and gave a response which was definitely the opposite of what Negro attitudes really are. It is not the officer's job to correct this attitude. His job is to get out information about his unit and what the men in it are doing. But if he thinks about his job he will see a connection between the absence of information about Negroes in the media which reach whites and the fact that objective measurement of white opinion shows that whites do not know what Negroes are thinking and feeling.

It appears that the attitude of the white respondents was an opinion based on sentiment rather than information, for they were asked whether they had heard, seen or read anything about what colored people are doing to help the war effort. Three-quarters of them said they had not read anything in magazines; four-fifths said they had not heard anything over the radio; and nine-tenths of them said they had seen nothing in the movies.

The small number of whites who said they had heard, seen, or read something, were asked whether they liked it or disliked it. Their responses are important for the public relations officer who wants to think about his job. Nearly all those whites who had seen something in the movies, heard over the radio, or read in magazines about what Negroes are doing in the war, liked it.

In the same study, Negro respondents were asked what they had seen or heard about Negroes in the war over the radio, in magazines, in the Negro news reel, and in the movies aside from the Negro news reel. More than half said they had heard and seen nothing. The others ranked the radio first, followed by magazines, the Negro news reel and the movies as the most frequent sources of Negro news.

In this case the Negro and white respondents are referring to the same news source. We know the volume of Negro news in these sources is very small. Much larger numbers of whites than Negroes say they have seen or heard nothing about Negroes in the war. They either do not notice, or they forget what they have seen, while Negroes remember and perhaps over-value what they have seen.

Another Misconception

With the white beliefs that Negroes are satisfied with their lot and are not doing all they should to help win the war, goes the feeling that more Negroes should be in the armed forces. This feeling varies in different parts of the country and in respect to different branches of the service. Two-thirds of the white respondents in both North and South feel that more Negroes should be in the Army; half the respondents feel that more Negroes should be in the Navy; and two-fifths feel more Negroes should be in the air force.

Negroes were not asked the exact parallel of this question. They were, however, asked to estimate their chances of serving and advancing in several branches of the armed forces. Few Negroes thought their chances were very good in any of the branches. One-half of the Negroes gave responses which showed they felt that the Army Air Forces was all but closed to them. (This inquiry was made before the 99th Fighter Squadron had been in action.) One out of every three was pessimistic about the Navy. Three in ten felt they had little chance to become officers in the Army. Two in ten felt they would have a poor chance in the WAC. Nearly one-third said they didn't know what a Negro girl's chances in the WAC were.

In the March, 1943 study referred to several times above, the Negro respondents were asked about the use of colored troops. One out of every three replied that he didn't know whether or not Negro troops were being used in combat. Half the total, however, were sure that Negro troops were being used only behind the lines, and of this number, four out of five were anxious to see Negro troops in combat.

Attitudes of Negro Civilians toward War Issues

Negroes are just as conscious of the basic war issues as whites, but they are not as familiar with the nature of our allies and our enemies as are whites. Negroes feel their greatest stake in the war is a chance to participate in it. This participation, which other Americans take as their natural right and duty, Negroes feel they have to fight for. Hence, what becomes a means to an end for other Americans, becomes an end in itself for Negroes.

"Double Victory"

Early in the war this attitude of Negroes crystalized in the "Double V" symbol, which stands for Victory at home and abroad. "Victory at home" meant victory in the struggle to achieve full participation in the war job — membership in the armed forces, jobs in war plants, and positions in civilian defense. "Victory abroad" meant exactly what it means to other Americans—victory over our country's enemies. The symbol took hold and achieved popularity because it expressed something Negroes feel very keenly, that the struggle for democracy at home cannot be separated from the struggle to defeat its enemies abroad

Although the popularity of the symbol has faded, the sentiment persists. In March, 1943, a large number of Negroes were asked the question, "Right now do you think it is more important to concentrate on beating Germany and Japan, or to make democracy work better at home?" The respondents divided fairly evenly

into three groups: those who said it was more important to make democracy work better at home; those who said it was more important to defeat Germany and Japan; and those who said "don't know" or gave no answer.

In opinion polls, a split of this kind indicates that a difficult choice has been forced on the respondents. In this question the clue to the underlying attitudes is found in the qualifying answers. Each respondent who replied to the question, whether he answered in favor of making democracy work at home, or whether he answered in favor of beating the Germans and Japanese first was asked why he thought the way he did. In each case the most frequent single reply was that it was the quickest way to win the war.

Attitudes and Color Consciousness

There are attitudes among both whites and Negroes based on color consciousness which complicate race relations during wartime. Inevitably, color has become to some degree connected with the war. Despite the fact that we have colored allies as well as enemies, cartoon and other portrayals of the Japanese tend to associate color with the enemy. Whites are inclined to expect the feeling among Negroes that the Japanese are fighting a racial war. This feeling emerges, for example, as an over-fear of the influence on Negroes of Japanese propaganda.

Negroes have a natural and legitimate interest in other colored peoples. The African colonial peoples, East Indians, and the Caribbean peoples are as well known to Negroes as to other Americans. But like white Americans, Negroes have been made more aware of the fact that the Japanese enemy is pigmented than of the fact that pigmented peoples are fighting on the side of the United Nations and with every United Nations army. The Chinese have been battling the Japanese since 1937. The troops of Great Britain and Russia include men of all colors. Filipinos gave a brave account of themselves on Bataan. The other American republics allied with us in the war contain millions of colored citizens.

This interest in colored peoples in other parts of the world should not be mistaken for pro-Japanese sentiment. To assume that only our enemies are colored is to fall into the Japanese propaganda trap. The Negro soldier's interest in colored peoples elsewhere in the world should be guided and directed by the officer, and should not be regarded with suspicion.

The Lunatic Fringe

Among people who live in cities, every group has its human derelicts, marginal men who have lost hope of making their way in life and have turned to the easiest avenues of escape: liquor, drugs, anti-social behavior, sometimes just their own thoughts. Some of these people, of course, are Negroes. For many years small numbers of them have banded together in cult-groups which combine religion and race in a ritual based superficially on Oriental or African mysticism. Some of them have been in the newspapers once or twice since the war began. The only reason for mentioning them here is that some newspapers created the impression that these groups were large and influential; were well organized and were a channel of Japanese propaganda.

In 1942 local cult-groups in cities like Chicago, New York and Washington got into the headlines when their leaders and some members were arrested on charges of draft evasion. These organizations had been in existence many years before they had any pro-Japanese tinge or counseled draft evasion. One of them was the subject of scientific study before 1940. The largest number of people at any meeting was 40. Yet one headline which heralded the arrest of the cult leaders read, "Big Jap Plot Here."

This episode is mentioned here so that officers in general, and public relations officers in particular, will know that the existence of these lunatic fringe cults does not indicate that propaganda proclaiming the Japanese as the saviors of colored peoples everywhere in the world has had any effect on the masses of Negroes in this country.

What to Do About it

In this chapter we set out to show the officer what the channels of communication are to Negro and white Americans; and to give him a picture of their content so far as they deal with Negro participation in the war. That picture shows a two-way lack of balance. The news channels that go to white Americans contain very little information about Negro participation

in any phase of the war, including what Negroes are doing in the armed forces. That being the case, it is not very surprising that many Americans feel that Negroes are not doing their share in winning the war. Negroes themselves feel this absence of news as a refusal to tell the whole story, and the result intensifies whatever strained feeling already exists between the two groups.

News Shortage is Two-Sided

It happens that the news shortage is not one-sided. Just as the white news channels are short on information about Negro participation in the war, the Negro news channels are short on fundamental information: why we are fighting, what we are fighting against, and what we are fighting for; what countries and peoples we are fighting against; what countries and peoples are fighting as our allies.

The Army does not have the right or the power to tell newspapers what to print, or news reels what to show, or the radio stations what to put on the air. And the Army is not responsible for race relations outside the Army. Its responsibility begins and ends with the soldier. It has both the right and the duty to tell the story of what all soldiers are doing, and to make that story available to all news channels without favor or discrimination.

The Army also wants its soldiers, white and colored, to be well trained, well led and well motivated, for these are the traits which make good fighters. The company officer and the orientation officer have a special job where Negro troops are concerned. Negro soldiers, on the average, come into the Army less well-informed than white soldiers, and less well oriented towards the war issues. And in contact with the civilian community, through newspapers, magazines, radio programs, visits home, and letters from home, their attention is constantly directed toward democratic Negro participation in the war as an issue rather than participation in the war as a normal American means towards the settlement of the larger issue of democracy in the world.

Building an Effective Orientation Program

The leader of colored troops if possible should increase materially the amount of time usually spent on orientation. The leader should begin by preparing himself. He should be thoroughly familiar with the materials in this text. He should be thoroughly familiar with the educational, occupational, community, and family background of his men. He should be thoroughly familiar with the orientation materials he plans to use: films, film strips, booklets, newsmaps, handbooks, discussion guides, newspapers, news magazines and so on. By all means he should read the Negro perodicals his troops are reading in order to orient himself.

If the officer himself has a clear idea of why we are fighting, he has only one special problem in dealing with Negro troops: to bear in mind that much of the thinking his men have done as civilians and as soldiers has been directed towards the immediate problem of the level and degree of Negro participation in the war, particularly in the armed forces. The orientation job is to relate that thinking and those attitudes to the problem of the achievement of democracy in the world as well as at home.

Tips for the Officer

For the guidance of the junior officer who has to collect news stories, and for the public relations officer who has to get them out to the papers, some practical suggestions are set out below:

1. The kinds of stories it is important to write about and which will be welcomed, especially by the Negro press, are participation stories. A man doesn't have to be a hero or get a medal or save a life to do something the folks back home want to read about. When a man does something interesting, in the course of his duties or away from them, it is news, and will be treated as such by the home papers if they know about it. A story that shows a man is in there working or fighting under unusual conditions or trying a little bit harder than most, or achieving something, getting recognition, is the kind that will do the man, the Army and the community the most good.

2. All that is required in writing about the Negro soldier is fair, full reporting. Write about him as a soldier and a man, not just as a Negro.

3. Report incidents of military performance which have news value to the local press in the nearby camp community. To do so will build regard for Negroes as soldiers in your area which will play its part in smoothing civilian-soldier relations.

4. There s a Negro Interest Section in the Press Branch, Bureau of Public Relations, which maintains close contact with all news channels, includ-

ing Negro publications, throughout the country. Officers should avail themselves of the opportunity of handling Negro news stories nationally, when the stories warrant it, by submitting news items through the post Public Relations Officer to this section by way of the Continental Liaison Branch of the Bureau of Public Relations.

5. Watch the stereotypes. In the story or in the pictures that go with it are you describing a "stage" Negro, or a soldier? Remember that the most frequent portrayals of Negroes are as servile, menial, or comic persons. Be especially careful if you are writing a story on camp entertainments. Avoid stories dealing with eating contests, comedy dancing, burlesque drill routines, or any other activities associated with stereotypes.

6. Check your own attitude. In writing your story are you preaching, or moralizing, or patronizing? Are you writing with a chip on your shoulder? Or are you reporting?

7. Watch your language. This point is important to the officer in speaking to his men as well as in writing about them. Avoid dialect. Such terms as "boy," "Negress," "darky," "uncle," "your people," and "aunty" are resented by Negroes. Avoid pronouncing the word "Negro" as though it were spelled "Nigra." It sounds too much like the hated word, "nigger." If you have occasion to distinguish between white and colored soldiers or civilians, use the preferred terms, "Negro," or "colored." A safe rule on jokes is to avoid those which depend for their laugh on the stereotype, on the "stage Negro," or on a burlesque of any kind. Of course Negroes tell them among themselves and use terms about themselves which, if used by others, would be considered offensive, but others will be wise not to do so.

8. Some officers have been concerned at the prominent display of grievance stories in Negro newspapers and have sought to discourage men from bringing them into camp. Note that an objective analysis of their content shows that these papers are interested in more than grievance stories. They print just about everything they can get their hands on which shows that Negro soldiers are participating in the war.

Also remember that Negroes have to buy Negro papers if they are interested in Negro news, since the other news channels carry very little of it.

9. Some officers have also been concerned at discovering that among their men are members of Negro organizations whose purposes, activities, and even names may be unfamiliar to the officer. Like all Americans, Negroes are joiners. Negroes belong to churches, lodges, unions, and other associations. Some of these associations are formed for the purpose of promoting and protecting the interest of Negroes in getting jobs, reducing discrimination, and exercising civil rights. Every group in America—farmers, businessmen, workers, women and so on—have such protective and other associations. The Negro organizations are as legitimate, as American, as the more familiar organizations and should be judged on the same basis.

CHAPTER 8

THE NEGRO SOLDIER IN AMERICAN HISTORY

Negroes are Proud of their Military Service

Loyal service in the armed forces of the United States is one of the proudest traditions of American Negroes. Since childhood, the Negro soldier has heard at home, from the pulpit and from the lecture platform that his people have given their lives and substance in each of America's wars. Many Negro soldiers in the present war are the sons, grandsons, and great-grandsons of veterans of former wars. To them Bunker Hill and Yorktown, New Orleans and Appomattox, San Juan Hill and the Meuse-Argonne have a personal meaning. For on the regimental rolls of units present at each of these historic battles, the names of Negroes stood beside those of other Americans.

When Washington arrived at Cambridge to take command of the Continental Army, Negroes were already in the ranks of the revolutionary militias which constituted that army. Negro seamen and gunners were aboard the first ships of the American navy and they remained in the navy until after Dewey entered Manila Bay. Negroes have always served in the fighting forces of the United States. The kind, quality, and extent of this service has always been in harmony with the nature of American society at a given time. There have been heroes and there have been men as badly shaken as those in *The Red Badge of Courage;* there have been crack outfits and those whose morale and discipline have been poor. The Negro average has neither been as high as the orator's roll call of heroes would place it nor as low as the estimate of the uninformed. In general it has been the average of American troops. With good officers and good training, Negroes, like other Americans, have made good soldiers.

"Do Negroes make Good Soldiers?"

Yet, one of the major questions asked in each war has been "Do Negroes make good soldiers?" The fighting ability of troops is not a racial matter. It is a matter of leadership, training, and motivation. Some striking examples may be observed among our United Nations allies. The troops of Czarist Russia were not successful against the Japanese in 1904-1905 nor against the Germans in 1914-1917. Yet, with new leadership, good training, and different motivation, the sons of these troops are today fighting successfully. The Chinese armies, whose performance in the last days of the empire was poor, have been fighting in this war longer than those of any other country among our allies.

Neither L'Ouverture's Haitian forces, who drove the French from their island, nor Kipling's "Fuzzy-wuzzies" who broke the British square were superior to their enemies in fighting ability. But, for the particular type of campaign fought, they were better trained and, above all, better motivated.

Lack of Training: Defeat

In our own history examples of the difference between well-trained and well-led troops and poorly trained troops, no matter how loyal and valiant, is amply illustrated. General Washington, in the Revolution, had trying difficulties with untrained troops. At Long Island, Brandywine, and Camden poorly trained troops were forced to break and flee. In the War of 1812, the record of land fighting, until New Orleans, is one of disappointments resulting from the use of raw troops. Even at New Orleans, the untrained volunteers on the west bank of the Mississippi gave way before the enemy. At Bull Run, in 1861, the entire Union force was routed, largely because General McDowell was forced to attack with raw recruits whose entire period of enlistment was for but three months. Only after bitter experience and long training in the field were we able to achieve victory in these early wars.

General Emory Upton, in his classic study of American military policy, concluded "Troops be-

come reliable only in proportion as they are disciplined; that discipline is the fruit of long training, and cannot be attained without the existence of a good corps of officers." This conclusion is valid for all troops. When Negro troops, like others, have been well led, trained, and motivated, they have fought well. When poorly trained and led, Negro troops, like all troops, have performed poorly. This lesson has been well-learned, and today our army is better trained than ever before.

Motivating Troops

The problems of training, leading, and motivating Negro troops are essentially the same as for any other troops. Specific training and leadership suggestions are given elsewhere in this text. Motivation is, perhaps, the most difficult of the three, but it is no less a function of successful command. For although the motivation of troops is a complex of factors not all of which are under the control of the officer, some of these factors are within his sphere of action. The officer who is aware of these factors may go a long way towards providing motives for his troops.

Negro soldiers in the Revolution and in the Civil War had an obvious motivation, freedom, in addition to the normal patriotic motives. Furthermore, this was reinforced by promises of bounties, a common practice in our early wars. But there are other strong motivating factors involved in the question of why Negroes fight.

"This Is Our Country"

The current Negro attitude towards war and participation in the armed forces has its roots in their desire for full participation in American life. In 1862, during the period when discussion of the possible colonization of the slaves freed by Lincoln's emancipation proposal was rife, Robert Purvis, free Negro of antebellum Philadelphia, expressed fully the view of most Negroes when he said "We were born here, and here we choose to remain . . . we were coaxed and mobbed, and mobbed and coaxed, but we refused to budge. This is our country as much as it is yours, and we will not leave it." The feeling that "this is our country," combined with a sense of religious justification, has often logically led Negroes to believe that offering to give their lives for America increases their stake in their country's future. A Spanish-American War chaplain expressed it biblically: "Without the shedding of blood there is no salvation." Frederick Douglass, in his Civil War appeal to Northern Negroes to enlist, phrased it: "The case is before you. This is our golden opportunity. Let us accept it and forever wipe out the dark reproaches unsparingly hurled against us by our enemies. Let us win for ourselves the gratitude of our country, and the best blessings of our posterity through all time."

In each war Negroes have had to struggle for the privilege of fighting. In the Revolution, the Civil War, and World War I, the same arguments, in different settings, have been used both for and against the use of Negro soldiers. Nevertheless, Negroes, who have always volunteered at the first sign of war, have often had to wait until manpower shortages made necessary the favorable consideration of their use. This experience has placed a premium upon combat service in the minds of Negroes.

At the same time, Negroes have good reason to feel that participation in America's wars has produced specific benefits for them. Many Negroes, from New Hampshire to Georgia, received their freedom as a result of services to the Revolution. The Emancipation Proclamation itself was a military as well as humanitarian gesture. Wartime necessities have opened up new areas of employment, new possibilities for a better life to thousands of Negroes.

THE NEGRO'S MILITARY TRADITION

In the development of a military tradition and in the facts of Negro participation in past wars the officer in command of Negro troops will find much which will increase his own outfit's pride in being a part of the Army of the United States. Because so little is generally known of the facts of that participation, the following brief account is given. It is not complete, for no brief discussion of a military history covering a span of 300 years, can be complete.

It does contain, however, enough of the facts to enable the officer to increase his own and his troops' knowledge of the Negro's part in America's military history. For the officer in charge of white troops, such information is equally valuable, since white and Negro troops are often in contact with each other both in training activities and in

combat. The past role of the Negro in the armed services can provide excellent material for discussions and lectures leading to a better understanding, and therefore to a better over-all esprit de corps.

A fighting tradition has long been a part of the Negro's sense of the past. Many of the men taken from the Guinea coast were fighting men, defeated for the moment by the armies of rival princes who profited by temporary success through selling the vanquished into slavery. Sometimes, under the influence of strong New England rum, even the victorious tribesmen found themselves aboard ship in company with the defeated. For fear that the militant captured might rise against their new owners, tribes were usually broken up, so that neither tribal language nor tribal tradition would survive on the plantations of the New World. But the urge for freedom was strong. Occasionally entire slave ships revolted and attempted to return to Africa; the human cargo of at least one slave ship plunged overboard within sight of the Georgia coast, preferring death to slavery.

Colonial America Negro Military Training

Colonial America was familiar with the fighting ability of Negroes. New England slave traders had seen their warlike nature on the African coast; planters early learned to fear armed insurrections. At the same time, fear of Indian uprisings in the back country—and the "back country" in the seventeenth century was within easy distance of the coastal settlements—was even greater.

Slavery in the earlier colonial period was quite different from the later institution. Early slavery, both in Massachusetts and Virginia, was closer to indenture than to permanent inherited slavery. Negroes found less difficulty in obtaining their freedom than in the days of the "cotton kingdom." They often found their previous condition of servitude no bar to slave-holding on their own part. Many of these free men, and many of the virtually free men, living in colonial towns, had as strong an interest in controlling the Indians as the white colonists.

Almost every colonial legislature passed laws requiring all Negroes to undergo military training for the defense of the colonies. Massachusetts, in 1652, was the first colony to pass such a law, but even eighteenth century South Carolina and French Louisiana had similar provisions. Prompted by the fear that military training might lead to a slave insurrection, Massachusetts, in 1656, was also the first to repeal her law. Throughout the colonial period, such legislation was enacted and repealed—enacted when the need for additional defenders was urgent, repealed when too many Negroes trained in the use of arms became a possible danger.

Colonial Wars

But, whatever the law, Negroes went along with white colonists when the Indians struck. The names of free Negroes are more frequently found on the colonial muster rolls of northern colonies like Massachusetts and Connecticut than on those of the younger southern colonies. In the South, however, master and slave as well as free Negro participated in border skirmishes with the Indians. Governor Craven's expedition against the Indians in South Carolina contained both Negroes and whites; the rolls of North Carolina's militia in 1754 contained the names of Negroes as members of local companies. Negroes were with Braddock and Washington in the French and Indian Wars. Governor Perier, of Louisiana, used free and slave Negroes during the Indian terror of the 1730's. On one occasion, he sent a band of Negroes to destroy the small tribe of Chouachas both as an example to the terrified French settlers and to drive a wedge between those Negroes and Indians who, in the Natchez War, had combined against the whites. Governor Bienville's troops in 1732 had a company of 45 Negroes commanded by free men of color. During the period of Spanish domination free Negroes were used regularly in times of emergency and in Louisiana the tradition of military service became strong among them.

Negro Soldiers Abroad

The use of Negroes as soldiers in colonial militias was duplicated in the British, Dutch and French colonies in the West Indies. In Spanish Cuba, Negro troops were a permanent part of the army. Brazil's army, even before the abolition of slavery, had regular Negro troops. As early as the 1850's the Portuguese and French were using troops from their African colonies.

Historically, in the ancient world, Negroes had produced famed fighters. Negroes from the Upper

Nile Valley held a military dictatorship over ancient Egypt for a considerable period of time and the Pharaoh's fiercest troops in the period of Egyptian expansion were often Nubian legions led by members of Egypt's elite officer caste.

In modern times some striking examples of Negro soldiery can be found. The Haitian Revolution, second in the New World, produced generals of genius who, like Toussaint L'Ouverture and Henri Christophe, were able to defeat the troops of Napoleon's France and Wellington's England. Alexander Petion, another of the Haitian generals, when president of the republic, sheltered the exiled Simon Bolivar twice, furnishing him food, ammunition, and men to help in the liberation of South America. One of the most dashing of Napoleon's generals was David Thomas Dumas, father of the famous French author. Dumas, a West Indian Creole Negro, came up from the ranks in the revolutionary army to become a lieutenant-general in Napoleon's legions.

In a later Latin American struggle for independence the Negro Cuban, General Antonio Maceo, became a national hero. In Africa herself, even at the end of the nineteenth century, Menelik, whose army annihilated a force of 30,000 invading Italians at Adowa, and Cetawayo, celebrated Zulu chieftain who held the British at bay for years in South Africa, kept alive the tradition of Negro fighters.

Negro American Military Heroes

These and more have contributed to the Negro soldier's rich tradition of military service. Coupled with them and looming higher in the estimate of Negro Americans are the names of Crispus Attucks, first to fall in the Boston Massacre; Peter Salem, hero of Bunker Hill; Anselmo Plancianos, flagbearer at Port Hudson; and Col. Charles Young, highest ranking Negro in the Spanish-American War and in World War I. Theaters, schools, and literary societies have been named "The Maceo," "Young High," and "Attucks Circle." Military heroes, though their total role in our national history has not been of the importance of L'Ouverture to Haiti or Maceo to Cuba, are necessary to a sense of minority self-respect. They should be thought of as a valuable aid contributing to the present day Negro soldier's sense of belonging to the larger American community.

REVOLUTIONARY WAR

From Lexington and Concord to Yorktown Negroes served in the ranks of the Revolutionary Army. At the outbreak of hostilities, free Negroes and some slaves found their way into local militias though attempts were made to dislodge them from the Continental Army on the ground that the colonies, in all of which slavery still flourished, could not compromise the dignity of their position by using Negroes in the fight for independence while still condoning slavery. Two colonies having an unusally large slave population, expressed the apprehension that the example of Negroes in the Continental Army would lead to disastrous slave revolts.

In the colonial experience, Negroes had proved to be excellent in Indian warfare and the Continental Congress was reluctant to bar them from service, but the counsel of the generals, many of whom were from the plantation colonies, prevailed and many Negroes were discharged in the fall of 1775.

But the British had no compunctions about using Negroes against their rebelling colonists. Throughout the war, attempts were made to alienate Negroes from the American cause. In some instances these succeeded; at Savannah, for example, the British forces included 3,000 Negro laborers and fighting men.

In the main, however, the British policy of offering freedom to slaves who enlisted in the service of the crown was not resorted to in the heavily slave-populated colonies, for large slave holders were sometimes Tories. Gaining slave forces at the expense of Tory support was not considered a clever move.

Negroes in the Continental Army

Early in the War (November 7, 1775), John, Earl of Dunmore, colonial governor of Virginia, issued a proclamation offering freedom to all slaves who joined His Majesty's forces. This move, had it been successful, would have hampered the Revolution immeasurably. The news did not reach General Washington in New England until December. Washington, realizing the seriousness of the proposal, issued an order authorizing all recruiting officers to accept free Negroes and the next day, wrote the President of Congress: "It has been presented to me, that the free Negroes, who have served in this army are very much dissatisfied at

being discarded. As it is to be apprehended, that they may seek employ in the ministerial army, I have presumed to depart from the resolution respecting them, and have given license for their being enlisted. If this is disapproved of by Congress, I will put a stop to it." Congress did not disapprove and enlistments continued.

It is difficult to determine the total number of Negroes in the Revolutionary Army, for many of the state rolls do not designate race. More were in the ranks along with other patriots than in separate Negro companies, an innovation which did not appear until the later years of the war. As the war went on, Negroes not only enlisted freely but many slaves served in the places of their masters, "and therefore," one observer reported, "no regiment is to be seen in which there are not Negroes in abundance." The seven brigades of Washington's Army in 1778 averaged 54 Negroes each. Rhode Island, which early felt the pinch of Congress' demands upon her for men, proposed to raise a battalion of Negroes in 1778, with freedom the bounty for slave enlistees, the master receiving a maximum of £120 for each slave. Massachusetts had one separate Negro company, recruited in Boston, which called itself the "Massasoit Guards" and another, flying a flag bearing a pine tree, a buck, and the initials "J. H." and "G. W.," called "The Bucks of America." One Connecticut company called itself the "Attucks Guards," as did a company of Negroes from New York.

Successively, as the demands for more men pressed upon the manpower reserves of the states, legislatures called for Negro enlistments. North Carolina, in 1778, already had a brigade with 42 Negroes on its rolls; in 1779 the Assembly promised freedom to all slaves who had enlisted with the impression that freedom would be their reward. Virginia's Assembly in 1777, forbade the enlistment of any except Negroes who could prove their freedom. Nevertheless, slaves served in lieu of their masters; approximately 500 Virginia Negroes, about equally distributed between the state militia and the state navy, served in the War. Maryland, in 1780 and in 1781, passed laws permitting Negroes, free and slave, to be recruited. New York, in 1781, authorized two slave regiments which were to receive their freedom in return for their service.

By 1781, Baron John Lewis Von Closen, writing in his diary, described a July 4 visit to an American encampment at White Plains. "One-fourth of the troops consisted of Negroes, and all looked cheerful and well. It was the regiment from Rhode Island that I found the smartest and best disciplined. Three-fourths of this regiment were Negroes."

Only Georgia and South Carolina refused to allow Negroes to enlist. Yet, as early as 1775, the Provincial Congress of South Carolina had authorized the militia to enroll "such a number of male slaves, to be employed as pioneers and laborers, as public exigencies required." Both of these states, because of small white populations, were under their Congressional quotas for the army. Distinguished South Carolinians, such as Henry and John Laurens, supported by Alexander Hamilton, urged slave owners to form companies of their own slaves for the protection of the colonies, but though the Continental Congress approved, the Provincial Congress refused. Nevertheless, South Carolina and Georgia Negroes fought in the Revolution, at Charleston, Savannah, and with Marion's Band, and after the war, several, along with North Carolina and Virginia Negroes, received grants of freedom, land bounties, or pensions as a reward for their service.

Negroes with America's Allies

Both the French and the Spanish allies of the young American Republic used Negroes against the British. The French forces operated largely in the eastern campaigns while the Spanish fought in the Gulf South and Southwest. At the siege of Savannah, the Comte D'Estaing's 3,000 Frenchmen included the Vicomte de Fontages' Legion of Haitian Negroes. The Fontage Legion saved the American and French forces from annihilation after the unsuccessful attack on Savannah. Andre, Beauvais, Christophe, Rigaud, Villette, and Beauregard, all of whom later became generals and commanders in the Haitian Revolution, were among the six to eight hundred men present in the Fontage Legion. Haitian forces were also present at Pensacola.

The Louisiana Spanish, under Governor Galvez, went into the Revolution on the American side in 1779 with an army made up of 670 French, Spanish, Negroes, and Indians, reinforced by 600 volunteers "of every condition and color." Free Negroes

had long been used in the Spanish Army and in Galvez's campaign against Forts Baton Rouge and Natchez, the Negro companies were employed as scouts and skirmishers and in the attacks.

The Revolutionary Navy

The Revolutionary navy had a larger proportion of Negroes than the army. Negro seamen were frequent in the eighteenth century and, from Providence to Hatteras, Negro sailors and fishermen knew the coves, harbors, and estuaries thoroughly. Negro pilots, because of their intimate knowledge of coastal waters, were in demand. The Connecticut brig "Defence Colony Service," the Massachusetts sloop, "Morning Star," the galley "Trumbull," and the privateer "Aurora" are known to have carried Negro seamen. In the Virginia Navy of forty vessels, Negroes from the Chesapeake Bay and Tidewater counties were aboard each in numbers ranging from one to ten.

Revolutionary Battles

Negroes fought in many revolutionary engagements, some of the best known of which are: Lexington and Concord, Bunker Hill, Brandywine, Boonesborough, Eutaw, White Plains, Stony Point, Trenton, Stillwater, Camden, Bennington, Saratoga, Red Bank, Fort George, Princeton, Bryan's Station, and Yorktown. Especially large numbers were at Long Island, Rhode Island, Savannah, and Monmouth. In the last named battle, 700 Negroes fought.

Negro Heroes of the Revolution

Stories of individual heroism in the Revolution are many. Peter Salem, of Farmington, Massachusetts, who fought at Lexington and Concord, at Bunker Hill, and at Saratoga, is the Negro in Trumbull's painting of Bunker Hill who, rifle steady, is aiming directly at the British Major Pitcairn. The patriot army, waiting behind their hastily constructed redoubts, stood firmly. But when Major Pitcairn, making a striking figure, mounted the breastworks shouting, "The day is ours," the men, uncertain what to do, stood gaping, except for Salem, who calmly took aim and killed the Major. With Peter Salem at Bunker Hill were many other Negroes, among them Barzillai Lew, cooper and drummer, who contrived to be present at most of the major Revolutionary battles, and Salem Poor. Poor, in a resolution signed by fourteen officers and noncommissioned officers, was commended to the General Court of Massachusetts for bravery. The commendation read that he "behaved like an experienced officer, as well as an excellent soldier," and asked that public recognition be paid this "brave and gallant soldier."

Across the Delaware with Washington went Oliver Cromwell and Prince Whipple, the latter in Washington's boat. Lemuel Haynes, future minister, whose New England congregations, mainly white, considered one of the ablest divines of his time, was not only at Lexington and Concord but, like several other Negroes, volunteered for Ethan Allen's expedition to Fort Ticonderoga.

Negroes as Spies

The use of Negroes as spies in the Revolution was a natural consequence of their service in the army. A Negro could wander into the British lines with relative safety. Such a spy was Pompey Lamb, who, in the guise of a vegetable huckster, scouted the British fort at Stony Point for General Anthony Wayne. The fort, located on a rocky promontory, surrounded on three sides by the Hudson, on the fourth by a swamp, equipped with strong outworks and a double row of abattis, seemed impregnable. Pompey visited the fort several days and then announced that he could no longer come by day but had to come at night. He had already learned the layout and the strength of the fort and the disposition of the guard. The British, suspecting nothing of the commonplace Negro, gave him the countersign for the night of July 15, "The Fort's Our Own." On that night, in 1779, Pompey Lamb, with his vegetables, led the way to the fort, followed by two soldiers dressed as farmers. When the sentries challenged him, Pompey gave the countersign and stopped to engage in small-talk, giving the disguised soldiers time to slip up and overpower the guards. General Wayne's Army followed, and Stony Point was taken without bloodshed.

Similarly, at Edenton, a garrulous Negro was sent into the British lines to prepare the enemy for a "weak, disorganized American force;" a strong American force won an easy victory. James Amistead, a spy in Lafayette's forces, warned the French of Cornwallis' planned surprise attack at

Petersburg. The Virginia legislature gave Amistead his freedom at the close of the war. Quaco Honeyman was freed by Rhode Island in 1782 for his services as a spy and South Carolina, in 1783, freed the wife and child of a deceased spy.

1812 AND AFTER

Between the Revolution and the War of 1812, the pattern of slavery altered perceptibly, but the forces of liberal thought growing out of the Revolution were strong. Beginning with Vermont just after the Revolution, slavery began to disappear in the Northern states, though it persisted in New York until 1828.

A number of causes for the War of 1812, growing out of Europe's Napoleonic Wars and the expanding commerce both in the Northeast and in the Southwest may be advanced, but a major precipitating cause was Britain's insistence upon the right of search of American vessels as a war measure. One of the most important of these cases was that of the *Chesapeake,* an American man-of-war, which was hailed by the British frigate *Leopard* on June 22, 1807. The *Leopard* fired upon the *Chesapeake* and removed four seamen, three of whom were Negroes. The white seaman was proved to be a British subject, but the Negroes, though they had previously served aboard the British ship *Melampus,* were proved to be Americans. The case was not settled until 1811, when Britain returned the Negro seamen to the American Navy, conceding their American citizenship but not relinquishing the right to search American ships.

In the Navy

The American Navy in these years, as in the Revolution, contained a considerable number of Negro seamen, for the sea was still a favored occupation for the race. Dr. Usher Parsons, a naval surgeon, estimated that the Upper Lakes fleet of 1814 contained one Negro in every ten or twelve sailors and that in 1816 and 1819 the proportion was one in six or eight. When Captain (afterwards Commodore) Oliver Hazard Perry received his crewmen for the Lakes campaign, he complained to Commodore Chauncey of the ill-assorted crew of Negroes, soldiers, and inexperienced men sent him. Commodore Chauncey replied,

> I regret that you are not pleased with the men sent you by Messrs. Champlin and Forrest, for, to my knowledge, a part of them are not surpassed by any seamen we have in the fleet: and I have yet to learn that the color of the skin, or the cut and trimming of the coat, can affect a man's qualifications or usefulness. I have nearly fifty blacks on board of this ship, and many of them are among my best men; and those people you call soldiers have been to sea from 2 to 17 years; and I presume that you will find them as good and useful as any men on board of your vessel . . .

Perry, in the Battle of Lake Erie found his men to be quite equal to Commodore Chauncey's estimate.

The experience of Nathaniel Shaler, in command of the schooner *Governor Tompkins,* was similar. Writing to his New York agent, Shaler said of an engagement with a British frigate,

> . . . The name of one of my poor fellows who was killed ought to be registered in the book of fame, and remembered with reverence as long as bravery is considered a virtue. He was a black man, by the name of John Johnson. A twenty-four-pound shot struck him in the hips, and took away all the lower part of his body. In this state, the poor fellow lay on the deck, and several times exclaimed to his shipmates, "Fire away, my boy: no haul a color down." The other was also a black man, by the name of John Davis, and was struck in much the same way. He fell near me, and several times requested to be thrown overboard, saying he was only in the way of others. When America has such tars, she has little to fear from the tyrants of the ocean.

Land Fighting

Fighting on land in the War of 1812 was neither as spectacular nor as decisive as the naval engagements until General Andrew Jackson defeated the British at New Orleans. Negroes accompanied the invading forces which went into Canada. New York, towards the close of the war, authorized the

recruiting of two separate regiments of Negroes to consist of 1080 men each.

British strategy, early in the war, included, in the manner of the Revolution, the possibility of arming Negroes against the Americans for a campaign in the South. As early as November, 1812, the British planned to capture New Orleans, thus bottling up the Mississippi and diverting the attention of Kentucky, Tennessee, and Ohio from the attack on Canada. The appearance of Negro troops in New Orleans, Charleston, or Savannah would dispose the South, it was hoped, to think in terms of a speedy peace.

Another plan was to dispatch an expedition to New Orleans, accompanied by nine or ten thousand stand of arms. If it were "even rumored" that the guns were intended to arm Louisiana Negroes, the British thought, "it would produce more effect in the American cabinet towards Peace than any other measure whatever."

With Jackson at New Orleans

But Britain's admirals, good strategists though they were, did not reckon with the Louisiana tradition. The allegiance of the state, newly admitted in 1812 and American only since the Purchase in 1803, was questioned by many, for it was felt that the large French and Spanish population still resented the Americans who had come in during the preceding decade. General Andrew Jackson, who had been assigned to defend Mobile and New Orleans, could depend on volunteers from Kentucky and Tennessee, but it was doubted that they would arrive in time. At best, the white population of New Orleans was not sufficient to repel an invasion.

Governor Claiborne, writing to Jackson, reminded him that the Spanish had always relied on free men of color in times of difficulties and that under a special act of the state legislature a battalion of free men of color was already available. This battalion, under the command of Colonel Fortier, a leading merchant, and Major Lacoste, a planter, had its own colored line officers and had "on several occasions evinced in the field the greatest firmness and courage."

Jackson, pleased with the offer, proposed the use of all available free men of color. The free Negro population of New Orleans had grown considerably since the Revolution, for in addition to the native freemen, a considerable number had fled from Haiti's internecine warfare and a sizable group had migrated from Martinique.

Jackson wrote to Claiborne, "Our country has been invaded and threatened with destruction. She wants soldiers to fight her battles. The free men of color in your city are inured to the Southern climate and would make excellent soldiers. They will not remain quiet spectators of the interesting contest. They must be either for, or against us. Distrust them and you make them your enemies, place confidence in them, and you engage them by every dear and honorable tie to the interest of the country, who extends to them equal rights and privileges with white men. I inclose you a copy of my address to them for publication and wish an experiment made for raising a regiment of them."

Jackson's Proclamations

That Jackson was skillful at what is now known as psychological warfare is apparent from his inclosed address. If anything, it was a little too skillfully prepared, for though it was sent to Claiborne on September 21, 1814, the governor declined to release it until the combined pressure of Jackson and the approaching British danger forced its publication. The proclamation to the free men of color, which was to have been released on the same date as a general proclamation to the citizens of New Orleans, began:

"Through a mistaken policy you have heretofore been deprived of a participation in the glorious struggle for national rights in which our country is engaged. This no longer shall exist.

"As sons of freedom, you are now called upon to defend our most inestimable blessing. As Americans, your country looks with confidence to her adopted children for a valorous support, as a faithful return for the advantages enjoyed under her mild and equitable government. As fathers, husbands, and brothers, you are summoned to rally around the standard of the eagle, to defend all which is dear in existence.

"Your country, although calling for your exertions, does not wish you to engage in her cause without amply remunerating you for the services rendered. Your intelligent minds are not to be led away by false representations. Your love of honor would cause you to despise the man who

would attempt to deceive you. In the sincerity of a soldier and the language of truth I address you . . ."

Jackson went on to give the terms of service, which included pay, allowances, and bounties equal to those of the rest of the army. Lacoste's battalion was enlarged and drilled in preparation for Jackson's arrival. Jackson, pleased with their appearance, approved the raising of a second battalion, recruited by Jean Baptiste Savary, a native of Haiti, who was given a captaincy. More than 600 free men of color, all propertied, volunteered.

Just before the engagements at New Orleans, Jackson reviewed the city's troops. To each section —the militia, the city's uniformed volunteers, and the free Negro corps—Edward Livingston, the General's aide, read an address from the General. Here Jackson again demonstrated his ability to reach into the minds of his troops and urge them on to courageous action.

TO THE MEN OF COLOR

> Soldiers! From the shores of Mobile I collected you to arms; I invited you to share in the perils and to divide the glory of your white countrymen. I expected much from you, for I was not uninformed of those qualities which must render you so formidable to an invading foe. I knew that you loved the land of your nativity, and that, like ourselves, you had to defend all that is most dear to man; but you surpass my hopes. I have found in you, united to those qualities, that noble enthusiasm which impels to great deeds.
>
> Soldiers! The President of the United States shall be informed of your conduct on the present occasion, and the voice of the Representatives of the American Nation shall applaud your valor, as your General now praises your ardor. The enemy is near; his sails cover the lakes; but the brave are united; and if he finds us contending among ourselves, it will be for the prize of valor, and fame its noblest reward.

After the night battle of December 23, as well as in the battle of January 8, Jackson singled out his Negro troops for commendation. In his report of the December 23 engagement, after a commendation of the entire corps, he praised singly Coffee's Brigade, the 7th, the 44th, the city militia, and Savary's volunteers, who "manifested great bravery." In this battle, there were 210 new men, who had mustered in but a few days before.

There is no question that Jackson's men fought well, routing the British veterans and saving the city. Nevertheless, Jackson's paymaster questioned his authority to pay the volunteer Negro and Indian troops. The General's reply was typically Jacksonian:

> Be pleased to keep to yourself your opinions upon the policy of making payments to particular Corps. It is enough for you to receive my orders for the payment of the troops with the necessary muster rolls without inquiring whether the troops are white, black, or tea. You are not to know whether I have received authority from the War Department to employ any particular description of men, and will, upon receipt of this, make payment of the Choctaws upon the muster roll of Major Blue.

THE SEMINOLE WARS

Jackson later, in the Seminole wars, came again into contact with fighting Negroes. For the Seminoles of Florida included pure Seminoles, Seminole Negroes, and Negro Maroons, or slaves who had obtained their own freedom and had taken refuge in the Florida swamps. One such group of Negroes and Indians held the "Negro Fort" on the Apalachicola from 1814 to 1816 until driven out by Jackson's men. Seminole resistance continued in the 1830's under Chiefs Osceola and Wildcat until, under the impression that their freedom would be recognized and that they would be removed to the West, the Negro Seminoles counseled peace. When it became apparent that it was intended to return the Negro Seminoles to plantations, a portion retired to the Florida wilderness where their descendants still live today.

THE MEXICAN WAR

Between the War of 1812 and the Mexican War, the nature of slavery changed greatly. Up to the

end of the 1820's anti-slavery sentiment had persisted in the South, and even in the thirties there was some feeling for "gradual emancipation" schemes and plans to colonize freed Negroes in Africa or in Haiti. But by the mid-forties prevailing Southern opinion had crystallized into the position that the welfare of the South depended not only upon the retention but also upon the extension of slavery into the lands west of Louisiana.

The Mexican War, with the annexation of Texas and the Southwest as one of its major results, was largely supported by the South and West. There was little pressure for additional volunteers as the war moved to a swift victory. The battle lines between the slavery and anti-slavery forces were by now sharply drawn, and few Negroes found themselves with the armed forces. Those who did find their way into the campaign in the Southwest and in Mexico went as the personal servants of Southern officers and as musicians. For example, Jordan D. Noble, who had been a drummer in the Battle of New Orleans, together with other members of his band, served with the First Regiment of Louisiana Volunteers under General Zachary Taylor in the Mexican campaign.

THE CIVIL WAR

When the guns sounded at Fort Sumter, great uncertainty as to the consequences pervaded both the North and the South. But Northern Negroes were certain that these were the first shots for freedom. Before the news of Sumter was stale Jacob Dodson, free Negro of Washington, D. C., who had been with General Fremont in the West, offered his services along with those of 300 other Washington freemen. The Secretary of War refused the offer. A group of New York Negroes rented a public hall and began to drill, preparing for the day when their services would be needed, but upon the advice of the chief of police, who feared that riots might result, they subsequently disbanded.

Many Northern Negroes' hopes fell when the official position that the war would not result in the change of status of any class of people was announced. Others persisted in attempting to prove to Congress, especially when the number of Northern volunteers began to diminish, that their services would materially benefit the Union. But the Union was not willing to jeopardize the chance of a reconciliation with the South or to risk the reaction in the Border States by admitting that the abolition of slavery was connected with the prosecution of the war. Union generals were ordered not to receive runaway slaves into their lines, General Fremont's proclamation of emancipation of Missouri's slaves as a military move was voided, and recruiting officers were ordered to refuse Negro volunteers.

With the Confederate Forces

Yet, Negroes insisted that theirs was a moral right to serve. They pointed out that Southern Negroes were being used to build fortifications and that a veritable "Army of the Soil" was producing food for the Confederate forces on the plantations of the South. The Confederacy had begun to use Negroes as early as January 1861, to construct redoubts. Some of these were free men of color who, either identifying themselves with the Southern cause or feeling it expedient, volunteered their services.

After the outbreak of hostilities, Negroes in scattered instances were received into the Confederate State troops and militia. As early in the war as June 28, 1861, the Tennessee legislature authorized the enlistment of free Negroes between the ages of 15 and 50. If insufficient volunteers appeared, county sheriffs were authorized to impress free Negroes until a sufficient number was obtained. In September, 1861, a battalion of several hundred Negroes marched through the streets of Memphis "in military order, under command of Confederate officers. They were all armed and equipped with shovels, axes, blankets, etc." The Lynchburg (Va.) *Republican* noted that 70 free Negroes had volunteered, adding, "Three cheers for the patriotic free Negroes of Lynchburg." In a New Orleans review of 28,000 troops on November 23, 1861, one regiment of Negroes from Mobile and another from New Orleans appeared.

Such outfits were unusual, but almost every Southern regiment had its complement of Negroes who went along as personal servants but who often got into the fighting along with their masters. One regiment, the 3d Alabama, marched off with 1000 men plus 400 personal servants. Even at Antietam a number of body servants were captured and exchanged.

Not until the closing year of the war, however, did the Confederate Congress seriously consider the large scale use of Negroes in the army. As early as February 17, 1864, at the same time that the South was criticizing the North for its now-official policy of using Negro soldiers, an act to conscript free Negroes was introduced in the Confederate Congress. The act provided that Negroes be used on fortifications, in the service of supply, in military hospitals, "or as needed." In event that enough free Negroes were not available, impressment of slaves not to exceed 20,000 in number was to be authorized. Officers, including General Patrick Cleburne among them, had long advocated the use of Negroes as soldiers, with emancipation as a reward. General Robert E. Lee, since the middle of 1864, had been urging the enlistment of Negroes, first to relieve whites on detail and, finally, as fighters. In return for their service he advocated a system of "gradual and general" emancipation.

When the Confederate Congress finally passed its bill on March 13, 1865—without the emancipation provision—Lee had already set up, within Virginia, an organization for Negro troops and Virginia had already made plans to enlist both slave and free Negroes. Lee asked his state for a maximum number, saying, "the services of these men are now necessary to enable us to oppose the enemy." By now the South planned to enlist a total of 300,000 Negroes. But March of 1865 was too late, for the surrender at Appomattox was but a few weeks away.

Union Policy on Negro Enlistment

The Union, in the meantime, debated the wisdom of employing the services of Negroes. From the early days of the War, however, Negroes, slave and free, within the lines of Federal troops occupying Southern territory were a troublesome fact which no amount of official debate could alter. General John C. Fremont, in Missouri, and General David Hunter, in South Carolina, operating on the assumption that slavery and military government were incompatibles, declared such men free, but both orders were officially revoked, for the Union was unwilling to interfere with the South's domestic institutions and, thereby, alienate her slave holding border states.

General B. F. Butler, while commandant at Fortress Monroe, Virginia, partially solved the problem by accepting the Southern view of Negroes as property, and, according to the laws of war, declaring the "property" contraband. "Contrabands," as slaves within the Union Army came to be termed, multiplied rapidly as slaves crossed the lines and as the lines moved forward.

Contrabands labored in the Union camps and on Union fortifications; officially, they were not in the Army though they often got into the fighting. In General Butler's expeditions against the Hatteras Forts in August, 1861, for example, contrabands manned one of the guns on the *Minnesota.*

Early in the War, manpower problems began to trouble the Union, for after the first battles it was realized that the war was likely to last considerably longer than the original three month estimate. Volunteers were not pouring into the army as rapidly as during the days of first enthusiasm and occupying troops necessary to hold captured territory were at a premium. General W. T. Sherman was authorized to enlist Negro volunteers in the South for detail duty, but so many tried to enlist that the order was revoked in November, 1861. Northern Negroes, learning of the order, again offered their services. G. P. Miller, a Negro physician of Battle Creek, Michigan, asked permission to raise a brigade to serve in any capacity, but preferably as sharpshooters. His offer was refused on the ground that General Sherman's instructions were to be carried out only in an emergency. The governor of Wisconsin offered a regiment of Negro and Indian troops. This offer, too, was refused.

Enlistment of Negroes

Not until July 16, 1862, after the failure of McClellan's campaign against Richmond and at a time when volunteers were alarmingly scarce, did Congress authorize the enlistment of Negroes, "for the purpose of constructing intrenchments, or performing camp service, or any war service for which they may be found competent."

General Hunter, given the task of holding captured South Carolina Territory with a minimum number of troops, in May, 1862, had begun to enlist Negroes on his own authority. When Congress inquired if he were enlisting fugitive slaves, General Hunter ingenuously replied that the only fugitives in his area were "fugitive masters" who had fled before his army and that, under his authority to enlist "loyal persons," he had pro-

ceeded to enlist Negroes, since they were the only loyal persons to be found.

General Hunter, reporting that his experiment was "a complete and marvelous success" continued to drill his soldiers until August, 1862, when, except for one regiment, the organization was disbanded for lack of funds and supplies. In the same month, also without specific authority, General J. H. Lane, in Kansas, began to enlist a Negro regiment. While the First Kansas Colored Volunteers were not formally mustered in until January 13, 1863, they fought at Island Mounds, Missouri, on October 28, 1862, the first engagement of the War in which Negro troops participated as a unit. The First Kansas, attacked by Cockerel's superior force, rallied and gained a victory.

The Emancipation Proclamation

The Congressional bill to enlist Negroes did not settle the question of their use, for despite General Hunter's report that Negroes are "eager beyond all things to take the field and be led into action; and it is the unanimous opinion of the officers who have had charge of them, that, in the peculiarities of this climate and country, they will prove invaluable auxiliaries—fully equal to the similar regiments so long and successfully used by the British authorities in the West India islands", grave doubts of their fighting abilities persisted. Following the Congressional bill by six days, Lincoln placed his first draft of the Emancipation Proclamation before his Cabinet on July 22, 1862.

Part of Northern strategy was to open the Mississippi and thus split the Confederacy. Lincoln suggested the use of Negro troops to hold it open below Memphis, proposing that commanders be allowed to use Negroes at their own discretion and that they be allowed to arm Negroes within their lines for "purely Defensive purposes".

A month later, the Secretary of War issued a special order to General Rufus Saxton, Military Governor of the Sea Islands, authorizing him to supplement his small force by enlisting up to 5,000 Negro volunteers. Not yet was the policy on the enlistment of Northern Negroes for combat purposes clear. The Governor of Rhode Island, in a proclamation issued August 6, 1862, reminding Rhode Island Negroes that their ancestors had served with distinction in the Revolution, announced that the Sixth Rhode Island Regiment would consist entirely of Negroes. The uncertainty of the regiment's combat status kept enlistment at a minimum and not more than 100 volunteered until the following year, when, as the 14th Rhode Island Heavy Artillery, the regiment was quickly recruited.

Story of the Louisiana Native Guards

It remained for New Orleans to raise the first Negro combat troops of the Civil War. Like Claiborne and Jackson, in 1814, Governor T. O. Moore, in 1861, had called on the free Negroes to help in the defense of the city. When Union forces captured New Orleans, all Confederate troops except the Negro "Native Guards" left the city. General Benjamin Butler, finding himself short of troops, called in the leaders of the Negro troops and inquired why they had accepted service under the Confederacy. They replied that they had not dared refuse and that they had hoped to obtain concessions by complying. They now asked to be allowed to serve the Union.

General Butler ordered recruiting stations opened and between August 26 and September 9, 1862, the first regiment of the "Native Guards", later known as "Corps d'Afrique", was filled and 500 more men had enlisted for an additional and as yet unauthorized regiment. The regiment was expanded to a brigade and, finally six regiments were called for. The free Negro line officers were retained in the first regiment, under white field officers; in the second regiment the colonel and lieutenant colonel alone were white, while in the third regiment officers were selected without regard to color. One observer reported, "Recruits come in faster than they can be provided for."

Under General N. P. Banks, most of the Negro officers were replaced by whites; yet, at Port Hudson, where the free colored regiments fought their first large engagement, one of the heroes was the Negro Captain Andre Cailloux. Before Port Hudson, the Negro regiments had requested that they be placed in the front ranks "that they may have a chance of removing the stigma of alleged cowardice from their race, and vindicate their rights and abilities as soldiers".

At Port Hudson the Negro regiments had the

right of the line in the face of decimating fire. Captain Cailloux, wounded in the left arm, charged seven times at the head of his Company E crying, "Follow me!" and was killed while leading his men through the wounded and dying. General Banks' official report, widely published at the time, read in part: "Their conduct was heroic. No troops could be more determined or daring. They made, during the day, three charges upon the batteries of the enemy, suffering very heavy losses, and holding their positions at nightfall with the other troops on the right of our line. The highest commendation is bestowed upon them by all the officers in command on the right."

When volunteers were requested for the final assault on Port Hudson, the entire Corps d'Afrique responded. When the fort fell, the Negro troops were there to open the Mississippi which later, as garrison troops, they were to hold open for the Union.

National Recruiting

In the North, it was not until January of 1863, shortly after formal promulgation of the Emancipation Proclamation, that Governor Andrew of Massachusetts was authorized to raise two volunteer Negro regiments for three years service. Northern Negroes, now that their claims to bear arms in the Union cause had been recognized, lost no time in enlisting. Negroes from all over the North went to Massachusetts to join up. Only the question of equal pay stood between them and full service. John M. Langston, Negro lawyer of Ohio, urged, "Pay or no pay, let us volunteer." Frederick Douglass, famed anti-slavery journalist and orator of Rochester, had long urged the acceptance of Negro troops but when it developed that the Union planned to use them as laborers and in the malarial regions of the South only, he had refused to lend his influence in recruiting. Now, however, he issued a stirring appeal, as pertinent today as it was in 1863. The appeal is too long to quote in full, but sections of it should be familiar to every present-day soldier.

"Men of Color, To Arms!", it began. Explaining that he had long requested the employment of Negro soldiers he continued:

> "Slowly and reluctantly that appeal is beginning to be heeded. Stop not now to complain that it was not heeded sooner. That it should not, may or may not have been best. This is not the time to discuss that question. Leave it to the future. When the war is over, the country saved, peace established and the black man's rights secured, as they will be, history with an impartial hand will dispose of that and sundry other questions. Action! action, not criticism, is the plain duty of this hour. Words are now useful only as they stimulate to blows. The office of speech now is only to point out when, where, and how to strike to best advantage.
>
> "There is no time to delay. The tide is at its flood that leads on to fortune. From East to West, from North to South, the sky is written over, 'NOW OR NEVER!!' 'Liberty won by white men would lose its luster.' 'Who would be free themselves must strike the blow.' 'Better even die free, than live slaves.' This is the sentiment of every brave colored man amongst us.
>
> "There are weak and cowardly men in all nations. We have them amongst us. They tell you this is the 'white man's war;' that you will be no better off after than before this war;' that the getting of you into the army is to 'sacrifice you on the first opportunity.' Believe them not; cowards themselves they do not wish to have their cowardice shamed by your braved example. Leave them to their timidity, or to whatever motive may hold them back . . ."

Protecting the Negro Soldier

It was feared that the Confederacy's announced intentions of treating Negro soldiers as fugitive slaves, to be returned to slavery, and of treating their officers as outlaws under slave-stealing and anti-abolitionist laws, would hold Northern enlistments to a minimum. But Lincoln, both in his Baltimore Sanitary Fair Speech and in a proclamation promised full protection for all Federal troops.

In May, 1863, a Bureau of Colored Troops was established. After August 1863, the Union army enlisted Negroes freely. The Adjutant General, Lorenzo Thomas, was dispatched to the Missis-

sippi Valley to recruit Negroes within the Union lines. In October, recruiting stations were established in the border states for free Negroes. Slaves were eligible for enlistment under a plan whereby the government was to pay the owner $300 for each enlistment upon presentation of proof of ownership. The first federal boards of examination for officers were set up to select officers for Negro troops, insuring the U. S. Colored Troops better leaders than the average for Union Volunteers. Of the more than 185,000 Negroes who enlisted in the U. S. Colored Troops, over 82,000 were Northerners. To the official figures must be added the numbers who, within the Union Lines, attached themselves to the army as laborers. The Fifty-fourth and Fifty-fifth Regiments of Massachusetts Volunteers, which were not incorporated into the U. S. Colored Troops, must also be added. This, it is estimated, would bring the total number of Negro participants on the Northern side in the Civil War up to about 390,000. A total of 165 Negro regiments were enlisted in the Union forces, 140 infantry, 6 cavalry, 13 heavy artillery, 1 light artillery, and 5 of engineers. One hundred and six of these regiments saw combat action in more than 200 engagements and skirmishes while the others performed post, garrison and provost duty, especially in the Mississippi Valley.

In some cases colored regiments were incorporated into higher units. A conspicuous case was the XXV Army Corps, largest colored unit set up-to-date. Another was Ferrero's (4th) Division of Burnside's (IX) Corps, with the Army of the Potomac. Several Negro officers served with the Massachusetts regiments and the Louisiana Native Guards, in addition to eight commissioned surgeons and seven chaplains. Fifteen Negroes won the Congressional Medal of Honor. Over 36,000 lost their lives in the conflict.

Negroes fought from Port Hudson to Fort Blakely and Appomattox, last official battles of the War. Of Milliken's Bend, June 6, 1863, General Grant reported "In this battle, most of the troops engaged were Africans, who had but little experience in the use of firearms. Their conduct is said, however, to have been most gallant." Other major engagements in which Negro troops participated were Olustee, Chaffin's Farm, New Market Heights, the Wilderness, Petersburg Crater, Darbytown Road, Honey Hill, and Fort Wagner.

Negro Indian Fighters

After the Civil War, the Federal Army was reorganized. Acts of Congress provided for four permanent Negro regiments, two of cavalry and two of infantry. These became the 9th and 10th Cavalry Regiments organized in 1866, and the 24th and 25th Infantry Regiments, consolidated from four regiments in 1868 and 1869. These units, with few exceptions, were staffed with white officers, many of whom, like Generals Nelson A. Miles and John J. Pershing, became famed American leaders.

Even before the close of the Civil War the Union Army was engaged in patrolling the Plains. The 9th and 10th Cavalry soon joined in this task and from the late sixties to the close of the Indian Wars in the nineties, these two regiments were seldom in garrison. They rode the plains from Arizona to the Dakotas, and developed a reputation for good discipline, hard fighting, and fine horsemanship. As late as the last Indian demonstration in 1906, when the Utes left their Wyoming reservation terrorizing the countryside, eight troops of the 10th Cavalry and eight of the 6th Cavalry, in a show of strength, forced the Utes back to their reservation.

Triumphs of the 9th and 10th

The 9th and 10th, called "Brunettes" by the army and "Buffalo Soldiers" by the Indians, were reputed to be "bad medicine" in Indian lore. Frederic Remington, in his illustrations and paintings of the Indian frontier, well known in the 80's and 90's, often chose the 9th and 10th as subjects. Two of the better known, "Ninth Cavalry Scout Patrol" and "Captain Dodge's Colored Troops to the Rescue," are still reproduced upon occasion.

One troop of these veteran outfits—and they were veterans in the best sense of the word, for most of these men made a career of the army—found itself without water for three days and four nights. They drank the blood of their dying horses and lost but five men out of sixty-one. During the Ghost Dance uprising of the 1890's involving Sitting Bull and Big Foot, the 9th Cavalry, which had a reputation for arriving just when needed most, rode 100 miles and took part in two fights in 30 hours to relieve the besieged 7th Cavalry at

White Clay Creek. One of the favorite songs of the Plains soldier and frontier man was the rousing ballad, "The Indian Ghost Dance and War," written by a Ninth Cavalryman. One of the many stanzas celebrates the Ninth:

"The Ninth marched out with splendid cheer,
The Bad Lands to explo'e
With Colonel Henry at their head
They never fear the foe;
So on they rode from Christmas eve
'Till dawn of Christmas day;
The Red Skins heard the Ninth was near
And fled in great dismay."

With the plains soldiers in the 70's and 80's were a number of Indian scout outfits, including Negro-Seminole scouts. Separate Indian units were discontinued in 1892 and the Indians thereafter enlisted as individuals.

The 24th and 25th Infantry garrisoned many western posts, patroling the plains, opening the West and performing duties ranging from fighting forest fires and surveying the valley of the Yukon after the discovery of gold to maintaining order during railway strikes.

The 9th and 10th Cavalries and the 24th and 25th Infantry Regiments created a deep respect for military service among Negroes. This respect was buttressed by the fact that the early Negro schools and colleges founded after the Civil War often used military training as a desirable disciplinary measure. Howard University in Washington and Hampton Institute in Virginia, both founded by Union generals, were organized with military training as a basic requirement in their programs.

THE SPANISH-AMERICAN WAR

At the outbreak of the war with Spain in 1898, the four regular colored regiments were among the first to receive their orders to proceed to Cuba. Volunteers were called for and a number of additional Negro regiments were formed.

At Tampa, the First and Second Cavalry Brigades assembled to sail for Cuba. The Ninth Cavalry was brigaded with the Third and Sixth Cavalry Regiments, forming the First Brigade. The Tenth Cavalry was brigaded with the First Regulars and the First U. S. Volunteer Cavalry better known as Roosevelt's Rough Riders. These two brigades were under the command of Major General "Fighting Joe" Wheeler, ex-Confederate cavalryman. In the Battle of Santiago de Cuba, their regiments, dismounted, along with the 24th and 25th Infantry, shared the glory of the charge up San Juan Hill with the Rough Riders. Newspapers back home carried glowing accounts of the action. Fighting Joe Wheeler, who in the charge against the Spanish at Las Guasimas is supposed to have rolled back the calendar to his Confederate days by whooping a Rebel yell, calling "Come on, boys, we've got the damned Yankees on the run!" wrote, in an introduction to a volume of memoirs of the Tenth Cavalry in Cuba, "the reports of all their commanders unite in commending the Negro soldier." In concluding, he asked if there was any wonder that they "returned from Cuba's blood-stained fields covered with glory."

The Twenty-fourth Infantry was ordered to Siboney for guard duty after San Juan Hill. Yellow fever sufferers filled the hospital there. When asked if any men wished to volunteer for nursing duty, the entire regiment stepped forward. Sixty-five men were selected; in two days forty-two of these were down with fever. Again volunteers were called for and again the entire regiment volunteered. Of the 456 men who marched to Siboney, only 24 escaped illness. The Twenty-fourth's service at Siboney became almost as famous as the action of San Juan Hill.

Only three of the Negro volunteer regiments reached Cuba. The 9th U. S. Volunteers, with colored line officers, was ordered to Cuba to suppress bandits. The Eighth Illinois and the Twenty-third Kansas, with all Negro officers, did garrison duty in Cuba from August, 1898, to April 1899. A third State Regiment served in Puerto Rico. Most of the Negro volunteer regiments had their own Negro officers. Many of the units had been formed around the National Guard outfits; later, National Guard battalions were formed around Volunteer personnel.

1900-1917

After the Spanish War, the four regular regiments, along with the 48th and 49th Volunteers, were ordered to the Philippines where they served through the Insurrection.

Later they served as garrison troops, both in the Philippines and at home. Innovations, such as bicycle corps, were tried out by these units. The

Tenth Cavalry, in the first decade of the century, became our original machine gun experts. Techniques of machine gun use, such as indirect and overhead fire, which were not generally used until World War I, had already been perfected by the Tenth in the early years of the century.

General John J. Pershing's estimate of the Tenth is close to that of most of the officers who served with these regular army regiments. "It has been an honor, which I am proud to claim," he wrote in 1921, "to have been at one time a member of that intrepid organization of the Army which has always added glory to the military history of America—The 10th Cavalry."

WORLD WAR I

After the Spanish-American War, as often before, many journals and papers had expressed the opinion that the wisdom of using Negro soldiers would never again be questioned. But at the beginning of World War I, Negroes once more had to prove their ability as soldiers. While the civilian experience of Negroes had grown steadily since 1865, their relative position in American life was more disadvantaged in 1917 than today. Only one out of a hundred Negro soldiers in 1917 had graduated from high school and few indeed had had vocational training along technical lines. Armies, however, had changed greatly between 1865, 1898, and 1917. They had become vastly complex machines supported by intricate services of supply which, in their turn, were dependent upon a fully mobilized home front.

Industrial America expanded rapidly, and to fill newly opened factory jobs, thousands of Negroes migrated north from the rural South. This migration brought increased wages and new vocational experiences for the migrants and new educational opportunities for their children. As pointed out in chapters 3 and 4, World War I and the subsequent improvement in educational and vocational opportunities for Negroes all over the country, has an important relation to the use of Negro manpower in the present war.

Problems of a New Kind of War

But World War I was a problem for all of America. Not only had the complexity of war increased, but America, as a fighting nation, was not herself in the most advantageous position. Her nearest coast was 3,000 miles from the front. Her facilities for shipping were small. Even at the declaration of war, her army consisted of the small regular forces and the state units of the National Guard. The warring European powers, tired though they might be, had gained years of training and experience in a new type of warfare where trenches and concrete, heavy artillery and machine guns in pillboxes, poison gas and tanks had replaced the cavalry and infantry charges of our Civil and Spanish Wars.

America had one advantage: fresh and vigorous manpower. But, in 1917, there was little time for thorough training, little time to assemble all of the matériel necessary for modern warfare. Production of tanks, shells, and planes was rushed, but most of them were not to arrive in time for our troops to use them. American divisions in France often had to get along with British and French materiel. The divisions themselves often went into battle supported by artillery units with which they had never worked before, often with training which, by today's standards, would be considered as slight. But America had fresh manpower with high morale. These two factors alone carry tremendous weight even in highly technical warfare.

10 Percent of Our Manpower

One-tenth of America's manpower, then as now, was Negro. A general selective service draft was used for the first time during World War I, but as in the Civil War, volunteers were encouraged in addition to the draft. Negro volunteers, however, were not freely welcomed, for machinery for the use of Negro troops had not been decided upon in the early months of the war.

Memories of the Brownsville Affray were also fresh. Investigation of this affair, in which about a dozen soldiers of the First Battalion 25th Infantry (less Company A) were accused of rioting in the city of Brownsville, Texas, in 1906, had resulted in the discharge, without honor of the enlisted personnel of three companies for refusal to reveal the names of the participants in the riot. The enlisted men persisted in their story that no one known to them participated. Investigation, courts-martial, and special courts of inquiry lasted through 1909 and the results of these many pages of testimony were ordered printed in 1910, in twelve volumes. The Brownsville Affair, which was never totally settled, left a bitter feeling to-

ward Negro troops which had not died away by 1917.

Negroes protested vigorously, and pressed to be taken into the armed forces on the same basis as the rest of the population. They argued for, and won, a training camp for Negro officers. As a result, out of the 3,464,296 Americans in World War I, 371,710 or 10.7 percent were Negroes—a proportion about equal to that of the Negro percentage of the national population. Of these, 1,353 were officers, most of them trained at the special camp in Des Moines, Iowa, for duty with the infantry, field artillery, medical corps, and chaplain's corps. Nearly 200,000 Negroes served overseas during the War.

Combat Units

Negro National Guard units were called into the service early. Some of these had been called up in the Border Disturbance of 1916, when a part of the 10th Cavalry accompanied General Pershing into Mexico. The 9th and 10th Cavalry and the 24th Infantry Regiments served on the Southern border during the War. The 25th Infantry served in Hawaii from 1913 through 1918. All four units gave Regular Army men to the National Army as officers.

The National Guard units were the nucleus of the 93d Provisional Division. The 93d, which had only its infantry regiments, was designated a division primarily for purposes of administration. A second combat division, the 92d, at full strength, consisted of draftees. These were the only Negro combat divisions in France, but the 92d alone fought with the American Armies, for the regiments of the 93d were brigaded with the French.

Units of the 93d Division

The 185th and 186th Infantry Brigades of the 93d Division were authorized on November 23, 1917. The 185th consisted of the 369th Infantry, formerly the 15th Infantry, New York National Guard, and the 370th Infantry formerly the 8th Infantry, Illinois National Guard. The 186th included the 371st Infantry, made up of selective service men largely from South Carolina, and the 372d Infantry, organized from National Guard units from Connecticut, the District of Columbia, Maryland, Massachusetts, Ohio, and Tennessee. Division and brigade headquarters retained administrative control until May, 1918, when they ceased to function, for by that time the regiments had been fully affiliated with the French army.

Units of the 93d were among the first American combat troops to arrive in France. When the 369th Infantry Regiment arrived at Brest on December 27, 1917, only the 1st and 2d Divisions of the Regular Army and the 26th (Yankee), and 41st (Sunset), and 42d (Rainbow) Divisions of the National Guard had preceded it. The other units of the Division arrived in France separately; the last three companies of the 371st did not arrive until April 29, but even these were ahead of most of the National Army units. The four regiments were brigaded with the French, both in training and in combat, throughout the War; as a result their record has often been omitted from accounts and tabulations of the operations of the divisions of the A. E. F.

With the French

The 369th Infantry, which became especially proud of its record of 191 days on the firing line without losing a foot of ground or a single prisoner, did its first oversea duty with the Service of Supply at St. Nazaire immediately after landing. In March it began training with the French and by April 8 the regiment was ready to occupy a subsector of the Champagne region, as a part of the French 16th Division. In May, the 372d Infantry, trained under the French XIIIth Corps, joined the French 63d Division and entered the Aire Sector, Lorraine. The 371st Infantry, in June, occupied a position in the Verdun Sector. The 370th Infantry occupied a position in the St-Mihiel Sector in the same month.

In the Champagne

The 369th Infantry participated in the July 15-18 Champagne-Marne Defensive. On July 15 it assisted in stopping an attack on the French 16th Division and on July 18 joined a counterattack, recapturing the front line trenches of the division. All of the regiments of the 93d, with the exception of the 370th, were in the Champagne region, between Reims and the Argonne Forest, during the Meuse-Argonne offensive of September 26 to October 8 as integral parts of the French Fourth Army. At the same time divisions of the American First Army were operating to the right of the

French between the Forest and the Meuse. Entering a gap in the line on the first day of the attack, the 369th Infantry took the town of Ripont, captured a number of prisoners, and several pieces of artillery. The regiment continued forward on the 27th and 28th, reaching the slope of Bellevue Signal Ridge after a stubborn fight.

The 371st and 372d Infantry Regiments entered the line as parts of the French 157th Division and attacked immediately, advancing 600 yards against heavy machine-gun fire. The next morning the 371st captured Ardeuil and Montfauxelles, while the 372d made an unsuccessful attack on the village of Sechault. Though its patrols entered the town, the regiment withdrew; but the town fell that afternoon to the 369th. On September 30, the 369th advanced about a half mile, but, having suffered heavy casualties, was relieved that night. The same day, the 371st captured Trieres Farm. The next day the 372d relieved the 371st and, on October 2, advanced, repulsing a strong enemy counterattack on the 5th and holding its position until relieved on October 7th.

To the Vosges and the Rhine

All three regiments won praise from the French command. The 369th suffered 851 casualties during the attack, the 371st and 372d, 1,032 and 616 respectively, making a total of 2,502 casualties for the three regiments. After October 8, the three regiments moved, with their French divisions, to front line sectors in the Vosges Mountains. The 371st and 372d, with the French 133d Infantry, occupied the Anould Sector, whose southern section was on German soil. The 369th occupied a Thur subsector, northeast of Belfort in Alsace, until November 11. On November 17, with the French Second Army, now in the Army of Occupation, it moved to the Rhine, where it remained, at Blodelsheim, until December 12, when it was relieved from duty with the French.

Records of the 370th

The 370th Infantry, the only one of these regiments with all Negro company officers, had held the bend in the Allied line before St-Mihiel from June 22 to July 3 and the Vauquois sector in the Meuse-Argonne from July 23 to August 15. While the other regiments of the 93d were participating in the Meuse-Argonne (Champagne) Offensive, the 370th was serving with the French 59th Division at Vauxaillon, northeast of Soissons, in the Oise-Aisne Offensive. With the French, four companies participated in the unsuccessful attack on the Mont-des-Signes between September 17 and 20. On September 24, the regiment took command of part of the front line north of Vauxaillon and advanced to the Ailette River on September 28. It assisted in driving the Germans north of the Oise-Aisne Canal and, on October 12, crossed the canal and the river in pursuit of the enemy, driving them through the Bois de Mortier.

On October 28, again with the French 59th Division, the regiment rejoined the Oise-Aisne operation, reentering the battle line on November 5. From November 5 to 11, the regiment, in line with the division, pursued the enemy, advancing 40 miles in the last week of the War, driving the enemy from the Bois du Val-St-Pierre, capturing Beaume, and reaching Le Gue d'Hossus, across the Belgian border, by November 11. The action of the 370th Infantry concluded the American fighting in the Aisne-Marne region. In the Oise-Aisne Offensive the regiment suffered 665 casualties.

As units, the French government awarded the 371st and 372d Infantry Regiments and Company C, 370th Infantry, the Croix de Guerre with palm and the 369th Infantry the Croix de Guerre with silver star for especially meritorious conduct in action.

Some Negro Heroes of the 93d

The first American soldiers to receive the Croix de Guerre were two Negroes, Henry Johnson and Needham Roberts, of the 369th Infantry. Johnson and Roberts, placed on guard in a small outpost, were attacked by a German raiding party numbering from twelve to twenty men. Both men were wounded early in the fighting, but they waited quietly until the Germans were directly upon them. Then Johnson opened fire with his rifle while Roberts, otherwise virtually helpless, opened up with hand grenades. Roberts was seized by the raiders, but Johnson's hand-to-hand fighting caused them to release him. When his cartridges gave out, Johnson drew his bolo and waded into the Germans; Roberts continued to throw grenades with his one good arm. The raiders fled. At least one had been killed by rifle fire, two by bolo, and one by grenades. Several others, judging from the

trails of blood remaining, had been wounded in the bitter fighting.

The 371st Infantry, the only regiment of draftees in the 93d Division, won 121 French decorations and twenty-seven American Distinguished Service Crosses. On Hill 188, Champagne Sector, September 28, 1918, for example, Corporal Sandy E. Jones after all of his officers and most of his noncommissioned officers had been wounded or killed, reorganized his company and held his position. "As a result of the very heavy losses suffered by Company C," his citation for the Distinguished Service Cross read, "it had become badly broken up and disorganized. Corporal Jones collected the scattered elements and reorganized them under extremely difficult circumstances due to very effective hostile artillery fire."

Brooks Square, in New York City, was named for Private Dorrance Brooks, 369th Infantry, who was killed in the Champagne Offensive while leading forward a remnant of a section of the Third Machine Gun Company after his four white officers, two colored sergeants, and two corporals had been killed or wounded.

The 92d Division

The 92d Division, established October 24, 1917, did not arrive in France until June and July, 1918. The experience of the 92d was quite different from that of the 93d. Technically, the 92d as a Division, was never in battle, for all of its combat service in the front lines was in the trenches of "quiet" sectors on the Vosges. This division received a great deal of attention from the public, for though all of its staff, field supply, and engineer officers, and its field artillery officers above the grade of first lieutenant were white, its infantry company officers were Negroes trained at Des Moines. Its enlisted personnel consisted of draftees from all over the United States.

Speculation concerning the abilities of this division was indulged in freely. The abilities of its Negro officers were especially questioned. In some quarters, it was felt that Negroes, accustomed to being led by whites in both military and civilian life, would not follow Negroes into battle. Others felt that the Des Moines Officers' Training Camp, an experimental camp in which colored officer candidates were trained separately, had been less than a complete success. Whether Negro enlisted men, whose general educational and vocational background in World War I was at a considerably lower level than today, could cope with the technical aspects of the division's machine gun, artillery, trench mortar, field signal, and engineer units under battle conditions was doubted even by many of the division's own officers. Analytical studies of the 92d Division prepared after the war by the Historical Section of the Army War College revealed that the division left the United States with "only rudimentary training given" and that of the three phases of training which it should have got in France, the division received only the first and part of the second. Few American divisions got full training in World War I, but the 92d was further hampered by the facts that it was scattered over a wide training area, making centralized control difficult.

Moreover it was never seriously felt by the division's officers that it could be made into a first-rate fighting unit. General Pershing visited the Division on August 21, 1918, just two days before it moved into the St-Dié Sector for seven days of training in line with the French 87th Division. "During my visit to the 92d Division (colored)," he wrote in his memoirs, "it was learned that the situation as to training, especially of the colored officers, was not entirely satisfactory . . . None of the junior officers had received more than superficial training and most of them were unaccustomed to the management of men. The general officers of the division, who had all served with colored regiments of the Regular Army, were not sanguine regarding the possibility of reaching a high standard of instruction among their troops."

Action of the 368th

The Division commanded the St-Dié Sector, Lorraine, from August 30 to September 20. In the Meuse-Argonne Offensive beginning September 26, the Division, less the 368th Infantry and the artillery brigade, was part of the reserve of the First Corps. The 368th Infantry was assigned to the French Fourth Army, XXXVIIIth Corps, and, with the French 11th Cuirassiers-a-pied, formed a connecting force between the French Fourth Army and the American First Army. The action of the 368th Infantry, in the first 5 days of the Offensive, is important mainly for its meaning in terms of good training and good leadership in contrast to poor training and poor leadership. At the same time, three regiments of the 93d were operating

successfully in the same offensive directly to the left of the 368th as integral parts of French Fourth Army units, while the fourth regiment was participating, with success, in the Oise-Aisne Offensive. It is also important because this action was the only one in which a unit of the 92d actively engaged the enemy in a major operation. Upon this action, at the time and for many years later, rested the reputation of the Division and, by extension, of Negro combat troops in general.

On September 26, the 368th Infantry jumped off from its trenches on a one and a half mile front, with the mission of feeling out the enemy, maintaining contact with the units on its flanks, and following up any retirement of the Germans. The attack, made with poor artillery support, developed into separate movements of three different groups. One group worked its way into the German trenches, the other two penetrated the German lines for a considerable distance. That evening and night, with the exception of one company, the units of the regiment, out of communication with each other and in confusion and disorder as the result of heavy bombardment and poor leadership, retired behind the jump-off line.

The next day, the regiment moved forward about a mile, and on September 28 it attacked in the direction of Binarville. Despite considerable movement forward and backward, the regiment gained little ground. The regiment reorganized on the 29th, when its zone of action was reduced. On the 30th the French 9th Cuirassiers-a-pied, on the regiment's flank, advanced towards Binarville. Having failed to receive the orders to stand fast which had been sent it, the 368th attacked with the French, captured Binarville, and established its front line beyond it.

Exactly what happened to the regiment on these five days is not clear, but it is certain that poor leadership and lack of confidence between officers and men and between officers, especially junior and field officers, added to poor training, played a large part in the demoralization of the regiment. Rumors concerning the action grew and, especially after the war, assumed such proportions that the conduct of all Negro troops in combat was seriously questioned. Six years after the War, when discussion was at its height, the Commanding General of the 92d, Major General C. C. Ballou, wrote:

> An infantry regiment, never before in battle, was detached from the division, attached to a French brigade under a French officer, placed between the French and the American armies, in a gap so wide that they were out of touch with both, and there, during the night, under the influence of bombardment to which they could not reply because of the limitations of their weapons, the battalion in the first line—very generally, but not entirely — drifted to the rear — not in a stampede, but singly and in small groups.
>
> The above is from information later given me by the officers white and black, of the regiment, and by General Mondesire, the French corps commander. The latter added: "It was a difficult situation —one that would have tested the quality of experienced troops of approved valor."

So widespread was discussion of this action that the War Department ordered a thorough investigation. The Secretary of War, Newton D. Baker, reported:

> The circumstances disclosed by a detailed study of the situation do not justify many of the highly colored accounts which have been given of the behavior of the troops in this action, and they afford no basis at all for any of the general assumptions with regard to the action of colored troops in this battle and elsewhere in France. On the contrary, it is to be noted that many colored officers, and particularly three in the very battalion here under discussion, were decorated with Distinguished Service Crosses for extraordinary heroism under fire.
>
> I authorize the publication of this statement in order that justice may be done to the officers, white and colored, and to the men of this regiment, and in the hope that a recital of the facts may make prejudiced and distorted discussion impossible in the future.

Discussion, of course, did not cease, any more than discussion of the World War in general ceased. But most discussion was based upon the meaning of the action in terms of the fighting ability of Ne-

gro troops in general. Seldom was it recalled that, by known standards of training, morale, and leadership, the 368th was seriously handicapped from the start. Moreover, the heroism of individual men and units of the regiment was obscured in the general picture of the battle. For heroism at Binarville, for example, five enlisted men of this regiment were awarded the American Distinguished Service Cross.

It is well to realize that, with a proper understanding of the training and leadership required, the action of this regiment in the Champagne might have been quite different. This is especially important today, when all troops, whether actually trained for front line combat duty or not, must necessarily perform their duties under battle conditions in warfare where long range artillery and air bombardment permits no part of a combat area to be considered a "quiet" sector.

The 92d Division, in October, entered the Marbache Sector in the St-Mihiel Region, where, on the right of the Second Army, it gained considerable territory in the attack of the 10th and 11th of November preparatory to the offensive planned for November 14. The division advanced 3½ kilometers against gas and heavy artillery and machine gun fire, occupying the Bois Cheminot, the Bois de la Voivrotte, and the Bois Fréhaut. The Commanding General called frequently for reports concerning the conduct of officers and men under fire. One, from Major A. E. Sawkins, 2d Battalion, 366th Infantry, referring to the action before Metz, reads in part:

> Officers and men deserving special mention have been recommended in other communications. An observation of the general conduct of officers and men is the reason for this report. I desire especially to call to the attention of the Division Commander the fact that the handling of their units by the company and platoon commanders was all that could be expected from the most experienced officers. There was an absolute lack of any disorder, and I cannot say too much in praise of the manner in which these officers handled their men.

The Commanding General of the Division cited the officers and men of the 365th Infantry for meritorious conduct in the Bois Fréhaut. The field artillery brigade, which had rejoined the division on October 20 after completing the training which it had begun upon landing in France, acquitted itself well, according to its commanding general. The Division had definitely improved since its first month in combat, but the Armistice of November 11 prevented the final test which would have proved whether or not it had reached a high point of training and morale.

Negroes in the Service of Supply

It was in the Service of Supply that American Negro soldiers performed their greatest service in World War I. The problem of supply in this war was greater than any that America had faced before. Armies could no longer live off the land and the contract waggoners and shippers, who had supplied most of the earlier American armies, would have been inadequate for the job which faced the army of 1917-1918. Entire ports of debarkation, assembly plants for locomotives and other equipment, entire railroads, highways, and billeting areas had to be built in France as well as at home. A huge force of men to handle the shipment and transshipment of supplies was necessary. In quartermaster, pioneer infantry, engineer, and stevedore units, Negroes performed many of the tasks incidental to keeping the American army in the fields. They had done this before. They had been waggoners with Washington's army. They had built fortifications and constructed roads for both armies in the Civil War. They had loaded and hauled ammunition from arsenals to docks in both Civil and Spanish Wars. In World War I, as in the present war, they performed these duties as a part of their duty to their country.

Praise from General Pershing

In World War I divisions, the trains, consisting of military police, ammunition, supply, engineer, and sanitary (three ambulance companies and field hospitals) units, were of the utmost importance. Those of the 92d Division were considered among the best in the A. E. F. At Le Mans, on January 28, 1919, just before it embarked for return to the United States, General Pershing addressed the Division:

> "I want you officers and soldiers of the 92d Division to know that the 92d Division stands second to none in the record you have made since your arrival in

France. I am proud of the part you have played in the great conflict which ended on the 11th of November. Yet you have only done what the American people expected you to do and you have measured up to every expectation of the Commander-in-Chief."

The words of General Pershing are well remembered by Negro World War veterans. For in every American war Negro soldiers have tried to fight as normal Americans and have thought of service in the armed forces only as that which is expected of all Americans. Their service has been continuous and has been of whatever type the needs of their country has dictated. Negro soldiers have a rich and long tradition, as the names on muster rolls and the monuments in national battlefields and cemeteries attest. The quality of their service has varied with the quality of their opportunity, their training, and their leadership. With good officers and good training, they, like all Americans, make good soldiers. The story of their part in this War is now being written. What that story will be depends, in a large part, upon what you, their officers provide in the way of good training, good motivation, and good leadership. With the information which this text has provided and an understanding that the command of Negro troops differs only in degree and not in kind from the command of any other troops, your unit cannot fail. Like commanders of Negro troops in the past, you will be rewarded with the knowledge that you have trained and led first class soldiers.

SUMMARY

1. Negroes have fought in every American War from the Revolution to World War II. The degree of Negro participation in the armed forces of America has varied with the changes in the development of our national policies.

2. Fighting ability cannot be measured in terms of race, but only in terms of training, leadership, and motivation. Well-trained, well-led, and well-motivated troops fight well. Poorly-trained, poorly-led, and poorly-motivated troops do not fight well. This is true of white and Negro troops alike.

3. A long tradition of military service, in America and abroad, has been built up by Negroes. This tradition, in the hands of informed officers, can be a valuable motivating factor for Negro troops.

4. Arguments for and against the use of Negro troops have been common in the early period of each American war. These arguments are usually centered about the questions: Can Negroes fight? Can they be depended upon? In view of our existing social structure, is it wise to train Negroes to fight? By the close of each war these questions have received a full affirmative answer from most informed persons, whereupon the record of Negro troops has been forgotten. The facts of the story of the Negro in American Military history support the affirmative answers.

5. Until the Civil War comparatively few Negroes were in the ranks of America's armed forces; seldom were they in distinctive Negro units. All accounts of their participation agree, however, that they acquitted themselves well. The first large scale use of Negroes was in the Civil War, following the Emancipation Proclamation. After this war, Negroes became a part of the regular army. In the Indian wars, in the War with Spain, and in World War I, they fought well. Negroes, since the Revolution, have always been represented in the service forces, as waggoners, stevedores, pioneers, engineers, etc.

6. Negroes have fought for America out of the patriotic motives common to all Americans. In addition, Negroes have felt that they have a special stake in continuing an unbroken tradition of loyalty to America, and in justifying in battle their claims to full participation in American life. Negro soldiers today respond to the same appeals that motivated their forbears in Jackson's and Douglass' time.

7. With each war, the measure of Negro responsibility has increased as his education, his physical well-being, and the general recognition of his part in American life have increased. Today, as a result, Negroes are serving in all branches and in most capacities in the American armed forces.

APPENDIX I

A SELECTION OF FEDERAL AND STATE LAWS OF IMPORTANCE TO COMMANDERS OF NEGRO TROOPS

This appendix is designed to give a junior officer some standards which will aid him in making decisions in emergencies. Where time permits he should always consult his superior officer on legal problems.

CONFLICT BETWEEN MILITARY AND CIVIL JURISDICTION

Every reasonable effort should be made to avoid strained relationships between the Federal and State government. Powers not delegated to the Federal government in the Constitution and its amendments are reserved to the States. Nevertheless within its sphere the Federal authority is paramount. Article VI of the Constitution of the United States provides:

> "This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land . . . . . ."

Military Jurisdiction

In time of war military jurisdiction is exclusive over military personnel on military reservations. It includes the power of arrest and detention of civilians on military reservations until they can be turned over to the Federal courts if the civilian's offense was committed on the reservation. (See AR 600-355.)

Civil Jurisdiction

Civil authorities have concurrent jurisdiction over acts of military personnel in civilian areas, but military necessity requires that the war effort should not be impeded by unnecessary arrest and detention of military personnel by civilian authorities. Request should always be made of civilian authorities to turn over military personnel to military authority for trial of all offenses which violate civil as well as military law. Agreements governing the surrender of military personnel by civilian authorities, or their release in some cases by the military to civilian authorities, have been reached between the War Department and the Governors of the most of the States.

No military personnel will be turned over to civilian authorities by commanders of Army Ground Forces, Army Air Forces, or Army Service Forces without first informing the commanding general of the appropriate service command.

In all cases where military personnel are charged with an offense because of an act done under orders or authority of any law of the United States respecting the military forces or Articles of War, trial by court martial or a Federal civil court should be insisted upon, and the War Department notified immediately through channels if a satisfactory understanding with the civil authorities cannot be reached.

Where military personnel have already been taken into custody by proper military authority for an act which violates both civil and military law, civilian authorities have no right to take him from military custody.

Military personnel have the right to arrest and detain for the civilian authorities a civilian who interferes with and tries to prevent military personnel from performing military duties; but under exisiting law an assault on military personnel off duty and off military reservation comes exclusively under civilian jurisdiction. Military personnel are given no special rights to prevent or aid civilian authorities in the enforcement of civilian law. Any citizen has the right to try to prevent a breach of the peace or a felony, or to make an arrest for such an act committed in his presence.

CIVIL RELIEF ACTS

The Federal Government and most of the states have civil relief laws to protect and preserve the

rights of persons on active military duty. These laws are too varied for an extensive analysis to be made here. The Federal Soldiers and Sailors Civil Relief Act of 1940 may be taken as typical.

Default Judgments

This Federal Act, for example, prevents a default judgment being taken against a person in the service without an order of court and an attorney first being appointed by the court to investigate the case. Further, the defendant is given up to 90 days after his discharge to move the court to set the default aside.

At any stage in a case involving a person in service a court can on its own motion, and must upon application, grant a stay of proceedings for the duration of military service and 60 days thereafter, unless the court finds that military service does not materially prejudice the ability of such person to prosecute or defend the case. A court on motion will stay an action against a person in the service for a forfeiture or penalty on a contract. Statutes of limitation in civil cases are suspended during military service.

Dependents and Rents

The dependents of a person in the service cannot be evicted for nonpayment of rent where their dwelling quarters rent for not more than $80 per month, without an order of court, and the court has power to stay the eviction for not more than 3 months.

Contract Purchases

A seller cannot rescind a contract for the purchase of real or personal property where the purchaser has paid a deposit before he entered the service, without an order of court, unless after he enters the service the purchaser and seller make an agreement in writing for such rescission. Upon hearing the court may order the seller to return all installments paid as a condition to his right to rescind.

But no court has power to stay a proceeding to repossess a motor vehicle, tractor, or the accessories of either, or to withhold an order for sale of same, under a purchase money mortgage, conditional bill of sale, or lease or bailment with a view to purchase, unless 50 percent or more of the purchase price has been paid.

No sale under a power of sale or under a judgment entered upon a warrant of attorney to confess judgment contained in a mortgage, trust, deed or other security in the nature of a mortgage made prior to entering military service, on real or personal property owned by the person when he entered the service and still owned by him, shall be valid if made while he is in the service or within 3 months thereafter, unless upon an order of sale granted beforehand by the court, and further unless a return on said sale is made to the court and the sale is approved by it. When the court is asked for an order of sale it may stay the proceedings or make such other judgment as may be equitable to all parties, unless it finds that military service has not materially affected the ability of the debtor to comply with the terms of his obligation.

Insurance Policies

The Federal Government will advance insurance premiums on life insurance policies including fraternal or beneficial association membership where the policies do not exceed a total of $5,000 face value, and the contract of insurance was made and a premium paid not less than 30 days prior to entrance in the military service, but the Government will not advance the premiums on a policy on which premiums are in default more than a year at the time application for government assistance is made. This program is under the United States Veterans Administration.

Taxes

A person in military service is entitled to file an affidavit with the tax collector stating that his military service has materially affected his ability to pay his taxes, and thereafter no sale of the property taxed shall be made for nonpayment of taxes except by order not exceeding 6 months after the end of the taxpayer's military service.

Payment of income tax arising either prior to or during military service may be deferred for a period not exceeding 6 months following military service, if the taxpayer's ability to pay is materially affected by his military service.

Land Rights

No rights in mineral or mining land acquired un-

der the laws of the United States prior to military service shall be prejudiced during the period of military service by absence from the land or failure to perform any work on it required by law. Military service is construed as equivalent to residence on homestead entries where application for homestead entry was made prior to military service. If shall be construed as equivalent to performance of all the requirements as to residence and cultivation all the requirements as to residence and cultivation on such homestead. No desert-land entry prior to military service shall be contested or canceled for failure to make or expend the sum of $1 per acre per year in improvements while the entryman is in military service or during 6 months thereafter or during hospitalization for wounds or disabilities incurred in line of duty.

REEMPLOYMENT

A person called to military service is entitled on discharge or indefinite furlough to be restored to his position in private industry, if still qualified therefor, with full seniority, status and pay, provided he left such a position (other than a temporary one) to perform his military service, has received a certificate showing satisfactory termination of his services, makes application for reemployment within 40 days after his discharge or furlough and his employer's circumstances have not changed to such an extent as to make it impossible or unreasonable to restore him to his old position. Any veteran so restored retains his seniority, insurance and other benefits as though he has been on furlough or leave of absence. An employer cannot discharge without cause an employee so restored within one year after reemployment.

If his former private employer refuses or fails to reemploy him the veteran may file a motion in the United States District Court located where the employer maintains a business, and the Court may require the employer to pay him for loss of pay.

The United States Attorney for that District, on application by veteran, shall act as his counsel.

Unemployment insurance rights are preserved during military service.

COMMUNITY RELATIONS

Discrimination by state or local governments is prohibited under the Fourteenth Amendment to the Constitution of the United States. The state or local government either has to let Negroes share in the same public benefits accorded white citizens or else provide Negroes with substantially equal but separate facilities. Speaking generally, the established practice in the South is separation of the races in public accommodations, including public parks, municipal auditoriums and stadiums. But the local patterns differ and an officer should consult the nearest United States Attorney or county attorney before attempting to advise his men as to their rights.

Several states, chiefly in the North and West, have civil rights statutes providing for equal enjoyment by all citizens properly conducting themselves, in places of public entertainment. No legislation, however, attempts to control admission to private clubs or service in private businesses. The extent to which businesses (as for example athletic exhibitions, recreation grounds, etc.) can cater to the public generally without losing their prerogatives as private enterprises to refuse whomever they please is not clear.

These state civil rights laws vary too mucb both as to coverage and as to penalties to be analyzed here. The type of places usually covered are hotels, theaters, and restaurants; but in every instance an officer should consult the nearest county attorney before attempting to advise his men.

Neither civil rights laws nor segregation laws have any force beyond the borders of the state which enacted them.

Transportation

Segregation laws apply to public vehicles only; they do not apply to private automobiles, trucks or other conveyances. Segregation laws in the South specify separate but equal accommodations for Negroes in public transportation. That includes waiting rooms, restaurants and separate entrances to stations. But the laws neither require nor provide that whites shall be accommodated before Negroes, and Negroes must be provided substantially equal facilities, comforts and conveniences as white travelers.

Taxicabs are public conveyances, and while there may be at times difficulties of enforcement, Negroes are entitled to substantially equal taxicab service as other travelers, particularly where the

taxicabs are operated under concession at a public carrier station or waiting room.

Hospitals

A public hospital or clinic is a public institution and must offer substantially equal facilities to all to the limit of its facilities. Where Negro wards or rooms are separate, they must offer substantially equal facilities as similar wards or facilities for whites.

FAMILY RELATIONS

Nothing affects a soldier's morale more directly than the state of his family affairs. Therefore, the unit commander has a special responsibility to post himself on the Army Regulations governing marriage and family dependency and to be alert and sympathetic to all the family problems of his personnel.

Marriage

The right of army personnel to marry while in the service is governed by regulations of the War Department. These are amended from time to time, therefore, extreme care should be exercised to see that your advice is based on the latest and current regulations in every case.

All regulations pertaining to marriage apply to women as well as to men except special regulations governing the Army Nurse Corps. Under certain rules and regulations, Army nurses may marry and continue in service for the duration of the war and 6 months thereafter or until such time as they may be found physically disqualified for active service. Soldiers can marry in the United States without permission, but military personnel in the Panama Canal Zone or in any foreign country or possession can not marry without the approval of the commanding officer.

There appears to be no present regulation prohibiting marriage between army personnel in the United States and citizens of other countries.

While the right of army personnel to enter into a marriage contract is governed by Army Regulations, the formalities and effect of the marriage are governed by civilian law. The law varies from state to state and care must be taken to see that the requirements, both of the state where the marriage ceremony is performed and the state in which the soldier lives, are complied with.

Ordinarily the Anglo-American law does not recognize marriage by proxy but some states may have altered this rule for the benefit of army personnel overseas. Inquiries should be addressed, through channels, to the Director, Personal Affairs Division, Army Service Forces, War Department, Washington, 25, D. C.

Common Law Marriage

Common law marriages are recognized in some states. To constitute a valid common law marriage, the parties must be legally competent to enter into the marriage relation, which means they must be either single, widowed, or divorced. They must have actually lived and cohabited together as man and wife and held themselves out to and been recognized by the community as man and wife. In states where common law marriages are recognized, the children of such a marriage have all the rights of children born in wedlock.

Wills

The Army Handbook, "Army Life," which is given to all army personnel, advises and encourages each soldier to make a Will. Ordinarily, a Will must be in writing, signed by the testator in the presence of at least two witnesses who should sign immediately afterwards while all are present together. Some states require three witnesses to a Will, and, wherever possible, three witnesses should be obtained. Each witness must sign the Will in the presence of the other witnesses and the testator. Many states make special provisions for soldiers in the combat zone by providing that a Will written entirely in the soldier's own hand, called a Holographic Will, will be recognized even without the signatures of witnesses as a valid Will and Testament. Some states will even recognize an oral Will made by a soldier about to go into battle. The legal effect of a Will depends, as to personal property, on the law of the state where the soldier resides, and as to real property, on the law of the state where the land lies. The laws vary so much that no detailed principles can be stated and the best advice to give soldiers is to have them make their Wills as soon as they enter the service when there is still opportunity to get competent, local legal advice.

In case a soldier does not make a will his estate will be distributed according to law among his blood relatives, widow and children being pre-

ferred. The shares which the relatives take vary according to the law of each state.

In most states an "adopted" child does not share in the estate unless he has been adopted by legal proceedings. This is true regardless of how long the "adopted" child has been in the family. If a soldier is himself an adopted child or has an adopted child, it is recommended that proper proceedings be taken at once to make the adoption legal. In the meantime, the soldier should make his will expressly providing for the "adopted" child or "adopted" parent.

SUPPLEMENTAL ADVICE AND ASSISTANCE

The local United States Attorney is the first civilian authority from whom a unit commander should seek aid or advice. In addition, there are many agencies in every community organized and ready to help: the local bar associations, legal aid societies, Red Cross, religious and fraternal organizations, and others. In time of war it is reasonable to assume that no part of the community will refuse. Circular No. 74, War Department, 16 March 1943, describes the plan sponsored jointly by the War Department and the American Bar Association "to make adequate legal advice and assistance available throughout the Military Establishment to military personnel in the conduct of their personal affairs." This circular also contains a list of Bar Association Committees on War Work and a list of established legal aid organizations.

APPENDIX II

SUGGESTED READING

BOOKS OF HELP IN THE LEADERSHIP OF NEGRO TROOPS

This reading list is not intended to represent a complete bibliography on the Negro in the United States, nor is it a source list for the factual materials presented in the body of this manual. It is, rather, a listing of materials suitable for supplementary reading designed to increase the officer's knowledge of his men. Materials in this list which will serve as a nucleus of a small collection on the Negro, suitable for a camp, day-room, or personal library, are marked with an asterisk (*). It should be unnecessary to say that the listing of a book does not constitute an endorsement of its contents in totality, but it does mean that it is believed that officers may profit by intelligent reading of it.

I. GENERAL

"The American Negro in World War I and II". Edited by Charles H. Thompson. *The Journal of Negro Education,* Yearbook No. 12, Vol. XII, Summer, 1943. Washington: Howard University Press. $2.00.

Congressional Record

United States of America

PROCEEDINGS AND DEBATES OF THE 79th CONGRESS, FIRST SESSION

Vol. 91 WASHINGTON, THURSDAY, JULY 5, 1945 No. 134

Senate

The Senate was not in session today. Its next meeting will be held on Friday, July 6, 1945, at 12 o'clock meridian.

House of Representatives

THURSDAY, JULY 5, 1945

The House met at 12 o'clock noon.

Rev. Bernard Braskamp, D. D., pastor of the Gunton Temple Memorial Presbyterian Church, Washington, D. C., offered the following prayer:

O Thou gracious benefactor, whose heart responds to every human need, we praise Thee for the beautiful and manifold testimonies of Thy love and care. Grant that we may receive them with due appreciation and devout thanksgiving.

Strengthen us by Thy grace during all the hours of this day. We know that Thou wilt never forsake us in our weakness and failures or abandon us in our waywardness and follies.

Encourage and inspire us with confidence when we are afraid and apprehensive. Refresh and cheer us when we are faint-hearted and tired. Rebuke and restrain us when we are unfaithful and recreant to any duty. May we lay hold on Thee more tenaciously when some insurgent impulse tempts us to be faithless and cynical. May the keynote of our life be that of trust in the Lord—that perfect trust which casts out fear and enables us to meet every experience and responsibility with courage and gladness.

Deepen within us a desire to seek Thy glory and to serve needy humanity. May we have the mind and mood of the Master. Fill our hearts with His spirit of good will and good cheer. Hear us for His sake. Amen.

THE JOURNAL

The Journal of the proceedings of Tuesday, July 3, 1945, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Miller, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On July 3, 1945:

H. R. 2875. An act to amend an act entitled "An act to fix the salaries of officers and members of the Metropolitan Police force and the Fire Department of the District of Columbia";

H. R. 3024. An act making appropriations for the Department of the Interior for the fiscal year ending June 30, 1946, and for other purposes;

H. R. 3199. An act making appropriations for the Department of Labor, the Federal Security Agency, and related independent agencies, for the fiscal year ending June 30, 1946, and for other purposes;

H. R. 3278. An act to amend section 204 of the act entitled "An act to expedite the provision of housing in connection with national defense, and for other purposes," approved October 14, 1940, as amended, to increase the amount authorized to be appropriated therein, and for other purposes;

H. R. 3550. An act making appropriations for the Military Establishment for the fiscal year ending June 30, 1946, and for other purposes; and

H. J. Res. 202. Joint resolution reducing certain appropriations available in the fiscal year ending June 30, 1945.

On July 5, 1945:

H. R. 2995. An act to amend an act entitled "An act to create a revenue in the District of Columbia by levying a tax upon all dogs therein, to make such dogs personal property, and for other purposes," approved June 19, 1878, as amended;

H. R. 3201. An act to amend the District of Columbia Alley Dwelling Act, approved June 12, 1934, as amended;

H. R. 3240. An act to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, and for other purposes;

H. R. 3257. An act to remove restrictions to the appointment of retired officers of the United States Public Health Service or retired civilian employees of the United States Government or District of Columbia government as Superintendent of Gallinger Municipal Hospital in the District of Columbia, and for other purposes;

H. R. 3579. An act making appropriations to supply deficiencies in certain appropriations for the fiscal year ending June 30, 1945, and for prior fiscal years, to provide supplemental appropriations for the fiscal years ending June 30, 1945, and June 30, 1946, to provide appropriations for the fiscal year ending June 30, 1946, and for other purposes; and

H. R. 3607. An act to authorize the President to appoint Gen. Omar N. Bradley to the office of Administrator of Veterans' Affairs, without affecting his military status and perquisites.

COMMITTEE ON THE JUDICIARY

Mr. COCHRAN. Mr. Speaker, by direction of the Committee on Accounts, I submit a privileged resolution (H. Res. 305) to provide for further expenses of investigation authorized by H. R. 138, Seventy-ninth Congress, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That the further expenses of conducting the investigation authorized by House Resolution 406 of the Seventy-eighth Congress and continued by House Resolution 138 of the Seventy-ninth Congress, incurred by the Committee on the Judiciary to investigate the official conduct of Albert W. Johnson and Albert L. Watson, district judges of the United States District Court for the Middle District of Pennsylvania, not to exceed $7,500 in addition to the unexpended balance of the sum heretofore made available, including such printing and binding and the employment of such clerical, stenographic, and other assistance as the committee may deem necessary, shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman thereof, and approved by the Committee on Accounts.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

Mr. MARTIN of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. COCHRAN. I yield to the gentleman from Massachusetts.

United States of America

Congressional Record

PROCEEDINGS AND DEBATES OF THE 79th CONGRESS, FIRST SESSION

Vol. 91 WASHINGTON, FRIDAY, JULY 6, 1945 No. 135

Senate

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

God of all mercy, bowing at this noontide altar, may we be vividly conscious that we need turn not back to bygone centuries to hear Thy voice, as if Thou dost speak no longer to us now. Give us ears to hear Thy imperial imperatives above the noise of crashing systems, yea, in and through the change and confusion of our day. May we not imagine that the judgment which shall search the secrets of our hearts is postponed to some far-off future assize, when in this day, by our response to the want and woe of Thy world and of Thy children, our brothers, Thy thrones are set: Thou art searching out the souls of men before Thy judgment seat.

So hearing and heeding the voice divine, may our compassion help to heal the open sores of the world as we serve the present age, our calling to fulfill. In the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. HATCH, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, July 3, 1945, was dispensed with, and the Journal was approved.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed without amendment the following bills of the Senate:

S. 24. An act for the relief of the Truckee-Carson irrigation district;

S. 100. An act to authorize an exchange of certain lands with William W. Kiskadden in connection with the Rocky Mountain National Park, Colo.;

S. 301. An act for the relief of Mr. and Mrs. James E. McGhee;

S. 311. An act for the relief of Philip Kleinman;

S. 454. An act to revive and reenact the act entitled "An act creating the Arkansas-Mississippi Bridge Commission; defining the authority, power, and duties of said Commission; and authorizing said Commission and its successors and assigns to construct, maintain, and operate a bridge across the Mississippi River at or near Friar Point, Miss., and Helena, Ark., and for other purposes," approved May 17, 1939;

S. 497. An act to amend an act entitled "An act to provide for the purchase of public lands for home and other sites," approved June 1, 1938 (52 Stat. 609);

S. 501. An act for the relief of the Catholic Chancery Office, Inc.;

S. 527. An act to extend the time for commencing and completing the construction of a bridge across the St. Croix River at or near Hudson, Wis.;

S. 660. An act to transfer certain lands situated in Rapides Parish, La., to board of supervisors of Louisiana State University and Agricultural and Mechanical College;

S. 712. An act for the relief of William B. Scott;

S. 748. An act for the relief of Nita Rodlun;

S. 761. An act to reimburse certain Navy personnel and former Navy personnel for personal property lost or damaged as a result of a fire in Quonset hut occupied by Eighty-third United States Naval Construction Battalion at Camp Rosseau, Port Hueneme, Calif., on December 22, 1944;

S. 812. An act to amend section 3 of the San Carlos Act (43 Stat. 475–476), as supplemented and amended, and for other purposes;

S. 822. An act to reimburse certain Navy personnel for personal property lost or damaged in a fire at Naval Base Two, Rosneath, Scotland, on October 12, 1944;

S. 824. An act to reimburse certain Navy personnel and former Navy personnel for personal property lost or damaged as a result of a fire in Quonset hut E–172 at the amphibious training base, Camp Bradford, naval operating base, Norfolk, Va., on January 20, 1945;

S. 867. An act for the relief of Ruby Doris Calvert, as administratrix of the estate of Frederick Calvert, deceased; and

S. 911. An act authorizing the conveyance of certain lands to the city of Cheyenne, Wyo.

The message also announced that the House had passed the following bills of the Senate, severally with an amendment in which it requested the concurrence of the Senate:

S. 75. An act for the relief of Thomas C. Locke;

S. 134. An act for the relief of Ida E. Laurie and Zella Rickard;

S. 233. An act granting the consent of Congress to the State of North Dakota to construct, maintain, and operate a free highway bridge across the Missouri River;

S. 234. An act authorizing the construction of a free highway bridge across the Yellowstone River near Fairview, Mont.;

S. 512. An act for the relief of Mr. and Mrs. Arthur R. Brooks;

S. 672. An act for the relief of the legal guardian of Clifton R. Weir;

S. 784. An act for the relief of Mr. and Mrs. John T. Webb, Sr.; and

S. 956. An act for the relief of Mr. and Mrs. Stephen E. Sanders.

The message further announced that the House had passed the bill (S. 574) to extend the times for commencing and completing the construction of a bridge across the Columbia River in Clatsop County, Oreg., with amendments in which it requested the concurrence of the Senate.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 3180) to impose certain restrictions on the disposition of naval vessels and facilities necessary to the maintenance of the combatant strength and efficiency of the Navy, and for other purposes; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. VINSON, Mr. DREWRY, and Mr. MOTT were appointed managers on the part of the House at the conference.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 476. An act to revive and reenact the act entitled "An act creating the St. Lawrence Bridge Commission and authorizing said Commission and its successors to construct, maintain, and operate a bridge across the St. Lawrence River at or near Ogdensburg, N. Y.," approved June 14, 1933, as amended;

H. R. 799. An act for the relief of the estate of Stanley E. Smallwood; to the legal guardian of Frank Carter, Jr., a minor; to the legal guardian of Donald R. Keithley, a minor; to Keithley Bros. Garage;

H. R. 851. An act for the relief of Oscar R. Steinert;

H. R. 1145. An act for the relief of Ben W. Colburn;

H. R. 1301. An act for the relief of Madeline Winter and Ethel Newton;

H. R. 1456. An act for the relief of George E. Baker;

H. R. 1512. An act to amend section 9 of the Pay Readjustment Act of 1942 (Public Law 607) by providing for the computation of double-time credits awarded between 1898 and 1912 in determining retired pay;

H. R. 1563. An act for the relief of S. Owen Oxley and the legal guardian of Lamar Oxley, a minor;

I M M E D I A T E R E L E A S E

INTREPID NEGRO PLATOON LEADER
WINS DSC FOR HEROISM IN ITALY

An intrepid Negro officer from Cheyenne, Wyoming, who killed or wounded nine Germans while personally knocking out three enemy machinegun nests and an observation post in Italy, has been awarded the Distinguished Service Cross, the War Department reported today.

The recipient, First Lieutenant Vernon J. Baker, 25, a rifle platoon leader in the 92nd Infantry ("Buffalo") Division, thus becomes the second living Negro of three who have been decorated with the DSC in this war.

The text of the official citation from Headquarters, Fifth Army, dated June 10, 1945, follows:

"For extraordinary heroism in action, on April 5 and 6, 1945, near Viareggio, Italy. First (then Second) Lieutenant Baker demonstrated outstanding courage and leadership in destroying enemy installations, personnel and equipment during his company's attack against a strongly entrenched enemy in mountainous terrain. When his company was stopped by the concentrated fire from several machinegun emplacements, he crawled to one position and destroyed it, killing three Germans.

"Continuing forward, he attacked an enemy observation post and killed its two occupants. With the aid of one of his men, Lieutenant Baker attacked two more machinegun nests, killing or wounding the four enemy soldiers occupying these positions. He then covered the evacuation of the wounded personnel of his company by occupying an exposed position and drawing the enemy's fire. On the following night Lieutenant Baker voluntarily led a battalion advance through enemy mine fields and heavy fire toward the division objective. Lieutenant Baker's fighting spirit and daring leadership were an inspiration to his men and exemplify the highest traditions of the Armed Forces."

Lieutenant Baker was commissioned a second lieutenant in the Infantry at Fort Benning, Georgia on January 11, 1943 and promoted to first lieutenant on May 7, 1945. Prior to receiving his commission he was a staff sergeant in Company D, 25th Infantry Regiment.

Born in Cheyenne, Wyoming, Lieutenant Baker is the husband of Mrs. Helen S. Baker, 122 10th Avenue, North, Birmingham, Alabama.

The other living Negro veteran wearing the Distinguished Service Cross today is Captain Charles L. Thomas, of Detroit, Michigan, who won the award for leading his platoon of Tank Destroyers in a breakthrough of the Siegfried Line last December.

Private George Watson, of Birmingham, Alabama, first Negro to win the Army's second highest honor in this war, received the award posthumously in 1943 after he lost his life at Pordoch Harbor, New Guinea while going to the rescue of comrades in a sinking boat.

The Negro Soldier

A Partial Record of Negro Devotion and Heroism in the Cause of Freedom Gathered From the Files of the War and Navy Departments

REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

February 1, 1946

Mrs. DOUGLAS of California. Mr. Speaker, it is about the Negro soldier I wish to speak today. I wish to pay him the respect and to express the gratitude of the American people for his contribution in the greatest battle of all time—the battle which decided whether or not we were to remain a free people.

We should be especially mindful of the Negro soldier, remembering that he fought and shed his blood for a freedom which he has not as yet been permitted fully to share.

The service record of the Negro in World War II began with the Japanese attack on Pearl Harbor, December 7, 1941, and carried through to the day and the hour of the Japanese surrender.

Whether in the North African, European, or Pacific theater of war, the Negro serviceman responded to the call of duty to the fullest extent of his opportunity and to the very best of his ability.

The Negro soldier made his contribution in World War II as he has in every other war in which we, a free people, have fought. And he has again met the test of patriotism and heroism. The names of Negro heroes in this war are everlastingly recorded among the living and the dead. They won their citations in every combat area, on land, on sea, in the air.

It should never be forgotten that Negro heroes in this war achieved their proud records under handicaps that did not have to be overcome by most of their white fellow citizens.

This was the most mechanical of all wars. Training had to be based on the education and experience of the average man. The average American boy going into the service of his country had some knowledge of, some experience with the mechanical gadgets that contribute to our much boasted high standard of living. And at least he could read and write.

Three-fourths of all Negroes in the armed forces came from areas in this land of the free where their people had been held down for generations, denied education, denied the use of tools any more complicated than a hoe, denied the right to participate in self-government, denied even the right to self-respect. For them, equal educational opportunities, equal pay for equal work, practically any opportunity to work at skilled trades simply did not exist. They went into the armed forces ill equipped, through no fault of their own, for the tremendous job required of them.

But they did the job, all the same, handicap or no handicap. And they did it magnificently.

They were MEN—with the heart and the will and the courage—the stuff of which heroes are made. They may, as did one group, have had to memorize instructions because they could not read them. But while letters may have been foreign to them, devotion was not; nor was courage foreign to them. The qualities that cannot be indoctrinated—the qualities of greatness—were there.

Some of the most outstanding units in all theaters were made up of Negroes who had been classified in the lowest Army classification categories—those very boys

who had never had a chance to run a machine or even to learn to read and write before going into the Army.

Despite the Selective Service and Training Act, which established a basic policy of nondiscrimination because of race or color in building up our Army, and in spite of improvement during the course of the war, it must not be forgotten that segregation, discrimination, and race prejudice, in all of its varied forms, placed an added burden on the Negro in the armed forces and dogged his steps from the induction center to the front line.

Navy Crosses—for "conduct in keeping with the highest traditions of the United States naval service"—were won by Negro mess attendants not permitted to enlist in their country's Navy as fighting men.

It was a mess attendant—not permitted, because he was a Negro, to train as a gunner—who manned a machine gun and fought back when the Japs strafed his ship at Pearl Harbor. For this and for dragging his mortally wounded captain to safety, Dorie Miller, mess attendant first class, won the Navy Cross.

It was Leonard Roy Harmon, mess attendant first class, who won the Navy Cross, posthumously, for heroic action. He lost his life aboard the U. S. S. *San Francisco* in battle off the Solomon Islands. Later his mother was brought from her home in Texas, by order of the Secretary of the Navy, to the shipyards in Hingham, Mass., to sponsor the destroyer escort U. S. S. *Harmon,* named after her hero son.

It was Pvt. Woodall I. Marsh, of Pittsburgh, of the Ninety-second Division, who won the Silver Star for taking 12 wounded paratroopers out of the front line to safety, fording a raging torrent in his truck, after an officer had said it could not be done. When he was told he could not get through because the water was too deep, Private Marsh replied, "Well, there's dirt underneath, ain't there?"

685535—15300

In December 1944 when the picture in Europe was dark, where our front-line losses were mounting with tragic swiftness, a call was sent out for volunteer replacements from troops assigned to noncombat duty behind the lines. More than 5,000 Negroes eagerly responded. Because only privates were accepted, many noncommissioned officers offered to sacrifice their stripes for a chance to get into the fighting. Twenty-five hundred Negro soldiers were accepted, but 3,000 more were turned back, because a quota for Negroes among the volunteers had been set. One of those who was accepted, Pfc Leroy W. Kemp, of Atlantic City, N. J., remarked, "We've been giving a lot of sweat. Now I think we'll mix some blood with it."

They did mix their blood—with the blood of their white brothers—and out of that mixing new understanding and respect were born.

One of the finest tributes paid these volunteers came from Brig. Gen. Charles T. Lanham, assistant commander of the One Hundred and Fourth Infantry Division, following the presentation of combat decorations:

"I have never seen any soldiers who have performed better in combat than you," General Lanham told the Negro doughboys.

Under the Selective Service Act, Negroes were trained for every branch of the service, but, although Negro fighter pilots were shooting down German planes over Italy, although the Ninety-second Division fought through the Italian campaign from start to finish and came out with 2 Distinguished Service Crosses, 1 Distinguished Service Medal, 16 Legion of Merit awards, 95 Silver Stars, 6 Soldier's Medals, 723 Bronze Stars, 1,095 Purple Hearts, and 7,996 Combat Infantry Badges, and although the Nine Hundred and Sixty-ninth Field Artillery Battalion was caught at Bastogne and fought it out side by side with the celebrated One Hundred and First Airborne Division and received, with the One Hundred and First, a Presi-

dential Unit Citation, and although there were Negro combat troops in action on every front, the fact remains that the majority of the Negroes, sometimes regardless of qualifications, found themselves in service outfits.

And what did that mean? It meant building airports, bases, roads, and highways under fire, in freezing cold and blazing heat. It meant building an approach to a bridge across the Rhine, under artillery fire, unable to take cover, unable to shoot back. It meant landing ammunition on the Normandy beaches on D-day, always under fire. It meant setting up field kitchens on those beaches, even before the fighting troops which were to be fed and heartened had all come ashore. It meant Negro Seabees winning commendation for building an airport on a Pacific island under heavy Japanese fire. It meant stringing thousands and thousands of miles of communication wire—across rivers, through steaming jungles, over icy mountain passes, with artillery shells crashing around them, with snipers forever shooting at them. It meant trucking high explosives and octane gas over the Red Ball Highway—continuously under aerial bombardment. It meant building the Ledo Road, under impossible conditions, cutting and blasting their way through jungle and over mountain passes—riding their bulldozers down with tons of sliding rock when the narrow ledges gave way, to save the precious equipment. And again and again and again it meant dropping a shovel and picking up a gun from the stiffening hands of a fallen fighting comrade.

In 1940, when the Selective Service Act was passed, there were only 4,451 Negroes in our Army, including 5 commissioned officers and 11 warrant officers.

In February a year ago there were 690,282 Negroes in the Army. Of these, 52,884 were in the Infantry, 27,163 in the Coast and Field Artillery, 770 in the Cavalry, 140,154 in the Engineers, 63,079 in the Air Corps, and 406,232 in other branches of the armed services. Included in the total were 6,548 commissioned officers. Of that number, 120 were Dental Corps officers, 343 were nurses, 569 were Medical Corps officers, and 260 were chaplains. The Army had 820 Negro Wacs, the Navy had 68 Negro Waves, and the Coast Guard 5 Negro Spars.

Last August there were 695,264 Negroes in the United States Army. Of these, 495,950 were overseas. On the day of final victory in Europe there were 22 Negro combat units in action on the European front.

Here are some things that "Ike" Eisenhower, the man who broke the Axis, had to say about the Negro troops who served under him.

In July 1944, to the commanding officers and men of a Negro antiaircraft balloon battalion, the only outfit of its kind participating in the D-day landings:

The commanding officer, First United States Army, has brought to my attention the splendid manner in which you have carried out your mission during the period of June 6 to July 10, 1944.

Your battalion landed in France on June 6 under artillery, machine-gun, and rifle fire. Despite the losses sustained, the battalion carried out its mission with courage and determination and proved an important element to the air-defense team. The cheerfulness and devotion to duty of officers and men have been commented on by the personnel of other units.

This report is most gratifying to me. I commend you and the officers and men of your battalion for your fine effort, which has merited the praise of all who have observed it.

On the same day to the commanding officer and officers and men of a Negro truck company:

I have received from the commanding general, First United States Army, a report of your exceptionally fine work during the landing in France and the period of a month subsequent thereto. The report confirms my own observation.

You landed under enemy machine-gun and artillery fire, which caused losses in men and equipment. Nevertheless, you salvaged most

685535—15300

of your equipment at once and within 3 days 90 percent of your vehicles were operating on a 24-hour basis, a scale which was maintained for 5 weeks. During this time you continued the delivery of essential supplies. I want you to know that I appreciate your splendid work. Your accomplishments are a source of gratification to me and to your Army commander.

Reviewing the war at a press conference in Paris on June 15, 1945, General Eisenhower was asked to comment upon the contribution Negro soldiers made to the European Theater of Operations. He replied:

To start with, I would like to say this: That I do not differentiate among soldiers. I do not say white soldiers or Negro soldiers and I do not say American or British soldiers. To my mind, I have had a task in this war that makes me look upon soldiers as soldiers. Now, I have seen Negro soldiers in this war, and I have many reports on their work where they have rendered very valuable contributions and some of them with the greatest enthusiasm. In late November, when we were getting short of reinforcements, replacements, some 2,600 Negro soldiers volunteered for front-line service and they did good work. All my commanders reported that these volunteers did excellent work. But their major job has been in Service of Supply, engineer units, quartermaster units, ordnance units. There, so far as I know and certainly as far as any official reports, they have performed equally with every kind of ordnance battalion, quartermaster battalion, and engineer battalion. They have done their job and they have done the job given them.

Mr. Speaker, I trust that all of us, as we continue our task of building a firm and lasting peace, will emulate "Ike" Eisenhower. He did not differentiate between whites and Negroes—nor between Americans, British, French, nor Russians. They were all soldiers. It is my fervent hope that we will have the wisdom to look upon citizens as citizens—neither white nor black nor yellow—but simply as citizens—of a world community.

At this point, I wish to introduce what at this time can only be a partial record of Negro devotion and heroism in the cause of freedom. My material has been gathered from the War and Navy Departments.

African-Italian Campaign

Forty-first Engineers

On June 17, 1942, 18 months before United States troops were reported to have landed at Dakar—the first Negro troops landed in Africa. They were the Forty-first Engineer Regiment—the "singing engineers"—and their mission was to protect that vital area in the trans-African life line of the United Nations under an agreement between the Governments of the United States and Liberia. The pact, signed on March 31, 1942, gave the United States the right to construct, control, operate, and defend airports in the West African republic. In return for use of lands for American troops, the United States agred to protect Liberia's neutrality, provide $1,000,000 in lend-lease aid, undertake a road-building program and train a Liberian Army, using American equipment.

Pfc. Edward Taylor, of Baltimore, led ashore the first American expeditionary force ever to set foot in Africa. A handful of natives and civilian construction workers watched him step ashore. "Liberians," he said, "we are here to join hands and fight together until this world is free of tyrannical dictators."

The Forty-first Engineers worked at a grueling pace. A big job had to be done in record time, despite malaria, bad terrain, and the rainy season. But they built the airports, cantonments, and other installations that were needed. They unloaded ships and dispatched supplies through three big defense areas. They laid steel landing mats in the emergency airports and waged a constant battle against the verdant undergrowth. They built permanent structures to replace temporary shacks and sheds.

"For exceptionally meritorious conduct in the performance of outstanding service" in Liberia, Master Sgt. Albert F. Williams, of Waycross, Ga., Headquarters and Service Company, Forty-first Engineers, was awarded the Legion of Merit.

His citation stated that "As a member of the advance detachment of an expeditionary force, from April to June 1942, he distinguished himself by his soldierly qualities, leadership, and dependability. Upon arrival on a strange continent, by his example of cheerfulness, confidence, energy, and industry he was a constant source of inspiration to his fellow soldiers and a tower of strength

to his commanding officer. Sergeant Williams set the pace for all duties assigned. He supervised his men every moment of the day, protecting their health so that there was no illness in a disease-ridden country. He used his 600 native laborers with patience, understanding, and skill. He was largely responsible for building up an enviable reputation for our soldiers abroad and contributing materially toward the preliminary mission of the force."

President Roosevelt stopped in Liberia on his way home from the Casablanca conference on January 27, 1943, and reviewed the Forty-first Engineers.

FOUR HUNDRED AND FIFTIETH ANTIAIRCRAFT ARTILLERY AUTOMATIC WEAPONS BATTALION

This battalion had the distinction of being the first Negro combat unit to land in north Africa and the first Negro combat unit to go into action on European soil.

As a matter of fact, before it even landed on the Italian peninsula, it won the commendation of Lt. Gen. Mark W. Clark, commanding the Fifth Army, for "outstanding performance of duty" in its baptism of fire. It accounted for two German bombers before it landed in Italy.

While the Negro troops of the Four Hundred and Fiftieth Battalion were still aboard ship in Naples Harbor, German bombers came over. The attack occurred at night. Soldiers of the Four Hundred and Fiftieth Battalion aboard one ship manned its 40-mm guns. Searchlights picked up the bombers, and the Negro gun crew shot down one German bomber.

Aboard another ship, carrying personnel and equipment of the Four Hundred and Fiftieth Battalion, M/S Johnson Clark, of Detroit, Mich., jumped into a loaded truck parked on deck and opened fire with a 50-caliber machine gun mounted on the cab. Other fire opened up from that ship, and a second bomber crashed into the sea.

Commending troops of the Four Hundred and Fiftieth Battalion for this accomplishment, General Clark declared:

"I am proud of the outstanding performance of duty of these soldiers in this baptism of fire. Their conduct was excellent and reflects the training and discipline of their unit. The Fifth Army welcomes such soldiers."

NINETY-NINTH PURSUIT SQUADRON

This unit of fighter pilots trained at the Tuskegee Army Air Field. After further training by veterans of the Tunisian campaign, the unit was committed to combat on June 1, 1943. It flew its first mission, over an air base at Fardjouna, the following day. Other early missions were over the island of Pantelleria, Italian stronghold guarding the Sicilian straits. Six of its pilots had their first brush with enemy aircraft over Pantelleria, and pilots of the Ninety-ninth dive-bombed Pantelleria daily until it was surrendered on June 11, 1943.

Next came the Sicilian campaign. During the first 9 days of July 1943, the Negro pilots of the Ninety-ninth Squadron escorted bombers to Sicily. On every trip they were attacked by superior numbers of enemy fighter planes.

By the middle of July the Ninety-ninth was escorting bombers over Italy. In a dogfight over Sciacca, Italy, one day, First Lt. (now Captain) Charles B. Hall, of Brazil, Ind., shot down the first Axis plane officially credited to the Ninety-ninth Squadron. On that same day the Ninety-ninth, flying close escort for medium Mitchell bombers, probably destroyed two more German planes and damaged three.

General Eisenhower was at the air base with the squadron's commander, Lt. Col. (now Colonel) Benjamin O. Davis, of Washington, D. C., when Hall and the others landed after that fight and congratulated them on their first confirmed victory.

From June 1 to September 3, 1943, the Ninety-ninth Squadron participated in about 800 sorties over north Africa, Sicily, and Italy.

Squadron's Biggest Day

The Ninety-ninth Squadron, by this time based in Italy, had its biggest day on January 27, 1944. In one of the fiercest air battles of the Italian campaign, over the Anzio beachhead, south of Rome, Negro pilots of the Ninety-ninth Squadron scored eight confirmed victories over the Germans.

Bent on driving the Allied landing force out of its beachhead, a hundred or more Messerschmitt 109's and Focke-Wulf 190's came over in two attacks, morning and afternoon on that day. Twenty-eight were destroyed during the day and the Ninety-ninth got eight of them, the largest number credited to any single squadron that day.

Flyers from eight States figured in this outstanding collective victory of the Ninety-ninth that day. Capt. Lemuel Rodney Custis, of Hartford, Conn., squadron operations

685535—15300

officer got one "Jerry." Six other pilots of the Ninety-ninth got one each: First Lts. Robert W. Deiz, of Portland, Oreg.; Willie Ashley, of Sumter, S. C.; Leon C. Roberts, of Pritchard, Ala.; and Edward L. Toppins, of San Francisco, Calif.; Second Lts. Charles P. Bailey, of Punta Gorda, Fla.; and Wilson Eagleson, of Bloomington, Ind. The Ninety-ninth Squadron's eighth victory was shared by Second Lts. Clarance Allen, of Mobile, Ala., and Howard L. Baugh, of Petersburg, Va.

The Ninety-ninth shot down four more enemy planes on January 28, 1944, Captain Hall scoring a double.

Lieutenant Deiz was credited with his second German plane in 2 days, and two pilots, Lieutenants Baugh and Allen, were credited jointly with the destruction of one plane. The fourth German plane was shot down by Second Lt. Louis C. Smith, of Los Angeles, Calif.

Second Lt. Elwood T. Driver, of Trenton, N. J., got the thirteenth German plane credited to the Ninety-ninth Squadron. Planes of the squadron were just arriving over Anzio beachhead on February 5, 1944, to take their turn at air cover, when a formation of German planes came over. The Ninety-ninth swooped down, and Driver sent one Focke-Wulf 190 crashing.

On February 7, 1944, Allied fliers brought down 16 Focke-Wulfs and 3 Messerschmitts, against a loss of only 4 of our own. Three of the German planes were brought down by pilots of the Ninety-ninth in the first of the day's engagements.

Sixteen Nazis in 10 days

In 10 days over Anzio beachhead, the Ninety-ninth brought down 16 enemy planes.

Gen. Henry H. Arnold, commanding general of the Army Air Forces, in a message to Lt. Gen. Ira C. Eaker, Allied air commander in the Mediterranean theater, commended the Negro Ninety-ninth Fighter Squadron on its exploits over Anzio beachhead. He said:

"The results of the Ninety-ninth Fighter Squadron during the past 2 weeks, particularly since the Nettuno landing, are very commendable. My best wishes for their continued success."

Exactly 1 year after they had flown their first mission over an enemy air base at Fardjouna, north Africa, pilots of the Ninety-ninth Fighter Squadron, on detached service with the Three Hundred and Thirty-second Fighter Group, flew their five hundredth combat mission.

The Ninety-ninth flew 3,728 sorties during its first year of service. During the first year, the squadron lost 12 pilots—5 killed in action, 4 reported missing, and 3 known to be prisoners of war.

THREE HUNDRED AND THIRTY-SECOND FIGHTER GROUP

From Allied headquarters in Naples it was announced on March 17, 1944, that the Three Hundred and Thirty-second Fighter Group, in which Negro pilots of the Ninety-ninth were flying, was operating from Italian bases, as part of the Mediterranean coastal air force. This group flew P-39's on convoy protection and harbor patrol missions along the west coast of Italy. It also flew in close support of advancing Allied armies in Italy, in daily dive-bombing operations against enemy supply lines, motor transport, rail yards, and gun emplacements. Penetrating ahead of the Fifteenth Army Air Force bombers bound for Munich on June 9, 1944, the group battled more than 100 enemy fighters near Udine, Italy, and sent 5 of them crashing to earth. The bomber formation they were protecting suffered only a few losses.

The Three Hundred and Thirty-second Fighter Group destroyed a total of 111 enemy planes in the air and 150 on the ground. In addition, it is credited with destruction of 57 locomotives and damaging another 69. Perhaps the greatest single feat of the group was the sinking of an enemy destroyer, with machine-gun fire, off the Istrian Peninsula but its pilots are best known for the protection they gave Fifteenth Air Force bombers during concentrated raids on oil refineries at Ploesti and Vienna. On the D-day invasion of southern France the group flew cover for Allied landing forces and strafed radar installations along the coast preparatory to the landings. On March 24, 1945, the group flew escort to B-17's of the Fifteenth Air Force to Berlin and destroyed three enemy aircraft, probably destroyed three other, and damaged three. For its outstanding performance of duty, the group was awarded the Distinguished Unit Citation, which reads as follows:

"On March 23, 1945, the group was assigned the mission of escorting heavy-bombardment type aircraft attacking the vital Daimler-Benz tank-assembly plant at Berlin, Germany.

685535—15300

Realizing the strategic importance of the mission and fully cognizant of the amount of enemy resistance to be expected and the long range to be covered, the ground crews worked tirelessly and with enthusiasm to have their aircraft at the peak of mechanical condition to insure the success of the operation.

"On March 24, 1945, 59 P-51 type aircraft were air-borne and set course for the rendezvous with the bomber formation. Through superior navigation and maintenance of strict flight discipline the group formation reached the bomber formation at the designated time and place. Nearing the target approximately 25 enemy aircraft were encountered which included ME 262's which launched relentless attacks in a desperate effort to break up and destroy the bomber formations.

"Displaying outstanding courage, aggressiveness, and combat technique, the group immediately engaged the enemy formation in aerial combat. In the ensuing engagement that continued over the target area, the gallant pilots of the Three Hundred and Thirty-second Fighter Group battled against the enemy fighter to prevent the breaking up of the bomber formation and thus jeopardizing the successful completion of this vitally important mission. Through their superior skill and determination, the group destroyed three enemy aircraft, probably destroyed three, and damaged three. Among their claims were eight of the highly rated enemy jet-propelled aircraft with no losses sustained by the Three Hundred and Thirty-second Fighter Group.

"Leaving the target area and en route to base after completion of their primary task, aircraft of the group conducted strafing attacks against enemy ground installation and transportation with outstanding success. By the conspicuous gallantry, professional skill, and determination of the pilots, together with the outstanding technical skill and devotion to duty of the ground personnel, the Three Hundred and Thirty-second Fighter Group has reflected great credit on itself and the armed forces of the United States."

Col. Benjamin O. Davis, Jr.

The leader of the Ninety-ninth Pursuit Squadron and later of the Three Hundred and Thirty-second Fighter Group, of which it became a part, was Col. Benjamin O. Davis, Jr., a graduate of West Point and son of Brig. Gen. Benjamin O. Davis, the highest ranking Negro officer in the United States Army.

Colonel Davis and three other pilots of the Three Hundred and Thirty-second Fighter Group—Capt. Joseph D. Elsberry, of Langston, Okla., and First Lts. Jack D. Holsclaw, of Spokane, Wash., and Clarence D. Lester, of Chicago, Ill.—were presented with Distinguished Flying Crosses in Italy on September 10, 1944. Lt. Gen. Ira C. Eaker, in command of all Allied air forces in the Mediterranean theater, attended the ceremony. It was held before a formation of the entire fighter group and the Fifteenth Air Force band, which was drawn up in review.

Concerning the leadership of the group by Colonel Davis, in a fight on June 9, 1944, when a bomber formation which his pilots were protecting was attacked by more than 100 enemy fighters, the citation said:

"Faced with the problem of protecting the larger bomber formation with the comparatively few fighters under his control, Colonel Davis so skillfully disposed his squadrons that in spite of the large number of enemy fighters, the bomber formation suffered only a few losses. During the engagement, Colonel Davis led one flight against more than 15 enemy fighters which were making repeated attacks on one group of bombers. His courage and combat ability have reflected great credit upon himself and the armed forces of the United States of America."

Colonel Davis also has been awarded the Silver Star, the Legion of Merit and the Air Medal with four Oak Leaf Clusters.

Capt. Joseph D. Elsberry

The award to Captain Elsberry was for "extraordinary achievement in aerial flight against the enemy in the North African and Mediterranean theaters of operations." His citation said:

"Throughout the extensive air offensive against the enemy in direct support of our ground troops and against targets of vital strategic importance deep within hostile territory, he, through his aggressiveness and courage, has consistently aided in the success of combat operations. Against heavy opposition from both aggressive and persistent fighter aircraft and intense, heavy, and accurate enemy antiaircraft fire, with his plane frequently seriously damaged by enemy fire, he has battled his way to his tar-

685535—15300

gets, defeating the enemy in the air and destroying his vital installations on the ground. Through severe and adverse weather conditions over treacherous mountain terrain, he has continually surmounted overwhelming obstacles for successful completion of his assigned mission to attack and destroy the enemy. Through his outstanding leadership and personal example, completely disregarding his personal safety at times of great danger, he has contributed to the ultimate and final defeat of the armed forces of the enemy, has upheld the highest tradition of the military service, thereby reflecting great credit upon himself and the armed forces of the United States of America.

First Lt. Jack D. Holsclaw

On July 18, 1944, Lieutenant Holsclaw led his flight as escort to heavy bombers attacking enemy installations in Germany and despite severe and adverse weather conditions, he brought his flight through to engage an enemy force of approximately 300 Army fighters. Of Lieutenant Holsclaw the citation said:

"In the ensuing engagement, despite the superiority in numbers of enemy aircraft, with complete disregard for his personal safety, Lieutenant Holsclaw, with an outstanding display of aggressiveness and combat proficiency, destroyed two enemy fighters and forced the remainder to break off their organized attack."

Lt. Clarence D. Lester

Lieutenant Lester participated in the same mission as that of Lt. Jack D. Holsclaw. The citation of Lieutenant Lester said:

"With complete disregard of his personal safety, Lieutenant Lester destroyed three enemy fighters, thus materially aiding in preventing the enemy from making concentrated attacks on the bombers."

The citations said of each of them that by his outstanding courage, professional skill and devotion to duty, evidenced throughout his combat career, he had reflected great credit upon himself and the armed forces of the United States.

A few months later back in this country, General Eaker presented Colonel Davis to the officers and men of the Four Hundred and Seventy-seventh Composite Group in a ceremony at Godman Field, Ky., June 21, 1945, as the commander of the group and of Godman Field. General Eaker said:

"Along with other officers in the Army Air Forces, I have followed closely the record of Negro pilots. As the commanding officer of the Mediterranean Allied Air Forces, I had under my command the Ninety-ninth Fighter Squadron and later the Three Hundred and Thirty-second Fighter Group. I watched closely as the pilots progressed through the P-39, P-40, P-47, and P-51 aircraft. I likewise watched their assignments develop from routine but necessary coastal patrol missions to important heavy bomber close-escort missions.

"The Ninety-ninth Fighter Squadron and other squadrons of the Three Hundred and Thirty-second Fighter Group have done well. They have carried out the missions assigned to them and they have destroyed enemy aircraft both in the air and on the ground. By their efforts and performance they have won a place on the great Air Forces team. They came up the hard way."

NINETY-SECOND DIVISION

A regimental combat team of Ninety-second Infantry Division went into the line on the Fifth Army front in Italy in August 1944. Ten minutes later they went into action against some of the best trained and seasoned troops Hitler had in his whole army.

From then on, until the Italian campaign finally ended with the surrender of a million crack German troops in April 1945, the Ninety-second Division fought in Gen. Mark Clark's Fifth Army. Some of them were in the line as long as 68 days at a stretch, more than 2 months.

It is one of the marvels of the war that the Ninety-second Division with an enlisted personnel made up almost entirely of Negro boys from the South—boys who had been sent out to work in the fields before they were even adolescents, boys who in many cases never had a chance to learn to read or write, boys who had grown up in an area where they and their people were always treated as inferiors—should have made the record it did, staying in there week in and week out, through some of the bitterest fighting in the whole war, against Hitler's best, a superb army of self-assured German veterans fighting with all they had to protect their homeland from the attack rolling up from the South.

The Ninety-second Division consisted of approximately 12,000 officers and men, including some 200 white officers and 600 Negro

685535—15300

officers, 3 of whom were lieutenant colonels and 6 were majors. Its enlisted personnel was all Negro—a majority of them rated as IV and V, the lowest grades in the Army classifications. This was largely due to the fact that three-fourths of them came from Southern States, where educational opportunities for the Negro are practically nonexistent. And the Ninety-second Division was activated before the Army educational program—designed to carry a man only through the fourth grade in school—got under way.

But these men—ill equipped as they were—did their job. They stayed in there, giving their best, day in and day out, seesawing back and forth through the rain and cold and mud, locked in a titanic death struggle with an experienced, magnificently trained enemy who knew all the tricks and who had never known defeat.

Through the whole bitter experience, the men of the Ninety-second Division were dogged by the racial prejudice and segregation that had followed them from the Southern camps where they trained at home. Other troops might yield temporarily, but there was no comment. But if the Ninety-second Division lost a yard one day—even though they might gain it back the next day—the reports went back across the Atlantic and soon their letters from home would tell them of loud-mouths screaming, even on the floor of Congress, that the Negro soldiers were cracking, that the Negro soldiers were no good.

A polyglot army

It was a polyglot army, the Fifth Army in which they fought, made up of British, American, Brazilian, French, Italian, Greek, Polish, Palestinian, New Zealand, and East Indian troops. It was in this Fifth Army that the Japanese Americans so greatly distinguished themselves—the Japanese American One Hundredth Infantry Battalion, one of the first outfits to receive a Presidential unit citation for fighting in Italy.

On April 30, 1945, General Clark announced that the long, weary, bitter campaign, begun on the beaches of Salerno in September 1943, had ended. His polyglot troops had so smashed the German armies in Italy that they had been virtually eliminated as a military force. Nearly 1,000,000 Germans in Northern Italy and Western Austria laid down their arms in unconditional surrender on May 2, 1945, at 2 p. m. The surrender had been signed in the royal palace of Caserta on April 29, by representatives of the German commander, Col. Gen. Heinrich von Vietinghoff-Scheel, and of the Allied Mediterranean commander, Field Marshal Sir Harold R. L. G. Alexander.

Around this last Thanksgiving time, the Ninety-second Division came home, landing in Boston, New York, and Norfolk. Only 4,000 were left of the once 12,000-strong Ninety-second Division whose ranks, like those of other divisions that fought overseas, had been thinned by transfers, discharges, and deaths.

While overseas the Ninety-second had received 12,096 decorations—including 2 Distinguished Service Crosses, 1 Distinguished Service Medal, 16 Legion of Merit awards, 7 Oak-Leaf Clusters to Silver Stars, 95 Silver Stars, 6 Soldier's Medals, 723 Bronze Stars, 1,891 Purple Hearts, and 7,996 combat infantry badges. It also received 205 commendations.

Almost 25 percent casualties

On the day the campaign in Italy ended, the Ninety-second Division had lost almost one-fourth of its men through casualties. Three hundred and thirty had been killed in action, 2,215 wounded, and 616 were missing in action.

A soldier of the Ninety-second Division, Pvt. Woodall I. Marsh, of Pittsburgh, Pa., was the first Negro to win the Silver Star in Italy. He got it for taking 12 wounded paratroopers from the front lines to safety in his truck, after officers said it could not be done.

When he was told that he could not make it because the water of a raging torrent he had to ford to get to the wounded paratroopers was too deep, Private Marsh replied: "Well, there's dirt underneath ain't there?" and he proceded to ford it.

Under terrific enemy fire, he drove his truck through water up to the hubs of the wheels to get to the wounded men. On the return trip, he tried another route, but it turned out to be just as bad. He had to dig his truck out of the muck and mire again and again. For 30 minutes during the trip, the Germans were trying to get him and his truck with heavy mortar and artillery fire.

Another hero of the Ninety-second Division was Second Lt. Vernon J. Baker, of Cheyenne, Wyo., a rifle platoon leader. He won the Distinguished Service Cross for the brav-

685535—15300

ery he exhibited in action on 2 days, April 5 and 6, 1945, near Viareggio, Italy. The citation reads:

"Second Lieutenant Baker demonstrated outstanding courage and leadership in destroying enemy installations, personnel, and equipment during his company's attack against a strongly entrenched enemy in mountainous terrain.

"When his company was stopped by the concentrated fire from several machine-gun emplacements, he crawled to one position and destroyed it, killing three Germans. Continuing forward, he attacked an enemy observation post and killed its two occupants.

"With the aid of one of his men, Second Lieutenant Baker attacked two more machine-gun nests, killing or wounding the four enemy soldiers occupying these positions. He then covered the evacuation of the wounded personnel of his company by occupying an exposed position and drawing the enemy's fire.

"On the following night Second Lieutenant Baker voluntarily led a battalion advance through enemy mine fields and heavy fire toward the division objective. Second Lieutenant Baker's fighting spirit and daring leadership were an inspiration to his men and exemplify the highest traditions of the armed forces."

One of the officers of the Ninety-second Division awarded posthumously the Silver Star for gallantry in action was Capt. Charles F. Gandy, Jr., of Washington, D. C. On October 12, 1944, Captain Gandy was ordered to deploy his company in reinforcement of another company in position on difficult mountainous terrain. His citation states:

"He personally led his company out in broad daylight and, through further reconnaissance and by personal example and leadership, succeeded in getting his entire company across a canal, with an abrupt 12-foot wall. This was accomplished in rain and under extremely heavy enemy fire.

"Halting the company at its intermediate objective, Captain Gandy went forward alone to reconnoiter the route of the next movement. While engaged in this activity, he was mortally wounded by enemy machine-gun fire. His outstanding gallantry and leadership in combat exemplifies the heroic traditions of the United States Army."

Lt. Theodore O. Smith, aged 24 years, was killed in action in Italy on February 11, 1945, 1 month after he had been awarded the Silver Star for his bravery in leading a small patrol on a mission that netted the Americans two Nazi prisoners and four enemy dead. According to the citation, Lieutenant Smith led his 14-man patrol 2 miles across a mined area through enemy lines to climb up a mountain where the enemy was holding out.

Risking his life to lead the mission, his action made it possible for the Americans to accomplish their objective and capture a strategically important point on the Fifth Army front. Lieutenant Smith was a native of the District of Columbia. He was graduated from Dunbar High School and received the degree of bachelor of arts from Howard University, where he was a captain in the Reserve Officers' Training Corps.

First Lt. John M. Madison was posthumously awarded the Silver Star for gallantry in action with the Ninety-second Division in Italy on February 8 and 10, 1945. The first action for which he was cited occurred after his company had taken its objective against light enemy resistance. Immediately afterwards the enemy subjected the position to terrific artillery and mortar fire which killed or wounded all officers except Lieutenant Madison.

"Extremely heavy casualties and the loss of leadership disorganized the company, and it sought to withdraw," the citation said. "First Lieutenant Madison quickly gathered the remaining 15 men, and regardless of continuing enemy fire put them into positions to hold the hill. By sheer personal courage and disregard for his own life, First Lieutenant Madison inspired his men to repel three separate enemy counterattacks aimed exclusively at their position. He withdrew only upon orders. Two days later he captured seven enemy soldiers while leading his company in an attack routed through an extensive unmarked mine field."

Killed in subsequent action

Lieutenant Madison was killed in subsequent action with the Ninety-second Division on April 5, 1945.

First Lt. William E. Porter, of Indianapolis, who was also awarded the Silver Star for gallantry in action, exposed himself to enemy arms while his company advanced on its objective under a hail of machine-gun fire. With his unit pinned to the ground, Lieutenant Porter succeeded in eliminating the

685535—15200

machine-gun nest, killing the German officer in command and forcing the gun crew to surrender.

During a patrol action Staff Sgt. Mansfield Mason, of Baltimore, Md., distinguished himself by heroic conduct. Acting on information that some Germans had been seen to enter a house near a village, his patrol surrounded the building and effectively covered all of its approaches. Sergeant Mason then crawled to within 30 feet of the house in the face of withering machine-gun fire. He hurled three hand grenades into the building and shifted his position slightly. Out walked five Germans, including an officer, to surrender.

Among the Negro units operating outside the Ninety-second Division in Italy was a Signal Construction Battalion, assigned to the Fifteenth Air Force. This battalion established a record. It installed and maintained 2,300 miles of open wire, 500 miles of field wire, and 100 miles of cable in its first 4 months in Italy.

EUROPEAN THEATER

Combat troops

Slightly under 9 percent of the 259,173 Negro troops reported in the European Theater of Operations on May 15, 1 week after VE-day, belonged to combat organizations.

Twenty-two Negro combat units participated in the operations of the American Expeditionary Forces against the Wehrmacht. These were: The Three Hundred and Thirty-third, Three Hundred and Forty-ninth, Three Hundred and Fiftieth, Three Hundred and Fifty-first, Five Hundred and Seventy-eighth, Six Hundred and Eighty-sixth, Seven Hundred and Seventy-seventh, Nine Hundred and Sixty-ninth, and Nine Hundred and Ninety-ninth Field Artillery Battalions; Four Hundred and Fifty-second Antiaircraft Artillery Battalion; Seven Hundred and Sixty-first and Seven Hundred and Eighty-fourth Tank Battalions; Six Hundred and Fourteenth and Eight Hundred and Twenty-seventh Tank Destroyer Battalions; One Hundred and Eighty-third, One Hundred and Eighty-fourth, Sixteen Hundred and Ninety-fifth, Sixteen Hundred and Ninety-sixth, Sixteen Hundred and Ninety-seventh, Sixteen Hundred and Ninety-eighth, Sixteen Hundred and Ninety-ninth, and Seventeen Hundredth Engineer Combat Battalions.

685535—15300

The Three Hundred and Twentieth Barrage Balloon Battalion was the only Negro combat unit to take part in the initial landings on the Normandy coast on June 6. Classified as an antiaircraft organization, it was the only American unit of its type in Europe but was transferred from the theater before the end of the war.

Men from the Three Hundred and Twentieth Barrage Balloon Battalion waded ashore in the early hours of D-day, struggling with their "flying beer bottles" which they had brought across the channel on LSI's and LST's on the first assault waves. They brought their balloons to the shoreline, dug in with infantrymen of the First and Twenty-ninth Divisions, and proceeded under fierce enemy fire to erect a protective curtain of silver barrage balloons that proved highly effective in combating strafing German aircraft.

Negro artillerymen of the Three Hundred and Thirty-third Field Artillery Battalion landed their 155-millimeter howitzers in Normandy on D plus 10 and went into action shortly afterward as a unit of the Eighth Corps. Their first mission was to fire in support of the Ninetieth Infantry Division and take part in the bloody battles at St. Jores, Lessay, Hill 95, and Hill 122 in the Foret de Monte Castret.

This unit swept through the Avranches corridor with the Third Army and did considerable firing in Brittanny at St. Malo and Brest. When the German counteroffensive in the Ardennes began, the Three Hundred and Thirty-third had batteries staggered in Belgium and across the German border near Schoenberg.

LOSSES SEVERE

Along with United States units like the One Hundred and Sixth and Twenty-eighth Infantry Divisions, the Three Hundred and Thirty-third Field Artillery received the full fury of the spearhead thrust of Von Rundstedt's attack at the point of impact. Losses in men and equipment were severe. The battalion commander was captured and most of two gun batteries were casualties.

Survivors of this action and recently liberated prisoners captured during the fight told of stubborn resistance and examples of high courage by the artillerymen that prolonged the battle after large groups of men had been surrounded.

"We took our toll of Germans before we went down, either because we ran out of ammunition or because some of us were hopelessly cut off," reported one Negro RAMP of the unit, shortly before sailing for the United States from Le Havre.

The Nine Hundred and Sixty-ninth Field Artillery Battalion, another medium howitzer outfit, was the only Negro artillery unit in Europe to receive a Presidential Distinguished Unit Citation. It had fought through the Normandy, and northern France, campaigns, providing artillery backing for infantrymen of a number of United States divisions. When the Ardennes breakthrough started, the Nine Hundred and Sixty-ninth received orders to displace its guns and withdraw in the direction of Bastogne, Belgium.

It reached that little city in time to be pressed into service by the acting commander of the One Hundred and First Airborne Division, then Brig. Gen. W. A. McAuliffe, and to earn for itself a place in American military history as one of the units making up the gallant garrison that fought against overwhelming odds to save the strategically vital rail and road junction.

The Nine Hundred and Sixty-ninth Field Artillery Battalion received its Distinguished Unit Citation along with the One Hundred and First Airborne Division and other attached units which formed the garrison that fought the epic Battle of Bastogne. The citation reads:

DISTINGUISHED UNIT CITATION

"These units distinguished themselves in combat against powerful and aggressive enemy forces composed of elements of eight German divisions during the period from December 18 to 27, 1944, by extraordinary heroism and gallantry in defense of the key communications center of Bastogne, Belgium.

"Essential to a large-scale exploitation of this break-through into Belgium and northern Luxemburg, the enemy attempted to seize Bastogne by attacking constantly and savagely with the best of his armor and infantry. Without benefit of prepared defenses, facing almost overwhelming odds, and with very limited and fast-dwindling supplies, these units maintained a high combat morale and an impenetrable defense, despite extremely heavy bombing, intense artillery fire, and constant attacks from infantry and armor on all sides of their completely cut-off and encircled position.

"This masterful and grimly determined defense denied the enemy even momentary success in operation for which he paid dearly in men, matériel, and eventually morale. The outstanding courage and resourcefulness and undaunted determination of this gallant force is in keeping with the highest traditions of the service."

FIRST ROUND ACROSS RHINE

The Seven Hundred and Seventy-seventh Field Artillery Battalion was the only Negro 4.5-inch gun unit in the ETO and fought with the Ninth Army. One distinction claimed by the Seven Hundredth and Seventy-seventh is that it fired the first American artillery round across the Rhine River near Munchen-Gladbach.

Other veteran ETO Negro artillery units were the Nine Hundred and Ninety-ninth Field Artillery Battalion, which fired its 8-inch howitzers from lower Normandy to Central Germany, and the Five Hundred and Seventy-eighth, another 8-inch howitzer unit that helped to stem the Nazi tide in the Ardennes in December and January.

In early November the Seven Hundred and Sixty-first Tank Battalion, commanded by Lt. Col. Paul L. Bates, of Boonton, N. J., was committed as attached armor of the Twenty-sixth Infantry Division in the Third United States Army, becoming the first Negro tank unit to go into action.

The Seven Hundred and Sixty-first fought in six European countries—France, Holland, Belgium, Luxembourg, Germany, and Austria—and was at various times attached to the Third, Seventh, and Ninth United States Armies. During these campaigns the batallion furnished tank support for the Twenty-sixth, Seventy-first, Eighty-seventh, Seventy-ninth, One Hundred and Third Infantry Divisions, and the Seventeenth Airborne Division during the Battle of the Bulge.

Eight enlisted men of the unit won battlefield commissions. Decorations included 40 Bronze Stars, 8 Silver Stars, 3 of them posthumously awarded.

These Negro tankers spearheaded the famous "Task Force Rhine," which crashed through the rugged mountain defenses of the Siegfried line in the Nieder Schlettenbach-Reisdorf-Klingenmunster area. Task Force Rhine consisted of the Seven Hundred and Sixty-first Tank Battalion, the Second

685535—15300

Battalion of the One Hundred and Third Infantry Division's Four Hundred and Ninth Regiment, a detachment of combat engineers, and a recon platoon from the Six Hundred and Fourteenth Tank Destroyer Battalion, a Negro outfit. In 3 days the task force opened up a big hole in the Siegfried defenses through which passed the Fourteenth Armored Division on March 24.

Another Negro tank unit, the Seven Hundred and Eighty-fourth, arrived in Europe in time to assist the Thirty-fifth Infantry Division in crossing both the Roer and Rhine Rivers and the subsequent fighting that followed these crossings.

MOST BRILLIANT RECORD

Probably no other Negro combat unit in Europe achieved as brilliant a record, both in terms of consistently outstanding performance in battle and excellence of morale, as did the Six Hundred and Fourteenth Tank Destroyer Battalion. Commanded by Lt. Col. Frank S. Pritchard, a white officer from Lansing, Mich., the unit was mainly officered by Negroes.

The unit moved into position with the Ninety-fifth Infantry Division in front of Metz in November, but soon after was transferred to the One Hundred and Second Infantry Division of the Seventh Army, where it remained as attached tank-destroyer support until the end of the war.

For "outstanding performance of duty in action against the enemy" at Climbach, France, on December 14, 1944, the third platoon of company C of the Six Hundred and Fourteenth Tank Destroyer Battalion received a distinguished unit citation. The citation itself tells graphically the grim, heroic nature of the action:

"The third platoon was an element of a task force whose mission was to storm and capture the strategically important town of Climbach, France, on the approaches of the Siegfried line. Upon reaching the outskirts of the town, the task force was halted by a terrific hail of fire from an enemy force firmly entrenced in the surrounding woods and hills overlooking the route of approach. The only position available for direct fire upon the enemy was an open field.

"As the Third Platoon moved into position, its commander and several men were wounded. Undeterred by heavy enemy small arms, mortar and artillery fire, which was now being directed against their position, the men of the Third Platoon valiantly set up their 3-inch guns and delivered accurate and deadly fire into the enemy positions. Casualties were mounting; two of their four guns were knocked out; nevertheless, the remaining crew members heroically assisted in the loading and firing of the other guns. At the height of the battle, enemy infantry converged on the position from the surrounding woods, threatening to wipe out the platoon's position.

"While a few members of the gun crews remained firing the 3-inch guns, others manned machine guns and individual weapons, laying down a devastating curtain of fire which inflicted numerous casualties on the enemy and successfully repulsed the attack. During the fight an ammunition shortage developed, and gun crews were reduced to skeleton size, one man loading, aiming, and firing, while the other men repeatedly traveled a distance of 50 yards through a hail of mortar and small arms fire, to obtain shells from a half-track which had been set on fire by a direct hit from an enemy mortar shell.

"Heedless of possible injury men continuously exposed themselves to enemy fire to render first aid to the wounded. In this engagement, although the platoon suffered over 50 percent casualties and lost considerable matériel, its valorous conduct, in the face of overwhelming odds, enabled the task force to capture its objective.

"The grim determination, the indomitable fighting spirit and the esprit de corps displayed by all members of the Third Platoon reflect the highest traditions of the armed forces of the United States."

INFANTRY

In December 1944 several thousand Negro soldiers answered a general appeal for volunteers for training as infantry riflemen. Some 2,500 volunteers from Negro units of Communications Zone were trained at a ground forces reinforcement command depot at Noyons, France, and committed to action with infantry and armored divisions of the First and Seventh Armies as assigned platoons and companies.

The setting of a quota for these Negro infantrymen resulted in the rejection of nearly

685535—15300

3,000 other Negro GI's who wanted to fight at the front.

In a story carried in its Paris edition on March 19, the Stars and Stripes announced the presence in the line of Negro infantrymen and said: "Long contemplated, the plan of mixing white and colored doughboys in fighting units was launched not as an experiment in race relations but as an answer both to the needs of the military situation and repeated requests by Negro service troops for an opportunity to get into the war as combat men."

The men gave many reasons for having volunteered. Some were sick and tired of dull rear-echelon activity. Many went in for idealistic reasons, determined to disprove the myth that Negroes are poor combat soldiers and lacking in courage.

Said Pfc Leroy W. Kemp, from Atlantic City, N. J.: "We're all in this thing together now—white and Negro Americans in the same companies—and that's how it should be. That's why I volunteered. Most Negro troops are in service units. We've been giving a lot of sweat. Now, I think, we'll mix some blood with it."

The record shows clearly that these men gave an extraordinarily fine account of themselves in combat, captured and killed hundreds of Germans, earned many decorations for front-line heroism, and won praise and respect from their white fellow infantrymen.

Negro rifle platoons fought with the First, Second, Eighth, Ninth, Sixty-ninth, Seventy-eighth, Ninety-ninth, and One Hundred and Fourth Infantry Divisions of the First Army, and Negro companies joined armored infantry battalions of the Twelfth and Fourteenth Armored Divisions.

"If comments of white personnel of these divisions are any indication, the plan of mixing white and colored troops in fighting units, a departure from previous United States Army practice, is operating successfully," a Stars and Stripes staff writer reported in an article in the paper's April 6 issue.

FRIENDLY WELCOME EVERYWHERE

Negro reinforcements reported a sincere, friendly welcome everywhere. They also spoke of excellent relations with their white fellow-doughs, of the making of inter-racial friendships.

One company commander's comment was typical, "The integration of the Negro platoon into this unit was accomplished quickly and quietly. There was no problem."

In its first action the Negro platoon of K Company of the Three Hundred Ninety-fourth Infantry Regiment of the Ninety-ninth Division, led an attack on the town of Honningen across the Rhine River, cleared one-fourth of it and captured over 250 prisoners.

Another platoon with E Company of the Three Hundred Ninety-third Regiment of the same division got its baptism of fire on March 25 when it attacked German positions near Jahrfeld, Germany. Employing marching fire, they advanced, routing the Germans, knocking out a Mark IV tank and a flak wagon, killing 48 of the enemy and capturing 60. These men gained their objective, Hill 373.

The Negro platoon of Company G of the Two Hundred Seventy-third Infantry Regiment helped the Sixty-ninth Infantry Division to become the first American unit to make contact with the Russian forces. During the platoon's first combat action at Hann Munden, Staff Sergeant Ames Shipper, of Philadelphia, Pa., took 118 prisoners from a barn.

This platoon was later attached to the Ninth Armored Division's Combat Command A for the drive across the German plains to the Mulde River. This platoon helped in the capture of Falkenharst, Wersenfeld, and a number of other German towns during this drive.

On VE-day, May 8, a group from the Negro platoon led by Lt. H. C. Hind, Los Angeles, Calif., and Staff Sgt. Elmans Starks, Washington, D. C., crossed the Elbe River, met Russian troops and held a victory celebration. It was the first time that these Russians had seen American Negroes and they exchanged stories and souvenirs and had a victory feast.

Sgt. Edgar E. Zeno, a member of the Negro platoon of G Company of the Thirty-ninth Infantry Regiment of the Ninth Infantry Division, received the Silver Star for "gallantry in action against the enemy." Near Siedlinghausen, Germany, Zeno's company met heavy enemy machine-gun fire. Zeno worked his way across open terrain, armed with a BAR, firing all the while.

Twenty-five yards from the machine-gun position, he hurled a hand grenade and rushed the emplacement. His action led to

635535—15300

the capture of the machine-gun position, during which he killed 7 Germans, wounded 3, and enabled his unit to take 60 more prisoners.

ANOTHER SILVER STAR

Another Silver Star recipient was Pfc June Jefferson, Jr., of Company A, Four Hundred and Fourteenth Infantry Regiment of the One Hundred and Fourth Infantry Division. The award citation stated:

"When an enemy tank crashed through a road block and entered a recently captured town, Private Jefferson voluntarily and at great risk of his life, crossed open, fire-swept terrain in the face of direct fire from the tank, made his way to the house where the tank was located, and dropped incendiary and fragmentation grenades into the open turret of the tank, causing it to catch fire.

"As the crew emerged, he killed them with his rifle. He then returned to his position and quickly organized an assault of the enemy riflemen who were supporting the tank, killing, wounding, or capturing all of the enemy infantrymen."

One of the finest tributes paid these volunteer infantrymen came from Brig. Gen. Charles T. Lanham, assistant commander of the One Hundred and Fourth Infantry Division, following the presentation of combat decorations of 11 of the men.

"I have never seen any soldiers who have performed better in combat than you," General Lanham told the Negro doughboys.

SIGNAL CORPS

During the campaign against the German Army in Europe, 5,500 Negro Signal Corps troops belonging to 20 signal units participated in the vital battle of communications.

These Negro troops worked in two main types of Signal Corps units—light and heavy signal construction battalions and companies.

Negro units that participated in various campaigns were the Twenty-fifth, Twenty-ninth, Thirty-seventh, Fortieth, Forty-first, Forty-second, Forty-third, and Forty-fourth Signal Construction Battalions, and the Two Hundred and Fifty-eighth, Two Hundred and Fifty-ninth, Two Hundred and Sixty-first, Two Hundred and Sixty-seventh, Two Hundred and Sixty-eighth, Two Hundred and Sixty-ninth, Two Hundred and Seventieth, Two Hundred and Seventy-fifth, Five Hundred and Thirty-fourth, Five Hundred and Thirty-fifth, Five Hundred and Thirty-seventh, and Four Hundred and Ninety-sixth Signal Construction Companies.

Negroes comprised 7½ percent of the total Signal Corps personnel in the European theater.

Several of these units made communications history. Negro signal outfits laid wire from the hedgerowed fields of Normandy, across France, Luxemburg, and Belgium deep into Germany.

A recent estimate of communications wire put in by Negro troops released by Communications Zone Headquarters included these figures: Over 10,000 miles of open wire set up, over 500 miles of field wire, and over 500 miles of rubber and lead spiral 4 cable.

The Twenty-ninth Signal Construction Battalion arrived in France on D plus 9 and 10. Its first major mission—rehabilitation of the Chef du Pont-Valognes railroad pole line, was accomplished in the face of enemy snipers, mines, and artillery fire.

After this the Twenty-ninth moved into Carentan on June 22, shortly after the town had been liberated by United States forces, and repaired damaged telephone lines frequently under heavy German artillery fire.

Another Negro Signal Corps unit—the Forty-first Signal Construction Battalion—arrived on the Continent on D plus 20 and was assigned to the rehabilitation of damaged French lines. The first line started at Valognes, Normandy, and ran into Cherbourg, where the Forty-first signal men worked before the city was completely cleared of enemy resistance.

The unit set up about 200 miles of open-wire pole lines and 40 miles of underground lead-covered cable. This latter is reported to be the longest underground cable laid in Europe by any one signal unit. The Forty-first also installed the communications system for the Continental headquarters of Communications Zone during the Normandy campaign, and assisted with the installation of communications for the first SHAEF continental command post.

The Forty-first Signal Construction Battalion was officially commended for its work in Normandy by Maj. Gen. W. S. Rumbough, chief signal officer of the ETO, who said: "This is to commend the officers and enlisted men of the Forty-first Signal Construction Battalion upon the construction work in connection with the establishment of the

685535—15300

headquarters Communications Zone signal system. The work was done at high speed, and the men worked far in excess of their normal working schedule to accomplish their job."

CHEMICAL WARFARE

Chemical Warfare Service headquarters in the European theater of operations has disclosed that of the 9,500 Chemical Warfare Service troops in the theater on VE-day, 2,442 of these were Negro enlisted men and officers. Other Negro Chemical Warfare Service units were the three chemical decontamination companies, the Twenty-fifth, Thirty-second, and Thirty-fourth.

All of the smoke-generato. units were not used in their primary function of manufacturing artificial fog, several being diverted to trucking operations under Transportation Corps supervision.

The record shows that the smoke-generator companies which saw action performed excellently, often under heavy enemy fire, winning praise from infantry commanders and chemical officers.

The Eighty-fourth Chemical Smoke Generator Company arrived in France on D-plus-1, but did not engage in smoking operations during the early part of the Normandy campaign. Its first important combat test came when it was attached to the Fifth Infantry Division in the latter part of Sepember 1944.

The Fifth Division was in the Moselle River Valley region and meeting severe German resistance there. The Eighty-fourth provided smoke for the screening of bridge-building operations across the river and materially assisted in the winning of the first major United States bridgehead east of the Moselle in that part of the valley.

There were casualties among the smoke men and a number of them distinguished themselves by gallantry under observed enemy artillery fire.

After watching men of the Eighty-fourth perform under fire during this action, the commander of the Tenth Infantry Regiment told them: "If I could, I would award the combat infantryman badge to all of you."

Some idea of the difficulties encountered during the Moselle operations can be obtained from reading the company operations record. The report covering the period November 12 to November 18 has the following facts recorded concerning the smoking of the Moselle crossing at Ancerville.

"Artillery fire was continuous over the entire area on November 15. At approximately 1200 on November 16, artillery fire at positions 1, 2, and 3 and on the surrounding roads made it impossible to bring supplies to these generator positions. Two trucks and one generator were hit by shrapnel."

Another Negro unit, the Seventy-fourth Chemical Smoke Generator Company, made smoke to cover the Ninth Army's crossing of the Roer River in February. It was attached to the Eighty-fourth Infantry Division for the attack across the Roer.

The division G-3 reported that the company had completed its mission "in an excellent manner." The G-2 of the division also reported that 300 enemy artillery rounds landed in Linnich, Germany, in 5 minutes on February 22 while the Seventy-fourth was working there.

One of the greatest artificial fogs in military history was created in December 1944 by the all-Negro One Hundred Sixty-first Smoke Generator Company when it shrouded the upper Saar River Valley with a dense cloud of fog that completely obscured the movements of one entire division, the Ninetieth Infantry Division.

The Ninetieth Division was effectively concealed for nearly 2 weeks, it is reported, during which time the entire division crossed the Saar, established a bridgehead, wiped out 260 pillboxes, wrecked a portion of the Siegfried Line and killed hundreds of enemy soldiers.

During this operation the One Hundred Sixty-first fed 146,000 gallons of oil into their M2 smoke generators.

The One Hundred Sixty-third Chemical Smoke Generator Company was assigned to the job of screening the crossing of the Neckar River at Heilbronn, Germany, by the One Hundredth Infantry Division of the Seventh Army. The mission was successfully accomplished.

A report of the operation states simply: "Hostile artillery and rocket fire was intense."

This unit also assisted in screening the crossing of the Rhine River at Speyer, Germany, on March 25 and 26, in support of advance elements of the Seventy-first Infantry Division. Its mission was to support the division's river crossing and to divert the enemy's attention from the site of the major river crossing operation which was to take in another location.

685535—15300

Negro chemical smoke generator companies that operated on the Continent between D-day and VE-day were: The Eighty-first, Eighty-second, Eighty-third, Eighty-fourth, Eighty-fifth, Eighty-sixth, Eighty-seventh, Seventy-fourth, One Hundred and Sixty-first, One Hundred and Sixty-second, One Hundred and Sixty-third, One Hundred and Sixty-fourth, One Hundred and Sixty-fifth, One Hundred and Sixty-seventh, and One Hundred and Seventy-first Chemical Smoke Generator Companies.

Other Negro units in the Chemical Warfare Service were the Twenty-fifth, Thirty-second, and Thirty-fourth Chemical Decontamination Companies.

ORDNANCE

Of the 6,000,000 tons of ammunition handled by ordnance ammunition companies on the Continent between D-day and VE-day, more than 4,500,000 tons passed through the hands of Negro ordnancemen, Maj. Gen. Henry B. Sayler, chief ordnance officer of the ETO, said recently.

In releasing the figures on the amount of ammunition made available for use by United States fighting men, General Sayler paid high tribute to the 14,323 Negro enlisted men who accounted for 11 percent of the total ordnance personnel on the Continent.

"Not only did these Negro troops 'pass the ammunition,'" said General Sayler, "but on numerous occasions many of them fought the Germans, participated in patrols, and took prisoners."

The forward ammunition supply points operated by these Negro ordnancemen were the retail source for all types of ammunition, bullets, shells, fuses, and propelling charges, served directly to infantry, artillery, and armored units. As such, these ammunition supply points were behind the front lines and on several occasions, in front of them, especially during periods of fluid fronts.

One ammunition company, the Six Hundred and Twenty-sixth, although it had moved into its new location, was unable to operate until the infantry had cleared the enemy artillery from a hill less than 2 miles away.

The peak of ammunition handling was reached shortly after the Germans were repulsd in their Ardennes break-through. During the period that followed, the 101 ammunition companies received and issued 24,000 tons per day, or seven to eight thousand tons over the average of 15,000 tons per day established in the European campaign.

In carrying out their mission of supplying ammunition to the men behind the guns, the Negro ordnancemen displayed courage time and again, General Sayler declared.

An example cited by General Sayler was the bravery demonstrated by the members of the Six Hundred and Fifty-fifth Ordnance Ammunition Company which unloaded a trainload of white phosphorous mortar shells on December 26, near Soissons, France, while shells were exploding around them. Their acts of heroism saved the French city from complete destruction.

Another noncombat Negro ordnance ammunition company earned the title of the "Fighting Fifty-sixth" when its members engaged 51 German SS troops near the Belgian border early in September. When the shooting was over, 36 Nazis were killed, 3 wounded, and the rest taken prisoner.

Of the 20 ordnance motor-vehicle distributing companies in the European Theater of Operations, two of them were manned by 430 Negro ordnancemen. These distributing companies furnished the combat troops with armored vehicles and service troops with the trucks necessary to keep the front-liners supplied.

The remainder of the Negro personnel, 165 in number, were active in the administrative divisions of battalion headquarters.

MEDICAL CORPS

Negro personnel formed 2.2 percent of the total European Theater of Operation medical service strength or 5,482, a statement released by the office of the chief surgeon of the European theater of operations disclosed.

Negro officers were distributed as follows: Medical officers, 51; Dental Corps, 28; Medical Administrative Corps, 17; and Nurse Corps, 67. Sixty-five of the Negro nurses were attached to the One Hundred and Sixty-eighth Station Hospital in England.

Working with divisions at the front the performance of Negro medics was particularly outstanding.

The Four Hundred and Twenty-eighth Medical Battalion operating with the First Army, carried more than 1,200,000 patients in their ambulances in evacuating wounded to rear areas.

685535—15300

Of the 230,000 patients hauled by the Five Hundred and Ninety-second Ambulance Company, only 2 were lost, those being caused by enemy action when an ambulance was strafed by enemy aircraft at Malmedy during the German counteroffensive last winter.

Typical of the heroism displayed by the medics is the story of Corp. Waverly B. Woodson, Jr., of Philadelphia, a medic of the Three Hundred and Twentieth Barrage Balloon Battalion.

At about 9:30 a. m. on D-day Corporal Woodson was wounded by shrapnel when the LST in which he was riding was damaged by a floating mine near the shore. The ship was under continuous mortar and machine-gun fire and was finally beached.

Corporal Woodson, along with three other enlisted men and an officer, went over the side of the LST onto the beach where they planned to set up a first-aid station. The shrapnel wound, which he had not noticed, was dressed by a member of the party. All other participants said that Corporal Woodson began caring for the wounded as a member of the group at 10 a. m. and remained on duty treating wounds ranging from bullet abrasions to intestinal wounds until relieved at 4 p. m. the next day.

When they were relieved Corporal Woodson found himself without bedding and started down the beach to acquire blankets. He was called by a group of soldiers who had been completing a landing operation by a rope attached to an LST out in the harbor and anchored to the beach. The rope had broken and three of the men attempting to land had been submerged. Corporal Woodson's Red Cross brassard attracted the soldiers on the beach and they called him to assist in giving artificial respiration, which he did. The three joined their companions after his treatment. Corporal Woodson was then sent to the hospital for further treatment of his wound.

Following an investigation by Lt. Col. Leon J. Reed, of the Three Hundred and Twentieth Barrage Balloon Battalion, a recommendation for an appropriate award has been made for Corporal Woodson.

Corps of Engineers

Of the 259,173 Negro troops in the European theater of operations as of May 15, a little more than one in every five was an engineer soldier, according to information released by the office of the chief engineer of the European Theater of Operations.

On May 31 there were 54,600 Negro engineer enlisted men, 320 officers, and 54 warrant officers, of a total of 337,000 in the theater's engineer command. This total includes personnel of general service regiments, engineer dump-truck companies, engineer fire-fighting units, aviation engineer battalions, and separate battalions. There were 165 engineer units of all types.

A survey of Negro engineer units showed that Negro engineers participated in all of the main operations by United States forces on the continent which required engineering, from D-day landings and beachhead operations of June 1944, to the conquest of the Rhineland.

Dump Truckers

One unit, the Five Hundred and Eighty-second Engineer Dump Truck Company, landed on Omaha Beach shortly after H-hour on June 6 and worked continuously up until and after the crossing and bridging of the Rhine.

The Five Hundred and Eighty-second was one of 58 Negro engineer dump-truck units in the ETO on May 31. This outfit came ashore on D-day with the One Thousand One Hundred and Sixth Engineer Combat Group, performing its "primary mission"—hauling bridging equipment and explosives. Almost immediately these dump truckers were conscripted to taxi combat personnel of the Eighty-second and One Hundred and First Airborne Divisions and the Fourth Infantry Division to forward areas.

Silver and Bronze Stars were awarded to several men of the unit for bravery under fire. First Sgt. Norman Day of Danville, Ill., received the Silver Star for heroism on the beach where he directed United States traffic under heavy shelling. Day also received the Purple Heart for wounds and the British Distinguished Service Medal.

During the Rhine crossing operations the Five Hundred and Eighty-second was significantly well up forward working as a XVI Corps unit, hauling crushed rock for bridge building operations.

These dump truck units worked all over Europe but rarely hit the head. The Four Hundred and Thirty-fourth, another Negro dump truck company assisted the One Thou-

685535—15300

sand and Fifty-sixth Port Construction and Repair Group in rehabilitating the port of Cherbourg in July 1944. They worked day and night on a double shift basis, removing thousands of tons of debris that had accumulated from bombing and demolition work.

Not all of the work done by the engineer dump-truck units was in the rear areas, however. The following excerpt from the unit history of the Five Hundred and Seventy-second Engineer Dump Truck Company, a Negro unit, describes a front-line incident:

"July 3, 1944, Pvt. William Wright, Jr., wounded by enemy shell fire while on operations delivering engineer supplies to a bridge site which was under enemy fire."

On July 20 this unit was given the job of hauling road-building material and debris for filling craters and building bridge approaches ahead of the armored columns which broke through the day after the capture of Lessay in Normandy.

The following account of a strafing attack on a Negro dump-truck convoy near Fontainebleau, France, was written by one of the drivers, and illustrates the dangers and difficulties under which the men frequently operated:

"The German planes came in very low dropping flares, lighting the area as far as one could see. The AA guns answered back with steady streams of cross-fire. The convoy was brought to a halt. The men scrambled to their guns and opened fire in unison with the ack-ack barrage.

"The accurate fire sent up by the men made it impenetrable. The barrage continued for what seemed an eternity before all was quiet. The Germans had gone on leaving the main bridge destroyed, their only damage. The men descended from their guns reluctantly. After finding a new road the convoy continued and delivered our much-needed cargo."

GENERAL SERVICE REGIMENTS

According to paragraph 318 of FM 5-5, which is the Engineer Field Manual, the mission of an engineer general service regiment is defined: "The engineer general service regiment performs general engineer work—particularly that requiring most skilled labor—throughout the Army service area and communications zone of the theater of operations. A general service regiment * * * is capable of executing extensive and permanent work."

This general phrasing of a general service regiment's function provided sufficient latitude for Negro general service units to perform a wide variety of tasks on the Continent, from erecting tent camps and welding to repairing damaged rail lines and all purpose excavations.

By VE-day 60 percent of all engineer general service regiments assigned or attached to Communications Zone were Negro units, 30 out of 50 reported on May 31.

When the Three Hundred and Fifty-sixth Engineer General Service Regiment moved into Granville, France, four days after the German garrison had left, it was given a few unexisting chores to do. One battalion was assigned to clearing and rehabilitating buildings and quarters in the city, removing debris, wiring, plumbing, and glazing a number of three-story houses.

"In addition," the regimental record states, "two kitchens were constructed and additional latrines and washrooms erected, showers installed, and an area of some 36,000 square feet graded and cleared."

After doing this, the regiment went to work on maintenance and repair of the road net from Granville to Vire to Mortain and Avranches, and all minor roads, a total of 245 miles of road net. The work consisted of repairing bomb craters and holes, "resurfacing of shoulders and general maintenance."

By and large this is the kind of work general service regiments were given to do. But it was precisely this work of rehabilitation and maintenance that helped to keep Communications Zone functioning.

Another Negro general service regiment, the Ninety-fifth, arrived in France July 8. It had worked on the Alcan Highway to Alaska and in Wales. Its first operational mission said: "Road construction and maintenance, debris clearing and street reconstruction in the Valognes and Cherbourg areas."

But during this job mines and booby traps were encountered in hundreds. They had to be removed and defuzed. The regiment also built during this period a very important traffic circle in the heart of shattered Valognes. Through that circle passed a vast and vital flow of traffic between Cherbourg and the beaches, toward the front.

685535—15300

This regiment was officially commended by Lt. Gen. C. H. Lee, Communications Zone commander for its work in constructing Communications Zone headquarters at Valognes.

Another job assigned to the Ninety-fifth was the rehabilitation of a single rail track from Alencon to Mortagne, France. How the job was completed is told in the regimental history:

"Three days were spent on removal of explosives in the yards at Mesles-sur-Sarthe before any heavy equipment could be put to work. The railroad bridge at Bressy-Mangis was damaged as a result of enemy demolitions, but the span was not completely dropped from the abutment, and a trestle bent placed under the end after jacking provided suitable bearing. The attempted demolition of the trestles themselves were very ineffective, and they were repaired in place by welding and patching.

"On September 2 a test run was made over the line with a locomotive. On the 4th the project was finished."

Another Negro general service regiment, the Three Hundred and Ninety-second, was awarded the Meritorious Service Unit Plaque for work performed between September 23 and December 31.

"Despite numerous difficulties," the citation order states, "including inclement weather and limited supplies, this unit efficiently accomplished several difficult and hazardous projects. The enterprise, ingenuity, and unremitting diligence displayed by the members of the Three Hundred and Ninety-second Engineer General Service Regiment were in keeping with the highest traditions of the armed forces of the United States."

The Meritorious Service Unit Plaque is awarded for "superior performance of duty in the performance of exceptionally difficult tasks."

TRANSPORTATION CORPS

Negro troops made an impressive contribution to the operations of the Transportation Corps from D-day to VE-day, a survey compiled from information obtained from ETO Transportation Corps headquarters showed.

The mission of the Army's Transportation Corps is to transport men and supplies. Statistics released by the office of Maj. Gen. Frank S. Rose, chief of transportation in the European theater, indicate the magnitude of its achievements as well as the extent of Negro participation in the operations of the corps.

Of a total of 157,327 troops in the Transportation Corps in the ETO, reported on May 3, 1944, 69,914 of these were in Negro units—or 44.4 percent.

Thirty-two of the forty-on. port battalions reported were Negro, while out of 50 separate port companies in the theater 38 were Negro, making a personnel total of 31,763 in all Negro port units.

In the quartermaster truck field, 316 of the 453 quartermaster truck companies operating under Transportation Corps control were Negro companies. Ten of the nineteen quartermaster groups were Negro, and there were 31 Negro battalions among the 86 quartermaster battalions listed. There was one Negro quartermaster car company, the Five Hundred and Twenty-fourth, and four Negro chemical smoke generator companies under Transportation Corps command.

PORT BATTALIONS

When the first United States elements reached the French coast in June, Transportation Corps units were among them and the battle of the beaches merged with the vital and hard-fought battle of supply.

Negro troops of the Transportation Corps were in the initial waves on D-day, came ashore with the engineer brigades and helped start what eventually became the greatest supply operation in military history.

The Normandy supply battle was won by units like the Four Hundred and Ninetieth Port Battalion, which came in with the second tide on D-day and unloaded crucial supplies of ammunition, food, and equipment to be used by the assault troops.

"We were in holes dug in on the beach when artillery fire from the bluffs started giving us hell," Corp. Joseph McLeod, of Tampa, Fla., a checker who landed with the Four Hundred and Ninetieth recalled. "That was about 10 in the morning. After it slackened, we got up and went to our LCT and unloaded 105 millimeter shells."

Another Four Hundred and Ninetieth man, Staff Sgt. Fred B. Jones, of Hazelhurst, Miss., was in charge of a platoon on an LCT carrying a load of antitank mines, detonators, and fuzes. He said:

"We stacked the stuff up on the beach and then moved it inland. We were lucky that stuff didn't get hit by shellfire. We made a

685535—15300

human chain and passed the cargo inshore by hand."

Other Negro units that arrived on D-day, D plus 1, and the first week of the beachhead fight were the Four Hundred and Ninety-fourth and Five Hundred and Second Port Battalions.

These operations were constantly under fire. To keep the invasion moving, men and supplies had to be discharged with split-second timing, and men worked the ships until exhausted. Work shifts ran into one another and men continued to volunteer to unload ships under hazardous conditions that included direct artillery fire and strafing.

"As one of the few regularly constituted Services of Supply units selected to accompany the Combat Engineer Battalions in the establishment of the beachhead, the Five Hundred and Second Port Battalion suffered some casualties," the unit history laconically reports. Their casualties included the battalion's commanding officer, Lt. Col. James T. Pierce, of Erie, Pa.

This unit sailed for France on June 2 and started unloading on the morning of the 7th. In accomplishing its mission in "Plan Neptune," as the invasion was called, the Five Hundred and Second met problems that were complicated by the element of "calculated risk." The record indicates it solved them all.

The GI stevedores had to devise special slings for handling bundles of pierced steel planking, a type of cargo that proved a problem during the ship DUKW operation.

The job of unloading cargo at the beaches and the ports never stopped. Tonnage schedules were reached and exceeded. Unloading records were broken week after week.

By May 8, VE-day, total United States Army cargo arriving by water and discharged by port units amounted to 20,432,368 tons. How much of this was unloaded by Negro port units is not precisely known, but a general estimate can be obtained from the fact that 77 percent of all port units operating during this period were Negro units.

The next phase of the battle of supply following seizure of the beachhead and expansion of the Allied toehold on Europe, consisted of development of Cherbourg and the minor ports on the north side of the Normandy Peninsula. Negro port units worked all of these ports.

685535—15300

How the battle of supply during this period was won is tersely told in "The Transportation Corps" in the Battle of France, volume IV, which is the official history of the Transportation Corps operating in Europe. An excerpt reads:

"Front-line Transportation Corps units from the battle of the beaches—the port battalions and the DUKW companies—played their part in the unspectacular but equally important work of getting supplies into the port of Cherbourg. The port battalions marched to the embarkation point at 0730 where they were ferried by the Navy in LCM's to ships waiting at anchor. The same battalion was assigned every day to the same ship until it was finished, and if possible, each group was given the same hatch to work in order to increase its efficiency."

By August 15, 10,000 long tons had been discharged at this port in a single day by an unloading force that was overwhelmingly Negro.

Cherbourg was a key Allied port. Its reconstruction and development became a chief task of the Transportation Corps. Its development was vital to the speeding-up of military operations on the Continent. The whole supply build-up hinged on the exploitation of Cherbourg. Much credit for the success of the complicated and arduous Cherbourg operation must go to the port battalions and DUKW companies that brought the cargo ashore and to the port construction groups and special service engineers who repaired the harbor.

On July 21, the 11th Port moved from Omaha Beach into the small ports of St. Vasst, Carentan, and Barileur, and continued work begun at Isigny and Grandcamp. Negro Transportation Corps units participated in all these operations, as well as in the development of the port of Granville.

The Negro contribution to the supply victory further can be gaged from the following facts. Progress of the campaign and the time factor would not permit development of the large Brittany ports as called for in the original plans. The military operations were supplied and supported by Cherbourg and the smaller Normandy ports. Through these small ports and Cherbourg, sufficient supplies were funneled to support the decisive break-through at St. Lo on July 25. Negro port and DUKW units handled the bulk of these supplies.

There were 53 ports in all, exclusive of Utah and Omaha Beaches, used by United States forces between D-day and VE-day. The largest were Le Havre, Antwerp, and Marseilles. As already stated the major share of tonnage handled came through the hands of Negro stevedores and crane operators.

AMPHIBIAN TRUCK COMPANIES

Six Negro DUKW companies, the Four Hundred and Sixty-seventh, Four Hundred and Sixty-eighth, Four Hundred and Sixty-ninth, Four Hundred and Seventieth, Eight Hundred and Nineteenth, and Eight Hundred and Twenty-first Amphibian Truck Companies, had been attached to the Eleventh Port for "Plan Neptune," the invasion operation. The first of these, the Four Hundred and Sixty-eighth, arrived on D plus 10. Others followed shortly after and helped importantly in the solution of the critical supply problem.

The official Transportation Corps historian states: "Great difficulty was experienced in locating ships at night. DUKW's were sunk by striking submerged objects and one was lost through the explosion of a mine.

"Guts and nerve, and the willingness to work long hours to help the soldiers struggling to enlarge the beachhead won the day, however. By June 26, these men discharged 14 coasters and 11 motor-transport ships and supplies were being built up on a scale sufficient to enable the fighting men to turn the landing into an offensive of decisive proportions."

These DUKW's saved the day following the severe coastal storm of June 20–22 which wrecked all of the Loebnitz piers on the beaches and temporarily halted port battalion unloading. The DUKW's stepped into the picture and carried the cargo night and day, onto the beach and sometimes inland to the waiting combat troops.

During this period an Eleventh Port officer estimated that these DUKW units hauled ashore 94 percent of all cargo unloaded at Omaha Beach.

On May 30, there were 16 amphibian truck companies in the ETO, 10 of them Negro units with a total personnel of 1,730. One Negro unit, the Four Hundred and Sixty-ninth, ferried supplies and personnel across the Rhine River during the attack that placed American forces on the east bank of the river.

685535—15300

TRUCK COMPANIES

As of May 30, 1944, 69 percent of all truck drivers in Transportation Corps' motor transport branch in the ETO were Negro. This average remained much the same following the beachhead phase of the battle of Europe.

Some of these units operated continuously after D-day. Negro cargo truck units landed vehicles and personnel on Omaha Beach on June 6. The Three Thousand Six Hundred and Eighty-third Quartermaster Truck Company had vehicles ashore on D-day. The Three Hundred and Seventieth Quartermaster Truck Company, a transportation unit, was scheduled to land 55 vehicles and 115 men on the beach on D-plus-1. Instead, it got 24 men and 12 trucks ashore as early as the morning of D-day.

The Four Thousand and Ninth Quartermaster Truck Company landed 115 men and 55 vehicles on the beach on D-plus-1. The Four Thousand and Forty-second Quartermaster Truck Company landed 6 men and 34 vehicles on D-day.

These men went through unforgettable experiences. What they did is starkly told in comments of some of the drivers of the Three Thousand Six Hundred and Eighty-third Quartermaster Truck Company, D-day veterans all:

Corp. Clavon Brown: "About 25 yards offshore 8 to 10 shells hit right near us. We hauled till 1800 on D-day. We dug in on the beach. Hauled ammunition on D-plus-2 while enemy planes strafed around us."

Pvt. George McLain: "After we got on the beach, an 88 burst my truck radiator. Hawkins, the mechanic, used the radiator from a deadlined truck to keep it running. On D-plus-4, I was nicked on the arm by a bomb fragment."

Pvt. Herman Copeland: "Eighty-eights were hitting all around us. We were just lucky. While hauling ammunition, bullets hit the corner of the gas tank and left door, just barely missing me."

Pvt. Walter Pearson, Jr.: "My truck drowned out and I had to swim into shore. A couple of grenades were thrown at my truck while I was hauling ammunition. On D-plus-3 a bomb dropped in front of the truck and tore up the radiator and both front tires. The fragments killed several foot soldiers. I also hauled some wounded from the lines."

After Cherbourg and the smaller ports in Normandy had been opened and operating, the main burden of transporting supplies fell on truck transportation. As the tactical situation improved and the military railway service started to operate its first trains, trucks were used to clear the ports, supplementing the rail lines whenever possible, and hauling troops and supplies to the combat areas.

The St. Lo break-through lengthened American supply lines enormously. But Transportation Corps's motor transport followed General Patton's Third Army, making possible exploitation of the break-through and maintenance of the speed of advance.

The first motor express line—the famous Red Ball Express—was started on August 25, 1944. It was built on the one-way traffic principle. Trucks were kept operating 22 hours out of 24 with only 2 hours reserved for maintenance. Drivers worked an average of 36 hours on the road without sleep.

At its peak Red Ball contained 67 percent Negro personnel. Its initial target was to haul 4,850 tons daily from the ports and beaches to Army or forward destinations. Peak reached by the system was 6,000 tons daily.

Between August 25 and November 13, Red Ball's 132 companies hauled 412,193 tons from the beaches and Normandy ports to the First and Third United States Armies. An average Red Ball Express route round trip was 546 miles.

As the supply situation dictated the closing down of Red Ball, other motor routes were opened from other ports.

There was White Ball, ABC, XYZ, Yellow Ball, Green Diamond, Red Lion, B-B (Bayeux to Brussels), Yellow Diamond. These were all important truck express routes which combined to form the world's greatest supply operation.

The motor express lines alone accounted for transport of 3,169,744 tons between D-day and VE-day.

Bombing and strafing were routine dangers for Transportation Corps drivers before Red Ball started operating.

RED BALL CITED

On behalf of General Eisenhower, Maj. Gen. E. S. Hughes, decorated Corp. Robert E. Bradley, of Lynchburg, Va., Negro truck driver of the Army's famed Red Ball Highway, with a Bronze Star Medal, and lauded the work of the thousands of Negro quartermaster truck drivers who were hauling vital front-line supplies over this 400-mile one-way loop, day and night, to the fighting fronts. It was awarded in symbol of all drivers.

Sixty percent of the drivers were Negroes. Stopping a huge convoy on the outskirts of Paris, Major General Hughes pinned the decoration on Corporal Bradley in a surprise ceremony which caught the entire trucking group unaware. He told them that he would have liked to present all of them with medals, but that "Bradley was chosen as a representative of the whole Red Ball Highway, including the men who repair the roads and bridges, put up the telephone wires and do all the service work in the rear.

"General Eisenhower realizes that you men seldom get the same recognition as soldiers in the front line and wants you to know that the part you're playing is vital. His message is for every man engaged on this vast project; the troops at the front couldn't do without you."

Maj. Gen. Frank Ross, Chief of Transportation, Communications Zone, disclosed that the route was four times the length of the Burma Road, and that in its first 26 days of operation it hauled and delivered more than 200,000 tons of supplies to advance depots, where front-line units picked it up with their hauling units.

Speedier supply became acutely necessary when Lt. Gen. George S. Patton's Third Army broke through at St. Lo, and began moving with lightning-like rapidity through France. And so the Red Ball Highway came into existence, with thousands of truck drivers pulling 24-hour a day shifts, as the long convoys rolled across specially designated one-way military highways through France.

The vast line became the biggest chain of supply maintained by United States forces.

During Von Rundstedt's break-through in the Ardennes in December, hazards encountered by Transportation Corps' truckers in supporting front-line troops made the Normandy and central France operations look mild by comparison.

During the historic Bastogne fight drivers carried ammunition and food into United States pockets as German forces closed in behind them. There were times, too, when these drivers having delivered their cargo had

685535—15300

to take their individual weapons and dig in with the Infantry.

But the most impressive testimony to the work of the drivers of the Transportation Corps, including the 35,839 members of Negro Transportation Corps truck units, is the tremendous total tonnage forwarded by Motor Transport Service in Europe between June 17, 1944, and May 31, 1945. It is 22,644,609 tons.

PACIFIC THEATER

All through the Pacific campaign runs the story of the heroism of Negro soldiers. They were in at the start in the Philippines and at the finish too.

In fact, the first American soldier of the armored force killed in the Pacific theater was a Negro boy, son of a Tennessee sharecropper. He was Pvt. Robert H. Brooks, who died on the battlefield near Fort Stotsenburg, in the Philippines, on December 8, 1941. The main parade ground of the armored forces at Fort Knox, Tenn., has been named Brooks Field in memory of Private Brooks.

The Ninety-sixth Engineer Battalion—later the Ninety-sixth Engineer Regiment—landed in Port Moresby, New Guinea, on April 29, 1942, the first American troops in New Guinea and probably the first American troops to face the enemy after Bataan.

In Alaska, the South, Southwest, and Central Pacific areas, and in the China-Burma-India theater, Negro troops played an important role in engineering activity. This included the construction of roads, airfields, ports, camps, and storage facilities and their maintenance.

Three of the seven Army engineer regiments—the Ninety-third, the Ninety-fifth, and the Ninety-seventh—which helped to build the Alcan Highway were Negro. The highway, 1,671 miles long, runs from Dawson Creek, northwest of Edmonton, Alberta, to Fairbanks, Alaska. Although most of the Negro soldiers in these regiments had never before been out of the South, only 140 men were incapacitated by the cold, and all except 4 recovered completely with no ill effects. The four suffered minor amputations.

After helping to blast through the brutal terrain of Alaska, building the Alcan Highway, the Ninety-seventh was transferred to the steaming jungles of New Guinea. There they struggled for a year or more in sweat, mud, and mire. While in Alaska this regiment adopted for its slogan: "No task too great." And it carried that slogan with it into the jungle.

A Negro aviation engineer battalion participated in the victory of the Battle of the Coral Sea, which was fought on May 7 and 8, 1942. It worked 24 hours a day to construct an airdrome in New Caledonia, which was effectively used by Army and Navy aircraft engaged in the battle. Their accomplishment was revealed in a commendatory report by Lt. Gen. Alexander M. Patch.

General Patch also told how members of the battalion unloaded gasoline from a supply ship which had anchored in an uncharted roadstead of the island. The Negro troops transferred the fuel ashore in rafts and moved it rapidly to the airdrome just in time to service aircraft which engaged the enemy in the Battle of the Coral Sea.

Negro soldiers were engaged in combat in the Pacific in September 1942. An Australian dispatch of that date describes their first engagement. It relates an interview with three wounded men, who told how the tricky Japanese used a hospital ship as a shield in a surprise attack on Milne Bay at the tip of New Guinea. Two of the three soldiers were Negroes—Charles Brown, of Milwaukee, Wis., and Reginald Simonds, of Durham, N. C. They were in charge of an antiaircraft gun emplacement watching the harbor.

They saw the hospital ship moving in and thought that it was an American Red Cross vessel. Suddenly the ship "lit up like a Christmas tree" from the searchlights focused upon it from out in the bay. They were about to relax when someone yelled:

"It's a Jap cruiser."

They made out the outlines of a cruiser lying beyond the hospital ship.

The Americans trained their guns toward the cruiser hoping to get a chance to rake her decks, but the cruiser had the same idea. Every gun aboard her opened fire. After about 10 minutes a shell from the cruiser hit the American gun position.

Hanson and Brown woke up in an ambulance headed for a field hospital. All the way to the hospital the wounded men were one jump ahead of Jap shells, which were hitting the road right behind the ambulance.

Simonds set up a machine gun on the edge of the Milne Bay airfield. Others did like-

685535—15300

wise. They watched for the arrival of Japanese ground forces who had been reported advancing through the jungle. Simonds was quoted as saying:

"I guess we did a pretty good job slaughtering those Japs when they came running out of the jungle. None knew very much about firing guns, but we knew enough to aim and keep them shooting at the Japs. And I guess that's all we had to know."

Both Brown and Simonds were seriously wounded; Brown by shrapnel and explosive shells and Simonds by machine-gun bullets and shrapnel. They were credited with saving the vital airdrome at Milne Bay by their quick perception, and response to the situation.

"ROAD TO TOKYO"

One of the most amazing construction feats of the war was the Ledo Road. Negro soldiers christened it "The Road to Tokyo." This highway from India to China via Burma was begun on December 12, 1942. Though they were originally brought in to construct United States airfields in Assam, a battalion of Negro aviation engineers was pressed into service as road builders after they had finished their initial assignment of building runways and dispersal areas. The road had just been started by the British Army with Indian labor when the Americans took over.

Three companies of the battalion spearheaded the drive into Burma from the Assam jungles in northeastern India. A Company cleared the point cutting a road wide enough for heavy Army vehicles. B Company did the drainage work, installing pipes up to 6 feet in diameter to carry off the monsoon rains into the huge ravines that line the winding mountain road. C Company widened, backfilled, and graded the road.

It was a round-the-clock job, 7 days a week. At night, drivers pushing their bulldozers into rock and dirt were always in danger of rolling too close to the edge of cliffs 500 feet high. In the weird light cast by smudge pots, gasoline-saturated bamboo or flaming 5-gallon fuel oil cans, they carved a road out of jungles and rock masses, 100 yards wide. They carried their highway up over mountain ranges, the Himalayas, that rise as much as 1,000 feet in 2 miles. One of the toughest spots was encountered just west of the India-Burma border line. A 100-yard formation of solid rock along an almost vertical cliff stopped the lead bulldozer cold. The 16-ton D-7 could not even get a bite into the cliff. So the air-line hose and jack-hammers were put into the job, cutting 8-foot holes in the rock for the charges of dynamite that blasted ledges for the bulldozer to follow.

Ultimately these men succeeded in making the impossible possible. With blood and sweat, they vanquished both the swampy, disease-infested jungles, and the skulking Japanese to create a desperately-needed supply route.

Three Negro enlisted men were awarded the Legion of Merit for exceptionally meritorious services rendered at Guadalcanal. They were Jesse Harris, private, Infantry, Tuskegee, Ala.; Henry Smith, Jr., private, Infantry, Good Pine, La.; and Verna C. Neal, private, Infantry, Ruleville, Miss. In announcing the awards, Secretary Stimson emphasized the fact that the recipients were all infantrymen, and that they were fighting in one of the most difficult theaters. These men abandoned the comparative safety of a slit trench, and advanced 250 yards over open terrain, exposed to bombing from an enemy air raid to assist in evacuating casualties. The undertaking was accomplished despite continued enemy action, causing impenetrable dust and confusion.

SOUTH PACIFIC

NINETY-THIRD DIVISION

On March 21, 1944 the commanding general, United States Army forces in the South Pacific area ordered the Ninety-third Infantry Division to move its Twenty-fifth Combat Team to Empress Augusta Bay Perimeter on Bouganville Island with the least practicable delay. The combat team was composed of the Twenty-fifth Infantry Regiment, Five Hundred and Ninety-third Field Artillery Battalion, Five Hundred and Ninety-sixth Field Artillery Battalion, Company A of the Three Hundred and Eighteenth Combat Engineer Battalion, Company A of the Three Hundred and Eighteenth Medical Battalion, one platoon of Company D, Three Hundred and Eighteenth Medical Battalion, Ninety-third Reconnaissance Troop, a detachment of the Ninety-third Signal Company, a detachment of the Seven Hundred and Ninety-third Ordnance Company, and a detachment of the Ninety-third MP Platoon.

By March 31, the Combat Team was in position and at 2:30 p. m., on April 2,

685535—15300

Pfc Isaac Moore of Brooklyn, N. Y., pulled the lanyard on the No. 2 gun of Battery A of the Five Hundred and Ninety-third Field Artillery which sent the first round fired by the Ninety-third Division into enemy positions. The Ninety-third Division was in combat.

On April 4, the Second Battalion of the Ninety-third Division which had been detached from the American Division and passed to operational control of the Commanding General of the Thirty-seventh Infantry Division closed with the enemy and killed approximately 25 Japanese soldiers.

Four men were lost by the A and P Platoon while it was returning from a supply mission to the Americal Division on Hill 500. These soldiers, Pfcs Hugh Carrol, Oginal I. Ryan, William W. Ash and Joseph C. Mallory, were the first men of the Ninety-third to be killed in action in this war.

On April 5, the men of the Five Hundred and Ninety-third Field Artillery received a commendation from Brig. Gen. W. C. Dunckly for their firing on the Numa Numa Trail.

On April 7, Company K contacted the enemy before an ambush could be established and in the fire fight that resulted one officer and 17 men were killed and 7 wounded. Our forces withdrew about 100 yards and called for artillery fire. All bodies were recovered and the men were buried in the Bouganville cemetery.

On April 15, litterbearers were subjected to enemy fire during the night and fought with as much vigor as the infantrymen. On one such occasion T5g Mose Wheeler, of Company A, Three Hundred and Eighteenth Medical Battalion, became the first casualty of his unit.

Thirty-five Japanees were killed by Company G on April 16 in repelling an attack by an enemy force aimed at a Fiji battalion located on the right of Company G. In this encounter the Five Hundred and Ninety-third Field Artillery fired 1,216 rounds.

Battle casualties of the Twenty-fifth Combat Team as reported through May 30, 1944, totaled 26 killed, 13 seriously wounded in action, and 27 slightly wounded in action.

The records of the War Department contain the names of many men such as Thomas J. Caveness, private, first class, Corps of Engineers, a native of Los Angeles, who was cited for heroism in risking his life in going to the assistance of his comrades buried under debris from an ammunition dump which had been set on fire by Japanese bombers.

LEGION OF MERIT AWARDS

The following Negroes received the Legion of Merit for performance in the Pacific theater of war:

Dennis Holt, staff sergeant, Infantry, Birmingham, Ala., and Isaac McGrew, Jr., staff sergeant, Infantry, Yazoo City, La.

Sergeant Holt was chief of a battalion wire section from May 4, 1942, to April 20, 1943, at a base in the South Pacific area. His leadership, skill, cheerfulness, and devotion to duty in the installation, maintenance, and operation of a wire net, in many respects comparable to that of a division, assured continuous communication. Without transportation, he led his men in cutting wire trails through miles of difficult jungle, in carrying wire up to a mountain top observation post, in crossing several miles of water to nearby islands, in all kinds of weather.

Sergeant McGrew was primarily responsible for the successful installation and maintenance of 300 miles of wire in the South Pacific area from May 15, 1942, to February 20, 1943. This task was performed under the most rigorous of tropical, climatic, and terrain conditions. By long hours, ingenuity, and perseverance, he performed remarkable feats of accomplishment.

The Silver Star was awarded to Mack B. Anderson, private, Corps of Engineers, Brenham, Tex., for gallantry displayed in the Asiatic theater of operations. During an attack by Japanese Zero fighters on an airfield in India, Private Anderson, while under continuous fire from the attackers, manned a machine gun until it went out of action, then continued firing with his automatic pistol while several Japanese fighters definitely centered their attack on him.

SOLDIER'S MEDAL FOR HEROISM

Several Negro soldiers received the Soldier's Medal for heroism in the Pacific area. Edward Williams, private, Quartermaster Corps, Hurtsboro, Ala., helped to extinguish a conflagration at a United States truck assembly plant in Iran, Persia. He risked his life to the peril of intense heat to save quantities of Government property from damage and destruction.

James Scott, private, Corps of Engineers, Montgomery, Ala., risked his life on June

685535—15300

25, 1942, near an airdrome in New Guinea to save a pilot. When a fighter plane, taking off to intercept enemy planes then overhead, struck a log and crashed into the nearby river splashing gasoline on the plane and water, and igniting both gasoline and ammunition. Private Scott in the midst of flames and exploding ammunition waded into the river and assisted in rescuing the pilot.

Roscoe E. Thomas, master sergeant, Corps of Engineers, Atlanta, Ga., went to the assistance of three comrades buried under debris from an ammunition dump which had been set on fire by Japanese bombers.

James Williams, private, Infantry, Indianapolis, Ind., save two of his buddies from drowning when they slipped and fell into the ocean while embarking in the Solomon Islands. He immediately dived into the water to help them.

Columbus Howard, private first-class, Corps of Engineers, Inkster, Mich., proceeded within 200 yards of an exploding inferno to remove hot metal fragments from inflammable materials, and fought tirelessly to prevent the fire from spreading to other vital supply dumps.

Jesse E. Evans, private, Quartermaster Corps, Morristown, N. J., aided in the rescue of three sailors from the waters adjoining a United States island base in the South Pacific.

Private Evans was one of a party of soldiers working on a ship in the harbor when he heard the cry for help and located a small home-made boat not far away which had capsized. One of the three sailor occupants was unconscious and being held up by another. Without regard for his own safety, Private Evans plunged 40 feet over the side of the ship, swam to the men and helped keep the unconscious man afloat until a ship's launch could come alongside.

Nathaniel Hocker, sergeant, Coast Artillery, Brooklyn, N. Y., helped to save the life of a pilot on the island of Oahu, T. H., on March 24, 1944. With complete disregard for the gasoline flames and the danger of the unexploded bombs, Sergeant Hocker assisted in removing the pilot from a burning plane that had crashed near his gun position.

William Downing, technician fourth grade, Quartermaster Corps, Nyack, N. Y., plunged into the icy waters of the Bering Sea to rescue a soldier in danger of being crushed between a barge and a freighter.

Douglas D. Hopper, private first class, Corps of Engineers, Shelby, N. C., braved the treacherous currents of a river in India to rescue an officer.

Opinions About Negro Infantry Platoons in White Companies of Seven Divisions

What do the white company grade officers and the white platoon sergeants in the European theater of operations think of the combat performance of Negro rifle platoons which were attached to their companies in March and April and fought side by side with white platoons through VE-day?

This question is answered by a survey, made in late May and early June 1945, by personally interviewing 250 respondents, namely, all available white company grade officers and a representative sample of platoon sergeants in 24 companies containing Negro platoons in several infantry divisions, namely, the First, Second, Ninth, Sixty-ninth, Seventy-eighth, Ninety-ninth, and One Hundred and Fourth. Standardized questions were used in the survey, which was conducted by five trained interviewers of the research branch, I and E Divisions, European theater of operations.

In all except one of the companies visited, the standard organization of three rifle platoons and one heavy infantry platoon had been augmented by one rifle platoon of colored soldiers. The colored platoons were made up of men from rear echelon units who volunteered for service with the infantry and were trained for approximately 6 weeks in reinforcement depots, usually by a white officer or noncom who later led them into combat.

In generalizing the opinions here reported, the fact that the Negro infantrymen in these platoons were volunteers must be kept in mind, as must also the fact that not all of the platoons experienced heavy and arduous fighting.

Opinions of White Officers and Enlisted Men in Companies with Negro Platoons

Question. How did you feel at first about serving in a company that had white platoons and colored platoons?

685535—15300

	Percent white officers	Percent white noncoms
Relatively unfavorable: Skeptical, didn't like it, thought it'd cause trouble, etc	64	64
Relatively favorable: Willing to try it, made no difference, didn't mind, etc	33	35
No answer	3	1
Total	100	100

Question. Has your feeling changed since having served in the same unit with colored soldiers?

	Percent white officers	Percent white noncoms
No; my feeling is still the same	16	21
Yes; have become more favorable toward them,[1] feel more respect for them, like them better, etc	77	77
No answer	7	2
Total	100	100

[1] No cases were found in which an individual reported his attitude had become less favorable.

Question. How well did the colored soldiers in this company perform in combat?

	Percent white officers	Percent white noncoms
Not well at all	0	0
Not so well	0	1
Fairly well	16	17
Very well	84	81
Undecided	0	1
Total	100	100

NOTE: In commenting on this question, respondents frequently gave detailed accounts of combat performance. Positive qualities stressed were aggressiveness in attack, effective use of fire-power, adeptness at close-in fighting, team-work in battle. Negative qualities reported in a few instances were that at first the men sometimes went forward too rapidly—too far in an attack. Some officers stressed the fact that these colored soldiers, being volunteers, may have had exceptional combat qualities. Others mentioned that in their units there had not been an adequate test under the most severe type of fighting, such as sustained attacks under heavy mortar or artillery fire. It should be noted, however, that the performance of the colored troops was rated just as high, if not higher, by the white officers and noncoms in those companies in which the colored platoons have had severe fighting as by respondents from other units.

Question. With the same Army training and experience, how do you think colored troops compare with white troops as infantry soldiers?

	Percent white officers	Percent white noncoms
Not as good as white troops	5	4
Just the same as white troops	69	83
Better than white troops	17	9
No answer	9	4
Total	100	100

Question. How have the white and colored soldiers gotten along together?

	Percent white officers	Percent white noncoms
Not well	0	0
Not as well in garrison as in in combat	14	4
Fairly well	7	36
Very well	73	60
No answer	6	0
Total	100	100

NOTE.—Replies are somewhat more favorable from white officers and white noncoms with a northern background than from those with a southern background, but differences in opinion are not great. Actual friction between white and colored soldiers is said to have been confined to isolated cases involving white soldiers from outside units who did not know the combat record of the colored troops. Evidence indicates that white and colored soldiers have gotten along best together in those units in which they have shared the heaviest combat. While many of the officers in further questioning expressed some doubt as to how well the situation would work out if their unit remains in the army of occupation, or other semi-permanent garrison status, 9 out of 10 said there had been no difficulties as yet.

685535—15300

Question. If colored soldiers are used as infantry, do you think they should be set up by platoons as they are here, or would some other way be better?

	Percent white officers	*Percent white noncoms*
In the same platoon with white soldiers	7	1
In a platoon within the same company	62	89
In separate companies	18	12
In separate battalions or larger organizations	10	2
No answer	3	0
Total	100	100

NOTE.—Most of those interviewed volunteered one or more reasons for their answer.

Among those who favor the platoon basis, the reasons given, in order of frequency, are:

1. Competition - emulation (encourages friendly competition; each tried to make a good showing; gives them something to come up to).

2. Avoidance of friction (saves any chance of trouble to have them in their own platoon; because of the old feeling of boys from the South).

3. Better discipline and control among the colored soldiers (whites have a steadying influence on them; colored boys feel more secure in combat this way).

4. Feeling of participation or nondiscrimination on part of the colored soldiers (gives them the feeling of being with the white boys; avoids that feeling of being set apart and discriminated against).

5. Improved interracial understanding (work close enough together so they can each get to know the other better and see what they do).

Among the minority who favored separate companies or larger units, the main reasons given were avoidance of friction (especially in garrison situations) and better discipline. A few men gave as their reason their personal feeling of not wishing to be in a company containing colored troops.

INDEPENDENT CHECK IN A CROSS-SECTION SURVEY

In the course of a survey of a representative cross section of 1,710 white enlisted men in ETO field forces, to ascertain men's information and orientation needs, two questions were asked about the use of Negro troops. This survey was independent of the interviews tabulated above.

The responses to the two questions asked in the cross-section survey were tabulated separately for four subgroups indicated below. The sample in some groups is small and therefore subject to a larger margin of error than is customary in research branch reports.

Question. Some Army divisions have companies which include Negro and white platoons. How would you feel about it if your outfit was set up something like that?

Percentage of white enlisted men answering, "Would dislike it very much":

Cross section of field force units which do not have colored platoons in white companies (1,450 cases)	62
Men in same division, but not in same regiment as colored troops (112 cases)	24
Men in same regiment, but not in same company as colored troops (68 cases)	20
Men in company with a Negro platoon (80 cases)	7

Question: "In general, do you think it is a good idea or a poor idea to have the same company in a combat outfit include Negro platoons and white platoons?"

Percentage of white enlisted men saying, "Very good idea" or "fairly good idea":

Cross section of field force units which do not have colored platoons in white companies	18
Men in same division but not in same regiment as colored troops	50
Men in same regiments but not in same company as colored troops	66
Men in company with a Negro platoon	64

NOTE.—These differences in attitude, varying with extent of experience with platoons of colored troops, can hardly be attributed to differences in geographical origin. For example, 31 percent of the white soldiers whose company has a Negro platoon are from the South, as are 34 percent of the soldiers in the cross section of field force units.

BACKGROUND INFORMATION ABOUT COLORED TROOPS IN THOSE INFANTRY PLATOONS

The soldiers in the Negro platoons were somewhat superior to other colored troops in

ETO in education and AGCT, but the differences actually are not striking.

Percentage who had graduated from high school:

Colored in infantry platoons	22
Colored in ETO (cross section)	18
White riflemen (cross section)	41

Percentage with AGCT scores above class IV:

Colored in infantry platoons	29
Colored in ETO (cross section)	17
White riflemen (cross section)	71

Percentage from the South (including border States):

Colored in infantry platoons	67
Colored in ETO (cross section)	76

As compared with white riflemen the Negro infantrymen were somewhat younger, 10 percent of the colored were 30 years old or over—as were 20 percent of the white riflemen.

Branches of service from which the transfer to infantry were made were as follows: Percent of total Negro volunteers:

Corps of Engineers	38
Quartermaster Corps	29
Transportation Corps	26
Signal Corps	3
Ordnance Department	2
All other branches	2

Of all who were converted to riflemen, 63 percent came from the following six military occupation specialties, in order of frequency:

Truck driver, light (MOS 345).
Duty soldier III (590).
Longshoreman (271).
Basic (521).
Foreman construction (059).
Cargo checker (470).

Negroes in the Navy

When the United States entered this war Navy policy restricted Negroes to the steward's branch of the naval service. This was so despite the fact that Negroes had been an integral part of our Navy from the days of John Paul Jones.

Yet, despite this restriction, when the Japanese made their infamous sneak attack at Pearl Harbor, one of the heroes of that day was Dorie Miller, a Negro messman, who took a machine gun from the dead hands of its gunner and turned it on the Japs. For his quick thinking and courage Dorie Miller received the Navy Cross. He was cited for his "distinguished devotion to duty, extreme courage, and disregard for his own personal safety during the attack." Later, still a messman, Dorie Miller went down with the *Liscombe Bay*.

Dorie Miller's heroism symbolizes the eagerness of Negroes to get into the fight despite the restrictions which the dead weight of tradition and prejudice have imposed upon them. This eagerness was recognized by the Navy in June 1942 when the Navy for the first time accepted Negro inductees from selective service.

At later dates, the Navy commissioned Negroes as naval officers, admitted Negroes into the WAVES, SPARS, and Nurse Corps, and began to assign Negroes for general duty aboard ships of all classifications.

On August 31, 1945, there were 165,506 Negro enlisted men in the Navy and 53 Negro officers. In the Marine Corps there were 16,964 Negro enlisted men; and 3,727 Negro enlisted men and 4 Negro officers in the Coast Guard.

On the same date Negro women in the naval service included 68 Waves and 2 officers and 38 officer candidates; while there were 4 Negro Navy nurses and 5 Negro enlisted Spars.

As the number of Negroes in the Navy increased, and they showed their qualifications, the Navy began to relax its restrictions. On August 9, 1944, the Navy began to assign Negroes in special service to man, partially, 25 large auxiliary vessels. Most of these ships were then in combat areas as part of the fleet train in the Pacific. Approximately 500 Negroes were assigned to those ships, both as petty officers and nonrated men. The 25 vessels were of the following types: Store ships, ammunition ships, cargo ships, oilers, and miscellaneous auxiliaries.

All Ratings Included

The petty officers assigned to these vessels included substantially all ratings required to operate the ships. Among them were coxswains, gunner's mates, quartermasters, storekeepers, carpenter's mates, shipfitters. Since then, the Navy has extended the assignment of Negro personnel to naval vessels so as to include all auxiliary and many fighting ships.

685535—15300

On July 13, 1945, Lester B. Granger, executive secretary of the National Urban League, held a press conference following completion of a tour of 12 naval stations, bases, and depots in the United States. "The Navy," Mr. Granger said, "has made remarkable strides in the last 2 years toward complete equality of expression in the service. It is a progress which reflects great credit upon the integrity and intelligence of the Navy's leaders and which should evoke a warm spirit of cooperation from the Negro and white public which is anxious to see our armed services more completely democratized."

Some of the gains which Mr. Granger cited were:

1. Admission of Negroes to general service.
2. Rating of Negroes in practically every category and training of Negroes as commissioned officers.
3. Assignment of Negro personnel to auxiliary craft up to 10 percent of a ship's complement.
4. Assignment of Negro commissioned and petty officers to these vessels to serve in their duties without regard to rank.
5. Important elimination of racial segregation in mess and in recreational facilities.
6. A beginning of assigning Negro personnel to combat duties on warships.

Dorie Miller was the first Negro decorated for heroism by the Navy in World War II. Some of the others were:

Elvin Bell

Elvin Bell, mess attendant, third class, United States Navy, 20 years old, of Jamaica, N. Y., on February 2, 1943, was awarded the Navy and Marine Corps Medal with the following citation:

"For distinguished heroism while serving aboard the U. S. S. *Lexington* during the battle of the Coral Sea on May 8, 1942. Voluntarily joining a repair party fighting a fire in an area frequented by violent explosions of gasoline vapor and ammunition, Bell, although emerging in an exhausted condition, unhesitatingly entered the most dangerous section of the stricken carrier and assisted in removing injured personnel who had been trapped below decks. His courageous initiative and utter disregard for his own safety were in keeping with the highest traditions of the United States naval service."

685535—15300

Charles Jackson French

Charles Jackson French, mess attendant, second class, United States Navy, 23, of Foreman, Ark., was commended by Admiral William F. Halsey, United States Navy, commander South Pacific Area and South Pacific Force, for heroism while serving on a destroyer in the Pacific area.

His commendation announced May 18, 1943, reads as follows:

"For meritorious conduct in action while serving on board a destroyer transport which was badly damaged during the engagement with Japanese forces in the British Solomon Islands on September 5, 1942. After the engagement, a group of about 15 men were adrift on a raft which was being deliberately shelled by Japanese naval forces. French tied a line to himself and swam for more than 2 hours without rest, thus attempting to tow the raft. His conduct was in keeping with the highest traditions of the naval service."

Leonard Roy Harmon (the U. S. S. "Harmon")

Secretary of the Navy Frank Knox, on June 8, 1943, designated Mrs. Naurita Harmon Carroll, whose address was post-office box 381, Cuero, Tex., to sponsor the destroyer escort U. S. S. *Harmon*, which she did when the vessel was launched July 10, 1943, at Hingham, Mass.

The *Harmon* received its name in honor of Mrs. Carroll's son, the late Leonard Roy Harmon, mess attendant first class, USN, who was awarded the Navy Cross posthumously for heroism while serving the U. S. S. *San Francisco*. This is the first vessel to bear the name *Harmon*.

Harmon's citation issued with the award of the Navy Cross read as follows:

"For extraordinary heroism while serving aboard the U. S. S. *San Francisco* during action against enemy Japanese forces in the Solomon Islands area on November 12 and 13, 1942, with persistent disregard for his own personal safety, Harmon rendered invaluable assistance in caring for the wounded and evacuating them to a dressing station. In addition to displaying unusual loyalty in behalf of the injured executive officer, he deliberately exposed himself to hostile gunfire in order to protect a shipmate and, as a result of this courageous deed, was killed in

action. His heroic spirit of self-sacrifice, maintained above and beyond the call of duty, was in keeping with the highest traditions of the United States naval service. He gallantly gave up his life in the defense of his country."

William Pinckney

The Secretary of the Navy, on behalf of the President of the United States, awarded the Navy Cross to William Pinckney, cook third class, USN, on June 10, 1943. Pinckney, 28 years old, was the son of Mr. and Mrs. Renty Pinckney, box 92, Beaufort, S. C. The Navy Cross was given with the following citation:

"For extraordinary heroism while serving aboard the U. S. S. *Enterprise* during the engagement with enemy Japanese naval forces near the Santa Cruz Islands on October 26, 1942. When a heavy bomb exploded in the near vicinity Pinckney, standing at his battle station in the ammunition handling room, was knocked unconscious. With several compartments completely wrecked and four of his five companions killed, Pinckney, regaining consciousness, groped his way through the burning and tangled wreckage to a point under an open hangar deck hatch. Just as he was about to escape he found a shipmate, the only other survivor of his party, struggling up through the hatch. When the man fell unconscious, either from his wounds or from smoke and fumes, Pinckney, unmindful of his own danger, lifted his comrade through the hatch to safety before he himself battled his way out of the burning and smoke-filled compartment. By his dauntless courage in saving his comrade's life at great risk to his own, Pinckney upheld the highest traditions of the United States naval service."

Joseph Cross

The Secretary of the Navy, in the name of the President of the United States, awarded the Navy and Marine Corps Medal to Joseph Cross, steward's mate, first class, USNR, of 2510 Thalia Street, New Orleans, La.

The citation says:

"For heroic conduct during four submarine war patrols in enemy-controlled waters. Performing his duties with excellent judgment and conscientious skill, Cross contributed materially to the destruction by his ship of an important amount of Japanese shipping. His resolute courage was in keeping with the highest traditions of the United States naval service."

Elbert H. Oliver

A Silver Star Medal was awarded Elbert H. Oliver, steward's mate, first class, United States Navy, by the Secretary of the Navy, in the name of the President of the United States. Oliver, who had been wounded in action, resided at 1112 Locust Street, North Little Rock, Ark.

His citation reads:

"For conspicuous gallantry and intrepidity while serving aboard a United States warship during a raid upon that vessel by approximately 25 Japanese torpedo planes in the vicinity of the Solomon Islands on June 30, 1943. When members of his 22mm. gun crew were severely wounded by a bursting projectile, Oliver quickly took over the station of the injured gunner and, although he himself was bleeding profusely, maintained accurate fire against the attacking planes until eventually compelled to give way to a relief gunner. His aggressive fighting spirit and grim determination to carry on in the face of acute pain and waning strength were in keeping with the highest traditions of the United States naval service."

Every branch of the naval service has seen courageous acts performed by Negroes in combat. Examples from the principal branches of the services are summarized below. All of them are based on official Navy Department releases.

A story of Negro steward's mates who received awards for their conduct under fire is told in an official Navy release.

"Six Negro steward's mates who manned their antiaircraft guns until a Japanese suicide plane crashed in flames among them have been awarded the Bronze Star Medal for their heroism in action aboard the U. S. S. *Intrepid*, the Department of the Navy said today.

"Vice Adm. John S. McCain, United States Navy, commander of Task Force Thirty-eight, made awards for their participation in the action of October 26, 1944.

"The medals were awarded to—

"Johnell Copeland, steward's mate second class, USNR, 19, office box 1363, Haines City, Fla.;

685535—15300

"Que Gent, steward's mate first class, USNR, 22, of 132 Center Street, Atlantic City, N. J.;

"Harold Junior Clark, steward's mate first class, USNR, 25, of 910½ Fourth Street, West Palm Beach, Fla.;

"James Eddie Dockery, steward's mate first class, USNR, 38, of 28 Barclay Street, Newark, N. J.;

"Alonzo Alexander Swann, Jr., steward's mate first class, USNR, 19, of 353 Christian Street, Steelton, Pa.;

"Eli Benjamin, steward's mate second class, USNR, 20, of 734 Jefferson Street, Norfolk, Va.;

"The six men, who volunteered to man antiaircraft guns in the event of attack by the enemy, were stationed at a 20 millimeter machine gun by the gunnery officer of the U. S. S. *Intrepid, Essex*-class carrier that was damaged four times by attacking Japanese planes."

The citations read:

"For distinguishing himself by heroic and meritorious service in connection with operations against the enemy, while serving aboard an aircraft carrier on October 29, 1944. When a Japanese dive bomber attacked from the starboard side of the ship, he continued to operate his portside gun in its fire over the flight deck although it became apparent that the enemy plane was headed directly for his gun tub. His gun fired until the Japanese plane crashed into his tub. The courage and skill he displayed were at all times in keeping with the highest traditions of the naval service."

NEGRO MARINES

A Navy press release dated February 13, 1945, states:

"On the beach nearest the enemy on Iwo are Negro marines of the Eighth Ammunition Company—worthy successors of the Negro marine ammunition companies in the Marianas actions and at Peleliu.

"They carry ammunition by day, feeding the front lines and building up supply dumps, playing a vital role in what is undoubtably the toughest battle in the history of the Marine Corps. At night they lie in foxholes among their kegs of TNT and dumps of high explosives, enduring the most persistent mortar and shell fire any American troops have faced in the Pacific.

"I've been using a TNT box for a pillow," says. Corp. Coleman Bagwell, of Chester, S. C. "There's nothing any softer around, and if a mortar hits anywhere near I figure the whole ammunition dump will blow up anyway, so that's not being reckless."

Four of the men of the Eighth made a run to the front lines, loaded with ammunition, then stayed there under fire to assemble rockets which were to be used against the Japs.

The four are Pfc Walter Moore, of 1217A Sam Rankins Street, Corpus Christi, Tex.; Simms Pattin, of Spartanburg, S. C.; Pfc William L. Stephenson, of 212 Northwest Eleventh Avenue, Fort Lauderdale, Fla.; and Pfc Samuel Miller, of 3780 Monroe Street, Detroit, Mich.

"It's a rough beach," said Corp. Edward White, of Nacogdoches, Tex., standing beside one of the first trucks the marines managed to bring ashore under fire.

Some of the Negro marines, despite wounds, returned to duty after receiving medical treatment.

The men of the Eighth agree that it has been a rough beach, and their fellow marines agree that they have proved they can take it.

NEGRO SEABEES

One of the important contributions of Negroes to the Navy in the war was that of the Seabees. An official Navy release tells of the work of one unit.

"Veterans of 20 months of jungle warfare in the South Pacific, and bearing a unit citation for many outstanding feats of construction completed under great difficulties, the first battalion of Negro Seabees to go overseas has returned to this country," the Navy Department announced this week.

"The unit, the Thirty-fourth Construction Battalion, indoctrinated at Camp Allen in Virginia, sailed outside the continental limits of the United States on January 7, 1943, and arrived in Noumea, New Caledonia, 19 days later. Since that date the unit has suffered casualties of 5 men killed in action and 35 wounded.

"The first big job tackled by the unit was the construction of the Halavo Seaplane Base at Halavo in the Florida Islands. Brigaded there with the Acorn (Red) Four, an air unit, the Thirty-fourth Battalion helped carve its camp out of a deep jungle. During

685535—15300

February and March 1943, the two outfits experienced two direct enemy bombings and were under almost nightly enemy air raids in the area for a period of 5 months. Casualties from these raids resulted in 2 killed and 28 wounded.

"A detachment of approximately 350 men were transferred, on March 19, 1943, to Guadalcanal to assist other battalions in constructing fuel and gas storage facilities. This detachment remained on Guadalcanal until November 1943, constructing all types of air field facilities and housing. They were under frequent enemy air raids for the first 6 months of their duty there and then less frequent raids, the last of which occurred in October 1943. No casualties resulted.

"On April 20, 1943, another detachment of approximately 200 men with 75 percent of the battalion's heavy equipment was transported by LCT's to Russell Island where they laid out and constructed, together with the Thirty-fifth Construction Battalion, the second fighter strip north of Renard Sound on Banika Island. This detachment was a part of what was essentially a regimental command consisting of the entire Forty-seventh Battalion and one-half of the Twentieth Battalion. It was assigned to the task of constructing a 6,000-foot bomber strip and a 4,500-foot fighter strip on the Russells in time for the New Georgia campaign. These Seabee units completed their assigned tasks on time and the first three units later enlarged the bomber facilities south of Renard, completing this assignment by August 1943. At Russells the detachment was subjected to constant enemy bombing until the completion of the New Georgia campaign in July. The Negro detachment experienced five casualties, consisting of three killed and two injured with minor burns in the operation of the fighter strip, caused during the crash of a Navy plane on the field.

"The entire battalion was reunited in November 1943, in the Tulagi area; with approximately one-half of the battalion quartered at Halavo, and the other half scattered over the adjacent islands of Tulagi, Savo, and Phillips Peninsula on Purvis Bay. The construction tasks at Halavo varied from marine railways, fueling docks, and costal defense gun mounts, to harbor boat nests, dolphins, piers, and considerable jungle and mountain roads for the Army defense. A unit at Tulagi took over and performed naval-base maintenance, relieving the Twenty-seventh Seabees until the arrival of the two CBMU's to release the battalion for assignment to Guadalcanal in March 1944.

"The battalion was reequipped with new housing facilities and a small quantity of new equipment and supplies early in 1944. The movement of the entire battalion personnel and equipment from the Tulagi area to Guadalcanal was completed in approximately 6 days aboard three LST's.

"A new camp was set up on the beach at Kukum to accommodate 1,200 men and 40 officers. The battalion duties were assigned by the public works division of the commander, Naval Base, Guadalcanal. In 2 months the battalion has cleaned up the unfinished priority projects in addition to numerous newly authorized projects assigned during this period. The duty hours of this battalion ran from 8 to 10 hours a day, 7 days per week for the first year, and for the last 5 months the hours were 8 hours per day, 6½ days per week.

"Just before the men embarked for home, Capt. Mark L. Halsay, Jr., United States Navy, commander of the naval base, sent them the following unit commendation:

"On the occasion of the completion of your work in this area, covering a period of 20 months, I wish to take this opportunity to congratulate you and the officers and enlisted men of your command for the splendid record which you have made and the outstanding reputation which your battalion enjoys. During this period your battalion has accomplished many outstanding feats of construction, too many to mention in detail, which will stand as a monument to your ability and efficiency for many years after the United States forces leave this area.

"Many of these construction jobs were completed under great difficulties, including bombing attacks by the enemy, in which 5 of your men were killed and about 35 wounded. In spite of these difficulties and dangers, and the impracticability of giving your men rehabilitation leave, your battalion continued to work at top efficiency until the day it was ordered to secure.

"The best wishes of this command for future success and continued usefulness to

685535—15300

the naval service go with you and the personnel of your battalion."

NEGRO COAST GUARD MEN

Tribute was paid to Negroes in an official release on the one hundred and fifty-fifth anniversary of the Coast Guard, July 20, 1945.

"Approximately 4,000 Negro enlisted men, officers, and SPARS participated in the celebration, which honored the Nation's oldest fighting sea service and one of the world's most diversified fleets

"One of the outstanding Negro heroes in the Coast Guard was 26-year-old Charles V. David, Jr., a mess attendant who gave his life rescuing his executive officer and others from the icy waters of the Atlantic during rescue operations of a torpedoed transport.

"The Navy and Marine Corps Medal, one of the highest naval awards, was presented to the Coast Guard man's widow, Mrs. Kathleen W. David, of 343 West One Hundred and Twenty-second Street, New York City, on June 20, 1944, by Rear Adm. Stanley V. Parker, district Coast Guard officer, with the Davids' 3-year-old son, Neil Adrian, standing by.

"Lt. R. W. Anderson, of 291 East Eighth Street, Brooklyn, N. Y., the Coast Guard officer whose life was saved by David's heroic act, was also present. Lieutenant Anderson, who had previously been decorated for his bravery during the dramatic rescue, paid tribute to the deceased:

" 'David's bravery under the most hazardous conditions and his unselfishness in sacrificing himself was an inspiration to every officer and man on board the cutter. We were all impressed by his alertness, for his quick thinking, and heroic daring in face of certain death were responsible for the saving of the lives of many men, including myself, who would be dead today.'

"David was a mess attendant first class aboard a Coast Guard cutter that rescued nearly a hundred men from a torpedoed transport in the North Atlantic. In a heavy sea, with freezing temperatures hampering operations, David dived countless times into the sea, in total darkness, to haul survivors to safety.

"When the rescue operations were nearly completed, David noticed that Lieutenant Anderson was near exhaustion from his work on a life raft off the side of the cutter. Passing the word along to the bridge, David, himself near collapse from his efforts, dived overboard and hauled Lieutenant Anderson back aboard. He died shortly after from pneumonia, exhaustion, and exposure as the result of his heroic actions."

The citation accompanying the medal, signed by Secretary of the Navy James Forrestal for the President, reads in part:

"Quickly realizing that the benumbed and suffering men were too exhausted to climb aboard the rescue vessel because of the heavy seas and intensely cold wind, David unhesitantly volunteered to go over the side to assist them. Despite the rough, near-freezing water, and gale he worked tirelessly with several comrades until 93 survivors had been rescued from certain death in the steadily mounting seas. His great courage and unselfish perseverance contributed to the saving of many lives and were in keeping with the highest traditions of the United States naval service."

THE MERCHANT MARINE

The contribution to victory of the Negroes who chose the merchant marine as their form of service has been a great one. It is significant that the records of the Maritime Commission, the War Shipping Administration, and the Coast Guard, the licensing and certificating authority for seamen, deliberately fail to include race and color data. Because of this lack of discrimination, it is impossible to determine the number of Negroes who served in the merchant service, the number who survived torpedoings or the number who were killed or injured through enemy action while delivering the supplies and men essential to the conduct of the war.

Negroes are known to have served in every capacity aboard ship; from master to ordinary seaman, chief engineer to wiper, and chief steward to messman. The 31 War Shipping Administration training schools all admit Negroes. The first Negro graduate of the Maritime Academy, Joseph B. Williams, of Annapolis, Md., went on active duty with the Navy and was the first Negro officer in the Naval Civil Engineer Corps.

There were four Liberty ships named for Negro merchant seamen lost on active service in the merchant marine. Fourteen Liberty ships were named for noted Negroes, and four Victory ships named for Negro colleges.

No vessel under War Shipping Administration control has ever sailed with an entire

685535—15300

Negro crew and the good relations which existed among mixed crews were a surprise to many. The United Seamen's Service which operated hotels and recreation centers abroad for our merchant seamen reports that the crews of mixed race who sailed together, mixed excellently while ashore in foreign ports. All Brave Sailors, by John Beecher, published by L. B. Fischer, tells the story of the steamship *Booker T. Washington*, manned by a black and white crew under the command of the Negro master, Capt. Hugh Mulzac.

It is competently estimated that approximately 25,000 Negroes served in the merchant marine out of a total seagoing labor force of 250,000 men.

The Merchant Marine Distinguished Service Medal, the highest decoration, was awarded to Fred Carlos Archibald, of San Francisco.

"CITATION

"For distinguished service in the line of duty.

"For 18 months the ship in which he was serving operated in the Southwest Pacific under especially hazardous conditions, as it was at all times in the danger zone, was unescorted, and only lightly armed. In an attack on Port Darwin, and on the nine succeeding days, when most of the crew had left the ship, he with his captain and four officers and men, manned the two machine guns, and so successfully defended the ship that it was the only 1 of 12 merchant vessels in the harbor not destroyed. After the first attack, this small group protestingly left the ship upon orders of the military authorities, but subsequently returned, got underway, and took their ship cut into the harbor each morning and returned to the dock each night to discharge cargo, so as not to endanger the dock during daylight. Because of the indomitable determination and courage of these six men, they succeeded in delivering the gasoline so vitally necessary to Army operations

"His loyalty to his ship and his devotion to duty have added another inspirational chapter to the history of the United States merchant marine."

REMARKS

Units of Colored Soldiers Also Win Praise From Top-Ranking Generals

By P. BERNARD YOUNG, JR.

Editor, Norfolk Journal and Guide
NORFOLK

GENERALS supposedly furnished Senator Eastland (D-Miss.) with the purported facts upon which he based his amazing charge that Negro troops in this war have been an utter and abysmal failure. This is an accusation that is difficult to imagine, in view of the high praise which our top generals, in all major theaters of operations, have publicly accorded those same fighters.

Senator Eastland's charge not only is refuted by famous American generals, but 's rebutted by three war correspondents of the Journal and Guide, who, between them, have spent 28 months in active war zones with our troops and on the high seas with navy personnel.

Before the European war ended, or since they have returned to this country, Generals Dwight Eisenhower, George Patton, Mark Clark, Ira C. Eaker, Lucien K. Truscott, M. S. Eddy and E. M. Allmond, to name a few, have publicly furnished testimony on the valor and performance of Negro soldiers that utterly repudiates the sweeping claim by the Mississippi Senator. Was it these generals to whom Senator Eastland says he talked? Hardly.

General Douglas MacArthur, Major-General Raymond G. Lehman, Navy Secretary Forrestal and others have similarly rated the Negro soldier and sailor highly on the basis of performances in the Pacific.

The Journal and Guide's war correspondents, Thomas W. Young, Lem Graves, Jr., and John Jordan, on the basis of their first-hand experience with our troops in combat, took sharp issue with Eastland's unqualified indictment.

Each of the correspondents cited favorable appraisals of colored servicemen given to them in interviews by famous combat generals.

For instance, Jordan declared: "Did the soldiers do a good job? The Germans thought they did. And so did General Mark Clark. And I know they did."

Correspondent Thomas Young stated: "A great number of Negro fighter-pilots are going to be quite surprised, and a little bitter, when they learn on authority of Senator Eastland that they have been utter and abysmal failures, but fortunately, they will be spared that suffering, because none of them returned from their missions. They died in the service of their country."

With special reference to Senator Eastland's direct reference to the Ninety-second Division, Correspondent Graves said: "Major-General E. M. Allmond, who commanded the Ninety-second Division in Italy, on the day after V-E Day, declared that his artillery, tank and engineer units had maintained throughout the final phases of the Italian campaign the same magnificent performance for which they had previously been cited many times by General Truscott and General Mark W. Clark, commanding general of the Fifteenth Army Group in Italy. General Allmond made this statement while seated at dinner in the world-famed Hotel Columbia, in Genoa, on May 9.

Correspondents' Statements

The full text of the statements by the Journal and Guide correspondents follow:

"John Jordan: 'The colored soldiers are doing a damn good job,' General Mark W. Clark, then commander of the American Fifth Army, told this correspondent last September, when Allied armies in Italy were straining every effort to capture Bologna.

"General Clark was referring to the Negro enlisted men of the 370th Regiment of the Ninety-second Division, who were fighting Germans in the mud and mountains along Italy's west coast. This outfit had just captured the city of Lucca and was pushing northward in the area of the Serchio River, a lazy little stream that is still tinted red with the blood of American colored soldiers.

"The Fifth Army did not take Bologna last September, despite its all-out efforts, but nobody blamed the white divisions who failed to reach their objective.

"Meanwhile, the colored regiment, which was later to be increased to division strength by commitment of the other units of the Ninety-second Division, scored advances in one of most vital sectors of the Italian front. Theirs was the important sector north of Leghorn, the great Allied supply base in Italy. The capture of Leghorn would have meant disaster for the Allied armies in Italy.

"Did the colored soldiers of the 370th Regiment do a good job? The Germans thought they did, and so did General Clark know they did.

"In my 10 months of roving around the European theater, principally in Italy and Southern France, I have never come upon an American outfit, white or colored, that could be described as an utter failure, either in service work or in actual combat, and I have never heard an American with the gall to say that any American men in uniform had failed utterly. That is, until I came back to America and listened to people like Senators Eastland and Bilbo, of Mississippi, and Congressmen Rankin, from that same State. Their reckless speeches could sound like something from Dr. Josef Goebbels.

"Not only are the bitter racial attacks which are being waged by the Bilbo-Eastland-Rankin clan playing havoc with the morale of the many thousands of Negro soldiers now serving in the American armed forces, but these undemocratic attitudes cannot help but poison the minds of other nations who are looking to America for leadership in this 'freedom-for-all' postwar project which was conceived at San Francisco.

"How can America lead the world's little people in their quest for freedom when America itself cannot give freedom to its own people?

"The Negro soldier has been an utter and abysmal failure, Senator Eastland told the Senate of the United States on June 29. Could the Senator from Mississippi say that to one of the black men who built the Ledo Road? Or the Alaskan Highway? Could he tell that to the sweating brown boys who toiled in the endless supply convoys over the battered, dusty roads of France, Belgium, Germany and Italy?

"Has the Mississippi Senator ever glanced at the casualty figures of the Ninety-second Infantry Division? Has he ever bothered to note how many enemy prisoners these colored troops were able to take while in their so-called unimportant position in the Fifth Army line?

"After listening to the brutal racial attacks waged by the Mississippi Senators and their colleagues in the halls of the Congress of the United States, I am convinced that there is no such thing as a haunted house. If there was, the halls of Congress would

Continued on Page 6, Column 3

of the *Christian Science Monitor*, says categorically that there is no question as to the chief matter which will concern the three heads of states when they gather at Potsdam.

T. V. SOONG, China's Prime Minister, is now in Moscow, and his journey is regarded as a vital preliminary to some sort of settlement among the Big Three of the Chinese problem and the collateral Japanese problem. We have, on the one hand, the question of China's internal unity, as yet so far from realization, and on the other, the problem of how and how completely to crush Japan.

The internal problem of China, with the Chungking government, under CHIANG KAI-SHEK, glaring grimly at the Communist government, whose capital is at Yennan in the North, is one which admits of no easy solution. One of the most difficult things about it lies in the immensely hard task of getting the basic facts. Persons seemingly well informed come out of China and make directly conflicting statements. Certainly it appears clear that there cannot be a stable China until there is internal unity. The extent to which Washington can influence Chungking, and the power of Moscow over Yennan, are vital factors in the situation.

As for Japan, it is felt in Washington that until Russia knows how completely we intend to smash the Japanese war machine and its war-making potential, the Soviet Union cannot formulate its Far Eastern policy. The prospect of a Japan which could stage a comeback in the next generation might cause the Kremlin to insist on far-reaching concessions in Manchuria, for example. If, on the other hand, STALIN could be convinced that we intend to break Japanese power permanently, he might be more amenable to the idea of playing a less dominant role in the Far East.

These are some of the considerations which apparently will be troubling the world statesmen when they meet ere long in the small town near Berlin where FREDERICK THE GREAT was wont to disport himself. Many Americans probably imagined that European questions would hold the spotlight there. It would seem that this view of the matter is a mistaken one.

Hoot Mon, They're Maligned!

THE propensity of the ladies for concealing their correct ages has seldom been more strikingly exemplified than in the Scottish village of Guay, where live the three sisters DIVORTY. These elderly spinsters were left an annuity of $1,200 by their sister, but the lawyers who were arranging matters wrote to ask them their ages, before the money was delivered.

The sisters DIVORTY, who were known to be in their seventies and eighties, replied that they were 59, 49 and 44, respectively. When skepticism as to the accuracy of this information was gently voiced, they declared that any further "impertinent inquiries" would bring rejection of the money. When such an inquiry was forthcoming, they wrote: "Definitely refusing to accept any annuities whatever."

There must be something wrong with those quips and jokes concerning the Scotch and their supposedly acquisitive and parsimonious propensities. How many Virginia ladies would turn down $100 a month in order to keep their exact ages a secret?

partment reports that of nearly 5,800,000 displaced persons found by the Allies in Germany, 3,260,000 have been returned to their home countries. That is considerably more than half. Since Germany surrendered only two months ago, this, we submit, is not a bad showing.

Those repatriated include 1,243,600 Frenchmen, 1,393,902 Russians, 247,790 Belgians, 195,000 Hollanders, 136,043 Italians, 33,488 Czechoslovaks, 2,051 Yugoslavs and 6,000 Luxemburgers. Of those remaining in Germany, Russians make up by far the largest group. The War Department explains that the repatriation of Russians could not begin until after the Allied and Russian fronts were linked following the fall of Germany.

Apparently the repatriation of these displaced persons is proceeding quite well, since supreme Allied headquarters is quoted as saying that the entire problem "may resolve itself by September 1 into caring for the residual of nonrepatriables and stateless persons." In other words, in less than two months from now all who can be repatriated are expected to be returned to their homes.

Evidently those critics who have been saying that the problem of displaced persons was in hopeless confusion did not know what they were talking about.

Pitching Horseshoes

WE are glad there is a national association to guide the official destinies of pitching horseshoes. Anything so important as this certainly ought to have an association behind it. If the people who enjoy projecting arrows from semicircular pieces of wood and those who knock an inoffensive wooden ball around with a mallet can have an organization behind them, then pitching horseshoes deserves the dignity of similar treatment.

A game after supper on the farm, however, needs no official sanction. Two deeply driven stakes of oak or ash 40 feet apart and a few old horseshoes are all the equipment needed. But a man who pitches regularly is particular about his shoes. They can be neither too heavy nor too light. They must feel "right" in a man's hands. The countryman who enjoys the game from April to December is just as fussy about his prize pair of old horseshoes as he is about his favorite axe or his pet hoe.

One of the pleasant things about it is the diversity of opinion regarding the techniques—and that's the way it should be in a democracy where one's opinion is respected among his peers. Some men insist that a ringer comes easier from holding the shoe by the calk at the rear center, and letting the shoe go three times end over end. Others insist that one end-over-end revolution is best. There are those who stoutly insist the only proper way is to hold the shoe sideways, with a thumb curled around a front calk. Others balance the shoe on several fingers and figure that two and three-quarters turns will produce the most ringers.

These, however, are merely the technicalities of a blood-stirring, traditional American sport. For some three centuries, men and boys have been exercising their skill with the pieces of curved iron. It's the good-natured rivalry, the man-spirit banter, and the pitting of one's skill against another's that gives zest to pitching horseshoes. And when the shout comes, "It's a ringer!" a man has a feeling that he's accomplished something worth while.

pletely subservient military rule.

Our charter for peace terms is the most wonderful single event in the whole history of our country. But peace without precaution ain't worth you know what, and that is what Patton means when he says we can be a nation of might to stand for fright against such treacherous onslaughts as Pearl Harbor.

Patton came home from the wars triumphantly as a knight of old. His only weapons of defense were two guns bearing G. S. P. as his coat of arms.

The British in their imperial manner are very aware of their centuries-old tribute. "God Save the King." To me, we have no less glory in Patton whose crest of knighthood spells "God Save the People."

ETHEL MULLINS,

Richmond.

[Editor's Note: Patton himself admitted that he "dealt harshly with a couple of soldiers" on the occasion in question, not with just one. Our correspondent says she doesn't think he "even pretends to qualify as a diplomat"—which is exactly the point. Why, then, does he discuss diplomatic questions in speeches, something he has done at least twice, with serious international repercussions both times? The Times-Dispatch has expressed its unqualified admiration for him as a fighter and leader of our armies, but it still thinks he ought to stay in that field, where he is superb, and abandon his erratic excursions into diplomacy.]

Senator Eastland's Speech

Editor of The Times-Dispatch:

In your June 30 edition, on the front page, you published an article, "Negro Army Units Called 'Failure' by Senator." This article brings to light how much is still to be learned by some of our Senators. They are still living very much in the past.

In carrying on a filibuster against the FEPC, Senator Eastland gave his views, not facts, on a subject that the public is learning more and more about each day, only the increase of knowledge is to the contrary of the Senator's views.

Webster's definition of "filibuster" is: "A member of a deliberative body who obstructs action by use of dilatory tactics, such as speaking merely to consume time." The latter portion of the definition fits Senator Eastland perfectly—he was speaking merely to consume time.

Having a brother and many friends who have fought and died in the Ninety-second Division, and knowing how they struggled to get their commissions and then went out willingly to do the task assigned to them, giving their lives for freedom the whole world over, it is indeed a knife in the back to have some one, especially a Senator, discredit them the way Senator Eastland has done. They have done all they can for their country.

It seems that Senator Eastland is trying to destroy the ideals and principles for which these men have given their lives.

It is highly discouraging to sacrifice so much and find so little appreciation.

A NEGRO SAILOR.

Williamsburg.

vidual in a great big world, and while I am my brother's keeper, I do not feel responsible for his every act.

It is well that we show discretion in such a case as this, and I intend to do just that.

It should not be so awfully hard for us to "do unto others as we'd have them do unto us."

Jesus, our divine Savior, suffered the torture of Calvary that we might know His love, and His command to us all was, "Love ye one another, even as I have loved you."

I realize that there is a very deep misunderstanding between our races. We do not all hate when we show it on the outside. Sometimes we are just fed up, worried, scared, tired or something like that.

But we must believe that the Old Testament has given way to the New Testament of our Lord Jesus and we are to become brothers and the adopted sons of God, because He died for all men. If we think about this, then how can

press from coast to coast, the OPA, WFA and WPB found it necessary to issue a statement to correct this erroneous impression. That statement flatly declares that "no sugar has been allocated for the manufacture of beverage alcohol in connection with the July liquor holiday."

The three agencies further stated that "no sugar had been allocated for this use during the past two releases of distilling facilities for the production of beverage alcohol."

We are sure your readers are interested in the facts and for that reason we have called them to your attention.

JACK GLASSER,

The Fighting Twenty-ninth

An Editorial from the Staunton News-Leader

THE Twenty-ninth (Virginia-Maryland National Guard) Division was one of the five hardest hit divisions in the European war, as shown by casualty totals. The Twenty-ninth hit the toughest of the Normandy beaches, "Omaha," on D-Day and was kept in action almost continuously from that time until the taking of Muenchen-Gladbach just before the crossing of the Rhine. Thereafter it was in Ninth Army reserve except for the 116th Infantry from this section, that regiment going in with a new division to help clean up the Ruhr pocket.

According to the War Department, the divisions with highest casualties were the Third, with 34,224; the Forty-fifth with 27,553; the Thirty-sixth, with 27,344; the Ninth, with 22,724, and the Fourth, with 21,550. The Twenty-ninth had 20,668. The high casualties of the first four, like those of the Twenty-ninth, were attributed to constant use of the same divisions and the fact that they, again like the Twenty-ninth, usually drew the toughest jobs because the high command evidently was confident that they would deliver the goods. With the exception of the Fourth and the Twenty-ninth, all of these divisions fought in Africa, Sicily, or Italy, or a combination of the three, before being used in France and Germany, so that the Twenty-ninth paid the highest toll of all ETO divisions except the Fourth.

A total of 4,839 officers and men of the Blue and Gray (29th) died as a result of enemy action; 819 officers and 14,327 men were wounded, the rest of the total having been listed as missing or as prisoners. A breakdown by regiments has not been published, but the 116th Infantry from Western Virginia, generally considered the mainstay of the division, is reported by returned officers to have taken a major part of the casualties. A division at war strength numbers slightly under 15,000 officers and men, so that the First Division took well over 200 per cent losses and the 29th about 133 per cent.

Few of the "old-timers" are now left with these divisions, those officers and men who went to Europe with them and survived the sanguinary fighting having for the most part been sent home, most of the men and some of the officers to be discharged, others going to assignments in this country. If they can possibly be spared, no officer or man who fought through the terrible battles these five divisions endured and won should be sent to the Pacific. They have done their full share of fighting and much more.

20 Years Ago Today

A CARLOAD OF BEER CONSISTING OF 48,000 BOTTLES, billed as cement mixture to a construction company in Illinois, was seized in the Pennsylvania Railroad yards at Hammond, Ind., by agents of the Chicago prohibition enforcement office.

THIRTY-SIX PROMINENT RICHMONDERS, representing many of the important business organizations of the city, were invited to meet Luke C. Bradley, new president of the Virginia Railway and Power Company, at a luncheon given at the Commonwealth Club by the First National Bank.

HARRY FLOOD BYRD, candidate for Governor, in a speech at Farmville, denied that as a member of the State Senate he had voted against ratification of the nineteenth amendment to the Federal Constitution, giving suffrage to women, because he was not present to vote, but added that if he had been present he would have voted against the amendment as an "unwarranted invasion of States' rights" opposed by a plank in the Democratic platform of 1916, which advocated the extension of the vote to women by States only.

E. L. CARRINGTON, of Lynchburg, was elected president of the Southern Shoe Wholesalers' Association at its convention in Richmond, and vice-presidents chosen were W. F. Spalding, of Atlanta, Ga., and Carter B. Snow, of Richmond.

of transfer—are being grabbed by Selective Service and put into the infantry. These men are being given no credit for the time they spent in Europe. Some have worked a year and a half or two years, often in forward areas under conditions of great hazard.

THE tough break for the individual is not, however, so important as the stake that all of us have in this situation. The individual may be better off if he has a service record behind him when the war ends.

But if this great national asset is frittered away, we are all losers. The very safety of the nation, to say nothing of its prosperity and well-being, depends on maintaining the high standards of scientific training we have had in the past.

Dr. Bush is deeply concerned about what is happening. He will stress this threat in his annual report, soon to be released.

Because of Selective Service policy, we are already short 150,000 young men with bachelor of science degrees. We will be short 17,000 Ph.D.'s.

That may seem pretty unimportant in the toll of loss and wreckage. It seems

laboratories, it might be a lot more serious than junking half of our warships.

Neither ally nor foe in this war has followed such a shortsighted policy. In Russian laboratories, young Soviet scientists have gone right on with pure research which would have no practical results for the current conflict. But out of those Russian test tubes might come the all-powerful weapon of another war.

Scientists themselves cannot do much about all this. They can't very well themselves agitate to become an elect group. They recognize the principle of equality that has guided Selective Service, although it hasn't worked when potent pressure groups intervened—the outstanding case being the hoarding of farm labor, thanks to the Tydings amendment.

There is now a bill before the House, introduced by Representative Gordon L. McDonough, of Los Angeles, a Republican, which would correct the worst errors. It would call on the army to comb out men with scientific training and it would order deferment of 20,000 qualified 18-year-olds for scientific and technical training. There is still time, if Congress will act quickly, to save one of our vital national resources.

Fair Enough

By Westbrook Pegler

NEW YORK—Captain Joe Patterson, of the New York Daily News, usually has pretty good sense, but when he lays an egg it is a double-yolker, and that certainly is what he did a few years ago when he decided to nickname Mayor LaGuardia "Butch" and tried to put it over with the public. If he had suggested "Snitch," a word whose meaning is understood by every man who ever was a neighborhood kid with an appreciation of the social ratings of youth, that would have been much better.

But "Butch" is a burly, manly, rough-and-tumble name suggesting a character whose every trait is flouted by the conduct of the ambulant belly under the black-hander's hat which has been what New York has had to make do for a Mayor ever since 1934.

LaGuardia was out of a job and the seat was pretty near out of his pants when Roy Howard, of the World-Telegram, to his later chagrin, picked him as the fellow to drive the rascals out of the City Hall. He wanted to sign with one of our syndicates dealing in journalistic canned goods to do a column for the papers, but Roy had one of his bright ideas and sent him to the post, and he just breezed in to become the most mischievous, brattish, intolerant, foul-mouthed public character this side of Berchtesgaden.

WHEN I say he is a dirty talker, I don't mean that he just indulges in the routine helling and damning that most men use and the occasional sexy epithets that are dictionary words, so to speak, in the unwritten language of the males of this republic. I mean that he rolls filth around in his mouth with voluptuous Adriatic relish and repeats it and fairly drools it, and if you doubt this, ask Jim Farley about his distress one time in a mayoralty campaign when he wanted to bring out this fact but just couldn't because it was impossible to repeat even to a stag meeting the language that "The Hat" had uttered for publication only a short time before. A reporter had asked him for a statement and LaGuardia said he would make one if the reporter would promise that it would be printed verbatim. The reporter naturally agreed, and then LaGuardia let fly, and not only that, but, for sheer pleasure in the repetition of his obscenities, said them again slowly as the reporter made his notes.

He is, moreover, a bulldozer who takes advantage of his position to bawl out decent, manly officials of the police department who would knock him bowlegged but for his power to fire them out of the service without their pensions after all their years. He humiliates other subordinates in the same way, and although he is a great fourflusher about the right of a worker to talk back to the boss, man-fashion, without being fired, he goes into screaming rages whenever some individual decides that his manhood is more precious than a lousy job and lets him have some of his abuse right back.

IN THE last few years he has just about talked himself out of his job as Mayor by his absurdities over the municipal radio station which has become his personal propaganda outlet. Most demagogues use radio to advantage, but LaGuardia's voice is almost soprano, and moreover most of the "masses" to whom he looks for his support are the very people who like to lay a bet in the books or play the numbers racket. However, "The Hat" has been wowsing against the operators of these public utilities for years.

There was a race riot in Harlem a few years ago and you would have thought that would be a lesson to him. But no, the other day he had to get on the air and tell the Negro population that the white daily newspapers had purposely refrained from saying that General Eisenhower was going to drive through Harlem to the ball game because the papers were anti-Negro, which was not true and might have stirred up another disaster. Then he made a political occasion of the Eisenhower dinner, as Hitler made politics of the Olympic games, using the general as the stooge for a political trick while a lot of Communists horned in where they had no business.

Murray Davis, a reporter, a big fellow who used to pitch ball in the American Association, knocked his ears down one day. He asked LaGuardia some question and got a dirty answer and gave one back and then LaGuardia screamed like a little girl, "I am going to tell your boss on you."

Instead of slapping him across the mouth, Davis pitched his voice into an effeminate treble and shrieked back, "And I am going to tell my mama on you."

The name Fiorello means "little flower," so why monkey with it? The dandelion is a little flower, and its color could not be more appropriate.

Negro Troops Defended by War Correspondents

Continued from Page One

be crowded with the enraged ghosts of colored soldiers who have died in this war."

Second Correspondent

"THOMAS W. YOUNG: The 761st Tank Battalion fought with the Third, Seventh and Ninth Armies through France, Luxembourg, Belgium, Holland and Germany. It fought with the Third Army during the Ardennes breakthrough.

"Several officers and men have had two and three tanks shot or blown from under them, and these men are still fighting in tanks, says an official War Department review. The men have extremely great pride in their unit and know they are a fine example of American soldier. It seems fitting that this unit be considered in an overall appraisal of Negro officers and enlisted men.

"Major-General M. S. Eddy, commanding one of the army corps with which the 761st fought, gave the men this commendation: 'I consider the 761st Tank Battalion to have entered combat with such conscious courage and success as to warrant commendation. The speed with which they adapted themselves to the front line under most adverse weather conditions, the gallantry with which they faced some of Germany's finest troops, and the confident spirit with which they emerged from their recent engagements in the vicinity of Dieuze, Morville, Lee Vic and Guebling entitle them surely to consider themselves the veteran 761st.'

"Major-General Raymond G. Lehman, commander of the Ninety-third Infantry Division fighting on Bougainville Island, summed up the fighting qualities of his men as follows:

" 'They have the same courage, the same fear and fighting spunk as any other soldier. They are quick to learn and eager to perform. They can give and take, and they are about the best disciplined in the army.'

"A great number of Negro soldiers are going to be quite surprised when they learn on authority of Senator Eastland that they have been 'utter and abysmal failures.' Among them are Lieutenant James B. McCullin and Sherman White, who took off on July 2, 1943, at the controls of P-40 Warhawks protecting American bombers with white crews in the assault on Sicily; and Lieutenant Paul G. Mitchell, who flew from a field in Sicily, after the island was invaded, in August of the same year, to dive-bomb enemy troops and installations, and Lieutenant Sam Bruce, who fought so spectacularly in the air defense of our beachhead at Anzio January, 1944, and Captain Erwin B. Lawrence, who flew his fighter plane over Yugoslavia to strafe the Nazis.

"These men will be surprised and a little bitter if they ever hear about the Senator's statement, but fortunately they will be spared that suffering, because none of them returned from their missions.

"They and dozens of other Negro fighter pilots who put duty before their personal security won't come home to suffer the anguish of ingratitude like that of the gentlemen from Mississippi."

Third Correspondent

"E. M. Graves, Jr.: 'In an interview on last Memorial Day, at the American Cemetery at Anzio, in Italy, Lieutenant-General Lucien K. Truscott, commanding general of the Fifth Army in Italy, told this writer that Negro artillery, tank, reconnaissance, tank destroyer, combat engineer, ordnance and the quertermaster troops 'who have served in this theater under my command have done an exceptionally good job.'

"On another occasion General Truscott told correspondents that the best general service engineer regiment in this command had been the Ninety-second Engineer Regiment, and the fact that he had placed that unit on Highway 65 during the Winter stalemate. These men were credited by the general with having made possible the Allied assault on Bologna which resulted in the quick ending of the war in Italy.

"Major-General E. M. Allmond, who commanded the Fifty-second Division in Italy, on the day after V-E Day, said that his artillery, tank and engineer units had maintained through the final phases of the Italian campaign the same magnificent performances for which they had previously been cited many times by General Truscott and General Mark W. Clark, commanding general of the Fifteenth Army Group in Italy. General Allmond made this statement while seated at dinner in the Hotel Columbia in Genoa on May 9.

"Lieutenant-General Ira C. Eaker, acting commanding general of the Army Air Forces, made the first of two revealing statements concerning the contributions of Negro airmen to the victories of this war at a time when he was commanding general of the Mediterranean Allied Air Forces in Italy. Speaking to the officers of the 332d Fighter Group at Capodichino Airport, in Naples, and later that same day. In the late Spring of 1944, to the officers of the Ninety-ninth Fighter Squadron at Cercola Airport, near Naples, General Eaker told the men that he had followed their exploits since the Negro flyers were first committed to combat, and that he was convinced that they were qualified, capable and courageous.' He said: 'I have confidence that you can do any job we have to do here. I have arranged for you to be transferred to the Fifteenth Air Force to do long-range bomber escort work in the strategic air force. I have given you the best airplane made, and judging by the excellent record you have made, you will do a fine job.'

"The second significant statement about these flyers was made on June 21 at Godman Field, Ky., when, while addressing the 4,000 Negro officers and men of the 477th Composite Fighter Bomber Group, he said: 'During 14 months of campaigns in the Mediterranean I had an excellent opportunity to observe the operations of the Ninty-ninth Fighter Squadron and the 332d Fighter Group against the German enemy. I am happy to tell you that I am proud of their record in the war. I have brought here with me your commanding officer for the future, Colonel B. O. Davis, Jr., who, incidentally, commanded both the Ninety-ninth and the 332d previously. It was on my personal recommendation and insistance that he is to take command of this group because of the work I saw him do overseas."

MEMORANDUM FOR THE PRESS:

Colonel Benjamin O. Davis, Jr., Air Corps, who on June 21 assumed command of the 477th Composite Group at Godman Field, Kentucky, on July 1 became the first Negro to head an Army Air Force base in the United States when he took over duties as base commander of Godman Field, succeeding Colonel Robert R. Selway, Jr., Air Corps, the War Department announced today.

Colonel Selway has been given a temporary duty assignment at Fort Knox, Kentucky.

Dear Yank:

The other night we had a jam session with some colored boys from a Quartermaster trucking outfit quartered near us. This morning we were read an order which prohibits us to associate with the colored troops "except on business."

A colored tank outfit fought side by side with this regiment clear to Steyr, Austria, and we were never ordered not to fight alongside of American troops of the colored race, so why should we be forbidden to associate with other American Soldiers because of color?

Germany -Pvt. David Icheson

Service Records

NEGRO SOLDIERS

Dear Yank:

I received a copy of your magazine and read that the ANG is letting the Germans go back to school. After that I read in Mail Call about the Jim Crow treatment of colored American soldiers.

Now I am from Mississippi. Until I came into the Army I hated Negroes. It wasn't anything they did to me; I just didn't like them. Since I have been in the ETO I have fought from D-Day to VE-Day with Negro soldiers. I was wounded twice in one foxhole and a Negro saved my life by using his first aid kit on me. Then he carried me to where a doctor could work on me. This was under heavy fire. Later he died. He was from New York and he knew I was from the south where he had no freedom.

Many Negro soldiers have died on the front for American soldiers who thought Jim Crow was right. So if Germans can have freedom after they have caused so much suffering and destruction, why not let the Negro race have what they fought for? I feel that they should, and a lot of southern GIs feel the same way.

ORDNANCE UNIT GIVEN PRAISE BY COMMANDER

HEADQUARTERS, EUROPEAN THEATER OF OPERATIONS, France—In a three-day period, 3,500 Negro troops of the 71st Ordnance Group performed something in the way of a miracle when they evacuated three ammunition supply points under fire, set up two new ones, reduced an army ammunition depot to supply-point size, set up a supply point to serve a corps, while at the same time issuing 3,000 tons of ammunition a day to the fighting troops.

Ordered To Stay In Business

With other units of the Ordnance they operated under orders to "evacuate, but stay in business" issued by Col. J. B. Medaris, of Cincinnati, Ohio, First Army Ordnance officer. The 71st was a part of the total of 15,000 troops who moved nearly every piece of equipment in Ordnance depots from the path of the advancing Germans, but not out of reach of the American troops who first slowed and then stopped the drive that had been designed to capture or seal off these and other supply points.

Within several days the entire depot had been moved to another location 50 miles away and the only items lost were the tank tracks.

"They evacuated, yet they stayed in business and kept the troops well supplied and kept up the repair work, too," Colonel Medaris

Hides Entire Division from Nazis for 16 Days; Protects 2 Saar River Crossings

SAAR RIVER FRONT—Major credit for creation of th greatest artificial fog in this or any other war goes to the al colored 161st Smoke Generator Company.

The feat, accomplished in conjunction with white unit of the 81st Chemical Battalion, enabled the entire comba force of the 90th Division to remain concealed for sixtee days, during which it made two crossings of the Saar Rive in Germany.

Members of the 161st, who earlier in the Continental in vasion had shielded a successful Allied crossing of the Mosell

River in France, kept nearly 9,000 smoke pots in effective operation, using 146,000 gallons of oil.

Under their protective screen, infantry, tank and tank destroyer units of the 90th were ferried across the Saar by Army engineers early in December. These combat units had the same protection throughout their advance to Dillingen, Germany, during which they destroyed over 250 Siegfried Line pillboxes.

They were obliged to re-cross the Saar in General Patton's shift of the Third Army, still shielded by the smoke screen, which was credited with helping to keep casualties to a relatively low figure.

Baltimore Afro-American

Cinti. Daily Enquirer Says History Of World War 2 Will Record Negro Playing Big Part In Fight On All World Battle Fronts For Victory

The Negro At War

When the time comes to write the history of armed service in World War 2 the Negro will merit a sizabe place for a splendid contribution. Negro soldiers are serving with valor on all the battle fronts. Many have been decorated for personal bravery. They can be found in nearly all branches of the Army, including the Army Nurses Corps, where they are helping to relieve a great shortage of women to caae for the wounded.

Pictures sent back from the war fronts show Negroes as pilots, fighting and building with the engineers in the Pacific, stringing communication lines with the Signal Corps, setting up heavy guns and readying them for artillery action in France, riding tanks and as foot soldiers in Italy.

The Negro has shown himself to be highly capable as a pilot. A B-25 pilot, back from 53 missions in the Southwest Pacific, praised highly their quick reactions and rapid assimilation of lessons when he drew an assignment as an instructor. The Negro can be very proud of the part members of his race have played and are playing in the thick of the fight for freedom.—Cincinnati Daily Enquirer

SOMEWHERE IN THE ETO—M/Sgt. Jack Watts, (r), Armstrong, Mo., operating a Thor Paving Breaker and T/5 John Gardner, Vicksburg, Miss., operating a LeRoi Compressor in construction overseas—(US Army Signal Corps foto).

Negro Combat Engineers Make Enviable Record

With the recent War Department announcement that one-seventh of the Negro troops in the Army are in the Corps of Engineers much interest has been aroused as to the types of services which they perform. Aside from the back breaking jobs of construction, demolition, bridge and road building, many are assigned to technical jobs which require training and skill in the operation of machinery. Bulldozers, pneumatic drills, paving breakers, graders, compressors, cranes and power shovels are a few of those types of machines which Negro Combat Engineers are operating efficiently in every theatre of war. They are also manning mobile machine shops for vehicle maintenance.

During the past year, Negro Engineers have been an integral part in every task of major engineering importance. In January they constructed a vital "springboard" from England to Nazi Germany, working in three 8 hour and two 10 hour shifts and completing the job in record time, according to a War Department announcement.

LEARN FRENCH

In March without the use of bulldozers or other heavy, high speed equipment, a unit in Great Britain completed the construction of a huge Army camp in two weeks. In April a full squad of an Engineer battalion in England were taught French, anticipating its use when the Allies stormed the beaches of Hitler's fortress Europe.

In India, a Negro battalion taken from their work on the Ledo Road built a large parking apron for B-29 Superfortresses in one month, an engineering feat because of the intense heat preceding the monsoon season and the shortage of materials and water.

In September, the 1316th Engineer Regiment, then stationed at Fort Huachuca, Arizona, was selected by the Engineer Board at Fort Belvoir, Va. as the most proficient Bailey Bridge building crew in the Army and a training film, widely used for Army teaching purposes, was made of this unit during construction.

In November mine detector squads of a general service regiment operating on the Normandy beachheads removed the amazing total of 2,742 mines and booby-traps in eight days, the War Department announced.

In December, although hazards were great, Negro Engineers in the 1349th Regiment in England, without a single casualty, inspected and removed live mines, booby-traps, hand grenades and Bazooka, howitzer and rifle shells from 10,000 acres in six weeks.

NEGRO GENERAL GETS DSM

Davis Began 46 Years 'Service in Army as an Enlisted Man

WASHINGTON, Feb. 10 (U.P.)—The War Department reported tonight that Brig. Gen. Benjamin O. Davis, the only Negro general, had received the first Distinguished Service Medal to be given to anyone of his race.

General Davis is completing forty-six years of Army service. He was cited for "meritorious service in a duty of great responsibility as an inspector of troop units in the field and as special War Department consultant on matters pertaining to Negro troops."

His citation added that his "wise advice and counsel have made a direct contribution to the maintenance of soldier morale and troop discipline."

General Davis entered military service as an enlisted man during the Spanish-American War. He is serving in the European theatre.

Ordered To Stay In Business

With other units of the Ordnance they operated under orders to "evacuate, but stay in business" issued by Col. J. B. Medaris, of Cincinnati, Ohio, First Army Ordnance officer. The 71st was a part of the total of 15,000 troops who moved nearly every piece of equipment in Ordnance depots from the path of the advancing Germans, but not out of reach of the American troops who first slowed and then stopped the drive that had been designed to capture or seal off these and other supply points.

Within several days the entire depot had been moved to another location 50 miles away and the only items lost were the tank tracks.

"They evacuated, yet they stayed in business and kept the troops well supplied and kept up the repair work too," Colonel Medaris said. "And our casualties were very light."

Tan Yanks Supply Bread For Troops

AHWAZ, GULF DISTRICT, Iran —(By Courier, Delayed)—While in this area of the Persian Gulf Command I paid a visit to another detachment of the 153rd QM Bakery Company, which is "sweating out" the job of supplying the daily bread for the thousands of GIs stationed in this sphere of influence on the Russian supply line.

Like many other units here in Iran, these Tan Yanks have been overseas more than 18 months and are hoping to get a break soon under the rotation policy. Even under the most severe conditions of climate and illness, these "GI doughboys" have not missed turning out their regular quota of bread for the troops, since their original assignment here.

Negro Units of Signal Corps Laid 10,000 Miles of Wire in France

WITH U. S. FORCES IN EUROPE—Day and night, through rain, sleet and snow, the communication lines must go through, and Negro units of the Signal Corps set a record in a recent feat of laying 10,000 miles of open wire from Normandy across France into the Siegfried Line.

The 29th Signal Construction Battalion, the oldest of these Negro units, was activated April 10, 1942, at Camp Gordon, Ga. The outfit has received letters of commendation from Brig. Gen. J. B. Sweet, Headquarters, Desert Training Center, and Col. George F. Wolley, Signal Officer, IV Corps, for its participation in California-Arizona maneuvers in 1943, and for building many miles of pole lines across difficult mountain and desert terrain. It arrived in France last June.

In setting 40 miles of underground cable in Farnce, the outfit is credited with the longest such cable laid by a single unit on the continent.

Motor Transport Service Completes Work in Iran

Tan Yanks Played Major Role in Pushing Through Tons of Supplies to Russia

By FRANK E. BOLDEN
NNPA War Correspondent

TEHERAN, Iran — By Courier, Delayed — I am now leaving the Persian Gulf Command after a 3,000-mile tour of this pulsating supply artery where American and British soldiers have by their combined efforts contributed in no small way to the success of Russian armies.

Also ending its all important mission here is the Motor Transport Service of which the all-colored 114th QM Truck Company (formerly the 26th QM Trucking Company) is a part.

Drove 97 Million Miles

From March 1, 1943, until the order officially ending the tenure of the MTS came out, this service handled a total of 624,342 long tons of freight, of which more than 400,000 tons went to the Red Army.

Added to this is the fact that American truck drivers have reeled off more than 97,000,000 miles of driving through one of the most arid and difficult countries in the world.

White GI's Operate Trains

Included in this tonnage figure were some 143,000 vehicles of all types and some 3,387 planes which were both assembled and tested here in Iran. All the troops working on the railroad are white.

Port Units Speed Work

In January, 1943, when the U.S. Army took over the operation of the gulf-ports of Bandar Shahpur and Khorramshahr, the monthly capacity was only 95,000 tons and it took over fifty days to unload a vessel and turn it around for the voyage home.

With engineers taking over the expansion of the docks and with the help of four port battalions, two of them colored — the 380th and the 482nd — the capacity of the twin ports had by October, 1944, been increased to 265,000 tons, while the turn-around time for vessels in port had been lowered to seven days.

Weather a Handicap

Troops have worked here in a country where the terrain ranges from zero elevation at the gulf ports to 7,250 feet above sea level in the mountains of the Iranian Plateau.

They have fought temperatures ranging from zero in some of the mountain ranges to the 170-degree sun readings of the desert and gulf areas, and weathered the ravages of dysentery, sandfly fever, and malaria.

Engineering outfits constructed, maintained and bettered hundreds of miles of highway. They produced sufficient gravel for these operations, and maintained snow removal teams to keep the roads open during the winter months.

Included in these operations were tan Yanks of the 352nd Engineer Regiment, and the 435th and 436th Engineer Dump Truck Companies.

The 4,000 colored soldiers who have "sweat out" two summers here in Iran have upheld the best traditions of American soldiers

Mercury Hits 179 in Iran During 1943

AHWAZ, Iran—The highest sun temperature recorded at theMasjidi-Sulaiman oilfield in 1942 was 183 degrees Fahrenheit and in 1943-44, 179 degrees on July 31, 1943. The section is 54 miles from here and is 1000 feet above sea level.

In an official communication to Colonel Bates, commander of Quarry Camp in the Gulf district, it was pointed out that these temperatures are about as high as would be obtained anywhere in the country.

92nd Hero Is Decorated

In a war-torn town somewhere on the Italian Riviera, top flight officers of the famed Fifth Army took time out to honor fighting heroes of the 92nd Division in an impressive decoration ceremony. Lt. Gen. Lucien K. Truscott, Fifth Army commander, pins the Legion of Merit on 2nd Lt. Johnny Birdsong of Dallas, Texas, who was recently given a combat commission. He led the first combat patrol across the Arno River. (Picture Courtesy "Buffalo")

OPEN ROAD OUR BOYS BUILT

Col. Davis' Air Fighters Celebrate 1st Year Overseas

15th AAF in Italy—The All Negro Fighter Group, commanded by Col. B. O. Davis, Jr., celebrated its first year overseas as a combat unit actively engaged in long range escort and participating in the strafing of enemy ground targets and installations.

The Group began flying combat assignments with the 12th Air Force but was transferred to the 15th Strategical Air Force under which it still operates. The type of aircraft flown by the Negro Group has been as varied as its assignments. They provided harbor patrol fo rthe Naples Area in P-39 type planes until they were assigned P-47 Thunderbolts. It was at this point that the Group was transferred to the 15th Air Force where it began escorting heavy bombers and aiding in the attacks upon the vital ground targets of the enemy.

Soon after, the pilots were assigned to fly the P-51 Mustang fighter type ship that they are still operating. It was in the P-51 type aircraft that the Group began the series of events that led to their success as a part of the 15th Air Force that was dealing the enemy a devastating blow.

The Negro pilots, led by Col. Davis, scored their initial victories against the enemy air force during an aerial battle in the Udine Area while still flying the P-47 type aircraft. During this battle, the pilots destroyed five ME-109 enemy ships, the first victory being scored by Capt. Melvin T. Jackson, 26, 432 E. 23rd St., Baltimore, Md., who is a squadron commander of one of the units within the Group.

Capt. Wendell O. Pruitt, 23, 4569 Garfield Ave., St. Louis, Mo., Flight Leader and 1st Lt. Gwynne W. Peirson, 23, 865—45th St., Oakland, California, added to the the day by day history of the Negro Mustang Group. A resume of the yearbook index would show that 24 pilots have been awarded the Distinguished Flying Cross, 9 pilots received the Purple Heart for injuries received as a direct result of enemy action and more than 200 Air Medals and Oak Leaf Clusters were awarded to pilots for "meritorious achievement in aerial flight."

Awards of special interest was the Legion of Merit to Col. Davis and the Bronze Star to T/Sgt. Raymond L. Washington, 24, 1209 Edmondson Ave., Baltimore, Md., Electrical Specialist and S/Sgt. Professor Anderson, 27, 1619 Philpot St., Selma, Ala., Sgt. Major of the Motor Pool.

As each day passes, the men of this Group are more resolved than ever to do their share toward the achievement of an everlasting peace. The pilots personnel changes, but the spirit moves on and on. These young Americans are dedicated to the task of wiping the scourge of the Nazi from the face of the earth and until this job has been completed, there can be no rest. There are others, countless others, who are doing all in their power to "Keep 'em flying" and they, too, deserve a place in the history to be written after this conflict has ended.

OPEN ROAD OUR BOYS BUILT—With Admiral Mountbatten's statement that "the land route to Chinca is now open," war supplies have begun moving by truck for the first time in more than two years over the new Ledo Road, built by American Negro soldiers. When the Chinese border town of Wanting fell recently, the last remaining military barrier was lifted and convoys, driven by Negro soldiers, now roll out of Myitkyina (1) to Kumming (2), assuring rapidly increasing quantities of fighting equipment and food for the land war against the Japs in Chinca. The convoys put out from Assam, reaching Myitkyina after a 262 mile stretch to the convergence of the Ledo and Burma roads.

Smoke Co. Stands Vigil In Belgium

(Public Relations Release)

WITH U. S. FORCES IN Belgium—Veteran of operations against German air raids in England, and the port of Cherbourg in France, the 82nd Chemical Smoke Generating Company now serves as a vital link in the antiaircraft defenses of an important Belgian port.

The port through which a port organization of the U. S. Army Transportation Corps is forwarding supplies and war material to the advancing Allied Armies, is one of the largest under Allied control.

The 82nd's activities are coordinated with British and American antiaircraft artillery and air force squadrons. Equipped with mobile generators and stationary "quick cover" circuit smoke pots, men of the 82nd can send up dense clouds of artificial fog to protect the vast dock areas in case of air attack.

Not only is the unit equipped with its own motor transport and radio and telephone communication system but it also operates a meteorology station to obtain local weather and wind data for computation in weather forecasts. Captain Ralph J. Smith, of Camden, Alabama, the unit commander, is proud of the outfit's record in being able to operate within five to seven minutes after an alert.

"The only time they can relax a bit is when there is natural fog over the city," he commented.

Philadelphia Tribune

992nd Quartermaster Service Co., First Negro Unit On Leyte Ends Year's Duty

WITH ARMY SERVICE FORCES In The PHILIPPINES.—The 992nd Quartermaster Service Company, the first Negro outfit to land on Philippine soil in General Douglas MacArthur's triumphant return, has seen over one year of duty in the Southwest Pacific theatre, the War Department reported today. During that time, it served from Lae in New Guinea to Leyte in the Philippines.

The business of the 992nd is to maintain a base quartermaster food distributing point from which rations are issued to troops located there. But exigencies of warfare are many, and men experienced in handling supplies efficiently and quickly are often needed desperately in a given gap.

For example, in our Leyte landing, the men of the 92nd arrived on D-Day and, pressed into the most needed service at the moment, were immediately at work unloading, stacking and issuing ammunition, petroleum and lubricant supplies. This they performed under heavy Jap sniper and machine gun fire which greeted our arrival.

Fifth Withdraws Slightly in Italy

U. S. Troops Give Way to Nazi Counter-Attacks After Nearing Massa

ROME (AP)—American Fifth Army troops who drove to within 2½ miles of Massa, in the Italian west coast area, have withdrawn slightly in the face of repeated enemy counter-attacks and heavy German artillery and mortar fire, Allied Headquarters announced today.

The Americans consolidated their positions about a half mile south of Strettoia, which is three miles southeast of Massa.

Due south of Massa, Negro troops of the 92d Division repelled several counter-attacks about a mile north of the little stream, Fiume La Foce, and then withdrew to its south banks under heavy enemy fire.

Farther inland, the Germans were reported making a determined effort to regain control of the Lama Di Sotto ridge on the east side of the Serchio Valley.

The Eighth Army reported that the Germans continued to dynamite Senio River flood banks so that a wide area adjoining the river will become inundated when the Spring floods start.

NEGRO UNIT AT BASTOGNE

969th Field Artillery Battalion Filled Heroic Role

WASHINGTON, Jan. 28 (AP)—The 969th Field Artillery Battalion, with Negro enlisted men manning its 155-mm. howitzers, has fought all the way from Normandy to Bastogne.

The War Department reported today that the battalion struck to its guns and helped beat off waves of German attackers at Bastogne, where for a time American forces were isolated in the German breakthrough push.

In the heaviest fighting at Bastogne all except the actual cannoneers fought infantry fashion, taking thirty or forty prisoners.

The battalion set up its guns under the direction of the 101st Airborne Division, to which it was attached. Enemy tanks and infantry approached. With the help of a few scattered tanks, the battalion poured out fire that held the enemy at bay. Casualties became heavy before the tide turned with the appearance of supply planes and armored forces from the south.

Port Unit Rushes Supplies To Reds

By FRANK E. BOLDEN
U. S. War Correspondent

(Representing the ATLANTA DAILY WORLD and Negro Newspaper Publishers Association)
(Copyright — Reproduction prohibited)

KHORRANSHAHR, GULF DISTRICT, IRAN — By Courier, Delayed—Here at this number one port in southern Iran, which figuratively pours blood into the throbbing Russian lifeline, arduously engaged in the task of unloading vital Lend-Lease cargo is the crack 380th Port Battalion. At one time it was considered as the second-ranking outfit of its kind in the world. Even now it is rated by veteran wiseacres in Iran as the "backbone" of the Persian Gulf Command.

Having spent two torrid summers here on the Persian docks, and pronounced excellent workers by the Russians and the British, these Tan Yanks, the majority of whom lacked previous longshoreman's experience, have by their scintillating performances added increasing lustre to the already brilliant and impeccable record made by colored soldiers, who have served their country well.

ONCE ARTILLERYMEN

Most of the men were drawn from the 46th Brigade of the 350th Field Artillery Regiment and various quartermaster complements in order to activate this Port Battalion.

During the past summer in the hottest month, which was July, the 380th set its all-time record for the discharging of cargo from ship to shore. In this one month it unloaded some 91,000 long tons of Lend-Lease supplies, and on one particular day, these speedy GIs discharged some 4,000 long tons, with two companies alone being responsible for 3,000 long tons of

NON-COMS RUN SHOW

Seldom do the officers have to interfere with the unloading operations. These three competent "non-coms" can supervise the discharging of everything from canned beans, munitions, and trucks to 50-ton tanks and locomotives.

Most of the supplies come in on Liberty ships, which average five hatches to a vessel. Each hatch required a crew of at least five soldiers and 15 coolies to insure unloading efficiency. It is officially admitted that Negro troops make the better coolie bosses because of their patient and understanding attitude.

Commanding the 380th is Lt. Col. Gerald "Jerry" Sadler, a well known figure back in his native Austin, Texas. He resigned his civilian job as railroad commissioner to enlist in the Army as a buck private. His enthusiasm for the Battalion is high, and he proudly points to its record here on the supply line, which he believes will match that of any other corresponding unit in the Army.

Bagpipes Play for Happy Women Whose Dreams Come True

By JOAN CAPREOL
Reuter Correspondent

BIRMINGHAM, England, Feb. 14.—When 686 tin-hatted members of the 1st Battalion of the American Women's Army Corps stepped off a train at a windswept flood-lit siding station near here last night, smiling faces showed their dreams had come true—they were overseas.

These girls, representing nearly every state with 85 per cent of them ex-school teachers and holders of college degrees, received a special welcome.

Brig. Gen. John A. C. Lee, commanding general of the communications zone, flew specially from Paris to greet them at their debarkation port where a Scot band bagpiped them to the train for England. Buses were waiting for them, and an American band marched them in.

A Thrill

Chaplain Capt. Beverley Ward of Harrisburg, Pa., who flew to welcome the girls, said he got a thrill when he recognized 21-year-old Ruby Wilson, whom he had baptised in the Presbyterian church in his home town.

The girls, most of whom have husbands, brothers or sweethearts in the Army, unanimously declared that their arrival over here would mean a lot to the Negro troops.

Pfc. Mamie Lewis, 26, of New York, told me her fiance, Corp. Frederick Clay of Oklahoma, who is in France, didn't know that she

92nd Division Wins High Praise On The Home Front

WASHINGTON, D. C. — The Ninety-second Division has won high praise for halting the German surprise offensive in the Ligurian coastal sector of Italy against Fifty Army troops.

Giving a summary of last week's war news on the Army Hour over the National Broadcasting Company network on a nationwide hookup last Sunday afternoon, Colonel Albert L. Warner, chief of the War Intelligence Division, Bureau of Public Relation of the War Department, said:

"In Italy the Germans took a cue from their fellow Nazis in Belgium and launched a small drive in the Serchio Valley. This three-day effort was stopped by Negro troops of the 92nd Division and the concentrated pounding of tactical planes."

Drew Pearson, newspaper columnist and radio broadcaster, coming on the Blue network at 9 o'clock on the same Sunday night, said:

"The German theory of the master mind has just received another jolt in western Italy where Hitler hurled a terrific attack at the all-Negro Ninety-second American Division.

"The Nazis picked this Negro Division because they were looking for a soft place in the line and because with typical Nazi arrogance they were certain that Negro troops would be no match for the Nazi supermen.

"However, they were surprised. The Ninety-second Division bent but did not break. They withdrew about three miles and then stopped the Nazis dead in their tracks. Today the Ninety-second has taken the offensive again. And War Department officials yesterday were strong in their praise for these Negro troops."

BROKE THROUGH

The suddenness of the attack enabled the Nazis to break through the forward American lines. The Germans, in a radio report of the drive, said that Italian Fascist forces also were participating in the attacks.

The German radio said that most of the American prisoners taken in the attack were colored, and Allied headquarters at Rome confirmed that the defending troops were elements of the Ninety-second Division.

Norfolk Journal & Guide

Cite Performance Of Negro Troops During German Drive

HEADQUARTERS, EUROPEAN THEATER OF OPERATIONS, FRANCE — Although forced to evacuate stores of ammunition, tanks, guns and trucks during the recent German drive through Belgium, Ordnance troops assigned to the First U. S. Army managed to save all but a small quantity of tank tracks and 2,000 tons of ammunition of standard American calibre which will do the Germans little or no good.

In a three-day period, 3,500 Negro troops of the 71st Ordnance Group performed something in the way of a miracle when they evacuated three ammunition supply points under fire, set up two new

Anti-Tank Men Suffer Heavy Loss

Tank Destroyer Unit Ignored Order To Withdraw

WITH THE AMERICAN 7TH ARMY IN FRANCE—(Delayed) — Small units of the Negro 827th Tank Destroyer Battalion and tankmen and armored infantry of the 14th Armored Division assisted a crack American infantry unit to hold up Field Marshal Karl von Rundstedt's offensive against the Maginot Line villages of Hatten and Rittershoffen for 11 days.

The regiment performing this feat was the 315th Infantry of the Seventy-ninth Infantry Division, supported by small units of the Negro 827th Tank Destroyer Battalion and tankmen and armored infantry of the Fourteenth Armored Division.

Almost half of the men in this regiment are casualties, but they gave a good account of themselves in the battle against the crack German Twenty-first Panzer Division, the Twenty-fifth Grenadiers Division and an entire regiment of the Seventh Parachute Division, and for every American casualty there were five to ten Germans.

GERMANS ATTACK

KHORRANSHAHR, GULF DISTRICT, IRAN — By Courier, Delayed—Here at this number one port in southern Iran, which figuratively pours blood into the throbbing Russian lifeline, arduously engaged in the task of unloading vital Lend-Lease cargo is the crack 380th Port Battalion. At one time it was considered as the second-ranking outfit of its kind in the world. Even now it is rated by veteran wiseacres in Iran as the "backbone" of the Persian Gulf Command.

Having spent two torrid summers here on the Persian docks, and pronounced excellent workers by the Russians and the British, these Tan Yanks, the majority of whom lacked previous longshoreman's experience, have by their scintillating performances added increasing lustre to the already brilliant and impeccable record made by colored soldiers, who have served their country well.

ONCE ARTILLERYMEN

Most of the men were drawn from the 46th Brigade of the 350th Field Artillery Regiment and various quartermaster complements in order to activate this Port Battalion.

During the past summer in the hottest month, which was July, the 380th set its all-time record for the discharging of cargo from ship to shore. In this one month it unloaded some 91,000 long tons of Lend-Lease supplies, and on one particular day, these speedy GIs discharged some 4,000 long tons, with two companies alone being responsible for 3,000 long tons of this total amount.

Last year with the temperature staying around a punishing 170 degrees, these "boom and crane commandos" put on a memorable three-star performance. It was during the dark days of Stalingrad, when the fate of that beleagured city was hanging in a precarious balance. Powerful Red Armies were locked in a death-grip struggle with the pride of the Nazis' Wehrmacht. Critical materials marked with a number one priority for these armies were waiting to be unloaded here in this jam-packed port. Working in around-the-clock shifts, the 380th together with one company of the also colored 482nd Port Battalion (now at Bandar Shahpur) and two white Port Battalions the 378th and the 385th, unloaded some 82,000 long tons of cargo. Of this entire amount the 380th alone handled some 63,000 long tons, which stands as no mean feat of accomplishment.

Khorramshahr was transformed from a broken-down, one-wharf dock to a seven-berth port with facilities for unloading directly onto freight cars or trucks.

The nearby village of Khorramshahr has been declared "off limits" during most of the day because of poor health conditions which are detrimental to the welfare of military personnel. Unit commanders have the privilege of deciding when their troops may visit for the purpose of shopping for curios and the like.

BANDITS A PROBLEM

Barbed wire and anti-personnel mines ring the entire installation at Khorramashahr, which is practically one huge supply dump. Native bandits are frequent visitors, as the materials bring fabulous prices on the black market.

NON-COMS RUN SHOW

Seldom do the officers have to interfere with the unloading operations. These three competent "non-coms" can supervise the discharging of everything from canned beans, munitions, and trucks to 50-ton tanks and locomotives.

Most of the supplies come in on Liberty ships, which average five hatches to a vessel. Each hatch required a crew of at least five soldiers and 15 coolies to insure unloading efficiency. It is officially admitted that Negro troops make the better coolie bosses because of their patient and understanding attitude.

Commanding the 380th is Lt. Col. Gerald "Jerry" Sadler, a well known figure back in his native Austin, Texas. He resigned his civilian job as railroad commissioner to enlist in the Army as a buck private. His enthusiasm for the Battalion is high, and he proudly points to its record here on the supply line, which he believes will match that of any other corresponding unit in the Army.

The 380th began working here the second day after its arrival in Iran over 20 months ago, and has been on the job steadily ever since. The combination of hard work and extreme rugged climate has left the majority of the GIs quite tired. Many times they have answered the call to "fall out for the docks" with little more than raw courage to spur them on. The Battalion has had its share of illness, injuries, and deaths. Its members have had no "snap" assignment.

PLAY FOOTBALL

The 380th has its own post exchange, service club, and recreational rooms. White troops have the same in their own areas. Both races are privileged to use each other's facilities if and when the occasion demands it. Generally the troops use those facilities which are in their own area because they are closer.

Our GIs also have their own football team, as do the white soldiers, and it is known as the Khorramshahr "Dolphins"

STORY OF ENDURANCE

The story of the 380th is one of perseverance and endurance. If you could but see these GIs just once, at work beneath a bright and pitiless sun . . . . the temperature on the steel-plated decks of the ships soaring as high as 186 degrees . . . . the salty perspiration from burning veins and tortured flesh making white patches in crazy-quilt fashion on green fatigue suits . . . and the mathematical precision of maneuver, the infinite detail, the split-second timing and the faultless accuracy employed in the movement of cargo from ship to shore, you would not be long in realizing that all of this war is not being fought in the foxholes and on the assault beaches.

Seven Fliers Win DFC's; Four Squadron Commanders Honored

By JOHN "ROVER" JORDAN
Guide War Correspondent

AN ADVANCED ALLIED AIR BASE IN ITALY—(Via Wireless) — Seven heroic pilots of the 332nd Fighter Group were awarded the coveted Distinguished Flying Cross by Brig. Gen. Dean B. Strothers, commanding officer of the fighter command under which the Mustang group operates, in impressive ceremonies at this airbase recently. Six of these pilots were captains and four of them are the commanding officers of the four fighter squadrons which make up the 332nd Group.

More than 20 DFC's have been awarded to Negro air heroes.

Norfolk Journal & Guide

By JOAN CAPREOL
Reuter Correspondent

BIRMINGHAM, England, Feb. 14.—When 686 tin-hatted members of the 1st Battalion of the American Women's Army Corps stepped off a train at a windswept flood-lit siding station near here last night, smiling faces showed their dreams had come true—they were overseas.

These girls, representing nearly every state with 85 per cent of them ex-school teachers and holders of college degrees, received a special welcome.

Brig. Gen. John A. C. Lee, commanding general of the communications zone, flew specially from Paris to greet them at their debarkation port where a Scot band bagpiped them to the train for England. Buses were waiting for them, and an American band marched them in.

A Thrill

Chaplain Capt. Beverley Ward of Harrisburg, Pa., who flew to welcome the girls, said he got a thrill when he recognized 21-year-old Ruby Wilson, whom he had baptised in the Presbyterian church in his home town.

The girls, most of whom have husbands, brothers or sweethearts in the Army, unanimously declared that their arrival over here would mean a lot to the Negro troops.

Pfc. Mamie Lewis, 26, of New York, told me her fiance, Corp. Frederick Clay of Oklahoma, who is in France, didn't know that she was overseas.

"I just hope we can get leave together. I am going to see the chaplain about it," she said. Both are graduates of universities and met in the Army while training in Kentucky.

Edna Toolsie's husband in New York will be glad to hear of his wife's safe arrival.

"He was discharged from the Army for medical reasons. He never got here but I got here instead. I am a British subject, born in Port of Spain," Mrs. Toolsie said.

Grandmother

The oldest member of the battalion is a grandmother, Mrs. Arma Fifer, 51, of Chicago, who got in "just under the wire."

With two sons on active service, Mrs. Amy Fairweather, of New York, a youthful looking widow of 48, joined up to make it a solid family proposition. Her son, Lt. Elwyn Fairweather, 26, was South Pacific-bound when his mother left for England. Her other son, Arthur, 21, is a sergeant in the Marines who has been in the Pacific two years.

Evelyn Lozi, 22, of New York, was a riviter on plane wings before she joined up "to help the colored people."

An accomplished pianist was among the group. She was Cpl. Jennie Moton, daughter of the great Negro educator who succeeded Booker T. Washington as head of the Tuskegee Institute in Alabama.

General Davis Gets New Post At Europe Front

By EDWARD TOLES

PARIS.—It was revealed this week that Brig. Gen. Benjamin O. Davis has been appointed "special advisor to the theater commander here to coordinate and advise on matters relating to Negro troops."

With the Inspector General, he has been observing Negro units in France since summer. The news of Gen. Davis' appointment was hailed by colored service troops in rear echelons as an indication that they will soon be volunteer front line infantry reinforcements.

Chicago Defender

week's war news on the Army Hour over the National Broadcasting Company network on a nationwide hookup last Sunday afternoon, Colonel Albert L. Warner, chief of the War Intelligence Division, Bureau of Public Relation of the War Department, said:

"In Italy the Germans took a cue from their fellow Nazis in Belgium and launched a small drive in the Serchio Valley. This three-day effort was stopped by Negro troops of the 92nd Division and the concentrated pounding of tactical planes."

Drew Pearson, newspaper columnist and radio broadcaster, coming on the Blue network at 9 o'clock on the same Sunday night, said:

"The German theory of the master mind has just received another jolt in western Italy where Hitler hurled a terrific attack at the all-Negro Ninety-second American Division.

"The Nazis picked this Negro Division because they were looking for a soft place in the line and because with typical Nazi arrogance they were certain that Negro troops would be no match for the Nazi supermen.

"However, they were surprised. The Ninety-second Division bent but did not break. They withdrew about three miles and then stopped the Nazis dead in their tracks. Today the Ninety-second has taken the offensive again. And War Depart-

3,000 Manhours Saved By Negro Engineer Group

WITH U.S. FORCES IN THE UNITED KINGDOM.—Helping to build communications for the full onslaught against Fortress Germany, Negro engineers of Company "A," 1349th Engineer regiment, in four days lopped off 3,000 of an estimated 26,000 man-hours in dismantling a fighter airfield in England and shipping the equipment for use again on the Continent.

With pointed hooks made by the company's blacksmith from scrap-iron, several crews began the job by pulling steel clips that fasten together thousands of landing mats. Additional crews remove the landing mats from the ground and stack them in bundles of thirty. Another group with baling wire binds them together.

Detroit Michigan Chronicle

TOP BRITISH RECORD—Members of a U.S. Army Engineer Light Pontoon Company recently topped a four-year British record by forty-seven man-hours when 180 soldiers constructed a 386-foot 12-ton Bailey bridge in 123 minutes, over the fast Jersey River in Northern England. Two of the soldiers, Pvt. Louis Hoodye of Bastrop, Tex. (left), and Pvt. Robert L. Hamilton of Baton Rouge, La., aided in the construction.—U. S. Signal Corps Photo.

Pittsburgh Courier

through the forward American lines. The Germans, in a radio report of the drive, said that Italian Fascist forces also were participating in the attacks.

The German radio said that most of the American prisoners taken in the attack were colored, and Allied headquarters at Rome confirmed that the defending troops were elements of the Ninety-second Division.

Norfolk Journal & Guide

Cite Performance Of Negro Troops During German Drive

HEADQUARTERS, EUROPEAN THEATER OF OPERATIONS, FRANCE — Although forced to evacuate stores of ammunition, tanks, guns and trucks during the recent German drive through Belgium, Ordnance troops assigned to the First U. S. Army managed to save all but a small quantity of tank tracks and 2,000 tons of ammunition of standard American calibre which will do the Germans little or no good.

In a three-day period, 3,500 Negro troops of the 71st Ordnance Group performed something in the way of a miracle when they evacuated three ammunition supply points under fire, set up two new ones, reduced an Army ammunition depot to supply-point size, set up a supply point to serve a corps, while at the same time issuing 3,000 tons of ammunition a day to the fighting troops.

With the other units of the Ordnance they operated under orders to "evacuate, but stay in business" issued by Colonel J. B. Medaris, Cincinnati, Ohio, First Army Ordnance Officer. The 71st was a part of the total of 15,000 troops who moved nearly every piece of equipment in Ordnance depots from the path of advancing Germans, but not out of reach of the American troops who first slowed and then stopped the drive that had been designed to capture or seal off these and other supply points.

Within several days the entire depot had been moved to another location 50 miles away and the only items lost were the tank tracks.

"They evacuated, yet they stayed in business and kept the troops well supplied and kept up the repair work too," Colonel Medaris said. "And our casualties were very light.

Cleveland Call & Post

Ignored Order To Withdraw

WITH THE AMERICAN 7TH ARMY IN FRANCE—(Delayed) — Small units of the Negro 827th Tank Destroyer Battalion and tankmen and armored infantry of the 14th Armored Division assisted a crack American infantry unit to hold up Field Marshal Karl von Rundstedt's offensive against the Maginot Line villages of Hatten and Rittershoffen for 11 days.

The regiment performing this feat was the 315th Infantry of the Seventy-ninth Infantry Division, supported by small units of the Negro 827th Tank Destroyer Battalion and tankmen and armored infantry of the Fourteenth Armored Division.

Almost half of the men in this regiment are casualties, but they gave a good account of themselves in the battle against the crack German Twenty-first Panzer Division, the Twenty-fifth Grenadiers Division and an entire regiment of the Seventh Parachute Division, and for every American casualty there were five to ten Germans.

GERMANS ATTACK

The two German divisions attacked on Jan. 8 and overran one American regiment at Hatten. The next day the 315th, commanded by Col. Andrew J. Schriver Jr., of Mount Holly Springs, Pa., rushed up to take care of the situation.

The struggle was a hard one for both the Germans and the Americans. At dusk on the tenth, remnants of the battalion originally overrun at Hatten were ordered to withdraw, but, according to Col. Goodwin, about twenty refused to leave and another score stayed at Rittershoffen, where they fought furiously with a third battalion of the 315th.

They asserted flatly "We've run as far as we're going to run."

That night at least half of one German division held down a second battalion at Hatten in their hardest attack against Rittershoffen.

Norfolk Journal & Guide

Easterners Spark Pacific Invasions

SOMEWHERE IN THE SOUTHWEST PACIFIC — The 4188th Quartemaster Company, formerly Company C of the 543rd Quartermaster Battalion, including men from New York, New Jersey and Pennsylvania was the only colored unit to take part in the New Guinea invasions.

Under fire for twenty-one consecutive days, the unit was complimented highly for the vital and significant role it played during the campaign, and in all of the action it encountered, it suffered not one single casualty.

In Netherlands Invasion

Members of the outfit have taken part in several other major campaigns and in each case have been praised highly by high-ranking officials for their achievements and cited as valiant and courageous soldiers of the very highest calibre.

The company's participation in a recent major invasion of the Netherlands East Indies, which sparkled in all the headlines, won for it the honor of being farther advanced in this theatre than any other colored outfit prior to the invasion of the Philippines.

Shipped overseas after a seven-month training period, the unit has now been abroad thirteen months and has seen service in Australia and many islands of the New Guinea group. The battalion was activated in March, 1943.

Negro Doughboys Showed 'Guts' In Combat With White Buddies

EAST OF THE RHINE IN GERMANY—Tan Yanks have proved for all time that they are courageous, aggressive and resourceful fighters in this European war. They proved it fighting side by side with their white comrades, facing death together in the fight against fascism. The debut of Negro doughboys as frontline infantrymen came rather auspiciously last December when General Lee, commander of Services of Supply in the ETO, called for volunteers. Immediately he was swamped by the number of colored troops who wanted to fight the Germans. General Lee announced that these volunteers would not be required to fight as segregated units but would be integrated into white combat units. The response was tremendous.

NEW POLICY GREETED WITH ENTHUSIASM

After a period of retraining the tan volunteers were assigned to units of the First and Seventh Armies. The Army began an experiment and for the first time Negro and white soldiers were incorporated in the same companies, although in separate platoons. The colored and white doughboys were enthusiastic and in the fighting that followed they have been loud in their praise of each other.

Colored doughboys proved their mettle under fire, fighting with the famous Seventy-eighth "Lightning" Division in a smash through the Siegfried line to cross the Rhine on March 14. The colored platoons were part of the 310th and 311th Regiments and their commanders have said of them, "They are the fightingest so-and-sos you ever saw. In all engagements they have proved to be as courageous and aggressive as the veterans of any other company."

The commander of the Sixteenth Infantry Regiment of the First Infantry Division said of his Negro volunteers, "They have proven themselves the equal of any other GI in the service where guts, courage and aggressiveness need be shown."

First Pilots!

99th Squadron Made History

The Ninety-ninth Pursuit Squadron, first all-Negro air unit sent overseas by the United States Army, stands as a monument in the minds of colored America.

The Ninety-ninth is no more. Its name and achievements are history. It gave way to the 332nd Fighter Group. But all America knows that the Ninety-ninth suffered the hardships and went through the struggles that paved the way for a place for Negro airmen in the U.S. Army.

Before the Ninety-ninth was broken up, it saw some eventful and exciting days over Italy under the command of Col. B. O. Davis Jr., and later under the direction of Major "Spanky" Roberts.

The squadron left the United States April 2, 1943, and, two months later flew its first combat mission—a bombing raid (skip-bombing) against gun positions on Pantelleria. In its first six months of operation, it flew 236 missions of 1,156 sorties, with the loss of four pilots.

HALL GETS FIRST PLANE

The squadron was credited with its first "kill" on July 2, 1943, when Capt. Charles (Buster) Hall of Brazil, Ind., shot down a Focke-Wulf during a big air battle over the Castelvestrano airdrome in northwest Sicily.

A jinx hovered over the Ninety-ninth after this first victory, and it was several months later before the squadron was able to show the world that it could handle the assignment.

The big action was over the Anzio-Nettuno beachhead below Rome. The Tan Fliers bagged a total of twelve planes in two days of battle. During this second air victory for the Ninety-ninth, Captain Hall jumped into the picture again and shot down two more Nazi planes, giving him an of-

From Beginning To End

Tan Troops Received Awards In Abundance

"For courage and valor in action above and beyond the call of duty . . . distinguished devotion to duty . . . disregard for personal safety . . . conspicuous gallantry . . . meritorious conduct . . . intrepidity . . ."

Not a chosen few, but a legend of Negro fighters have gone down on the lists of this war as men who have given of their best. Scores have been publicly acclaimed; even more have been and will be sorted among the millions whose feats will live and die with themselves.

From the very beginning, from Dec. 7, 1941, there was powerful testimony to the extent to which Negro servicemen were injected with courage, valor, heroism. When the first Japanese guns blasted, a Navy mess attendant, in the face of serious fire, manned and operated a machine gun until ordered to leave the bridge. Dorie Miller became the first Negro to be commended in this war when he was awarded the Navy Cross.

LIBERAL DISTRIBUTION OF AWARDS

Thereafter, up until V-E Day, Purple Hearts, Silver Star medals, Distinguished Flying Crosses, Soldiers' medals, Navy and Marine Corps medals, and other awards have been strewn liberally among our men.

Some of these men had never faced gunfire; others had flown hazardous air missions over enemy soil. All had been duty-riddled, whether in a galley, tank, truck, plane or ditch.

At least thirteen airmen of the 332nd Mustang fighter group in Italy were awarded the coveted Distinguished Flying Cross, highest decoration for American pilots.

The summer after war started, General MacArthur awarded Soldiers medals to three members of an engineer corps in the Southwest Pacific who rescued a pilot from a river in New Guinea. At the

mess attendant, who was commended by Admiral William F. Halsey for heroism while serving on a destroyer in the Pacific area; Leonard Roy Harmon, mess attendant, who received the Navy Cross posthumously, and for whom a vessel, the USS Harmon, was named; William Pinckney, cook, 3/c, who for extraordinary heroism during a Japanese engagement, was awarded the Navy Cross; Joseph Cross, steward's mate, 1/c, who received the Navy and Marine Corps medal for heroic conduct during four submarine war patrols; Elbert H. Oliver, steward's mate, 1/c, for conspicuous gallantry aboard a warship during a raid by 25 Japanese torpedo planes, who was awarded the Silver Star medal, and Charles W. David Jr., mess attendant, who was awarded the Navy and Marine Corps medal posthumously after he rescued crewmen from a sinking Coast Guard vessel.

At Saipan, Negroes were among the first Marines to receive Purple Heart awards; in March of last year a Negro group were the first service unit to be presented with the Fifth Army Plaque, an award of merit established early in the year.

WHOLE COMPANY CITED

On D-Day, General Eisenhower issued a commendation to a truck company for outstanding performance of duty.

The Croix de Guerre, high French award, was presented to two Negroes.

ARMY AWARDS

Notable awards made to Army men were the Distinguished Service Cross, second highest U. S. award, held by Pvt. George Wat-

Services Of Supply Played Vital Roles

EAST OF THE RHINE IN GERMANY—Now that the war in Europe is over, future historians will have a field day recording for posterity the heroic deeds of the combat soldier. But it is well for us not to overlook the terrific job that has been done so ably by all components of the service units.

This war could not have been brought to such a successful conclusion but for the support given the frontline men by the service units.

They did not make the headlines. And their brave deeds may escape the historian, but for all purposes they were rear line combat units. These soldiers who manned the amphib trucks that brought supplies ashore on D-Day, those who slaved at the docks unloading the materiels needed at the fronts, the truckers who hauled the ammunition, food and gasoline to the fighting men and were strafed by machine guns and shelled by enemy batteries, the engineers who built the bridges to cross the innumerable rivers, cannot be ignored. Their deeds speak out too loudly.

LICKED PROBLEMS OF LONG SUPPLY LINE

Very few of these service units were identified in war dispatches but every soldier on the front, from the generals to the privates, give plenty of praise for the heroic and back-breaking toils of the service units. From the Normandy beachhead to the break-through at St. Lo, from the border of Luxembourg to the Rhine and beyond, the Quartermasters were in there all the way.

Through the mud and muck of Europe, the intense storms and devastating shell fire the service units performed well. The problem of supply was licked by the rear echelon working twenty-four hours around the clock.

Probably the best known of these units were the "Red Ball" truck convoy, cited by General Eisenhower for its work supplying gasoline to keep the huge wheels of our mobile Army turning without a hitch, and the 514th Quartermaster group, composed of thirty-five Negro companies, that stored the huge supply dumps and kept the materiels moving along the ever-expanding frontline from Normandy to the Elbe river in Germany.

Pittsburgh Courier

24th Inf. Given Job To Find Japs On Saipan Island

SAIPAN, The Marianas—Official records list this B-29 base in the Western Pacific as having been "freed from organized enemy resistance" on July 9, 1944, after bitter fighting. Since then over 12,000 Jap troops have been killed on the island and 1,100 more have surrendered.

An island is declared "secured" as soon as it can be used as an operational base against the enemy, but to many infantrymen here the word has another meaning. While B-29s have been taking off on their spectacular missions against the Jap mainland, infantrymen have been slowly securing this "secured" island, regularly sending out patrols against enemy troops scattered about in Saipan's wild, hilly terrain. Twisting gullies and steep slopes are covered with tangles of vines, dense fields of tall sugar cane, thickets of banana palms and groves of taller trees.

The main part of the mopping-up has fallen in recent months to the men of the 24th Infantry Regiment—veterans of Guadalcanal, New Georgia and Bougainville with more than 35 months' overseas duty.

Cleveland Herald

Merit Plaque Given to 643rd Ordnance

THE PHILIPPINES — The Meritorious Service Unit Plaque has been awarded to a detachment of the 643rd Ordnance Ammunition Company, by the Commanding General of the Eighth Army, for superior performance and outstanding devotion to duty.

The detachment demonstrated fine performance of duty in a Philippine Island operation. Prior to embarkation, it established the ship loading plan for ammunition, checked all loading, and despite the great tonnage loaded in a short time, kept complete and accurate records.

Upon debarkation, the detachment immediately established beach dumps, and despite long, unrelieved hours of work, again provided accurate records. The men were subjected constantly to the danger of enemy air raids.

Baltimore Afro-American

The Ninety-ninth Pursuit Squadron, first all-Negro air unit sent overseas by the United States Army, stands as a monument in the minds of colored America.

The Ninety-ninth is no more. Its name and achievements are history. It gave way to the 332nd Fighter Group. But all America knows that the Ninety-ninth suffered the hardships and went through the struggles that paved the way for a place for Negro airmen in the U.S. Army.

Before the Ninety-ninth was broken up, it saw some eventful and exciting days over Italy under the command of Col. B. O. Davis Jr., and later under the direction of Major "Spanky" Roberts.

The squadron left the United States April 2, 1943, and, two months later flew its first combat mission—a bombing raid (skip-bombing) against gun positions on Pantelleria. In its first six months of operation, it flew 236 missions of 1,156 sorties, with the loss of four pilots.

HALL GETS FIRST PLANE

The squadron was credited with its first "kill" on July 2, 1943, when Capt. Charles (Buster) Hall of Brazil, Ind., shot down a Focke-Wulf during a big air battle over the Castelvestrano airdrome in northwest Sicily.

A jinx hovered over the Ninety-ninth after this first victory, and it was several months later before the squadron was able to show the world that it could handle the assignment.

The big action was over the Anzio-Nettuno beachhead below Rome. The Tan Fliers bagged a total of twelve planes in two days of battle. During this second air victory for the Ninety-ninth, Captain Hall jumped into the picture again and shot down two more Nazi planes, giving him an official total of three.

HELPED TAKE ROME

One of the big moments in the lives of the Ninety-ninth fliers was the part they played in the capture of Rome. They were on detached service with advancing members of the Fifth Army. They had the role of dive-bombers, blasting enemy supply lines, motor transports, gun emplacements and enemy communications.

The Ninety-ninth Pursuit Squadron was considered by the Air Force as an experiment. The men did their operational training in P-40 Warhawks. Training period began at Tuskegee in July, 1941. The squadron first went ot Africa, then to Sicily and finally to its present base in Italy.

It was that second air battle that proved the Ninety-ninth was no longer an experiment. It was that battle that really made the men of the squadron.

The Ninety-ninth became a part of the 332nd Fighter Group, commanded by Col. B. O. Davis Jr., in Italy in July, 1944, changing from P-40s to P-51 Mustangs.

"For courage and valor in action above and beyond the call of duty . . . distinguished devotion to duty . . . disregard for personal safety . . . conspicuous gallantry . . . meritorious conduct . . . intrepidity . . ."

Not a chosen few, but a legend of Negro fighters have gone down on the lists of this war as men who have given of their best. Scores have been publicly acclaimed; even more have been and will be sorted among the millions whose feats will live and die with themselves.

From the very beginning, from Dec. 7, 1941, there was powerful testimony to the extent to which Negro servicemen were injected with courage, valor, heroism. When the first Japanese guns blasted, a Navy mess attendant, in the face of serious fire, manned and operated a machine gun until ordered to leave the bridge. Dorie Miller became the first Negro to be commended in this war when he was awarded the Navy Cross.

LIBERAL DISTRIBUTION OF AWARDS

Thereafter, up until V-E Day, Purple Hearts, Silver Star medals, Distinguished Flying Crosses, Soldiers' medals, Navy and Marine Corps medals, and other awards have been strewn liberally among our men.

Some of these men had never faced gunfire; others had flown hazardous air missions over enemy soil. All had been duty-riddled, whether in a galley, tank, truck, plane or ditch.

At least thirteen airmen of the 332nd Mustang fighter group in Italy were awarded the coveted Distinguished Flying Cross, highest decoration for American pilots.

The summer after war started, General MacArthur awarded Soldiers medals to three members of an engineer corps in the Southwest Pacific who rescued a pilot from a river in New Guinea. At the same time the Silver Star was awarded a submarine crew member for action under Japanese attack at Corregidor.

CHAMPION "SPOTTER" AWARDED MEDAL

In 1943, another submarine crewman became the first Negro to receive the Navy and Marine Corps medal as a result of his efficiency at sighting enemy craft. During March of that year, Secretary of War Stimson personally commended Negro fighting men, and announced the award of the Legion of Merit to four men for meritorious service at Guadalcanal. This medal ranks fourth in the precedence of awards.

NAVY AWARDS

Outstanding Naval awards made that year were to Elvin Bell, mess attendant, who received the Navy and Marine Corps medal for distinguished heroism aboard the USS Lexington during the Battle of the Coral Sea; Charles Jackson French, mess attendant, who was commended by Admiral William F. Halsey for heroism while serving on a destroyer in the Pacific area; Leonard Roy Harmon, mess attendant, who received the Navy Cross posthumously, and for whom a vessel, the USS Harmon, was named; William Pinckney, cook, 3/c, who for extraordinary heroism during a Japanese engagement, was awarded the Navy Cross; Joseph Cross, steward's mate, 1/c, who received the Navy and Marine Corps medal for heroic conduct during four submarine war patrols; Elbert H. Oliver, steward's mate, 1/c, for conspicuous gallantry aboard a warship during a raid by 25 Japanese torpedo planes, who was awarded the Silver Star medal, and Charles W. David Jr., mess attendant, who was awarded the Navy and Marine Corps medal posthumously after he rescued crewmen from a sinking Coast Guard vessel.

At Saipan, Negroes were among the first Marines to receive Purple Heart awards; in March of last year a Negro group were the first service unit to be presented with the Fifth Army Plaque, an award of merit established early in the year.

WHOLE COMPANY CITED

On D-Day, General Eisenhower issued a commendation to a truck company for outstanding performance of duty.

The Croix de Guerre, high French award, was presented to two Negroes.

ARMY AWARDS

Notable awards made to Army men were the Distinguished Service Cross, second highest U. S. award, held by Pvt. George Watson, who lost his life in New Guinea after assisting several men to safety from a sinking boat, and Capt. Charles L. Thomas, commander of a Tank Destroyer company in France, who sustained multiple wounds while literally shooting his way through the Siegfried Line; Silver Star awards to men who were "cited for gallantry in action in orders, which citation does not warrant the award of the Medal of Honor or the Distinguished Service Cross."

There have been nearly a hundred Army and Navy awards during this war designated for Negro personnel. Somewhere, sometime, we will know them all; we will know those thousands who, whether they received Distinguished Service Crosses or Good Conduct medals, will forever be hallowed for making this V-E Day a victory for our side.

Nazis Stopped By 92nd In Historic Battle Area

The 32-months old Ninety-second Division, the second all-Negro combat unit activated by the War Department in World War II, this week in Italy stands in the flush of a victory denied the legions of the once mighty Caesars. This week in northern Italy, the all-Negro Ninety-second Division, USA, stands as conqueror over the hordes of Nazidom on the same grounds where centuries ago Alaric's Huns swept down through mountains and destroyed a brilliant Roman civilization. The parallel is the same except that on the same grounds today, the huns are vanquished.

ORIGIN IN WORLD WAR I

No army unit in the annals of warfare for democracy, freedom or any like human cause had a more difficult task before it, a more brilliant goal to achieve nor more rugged circumstances under which to perform its task. Nor had any U.S. Army division a more illustrious background.

In the first six months of combat against the enemy, men of the division won seven awards of the Legion of Merit, sixty-five Silver Stars, 162 Bronze Stars, four Air Medals, and 5,991 Combat Infantrymen Badges with 1,377 Purple Hearts, awards for blood shed in service. And the first member in the division to give his life in action was a captain, company commander.

TO FRONT LINES

Elements of the Ninety-second Division began being fed into the front lines in Italy a fortnight after its arrival on July 13, 1944. By late August and into September units of the famous division had spearheaded Gen. Mark Clark's Fifth Army's crossing of the Arno river to the slopes of Pisano Hill west of Florence.

It was here during the first stages of its combat experience that the division had to slug through stubborn dug-in defenses of the Werhmacht. Here also was one of the war's ironies. On the opposite side of the same slopes the 100th Infantry Battalion, U.S. soldiers of Japanese ancestry, was

This is how members of the 161st Smoke Generator Co. created artificial fogs to help the Allies in their push across the Saar River in Germany last January. The 161st did the job so well that an entire combat force of the 90th Division (white) was able to remain concealed for 16 days while making two crossings of the Saar. This has been termed one of the greatest feats of the war. *Baltimore Afro-American*

Engineers Build Bases for B-29 Bombers in India

SOMEWHERE IN INDIA — Twenty-three thousand cubic yards of concrete poured into a parking apron for B-29 Superfortresses in a single month—this is the achievement of a colored battalion of U.S. Army Engineers, a unit that made its contribution to the XX Bomber Command's aerial offensive against Japan.

When the Bomber Command began establishing bases for its huge bombers in India, one of the outfits called upon to aid in the undertaking was a separate battalion

and China.

The unit on leaving for overseas service in August, 1943, had been known simply as a "labor battalion." Its members had been trained for heavy construction work, the "hard muscle" tasks of maintaining airports and roads and performing other arduous laboring assignments. The unit immediately began the task of laying thousands of feet of concrete.

But during their service on the Ledo Road, these men had become specialists in many types of

Truck Company Cited In Battle Of Okinawa

By JOHN WALKER McCAIN Jr., BM 1/c
(Coast Guard Correspondent)

ABOARD AN ATTACK TRANSPORT IN A PACIFIC BATTLE ZONE—Negro Americans everywhere will take pride in the part the Negroes are playing at Okinawa. The Negro history of America in World War II will include the story of this amphibian truck company, which helped wrest from the Japanese this island of top military importance in the Pacific war.

FIRST TO ARRIVE ON OKINAWA

Pvt. Herbert Seward claims that his unit is the first United States Army outfit to lay foot on the soil of Okinawa. This unit is engaged in supplying the Sixth Marine Division and is the only colored unit so engaged.

What is this Negro unit doing on Okinawa? They took with them 75 mm. guns when they went ashore on the island. They also returned time and time again to haul ammunition and other supplies ashore and to return the wounded to the ships. In short, these Negro men are fighting Americans, doing their share in the battle of Okinawa, which increases in intensity each day. One day this week there were thirteen air raids in less than twenty-four hours.

They Won Air Tours of Italy

Left to right, S/Sgt. Lawrence D. Lynch, of Harrisburg, Pa.; S/Sgt. Joseph Wallo, of 151 Third Street, Rankin, Pa.; and Pfc. Charles Brown, of Philadelphia, recent winners of air tours of Italy for meri

combat unit activated by the War Department in [illegible] week in Italy stands in the flush of a victory denied the legions of the once mighty Caesars. This week in northern Italy, the all-Negro Ninety-second Division, USA, stands as conqueror over the hordes of Nazidom on the same grounds where centuries ago Alaric's Huns swept down through mountains and destroyed a brilliant Roman civilization. The parallel is the same except that on the same grounds today, the huns are vanquished.

ORIGIN IN WORLD WAR I

No army unit in the annals of warfare for democracy, freedom or any like human cause had a more difficult task before it, a more brilliant goal to achieve nor more rugged circumstances under which to perform its task. Nor had any U.S. Army division a more illustrious background.

In the first six months of combat against the enemy, men of the division won seven awards of the Legion of Merit, sixty-five Silver Stars, 162 Bronze Stars, four Air Medals, and 5,991 Combat Infantrymen Badges with 1,377 Purple Hearts, awards for blood shed in service. And the first member in the division to give his life in action was a captain, company commander.

TO FRONT LINES

Elements of the Ninety-second Division began being fed into the front lines in Italy a fortnight after its arrival on July 13, 1944. By late August and into September units of the famous division had spearheaded Gen. Mark Clark's Fifth Army's crossing of the Arno river to the slopes of Pisano Hill west of Florence.

It was here during the first stages of its combat experience that the division had to slug through stubborn dug-in defenses of the Werhmacht. Here also was one of the war's ironies. On the opposite side of the same slopes the 100th Infantry Battalion, U.S. soldiers of Japanese ancestry, was also pushing back Nazis.

To the newly come Negroes it was heartening to have been welcomed to Italy a few mornings previously by General Clark, who said: "I have come to welcome you to the Fifth Army and tell you how genuinely pleased I am to have you, members of the Ninety-second Division, as part of the Fifth Army."

TO EARN WELCOME

They were to earn that welcome. Throughout, the Ninety-second has operated in what was roughly the Gothic Line, or so-called by the Nazis. From these slopes, upward from the Arno river, the Ninety-second was to have tough slogging and some bad days until the end came.

From October, 1944, through Christmas the Italian front in the north was more or less static. That is, static for major actions. Small, isolated, but vicious patrol actions trickled over the cables until in January, 1945, when then it developed that the static conditions were only the prelude to the preparations of the Nazis for a breakthrough attempt.

In late January of 1945, reports began to seep through that the Wehrmacht had made a six-mile gain, smashing through positions held by the Ninety-second Division in the Serchio Valley.

VALOR AWARDS

At the same time awards for valor were being passed out to members of the "Buffalo" Division by General Clark, commander-in-chief of the Fifteenth Army Group. Leadership, coolness under fire and ability on the field of battle were featured words in these citations.

77 Units Aided In European Victory

By JOHN H. YOUNG III
Washington Correspondent

WASHINGTON — On the ground and in the air — the outstanding contribution made by Negro troops in the winning of the war in Europe is revealed in a study of official statistics and records of the War Department. These documents reveal in detail, the deployment of Negro troops in both the European and Pacific theatres and give some indication of the part that they will play in the ever-increasing tempo of the war in the Pacific.

According to the official listing of Negro troops overseas, there were 110 units in both theatres at the close of the war in Europe (since there is a lag between the time of arrival of overseas troops and the War Department announcement of that arrival, it is correct to assume that there are actually more units than those already listed by the War Department).

ELEVEN IN COMBAT

Of these 110 units, seventy-seven were in the European theatre and thirty-three in the Pacific. In Europe, Negro troops constituted nine per cent of all American troops on the continent during the invasion.

A breakdown shows that of the seventy-seven units in Europe, eleven were deployed in combat. These were 332nd Fighter Group, 969th, 333rd and 777th Field Artillery Battalions; 452nd Anti-aircraft Battalion, Ninety-second Infantry, 761st Tank Battalion, 82t7h, 614th and 784th Tank Destroyer Battalions and the 366th Infantry Regiment (broken up and made Engineer units prior to the end of the war in Europe).

Detailed breakdown of these sixty-five non-combat units is as follows:

ENGINEER—1221st Fire Fighting Platoon, 1232nd, 1229th, 1233rd, 1235th and 1234th Fire Fighting Detachments; 375th General Service Regiment; 134th, 1313th, 360th, 389th and Ninety-fifth Regiments; 390th General Service Regiment; 823rd Aviation Battalion; 392nd and 354th General Service Regiments; 791st Dump Truck Company; 812th, 822nd, 827th, 856th, 859th, 837th, 838th, 823rd, 829th, 847th, 848th, 858th and 949th Battalions.

QUARTERMASTER — 3264th, 3170th and 3229th General Service Companies; 4089th, 3241st and 4198th Service Companies; 4042nd, Truck Company; 3103rd QM Company; 272nd and 260th Battalions; 523rd and 524th Car Companies; 4353rd and 3033rd Bakery Companies; 960th QM Service Company, and the 999th Collecting Company.

ORDNANCE — 607th, 647th, Fifty-seventh, 651st and 656th Ammunition Companies; Seventy-first Group and the 655th Company.

PORT—483rd Battalion; 577th, 535th and 658th Companies.

CHEMICAL — Eighty-second and Eighty-seventh Smoke Generating Companies.

MEDICAL—318th Service Detachment and 711th Sanitation Company; 686th General Hospital Unit.

SIGNAL — Twenty-ninth and Forty-first Construction Battalions; 259th Heavy Construction Company.

SPECIAL—Seventeenth Special Service Company.

FIGHTING ABILITY WINS CITATION

Typical of the heroism of the Negro fighting man in this war was that of the glorious action of the 969th Field Artilelry Battalion which won a Presidential citation for its courage in defense of encircled Bastogne. Of this outfit an official War Department release said:

"So close to German infantry that mortar bombs fell on them liket rain, men of the 969th Field Artillery Battalion, a Negro 155-mm howitzer outfit, stuck to their guns and fired all around the compass

Engineers Build Bases for B-29 Bombers in India

SOMEWHERE IN INDIA — Twenty-three thousand cubic yards of concrete poured into a parking apron for B-29 Superfortresses in a single month—this is the achievement of a colored battalion of U.S. Army Engineers, a unit that made its contribution to the XX Bomber Command's aerial offensive against Japan.

When the Bomber Command began establishing bases for its huge bombers in India, one of the outfits called upon to aid in the undertaking was a separate battalion of Engineers, which had been working for six months on the Ledo Road, vital supply route being hacked through the jungles and mountains between India and China.

The unit on leaving for overseas service in August, 1943, had been known simply as a "labor battalion." Its members had been trained for heavy construction work, the "hard muscle" tasks of maintaining airports and roads and performing other arduous laboring assignments. The unit immediately began the task of laying thousands of feet of concrete.

But during their service on the Ledo Road, these men had become specialists in many types of work and had executed almost "impossible" assignments. When they were called to help build bases for the B-29 Superfortress, they accepted it. It was a rush job to be completed in a month. Materials were short, yet they accomplished it.

433rd Medics Aid Allied Wounded

GERMANY. — Wounded and long neglected Allied soldiers, freed by the U.S. Seventh Army doughboys of General Jacob L. Devers's 6th Army Group when they captured a German prisoner-of-war hospital, received their first American medical care from the medics of the 433rd Medical Battalion.

"These men were suffering from gross malnutrition and needed fresh food, baths and clothes," said Lt. Col. David H. Haimark, battalion commander. "The men we gave medical care had been operated on but neglected."

Performing headquarters administrative duties for this task were the colored medics of the 433rd, the only 7th Army medical battalion staffed by colored personnel. They aided headquarters officers in co-ordination of the work of its attached companies.

Four Years To Victory: This Is What It Took

IN EARLY 1941 THE ARMY WAS A VACATION. Going "off to war" was a time for merriment and a chance to get away from it all for a holiday. Camp Smith was the destination and 5th Ave. and 139th St. was the port of embarkation. The first stage of the war took a greatly enlarged and modernized army to the far corners of the world. On the shores of Trinidad (2) troops watched and waited for an invasion attempt which the fortunes of war stopped. In far off Iran, troops worked to ship supplies to the Soviet Colossus. Men from 7th and Lenox Aves. learned to walk the sidewalks of Teheran. (3) Russians, Persians and Turks became acquaintances of those whose furthest boundaries had been marked by Harlem. But war is not all travel and waiting. On the bloody shores of Algiers (4) the Negro soldier shed his blood with Englishmen, Frenchmen, and Americans to make the first all-out assault upon the Nazi Empire from the West. North Africa was followed by Sicily and Italy where men from Pullman cars, cotton-fields, shoeshine stands, and all walks of Negro life walked as conquerors the streets once paraded by the Caesars and the Legions of Rome (5). In the mountains and fields of Cassino, with rifle, bayonet, and field artillery, the battle to secure the southern flank for the opening of the second front was borne by the 92nd Division (5). Then began the assault upon Fortress Europa. From the fields and hedges of Normandy, the conquest of France (6) soon followed D-Day. And then began the assault on Germany. Across the Rhine and through villages (7) the American Negro brought glory to his country and honor to his race. Germany has fallen. The Negro soldier has played his part.

Amsterdam Star News

Alcan Highway Builders Carry On in New Guinea

SOMEWHERE IN NEW GUINEA—It was back in early 1942 while the Japs were nibbling at the vital Aleutians, and the Alcan Hghway was being blasted through the brutal terrain of Alaska, that the 97th Engineer General Service Regiment first adopted as its motto, "No Task Too Great."

In the face of lashing winds, and cruel temperatures of 50, 60 and 70 below, the earth-eating men and machines of the 97th roared through a sea of forest, moving mountains, conquering glaciers and gulleys, and transforming obstinate hills and muskeg into an orderly strip of earth.

Today, instead of the frozen wastes of Alaska, they are facing the steaming jungles of New Guinea. For a year now, these men have been working in the sweat, mud and mire that is the tropics, and still foremost in their minds is their motto, "No Task Too Great."

Their record here has been amazing.

Philadelphia Tribune

Negro Troops Save Lives

The 25 Negro Chemical Warfare Service units now serving overseas were praised today by Col. S. E. Whiteside Jr., commanding officer of the New York C. W. S. District, for 'efficient" work resulting in the reduction of American casualties.

"The successful use of smoke screens to hide important ports from air attack and to cover river crossings and other troop movements, thereby helping to reduce American casualties, is due in no small measure to (these) trained and efficient Negro troops," he said.

Whiteside revealed that at least five of these units have won commendations on the European and Pacific fronts for brave and resourceful service.

Sixteen of these units are smoke generator companies, he said, five are chemical decontamination companies, two are chemical processing companies and two are chemical service companies.

New York Post

RHINE CROSSING— Negro engineers (bottom photo) lower a pontoon boat into the Rhine in preparation for the big push. These men often worked under fire from German artillery fire and airplane bombing and strafing. These boats formed a bridge for foot soldiers and Army traffic.

COMBAT VOLUNTEERS— Brig. Gen. Ralph H. Immell, deputy commander, Continental Advance Section in France, commands supply troops who later volunteered for combat service. They fought alongside white troops in the final victorious days of the Allied armies.

Poll Tax

POLL TAX FACT SHEET

The poll tax is one of the little understood and popularly underestimated threats to America in war and in the peace to come. Americans deserve to know:

(1) that the poll tax deprives 10,000,000 of their fellow citizens of the right to vote; (2) that the existence of the poll tax discredits us among our friends and allies, and (3) that it will stand in the way of our building a sound peace based on democratic ideals. Ten million Americans must be given the right to vote so that they and all of us can build a secure and peaceful America on the principle of ballots, not bullets.

The poll tax issue, crucial to the war and to democracy, is one about which all Americans deserve to be fully informed. This Fact Sheet contains basic information about questions frequently asked about the poll tax. Copies of the Fact Sheet are available upon request.

For further information write to

NATIONAL COMMITTEE TO ABOLISH THE POLL TAX

127 B Street, Southeast • Washington 3, D. C.

THE POLL TAX

Before he can vote, an American citizen must pay a poll tax if he resides in any of the following seven states: Alabama, Arkansas, Mississippi, South Carolina, Tennessee, Texas, and Virginia.

The tax is from one to two dollars a year, and is cumulative for varying periods in three states. After a 24-year lapse, for example, in Alabama, not $1.50 but $36 must be paid.

WHY IT LIMITS VOTING

For years, many Southerners living on credit—sharecroppers and company town miners, for example—*have had no cash* from year-end to year-end. *They cannot vote.*

In an average poll-tax state, the yearly per capita income, even in a war year, did not go higher than $600.

In addition, the poll tax must often be paid in the winter months when farmers and workers have least cash on hand. It must often be paid at the court house, a long way over muddy roads. It is due months and months before candidates and issues are announced.

HISTORY

The history of the poll tax is that of an openly admitted campaign in the 1890's and early 1900's to limit the vote. Only Georgia had a poll-tax requirement from earlier times, and Georgia added other vote-limiting provisions during the "period of disfranchisement" from 1889 to 1908. The poll tax was used to keep the Negroes and so-called "white trash" from the polls.

The effect of the imposition of the poll tax was immediate. Tennessee imposed the tax in 1890. In 1892, the vote was 40,000 less than the vote four years earlier. In Mississippi, the drop was from 117,000 in 1888 to 52,000 in 1892.

THE POLL TAX VOTE

In the 1944 Presidential elections, 21% of the adult population voted in the poll-tax States as against 60% in the non-poll tax States. In the 1942 Congressional elections, the corresponding figures were 5% to 39%.

This means that four-fifths of the possible voters in the poll-tax States were disfranchised in the most significant election in decades.

Other results of the poll tax were:

1. More votes were cast in 1944 for the 5 Representatives from Connecticut (population 1,748,402) than for 34 Representatives from the entire States of South Carolina, Alabama, Mississippi, and Arkansas, plus five districts of Georgia (total population 9,666,144). Connecticut's voters have only 1/17th of the representation in Congress that the equivalent poll-tax voters have. A similar comparison could be made with the other Northern and Western States.

2. Only 2,905 votes cast by 1.5% of the population *eligible to vote* elected a Congressman from the Sixth District of South Carolina in 1942.

Since it took less than 37,000 votes in 1944 to elect the average poll-tax Congressman, and more than 118,000 to elect the average non-poll-tax Congressman, one poll-tax vote is worth more than three non-poll-tax votes. Thus the poll tax has the additional effect of disfranchising non-poll-tax voters.

POLL TAX CORRUPTION

The existence of the poll tax means that large sections of the vote are the corrupt purchase of political machines. Relatives and henchmen of political leaders seldom have to pay their own poll tax—it is paid for them. With a 5% to 21% vote, patronage goes far. Honest voters feel themselves outweighed. In Virginia, a machine boss can pay a block of 4,000 poll taxes and, if convicted for the offense, pay a fine of only $5. The payment of a poll tax usually means the purchase of a vote.

POLL TAX CONGRESSMEN

Poll-tax Congressmen have long been largely independent of the people of their states. Some of them are "permanent" politicians, re-elected term after term. In the last 3 elections, the turnover rate among non-poll-tax Representatives has been 98% greater than among poll-taxers. Fourteen poll-tax Congressmen have been in Congress 20 years or more. These veterans become experienced legislative tacticians, experts on rules and methods, past masters of political maneuvering.

CONTROL OF COMMITTEES

The power of these long-tenure Congressmen is greatly increased by their control of Congressional committees. Seniority determines the rank of committee members. Today poll-tax Senators, because of their long tenure, are chairmen of the Committee on Appropriations, Foreign Relations, District of Columbia, Finance, Immigration, Irrigation and Reclamation, Post-War Economic Policy and Planning. A similar situation exists in the House of Representatives.

NEGRO AND WHITE

Poll tax repeal has been called a Negro issue. Yet the fact remains that it disfranchises 7 white men to every 3 Negroes.

The poll tax as an economic burden bears down particularly hard on Negroes because they are poorest. It bears down unfairly on all poor people. Abolition of the poll tax is a precondition for any substantial growth of the vote in the South.

THE SOUTH IN MOTION

It was the people of the poll-tax states themselves who, in 1938, carried the fight for poll-tax repeal to the National Congress. Simultaneously the fight has gone on for repeal in the states. The poll tax is embedded deep in the state constitutions, and in every case state action is hedged about with difficulties. In Alabama, for example, change of the poll-tax requirement in the Constitution calls for a three-fifths vote of both houses of the State legislature, then a vote by the state's "qualified electors," by now about one-tenth of the potential voters. Other states have similar or harder conditions.

In Georgia, through a fortunate combination of circumstances that do not exist in any other state, liberal Governor Ellis Arnall was recently able to push through repeal of the Georgia poll tax. Senator Lister Hill of Alabama has appealed to his state legislature to follow Georgia's example.

Throughout the South today, the demand for the ballot is growing. There are many reasons. The new industrialization of the South has increased Southern cash income. The consequent growth of trade unionism is teaching men to work together. The war has greatly clarified our democratic ideals, and Southerners in uniform who have, with great bravery, helped bring democracy to countries overseas, want it at home too.

H.R. 7

H.R. 7, the bill to abolish the poll tax as a prerequisite to voting in Federal elections, is being guided through Congress by a bi-partisan coalition headed by Congressman George H. Bender (R., Ohio). The coalition includes 3 Republicans, 5 Democrats, and Mr. Marcantonio (ALP, N.Y.), author of H.R. 7.

Similar bills have passed the House of Representatives in the two preceding Congresses, each by a 2 to 1 majority. They were killed by Senate filibusters.

SENATE JUDICIARY COMMITTEE

After its passage by the House of Representatives, the anti-poll tax bill will be referred to the Senate Judiciary Committee. This Committee, in the two preceding Congresses, has held extensive hearings on the bill, declared it constitutional, and recommended its passage—in the last Congress by a 12 to 6 vote.

The Senate cannot vote on the bill until the Senate Judiciary Committee reports it out. Members of the Judiciary Committee are, in order of rank:

Democratic (Majority)	Republican (Minority)
Pat McCarran, of Nevada, chairman	Alexander Wiley, of Nevada
Carl A. Hatch, of New Mexico	William Langer, of North Dakota
Joseph C. O'Mahoney, of Wyoming	Homer Ferguson, of Michigan
Albert B. Chandler, of Kentucky	Chapman Revercomb, of West Virginia
Harley M. Kilgore, of West Virginia	Kenneth S. Wherry, of Nebraska
Abe Murdock, of Utah	E. H. Moore, of Oklahoma
Ernest W. McFarland, of Arizona	H. Alexander Smith, of New Jersey
Burton K. Wheeler, of Montana	
Charles O. Andrews, of Florida	
James O. Eastland, of Mississippi	
———————— (vacancy)	

FILIBUSTER IN THE SENATE

A small minority of the Senate, to keep anti-poll tax legislation from coming to a vote, twice talked and talked until the bills were dropped. If a vote had been taken, the bills would have passed. In 1944, a majority of the Senators were already pledged to vote favorably.

Danger of the use of the filibuster tactic looms large today, not only in the fight to abolish the poll tax but in other major tasks, including even the most important one of all, the building of a just peace. The people can no longer have patience with minority rule on the Senate floor. Majority decision must be the unbroken rule.

CLOSURE

Once it has begun, a filibuster can be broken only by passage of closure (or cloture) rule, to close debate. Closure is never called for until a bill has already been discussed more than a reasonable length of time. After closure is voted, each Senator may speak for an additional hour, a total of 96 more hours of debate.

Closure can be invoked only if two-thirds of the Senators present vote for it.

BALLOTS

"Ballots are the rightful and peaceful successors of bullets." —Lincoln.

"Let every man exercise his just and equal right to vote."—Jefferson.

PROCEEDINGS AND DEBATES OF THE 77th CONGRESS, SECOND SESSION

Problem of the Physically Handicapped

EXTENSION OF REMARKS

OF

JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 16, 1942

Mr. VOORHIS of California. Mr. Speaker, in inserting in the RECORD my address before Lodge No. 1 of the American Federation of the Physically Handicapped I include the names of the officers of that lodge and of the national organization.

The officers of Lodge No. 1 are: August P. Herdtfelder, president; Mrs. Sarah L. Alley, vice president; Virgil D. Smoak, vice president; Alfred Ederheimer, secretary; Simon B. Alley, treasurer; Heimo I. Antila, correspondent; and Thomas Wood, sergeant at arms.

The national headquarters of the federation are at 1365 National Press Building, Washington, and the national officers are: Paul A. Strachan, president; Jesse D. Gross, first vice president; Chester C. Haddan, second vice president; Harry J. Goldberg, third vice president; Millard W. Rice, fourth vice president; Ralph A. Collins, fifth vice president; John Millon, sixth vice president; Duane DeSchaine, secretary; Edwin E. Maczkowske, treasurer; and Samuel Barker, national legal counsel.

Mr. Speaker, I include herewith an address I made before Lodge No. 1, American Federation of the Physically Handicapped, at the National Press Club on December 1:

My friends, I appreciate very much this opportunity of meeting with you tonight. Since World War No. 1, there has been a definite trend toward recognition by the Nation of its obligation towards its own people who are disabled, and some beginning at the establishment of a permanent program in their interest. First, we had the Federal Vocational Training Act, passed some 22 years ago which provided, in a rather narrow way, for vocational training, but which was not particularly devoted to the handicapped. About two years later, the act was amended, so as to provide a means for rehabilitation of disabled men, wounded or diseased as a result of the First World War. In the past 20 years there have been several liberalizing amendments to this act, and in each instance the horizon was lifted just a little higher, so as to include more and more beneficiaries.

Although today there is a much clearer conception of the tdemendous size of the problem to be handled, still, there is, plainly, a lack of coordinated handling of its integral parts. We know that in many instances individuals, lack the capacity to reach the higher levels of training, and their education, therefore must be on a plane commensurate with their talents. But we also know that the full benefits of such a program have not been attained, because there has been, and is, in my opinion, too much slack between the elements of treatment—where required—education and training, and, final placement at useful employment of the individual.

As a former educator myself, I believe it most important that the fullest possible training be given to each individual. But, after that, there remains the equally important problem of placement of the individual in suitable employment.

Further, today, although the stringency of manpower has caused the physically handicapped to be admitted to various employments hitherto denied them, there is plenty of evidence that there is still discrimination against them. Federal and State laws, and local ordinances in many cases, debar them on technical grounds from admission to examinations for Government employment. And there are still restrictions imposed by various employers' liability and workmen's compensation laws which prevent the full use of handicapped persons both in government and in private industry. Such laws should be subjected to immediate scrutiny and in many cases revised so that the full power of the effort of the handicapped might be thrown into the war production program.

For the past year I have kept rather closely in touch with developments in this field, particularly as applying to the Government itself. I have addressed inquiries from time to time to various Federal administrators, such as Mr. McNutt, of the Federal Security Administration and War Manpower Commission; Mr. Arthur S. Flemming, of the Civil Service Commission. I believe there should be a vital national program for the physically handicapped launched right now.

First, of course, we must think through what it is we want to accomplish and weld this together into a workable program. This done, such program can be advanced by no one so well as by an organization, composed of the handicapped and their friends. For they can see to it that the general public, the Congress, all Federal, State, and municipal officials, as well as leaders of private industry, are constantly reminded of the importance of this great human problem. The American Federation of the Physically Handicapped can answer the need for such an organization.

Part of such a program would require legislation and would have to be introduced into Congress. Once that has been done it will take most earnest effort by the handicapped, as well as the public, to see that the legislation in question is not side-tracked, or pigeon-holed, but is made a live issue.

In my opinion, the program of the American Federation of the Physically Handicapped is well thought out and very commendable. While I shall not tonight attempt to deal with all its phases, I shall touch upon a few of them. First, there is the resolution providing that Congress and the President shall formally designate 1 week each year as National Employ the Physically Handicapped Week.

As you may know, the resolution provides that all organizations at interest shall cooperate in devising and executing programs appropriate to the week, which would mean that the public in this way would have an annual reminder of the problems and needs of the handicapped brought to its attention in the most forceful manner imaginable. This resolution which I introduced has been favorably reported by a subcommittee of the Judiciary Committee of the House. I will work hard for adoption of this resolution. I bespeak your earnest consideration and active support for it, and trust that you and all your friends will advise your Representatives in Congress of your desire for early action thereupon.

Another matter is the proposal to establish a Bureau for the Welfare of the Physically Handicapped. In view of the multiplicity of agencies now dealing with various phases of this matter, it seems to me entirely reasonable, and necessary, that there be coordination of these activities. As a result of this war we know that in the future we shall have more handicapped to deal with, instead of less, and we should, right now, provide the means by which, gradually, such activities could be coordinated and expanded to meet their needs. We do not wish to disturb the set-up respecting the veterans themselves, but there is the vast field of those who are not veterans. We have been at war for approximately 1 year. During that time, according to latest official figures released, there have been about 50,000 battle casualties. In the same period, there have been many times that number injured in private industry. We must not, of course, throw such a tremendous army of our people upon the human scrap heap for it has already been demonstrated that there is a definite limit to our manpower.

As I view the present picture there is, clearly, a need for Congress, itself, to provide the means whereby it can gain a factual understanding of this gigantic problem. Immediately prior to, and since the last national election, there has been a growing demand on the part of the American people that the Congress assume a more definite role in the conduct of the war, and in preparing against the problems which will, inevitably, grow out of it. One of the most important of these is the devising of a thoroughly adequate program for the physically handicapped.

The most effective way in which Congress could deal with this matter would be to set up a special committee to investigate, survey, and develop a national program for the physically handicapped. Such a committee, nonpartisan, and nonpolitical in make-up, should be composed of earnest men and women in Congress who perceive the need for such action and who would, thus, be put in position to intelligently attack the whole problem.

Among the duties of such special committee would be to explore the problem of employment of the physically handicapped in all its aspects. In addition to hearings before the proposed committee, numerous and thorough studies would be undertaken, on the basis of which the committee would be enabled to devise permanent legislation covering the blind, the deaf, the hard of hearing, the manually defected or deformed, the organically diseased, victims of industrial accidents, sufferers from occupational diseases, and, possibly, those afflicted mentally as a result of injury, disease, or shock.

With regard to disabled veterans there exists, as is I think natural, a feeling on the part of veteran organizations that they constitute a special group and that their problems should be dealt with under the auspices of the Veterans' Administration. With this point of view I find myself in agreement, feeling as I do that it is the most obvious duty of any nation which must engage in war to take care of the men who are maimed or crippled as the result of that war and do so through an agency which can concentrate its attention upon such work. The point is, however, we shall make certain that the emphasis placed upon work for disabled veterans becomes the means of increasing interest and concern about the problem of the disabled generally, and I am personally of the opinion that the better the job done for veterans the more likely will be an awakening of interest in the problem generally.

The hearings of such special committee, no doubt, would be the means of focusing public attention upon this subject in such manner as would not be possible in any other way. Further, any such investigation, naturally, would delve deeply into the operation of State laws, and city ordinances, so that we could ascertain the facts as to how the handicapped are now handled by the various instrumentalities of government; what States are using advanced methods; what States are lagging behind, etc., and thus strike a balance in the formulation of a national policy.

Such a committee could not, probably, complete its work in less than 2 years, and in view of that fact, its findings very likely would have a profound effect upon post-war reconstruction. Therefore, I firmly believe that the Congress should now realize its obligation, and its opportunity, to perform a needed and most worthy function in ascertaining the how, where, when, and what of the physically handicapped.

As for other points in the American Federation of the Physically Handicapped program, including establishment of a division for the physically handicapped in the United States Civil Service Commission, a division for the handicapped in the United States Employment Service, representation of the physically handicapped in governmental agencies where their interests are affected, and the call to private industry and the general public, to immediately remove all unfair discriminations against employment of the handicapped; all these, I believe, are most worthy and commendable.

In conclusion please let me say that I deeply appreciate the honor you have bestowed upon me, in having made me an honorary member of your lodge. I pledge my best efforts to assist you, in all ways possible, and hope that the future will hold in store much greater opportunities for all the handicapped citizens of our great Nation.

Congressional Record

PROCEEDINGS AND DEBATES OF THE 78th CONGRESS, FIRST SESSION

The Physically Handicapped

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 28, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Paul A. Strachan, president of the American Federation of the Physically Handicapped, and my own address delivered at a meeting of that organization held January 12, 1943:

ADDRESS BY MR. PAUL A. STRACHAN

Mr. President, distinguished guests, and fellow members, this is the first meeting we have held since the beginning of the Seventy-eighth Congress. We have already begun our legislative campaign. The national employ the physically handicapped week resolution has been reintroduced in the House by the Honorable JERRY VOORHIS, our very good friend, upon the opening day, and it will be reintroduced by the Honorable RICHARD B. RUSSELL, Jr., in the Senate within the next few days. Following that, piecemeal, as the opportunity presents, other legislation will be introduced to cover other phases of the national program for the physically handicapped.

One thing that all of us have ascertained in the past has been the necessity for the establishment of a bureau of welfare for the physically handicapped. There is, to my mind, every reason why that should be done. If, for no other reason, because it would ultimately bring together many of the various units now handling some phase of the welfare activities—rehabilitation, training, etc.—for the physically handicapped. I want to say, however, that we must not expect too quick action upon such matters. Bills have been introduced and others will be introduced by other organizations who believe in the expansion of the present set-up, which, frankly, means that those interested in such a program for themselves today, if they visited all agencies each having a part of the program, would have to go to 17 different agencies.

Nevertheless, I have talked with a great many Members of Congress and I find that they are interested in our program. I am frank to say that, whether they are interested to the extent of voting for a bill, I do not know, but I do believe that, on both sides of the aisle, there is an awakening of interest as to what to do, as to the 23,000,000 physically handicapped people in this country. And, I believe that we are in excellent position to push forward—a piece at a time—building against the future, a program that will cover this group adequately. I also know that one of the cardinal principles of successful legislative work is, never to overlook the temper of the Congress with which we have to deal. We must first build a program that will stand up under punishment—one that is so right that it can stand criticism and keep coming. We believe we have that kind of a program.

We believe that there is not a single item on our program today that is not needed, or, if enacted, would in any way conflict with any pending legislation. That is important. Because powerful groups which have initiated their ideas of legislation—rehabilitation experts and educational groups—must not run counter to ours, nor our program to theirs, at least not to the extent that we must lose sight of what we are trying to get specifically for our own special group.

I feel that the program we have designed is sound, in the sense of being practical. I know that we have not asked Congress for anything unreasonable, and that, too, is important. We have asked that Congress itself determine the scope that such a program should take, by the setting up of a special investigating committee to go into the whole field as to the physically handicapped.

I know that there is plenty of precedent for that, because nearly every piece of important legislation which has been put upon the statutes in the past 25 years has originated as a result of congressional study and action, itself. I have no compunctions about asking Congress for money, but I would much rather know exactly what is needed, so that we might apply the rule of reason. If it is 5 million, or 25 million, or even 100 million—if the job justifies it—I believe it should be done, and I believe that Congress is fair-minded enough to do it, and I am hopeful that some activity will be started soon looking to a congressional committee to investigate and determine a national program for the physically handicapped being set in motion.

We have already called upon the various agencies of the Government to lay down a definite program for the handicapped. We are calling upon the Civil Service Commission to establish a division to be charged with the handling of the handicapped, as to employment within the civil service. The reason for this is that there is no question but that there will always be handicapped persons, and in the system of economics now facing the Nation and which will intensify as this war goes on, one thing we are going to need is the skill of every person—men and women—as well as their aptitudes and abilities, who can do any kind of work to speed our final victory.

That, I believe, is self-evident, and I feel that all agencies of the Government must prepare now—not only for what is needed today—but, tomorrow, and the next day, as well. And, if they do that, they cannot escape the conclusion that the handicapped must be dealt with in a specialized way. We are calling upon the United States Employment Service, in the light of the approximate million and a quarter handicapped citizens who have registered already, since the war began, to set up qualified divisions to handle them, and those who will, inevitably, follow them.

It is an undeniable fact that a very large percentage of our handicapped people are not possessed of the experience, the wisdom—the education, if you please—as to what has been done for them by the Government, or what is being done now, or may be done in the future. I am sure that is true, because I have hundreds of letters from handicapped all over this country, and, notwithstanding that Governmental agencies have used every medium of publicity to tell the people what is being done, nevertheless these letters indicate that many people have never heard of any of the things that have been, or are being done in their interest. It must be a part of the job of this federation to apprise the handicapped of what benefits they may avail themselves in order to be rehabilitated, and to take part in the production of war matériel which will speed the day of victory. We must do that. I venture to say that 50 percent of the efforts of our office here, now, is devoted to telling people who are in absolute ignorance of what they may get now, or what is in store for them, as well as how to get it, and who to see, to get it.

As you know, we very early called upon private industry—through the National Association of Manufacturers, United States Chamber of Commerce, and leading industrialists of this country—to make use of handicapped individuals, pointing out that they must make use of them for the Nation's sake as well as for that of the individually handicapped. I am very glad to advise that, through various manufacturers, I have been informed that more than 200,000 of the handicapped have been put to work in the past 7 months. But there is still much need for the handicapped themselves going forward on their own steam instead of depending upon outside agencies and individuals. Still there are very definite signs of continuing improvement, and I am certain that if we keep pounding away, and if we do not expect to win all we ask for in a day or a week, we shall continue to push forward with our program and thus lift the horizons of the handicapped *higher and higher* all the time.

There are three steps in the development of any organization's program. The first step is to overcome public indifference and inertia to the program. The second, to meet the antagonism which that program will engender from those who do not wish to see the status quo disturbed, and the third step is to bring about a general understanding on the part of the public as to just what the program means, for from that point on, I am confident of our success.

That is all I have to say tonight on the subject of our general activities as to legislation.

Ladies and gentlemen, I think one of the gravest moments that can come to anyone is, to introduce his own Congressman. You can't strike a happy medium, because if you say too much, you get in dutch, and, if you don't say enough, you get in dutch, so, I shall throw myself on the mercy of the court, and I enter a plea that you, and he, shall both forgive me any commissions or omissions.

I can start back, about 16 years ago, when I first became aware of the fact that in the

grand old State of Georgia, there existed a citizen by the name of ROBERT RAMSPECK. Just by accident, about 2½ years later—mostly because I have a yen for attending political rallies—I visited a meeting at which the gentleman in question was a speaker. There was an opposition speaker, too, who sounded off in full strength, vocally, for his side, but, when BOB RAMSPECK said his piece, well, the other feller just faded away.

When I returned to Washington, I was very proud to find that he had, already, begun to climb upward. Sitting on four important committees, he has gradually built for himself a reputation for fairness, considerateness, and honorable dealing, as to which he has no superior in the House of Representatives.

Now, I want to say that he has proven to me to be a pretty tough customer, and I am often reminded that he was born in Decatur, Ga., in the shadow of the largest block of granite on earth—Stone Mountain. There are times within my knowledge that I have felt that he has a great deal of that familiar granite in his make-up. Nevertheless, he has had a profoundly beneficial influence upon Government employees' affairs; upon Labor, in fact, upon all working people. One reason why I am particularly proud of him is because—and I am almost ashamed to admit it, although it is perhaps undeserved in many ways—and that is, the South is ultra-conservative, but, despite that, his whole career in Congress has been that of a liberal who chose the middle of the road and yet, held fast to the ideal of continual progress. For that, I honor him.

Now, I want to bring this down to short focus. Early last year, I presented to Mr. RAMSPECK a program on behalf of the physically handicapped. He took it first to the Civil Service Commission, and later to the head of the War Manpower Commission, Paul McNutt, then and now the head of the Federal Security Agency. So far as I have been able to determine, that was the first effort to launch an over-all program for the handicapped, and I think we should accord Mr. RAMSPECK full credit for his efforts in that direction.

In September 1941, after considerable research, I ascertained that since 1919, there has been a grand total of 171 laws put upon the statute books on Civil Service matters, and of that number, 155 had been enacted while our friend had been chairman of the House Civil Service Committee. That record speaks for itself. It means that during his jurisdiction, more laws have been placed on the books, bearing on benefits to Government employees, than all the time previously in our history .

This, my friends, has been a rather rambling dissertation, but I can sincerely say that in ROBERT RAMSPECK we have no better friend in Congress, and I am proud to present him to you. Congressman RAMSPECK. [Applause].

ADDRESS OF HON. ROBERT RAMSPECK

Mr. President, ladies, and gentlemen, of course. I am grateful to my friend, Paul Strachan, for the kind remarks he made in presenting me to you. I think, perhaps, he is a little partial, because I let him come to my office and pound on my desk, and I do not try to argue with him, because he could not hear me anyway, and, besides, I am too lazy to try to write him notes all the time; so I would not be surprised if I have not listened to more speeches by Paul Strachan than anyone else.

He has made two speeches here tonight, and, I submit, in all fairness, what has he left for me to say? He has told you about his experience with me in regard to the programs for the physically handicapped. Therefore, he has used up a good part of my speech, which I had hoped to make to you. It is true that, at his request, I have tried to persuade the Civil Service Commission to establish a division for the physically handicapped. Then when that was unsuccessful, I went to Paul McNutt, after considerable urging by Paul Strachan, and tried to sell him the idea that the War Manpower Commission should have a division especially to look after the physically handicapped, in order to fit them into the war program.

We were not successful, specifically, but I think we can claim credit to this extent the Civil Service Commission did have a study made of positions that could be filled by persons having some physical handicap, and they have published a report—which I hope to make available to some of you—listing a large number of positions which will be open to persons suffering from some handicap. Therefore, we have made some progress on your behalf, and, so far as my activities on your behalf are concerned, they have been due to the fact that your friend, Paul Strachan, sold me the idea.

Now, with regard to the resolution asking that the President set aside a week, designated as "National Employ the Physically Handicapped Week," I am heartily in favor of such a resolution, because I think it is true that a vast majority of the people in this country are not familiar with the problems which you face. Such a proclamation, issued by the President, would focus attention upon this important problem, and would help to bring understanding to many people who have no conception of what it means.

I am also heartily in favor of having Congress investigate, as proposed by Paul Strachan, although, in that respect, I guess that some of that Stone Mountain granite is cropping out, for I do not agree with his idea as to a special committee. My own opinion is that one of the regular standing committees of the House should do the job, and should make a full and complete study of all the facts relating to this problem, in which you are so much concerned. However, I do not think that it is so important what procedure is followed as it is to get the investigation, and, therefore, have Congress and the public get all the facts.

I do feel, as Paul does, that somewhere in this great Government of ours we should have a bureau devoted to safeguarding the interests of the 23,000,000 citizens of America who suffer some handicap—major or minor—and I also feel that that bureau should be, so far as is possible, staffed by handicapped persons, because they, above all others, will undertand and appreciate the problems facing those other citizens who come within this classification.

Now, I do not know that there is anything further that I can add to what has been said here tonight, except this: This country—our United States—is a big country; the people are hard to impress, and to bring home to the average citizen the problem of selling a program to the Congress and to the American people takes a lot of hard work; it takes organization; it takes constant and persistent effort; it means many disappointments and delays, and you can hope to succeed only if you are willing to form a strong organization and do a lot of work in order that the people may be made to understand and appreciate what your problem is.

If you are willing to do that, and you have a sound program to offer, it is my judgment that you can win the fight, and get the legislation necessary from the United States Congress. I shall esteem it a privilege to do anything that I can, to assist you, but no idea was ever sold to Congress unless the people back home—those people who sent us to Washington—were first interested in the idea. So may I leave this suggestion with you, that the important thing for you to do is to focus attention of the people in the 48 States, through local organizations, on your problem, giving them the information, and asking them to support your program. When you get the support of the public throughout this country you won't have any difficulty in the Congress.

I am very happy to have the privilege of coming here and attending your meeting. I have a real affection for my friend Paul Strachan, and I think he is devoting his heart and soul to this movement. I sometimes get a little peeved at him because he takes up so much of my time, but since it is in the interest of such a good purpose I forgive him and I want to tell you how happy I am to have the opportunity to work with him and with you in any way that I can.

I thank you very much.

PROCEEDINGS AND DEBATES OF THE 78th CONGRESS, FIRST SESSION

Employment of Physically Handicapped

REMARKS

OF

JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1942

Mr. VOORHIS of California. Mr. Speaker, today I have introduced House Joint Resolution 325, to provide that the third week in October of each year hereafter shall be designated by Congress and the President as National Employ the Physically Handicapped Week.

The purpose of this week is to call public attention to the necessity and desirability of furthering employment of the physically handicapped, by providing for appropriate ceremonies in all States and cities.

Adoption of this resolution will not only be the means of directing public attention to this very important matter, but doubtless will also be the means of furthering the general program of rehabilitation and placement of all physically handicapped, estimated at approximately 23,000,000 citizens, and of which number it is also estimated that approximately 10 percent, or 2,300,000 now possess some skills and experience essential in the war-production program. It is further pointed out that the benefits of such a movement apply to all classes of the physically handicapped, including those injured, or diseased, by or through war or war-production services.

This resolution was introduced at the request of the American Federation of the Physically Handicapped, by its legislative committee, which is composed of Messrs. Paul A. Strachan, chairman, 1341 East Capitol Street, Washington, D. C., and Jesse D. Gross, of Canton, Ohio.

I sincerely hope that there will be early, affirmative action upon this resolution.

National Employ the Physically Handicapped Week

REMARKS

OF

JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1942

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recently introduced by me:

Joint resolution to establish the third week of October as National Employ the Physically Handicapped Week

Whereas there is now, and shall be for some time to come, a positive necessity for utilizing fully every available ounce of manpower in America; and

Whereas the growing and acute problems of the physically handicapped, who number approximately 23,000,000 citizens, and are being augmented by an average of 800,000 persons injured in industry yearly—to say nothing of those who have been, or will be, injured or diseased as a result of military service—is engaging more and more attention of the Federal Government, the States, and private industry; and

Whereas this condition will be greatly augmented after the conclusion of the present World War No. 2, as inevitably there will then be a much larger number of physically handicapped men and women injured or diseased by or through war or war-production service; and

Whereas rehabilitation and placement of the physically handicapped are among the most important problems in our national economy, as if a means is provided to make many such people self-supporting, wholly or in part, the entire Nation will be beneficiary because of lessening drain upon national finances and resources; and

Whereas Congress and the Chief Executive have expressed concern and have initiated constantly expanding programs on behalf of the physically handicapped, as well as leaders in private industry: Now, therefore, be it

Resolved, etc., That hereafter the third week of October of each year shall be designated as National Employ the Physically Handicapped Week. During said week appropriate ceremonies are to be held throughout the Nation, the purpose of which will be to enlist public support for and interest in the employment of otherwise qualified but physically handicapped workers.

The President is hereby authorized and directed to issue a suitable proclamation each year, and the Governors of States, mayors of cities, and heads of other instrumentalities of government, as well as leaders of industry, educational and religious groups, labor, veterans, women, farm, scientific and professional, and all other organizations and individuals at interest, are invited to participate.

PROCEEDINGS AND DEBATES OF THE 78th CONGRESS, FIRST SESSION

Office of Personal Catastrophe Loans—A Service for the Physically Handicapped

REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1943

Mr. BOREN. Mr. Speaker, I am today introducing a bill to establish an Office of Personal Catastrophe Loans in the Disaster Loan Corporation, a subsidiary of the Reconstruction Finance Corporation.

The purpose of this bill is to afford a means whereby citizens who have suffered disabling injury or disease which requires the individual to use a prosthetic, orthopedic, or other appliance or device, to enable such person to return to useful and gainful employment, may apply to the Office of Personal Catastrophe Loans and, upon proper certification as to character and need, be enabled to borrow funds essential to procure such appliances or devices.

This measure has been introduced at the request of the American Federation of the Physically Handicapped, Inc., national headquarters of which organization is suite 1365, National Press Building, Washington, and officers of which are Paul A. Strachan, president; Jesse D. Gross, first vice president; Chester C. Hadden, second vice president; Harry J. Goldberg, third vice president; Millard W. Rice, fourth vice president; Ralph A. Collins, fifth vice president; John Millon, sixth vice president; Duane DeSchaine, secretary; and Edwin E. Maczkowske, treasurer.

I also want to say in this connection that Mr. Paul J. Campbell, president of the famed Fraternity of the Wooden Leg, and Miss Augusta B. Weaver, secretary of that fraternity—the latter being one of my constituents—first projected a similar idea about 3 years ago, and I hope the present effort on behalf of the approximate 10,000,000 to 12,000,000 disabled, in this category, as represented by the endeavors of the American Federation of the Physically Handicapped, will bear early fruit.

H. R. 1867

A bill to provide a revolving loan fund in the Disaster Loan Corporation, to which worthy citizens may apply for loans to procure prosthetic, orthopedic, or other appliances or devices, to enable such citizens to become wholly or partially self-supporting, and thus contribute to needed manpower to win the war

Be it enacted, etc., That there is hereby established an Office of Personal Catastrophe Loans in the Disaster Loan Corporation, a subsidiary of the Reconstruction Finance

Corporation. "Personal catastrophe" shall be defined as an injury, or disease, which requires use of a prosthetic, orthopedic, hearing, or other appliance, to enable the individual affected to return to useful and gainful employment.

The Office of Personal Catastrophe Loans shall be funded with the initial sum of $5,000,000, to be supplied by the Reconstruction Finance Corporation from funds not otherwise allocated.

Said fund shall be established as a revolving loan fund to the herein-described persons, who, upon proper application by the individual, and certification by the properly designated official, may thus be afforded necessary relief. In each instance the individual shall have free choice of the appliance best suited to his or her personal needs, with the only proviso that it will fit him or her for useful and gainful employment.

513736—1269

No loan may be made without certification that the individual applying is worthy, of good character, and without the instant means of independent action.

There shall be secured from each certified applicant a note and pledge, to make repayment month by month, when employed, with interest at a rate not higher than 2 percent per annum.

The Office of Personal Catastrophe Loans is authorized and directed to utilize the personnel and facilities of existing loan agencies of the Disaster Loan Corporation and Reconstruction Finance Corporation in passing upon all applications.

The personnel of the Office of Person Catastrophe Loans shall be appointed by the Secretary of Commerce, and the expense of the office shall be paid by the Reconstruction Finance Corporation.

This act is effective upon date of passage.

United States of America

Congressional Record

PROCEEDINGS AND DEBATES OF THE 77th CONGRESS, SECOND SESSION

Rehabilitation of the Physically Handicapped

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

June 22, 1943

Mr. DAVIS. Mr. President, with respect to Senate Joint Resolution 43, which I recently introduced on the floor of the Senate, entitled "Establishing a Division for the Physically Handicapped in the United States Employment Service," I should like to point out that I recently received a copy of a communication issued by Mr. Harry B. Mitchell, president of the United States Civil Service Commission, in which he sets forth certain objections to the joint resolution in its present form.

I have, in addition, recently received a letter from Mr. Paul A. Strachan, president of the American Federation of the Physically Handicapped, Inc., in which he successfully replies to the objections raised by Mr. Mitchell, and in which he again makes clear the need for immediate action in the consideration and enactment of Senate Joint Resolution 43.

Mr. President, I ask unanimous consent that the letters of Mr. Mitchell and Mr. Strachan be printed in the RECORD as a part of my remarks, and that both these communications be referred to the Committee on Education and Labor, in order that that committee may be in a position to make an immediate and thorough analysis of the comparative merits of these respective communications.

537363—2870

Mr. President, I sincerely trust that the committee will see fit to take early and favorable action toward the solution of the very vital issue which is covered by Senate Joint Resolution 43.

There being no objection, the letters were referred to the Committee on Education and Labor and ordered to be printed in the RECORD, as follows:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., May 12, 1943.

Hon. ELBERT D. THOMAS,
United States Senate.

DEAR SENATOR THOMAS: Further reference is made to your letter of April 21, 1943, requesting a report on the Commission's views regarding Senate Joint Resolution 43, entitled "Establishing a Division for the Physically Handicapped in the United States Employment Service."

Section 2 of the bill provides that—

"The Director of the United States Employment Service is authorized, without regard to the civil-service laws and the Classification Act of 1923, as amended, to employ and fix the compensation of such persons as may be necessary for the efficient administration of the Division, to establish such number of subdivisions thereof as in his judgment may be necessary to carry out the functions of such Division, and to provide for an accredited representative of such Division in each of the offices of the United States Employment Service throughout the United States. So far as practicable, the personnel of such Division shall be selected from physically handicapped persons."

The Commission is not favorable to the proposal in section 2, quoted above. The Classification Act of 1923, as amended, is a general law containing pay scales which are presently applicable to over 1,000,000 Government employees in the departmental and field services. It sets legislative standards for determining the salaries of positions on the basis of their duties and responsibilities. Such a provision in the resolution would not be in the best interest of orderly salary administration, which involves recognition of the principle of equal pay for equal work, and would tend to establish unequal rates of compensation for rehabilitation specialists in one Government agency as compared to other Government agencies. Rehabilitation service calls for the highest professional qualities, and it would be unfortunate to set aside all consideration of the merit-system standards and place emphasis on physical condition alone in the case of the employees of the Division. Such a system of employing the handicapped would reverse the philosophy of rehabilitation, which puts qualifications for the job first as the most effective way of assisting the physically handicapped. They want to feel they are rendering adequate service.

The Commission during the past year has taken steps to speed up the utilization in suitable employment of the abilities and aptitudes of employable handicapped persons in the Federal civil service, and agrees that such steps are necessary in connection with employment in private industry. Through the Commission's program, thousands of such persons have been placed in Federal positions for which they are qualified.

A separate division for the physically handicapped, as outlined in Senate Joint Resolution 43 would be considerably less effective and efficient than a central planning and advisory committee to study, promote, and coordinate a program calling for the employment of the physically handicapped. Such a committee would place proper emphasis on the fullest possible use of the handicapped in each bureau of the War Manpower Commission,

rather than establishing a separate division in the United States Employment Service.

In accordance with established procedure, this report has been submitted to the Bureau of the Budget, who advises the Commission that there is no objection to the submission of the report.

Sincerely yours,

HARRY B. MITCHELL,
President.

AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, INC.,
1376 NATIONAL PRESS BUILDING,
Washington, D. C., June 11, 1943.

Hon. JAMES J. DAVIS,
United States Senate,
Washington, D. C.

DEAR SENATOR DAVIS: Acknowledging your letter of June 7, enclosing copy of letter from Mr. Harry B. Mitchell, President, United States Civil Service Commission, of May 12, to the Honorable ELBERT D. THOMAS, chairman, Senate Committee on Education and Labor, as per your request I beg to submit my views thereupon.

As one who, in earlier days, was representative of the organization primarily responsible for enactment of the present classification law, I believe I am familiar with its provisions, and would further say that, insofar as its genesis and operation in relation to the physically handicapped is concerned, I believe I know more about it than does the President of the Civil Service Commission.

The question (raised by Mr. Mitchell) as to whether or not the Classification Act would be fractured, broken, or irremediably disrupted by passage of the proposed resolution (Senate Joint Resolution 43) is not particularly in point. The director of the proposed division, for example, could establish any given set of standards relating to qualifications (other than physical) and pay, that may be desired, and these need not, necessarily, be in contravention to classification pay scales, or qualifications.

Further, the resolution states, "So far as practicable, the personnel of such division shall be selected from physically handicapped persons." That does not make it mandatory that all employees be chosen from the ranks of the handicapped, or, in fact, any employees at all, for that matter. And, even if all employees were chosen from the handicapped, as a matter of justice and equity, I ask you, "What would be more appropriate than an agency for the handicapped, operated by the handicapped?" Our first vice president, Mr. Jesse D. Gross, in commenting upon the proposal that there is objection to making physical disability a preferential factor in employment, very pertinently states, "It would, indeed, be but belated justice if, now, physical disability should be made a preferential factor in employment, as a change from the past and present extreme of it being a detrimental factor in employment."

The good President of the Civil Service Commission, like many others who do not distinguish between "rehabilitation," per se, and employment placement techniques—a thing entirely apart from rehabilitation—proceeds to arbitrarily aline the proposed division for the physically handicapped (designed to be set up solely as an employment proposition), with the Vocational Rehabilitation Service. Such is not the intent. Indeed, if the writer had his way—in the light of his own past observations—there would be no mixing of the two—at least not under the present set-up.

I am quite confident that Mr. Mitchell's confusion in this matter is due to the fact that, in all likelihood, his letter was probably drafted by Mr. Arthur S. Flemming, member, United States Civil Service Commission, and more recently also a member of the War Manpower Commission, and who, in my opinion, for the past 2 years has evaded, sidetracked, and otherwise derailed development of any comprehensive over-all policy relating to Federal employment of the physically handicapped.

Rehabilitation, as stressed by Mr. Mitchell, it is true, is part of the task of regeneration and utilization of the handicapped—at least in such instances where either treatment, application of orthopedic, prosthetic, hearing, aids to sight, or other devices or appliances to aid and restore to full or partial usefulness the handicapped individual, or, education and training, may be concerned. But this does not necessarily mean that there are not many positions which could be held, by many types of handicapped, without any treatment or training. In short, acceptance of the status quo, making use of their respective abilities for work, right now or later, which they may be qualified to do, without rehabilitation processes being applied.

Rehabilitation to Mr. Mitchell's mind, apparently, is the junction where treatment, training, and placement meet; but, it may be pointed out that, in the absence of traffic signals, there is always a great deal of confusion at such intersections.

With respect to paragraph 4 of Mr. Mitchell's letter, may I not inform you that in association with Hon. ROBERT RAMSPECK, chairman, House Committee on the Civil Service, I presented to the Civil Service Commission, even before this Nation entered the present war, what was, I believe, a thoroughly workable plan relating to employment of the handicapped. Sad to relate, the Commission, as is usual when suggestions are developed apart from their own staff, did nothing about it for a long, long time. It will be noted from attached marked copy of address of Hon. ROBERT RAMSPECK, that he generously credits me with having initiated the survey of the handicapped made by the Civil Service Commission, on which largely the present employment policy relating to the handicapped is presumed to be hinged.

However, before that time, operating under civil service regulations, many otherwise qualified handicapped could not be appointed, because of their disability. For example, it is only a short time, relatively, since the Commission in its wisdom held fast to the rule which would have, if literally applied, forbidden appointment of the late Thomas Alva Edison because, forsooth, "he could not hear a watch tick at a distance of 15 feet." And this is but one of many instances which might be cited.

The position of this federation, representing the handicapped, is, that in all agencies where their interests are at stake, they should have adequate representation. We believe, frankly, that there has been a sort of caste system built up in agencies dealing with the handicapped and that representatives of this caste—not handicapped themselves—have been and are more concerned with preservation and advancement of their own interests than actual aid to the handicapped. There are, of course, notable exceptions to this. But we are determined to continue our campaign, which has already received approval of a large number of Members of Congress as well as other eminent men and women in public and private life, that agencies handling the problems of the handicapped shall be staffed, insofar as practicable and possible, by the handicapped. We indignantly refute the idea that anyone could understand the problems and psychology of the physically handicapped as well as those who, themselves, are so afflicted. In short, Senator, we shall fight for actual representation—not theoretical representation—in high and low places where the interests of our people are concerned.

We shall do this as a matter of sound economic policy—in assisting to put a floor under the present wobbly and wholly inade-

quate program for the handicapped—and, as a matter of humanitarian principle, social justice, and equity. We do not wish to continue in the unhappy plight of having others do our thinking, or acting, for us. We believe that, in our ranks, there are sufficiently well qualified handicapped to head or staff, any agency of Government. In fact, we might point out that the Chief Executive himself is physically handicapped. Disability should not be a deterrent to employment, provided other qualifications are present.

In paragraph 5 of Mr. Mitchell's letter, which I believe to be the voice of Esau, although the hand of Jacob, because it is, in fact, but a repetition of the endless evasions with which those of us who represent the handicapped have had to contend, emanating, among others, from the aforesaid Mr. Flemming, since this paragraph expresses the opinion that—

"A separate division for the physically handicapped, as outlined in Senate Joint Resolution 43, would be considerably less effective and efficient than a central planning and advisory committee to study, promote, and coordinate a program calling for the employment of the physically handicapped. Such a committee would place proper emphasis on the fullest possible use of the handicapped in such bureau of the War Manpower Commission, rather than establishing a separate division in the United States Employment Service."

I respectfully point out, in reply to Mr. Mitchell, that this federation, from the beginning, has persistently called for a Bureau of Welfare for the Physically Handicapped, a central agency to handle all the problems of the handicapped, but, with proper observance of the rights and functions of existing agencies.

Second, if Mr. Mitchell's statement is to be accepted literally, in view of the fact that various plans and programs looking to establishment of just such a committee as he proposes, have been laid before his, and other Federal agencies during the past 2 years, why then, have not such agencies already established such central organization? It seems rather late to me, to now announce that which should have been clear to any thinking person 2 years ago, especially in the light of the fact that I was one of those who proposed to these agencies that very program they now project as coming "like a thunderbolt, full-armed, from the head of Jove" as their very own.

Third, in fact, Mr. Mitchell's statement is simply the familiar cry of the bureaucrats. When faced with necessity for taking definite action they, invariably, seek refuge in "let's form an advisory committee." That has, to their minds, the desirability of stalling definite action, so that the original proposal may either be pigeon-holed and forgotten, or completely emasculated by later amendments, as well as taking away from Congress its prerogative to adjudge the matter upon its merits and, if justified, writing a sensible remedy into basic law.

Fourth, it must be pointed out that the War Manpower Commission, as now constituted, is but an ephemeral institution. It has no standing in basic law, and exists solely by virtue of Executive order. We seek a permanent, definite policy and program for the handicapped, Senator; not merely an illusory, vague, and temporary "hand-out."

Further, suppose such advisory planning and coordinating committee were formed, would not one of its findings, if such findings were based upon sound reasoning, be, that as one step in the development of a national program for the physically handicapped there be a division for the physically handicapped, in the United States Employment Service?

How could they escape that conclusion? Is that not dealing with the subject at the source, or, at least, one source? Remembering, all the while, that in this instance, we are talking, solely, about employment of the handicapped.

Surely, even the august minds now composing the War Manpower Commission and its alter ego, the Civil Service Commission—whose brilliant coups-de-etat have so electrified the Nation, particularly the Congress—that these agencies, of late, have been recipient of fulsome compliments for the splendid results emanating from application of their methods and plants. Indeed, so much so, that various congressional committees are today frenziedly seeking new words in their lexicons to describe the present muddled manpower situation in its entirety.

Certainly, even these great minds would have to admit, there is no way in which to bypass a fact, and a fact in this instance is that there are, according to Mr. McNutt's own figures as submitted to Mr. Ramspeck, 23,000,000 or more physically handicapped citizens in this country, and a fair percentage of these are possessed of skills and aptitudes which would avail in the war effort, either with or without additional treatment or training.

If it is intended that the so-called Vocational Rehabilitation Service must be the funnel through which all these people are to be strained, then I submit somebody is kidding. How could their boasted economical force of 22 specialists even augmented by the meager total of States' rehabilitation services employees—probably less than 500 all told—handle the specialized problems of 23,000,000 people, or even any considerable number of them? Specially so when it is considered that, by comparison, there are more than 1,500 United States Employment Offices scattered through this broad land, and in them, logically, the handicapped would find facilities for registration for employment far easier and certainly to greater advantage to themselves and to the country than in going through the endless fol-de-rol imposed by the United States Rehabilitation Service.

This federation, Senator, wants things in their proper perspective. It believes there has been too much intermeddling by outsiders in matters which they "wot not of." It does not necessarily follow that a specialist in rehabilitation is likewise a specialist in placement, and there is no way in which a corps of placement experts could be better developed than as an arm of the United States Employment Service as, from your own long experience as Secretary of Labor, I believe you would agree.

We do not desire to make invidious comparisons as to the methods by which such agency should be staffed insofar as abrogating the Classification Act is concerned but, we point out, that recently various responsible Government heads have severely criticized the Civil Service Commission for the miserable quality of personnel it has sent them through its own channels and we respectfully submit, if a proper directorate of the proposed division for the physically handicapped in the United States Employment Service is selected, we do not see how the head of such could do a much worse job in picking personnel than has the Commission, on the basis of testimony of those executives who are presumed to know what they are talking about—among others, the Honorable Lindsay Warren, Comptroller General and former Member of Congress.

The American Federation of the Physically Handicapped wants the Rehabilitation Service to be properly staffed and funded. We are just as much concerned in development of their side, as we are that of employment, through suitable placement. But, in proposing establishment of a division for the physically handicapped in the United States Employment Service, we are, we believe, placing this work where it properly belongs, and we do not understand why the Civil Service Com-

mission has anything to say about the conduct of the United States Employment Service in this instance, since no violation of the Commission's own personnel policies are involved. Further, we refute the thought that the Rehabilitation Service, as now constituted, is either equipped or funded to handle all the problems of the handicapped. Sad experience has proven otherwise.

In conclusion, we respectfully submit, the problems of the handicapped today are acute and demand full consideration by the Congress because any effective remedy will, of necessity, have to be, or, at least, should be, developed through enactment of law, rather than by Executive order, which last is subject to the vicissitudes of change of mind, or administration, later, and, if adverse, would leave the handicapped in that future day in worse plight than ever before.

537363—2870

Therefore, we insist that this is Congress' job and not that of any bureaucrat. We respectfully urge that consideration be given Senate Joint Resolution 43 on its merits, and not because of an opinion of an agency which has, already, to my belief, shown itself to be wholly indifferent to and unable to perceive the ramifications of the problems of the physically handicapped in their true light, to say nothing of failing to prescribe or apply adequate remedies for such situation.

We say this, Senator, as representatives of the physically handicapped, who, because of having long been ignored, we now believe stand in need of vigorous representation before Congress and the various Federal, State, and other governmental and private agencies—and we say this conscious of the unpleasant fact that in bygone years there has been no over-all representation of the handicapped whatsoever and they have been at the mercy of individuals who, we believe, are absolutely indifferent to, and ignorant of, our needs and aspirations.

We hope, therefore, that you will not falter, but will renew your efforts to pass Senate Joint Resolution 43, thereby aiding not only the handicapped, but the Nation as well, through facilitating increase in manpower supply. We extend our heartiest appreciation for your splendid work on this measure and assure you that we shall continue the fight with you.

With best wishes and personal regards, I am,

Sincerely yours,

PAUL A. STRACHAN,
President.

Rehabilitation of America's Physically Handicapped Citizens

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, November 3 (legislative day of Monday, October 25), 1943

Mr. WILEY. Mr. President, it has recently come to my attention that the senior Senator from Pennsylvania [Mr. DAVIS], addressed the annual convention of the Association of Limb Manufacturers of America at the Biltmore Hotel in New York City on October 6, 1943.

The address delivered by the Senator from Pennsylvania, who served as Secretary of Labor under three Presidents, dealt with the problem of the rehabilitation of America's physically handicapped citizens—a problem to which the Senator, both as chairman of the Federal Board of Vocational Education and as Senator of the State of Pennsylvania, has devoted more than 20 years of his life.

Mr. President, I believe that this problem of rehabilitation is one which will command the increasing attention of the American people, and I feel that the remarks of the senior Senator from Pennsylvania will prove of considerable interest to those who are concerned with this problem.

I therefore ask unanimous consent that the address which the Senator from Pennsylvania delivered at that convention and certain introductory remarks by Mr. McCarthy Hanger, past president of A. L. M. A., and president, J. E. Hanger, Inc., and a response by Mr. Chester C. Haddan, president, A. L. M. A., be printed in the Appendix of the RECORD, together with a resolution, bearing upon the problem of the physically handicapped, which was adopted by the assembled convention.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

INTRODUCTION OF HON. JAMES J. DAVIS, UNITED STATES SENATOR FROM PENNSYLVANIA, BY M'CARTHY HANGER, PAST PRESIDENT ASSOCIATION OF LIMB MANUFACTURERS OF AMERICA

Mr. President, fellow members, and guests, on the occasion of the banquet of the Metropolitan New York Council of the A. L. M. A., attended by the national officers of the association and a representative gathering of manufacturers of prosthetic appliances throughout the United States and Canada, it is my privilege to introduce to you tonight our honored guest who will speak to us on a subject close to his heart and the hearts of all of us—helping others to help themselves.

For years I have admired his work for the advancement of mankind and the good of our Nation. His aim has always been service to his fellow man. He is still helping to guide the Ship of State on the right course. He is devoted to true Americanism and to the recently forgotten principles of free enterprise which are responsible for our growth from a handful of scattered colonies to the greatest Nation—economic and political—in the world today.

He has preached and practiced the doctrine of fellowship and fraternity. He was almost solely responsible for the founding and growth of that great fraternal organization the Loyal Order of the Moose. In 1907 he became director general of this splendid fraternity. He takes pride in having continuously held that office from that day to this.

He is a man of rare charm and winning personality, yet forceful and outspoken when he takes up the cudgel to battle for the good of humanity—a role he has consistently and successfully filled. His zeal for the common man was no doubt born as he landed on our shores an immigrant boy, inspired by his faith and pride in a democracy which offered equal opportunities to all.

Many honors have come to him. Degrees have been bestowed upon him by leading universities. He has served in the Cabinets of three Presidents as Secretary of Labor and Director of Vocational Rehabilitation. For three terms he has represented one of the really great Commonwealths of the Nation in the Senate of the United States.

Yet with all his honors and accomplishments he remains a simple man. He has never lost contact with the plain people. It is significant that from his present eminence in State and Nation, he is still proud to own the title he acquired as a lad in the steel mills, "Jim the Puddler."

It is a very genuine pleasure to present to you, ladies and gentlemen, my friend, the senior Senator from Pennsylvania, the Honorable JAMES J. DAVIS.

ADDRESS OF THE HONORABLE JAMES J. DAVIS, OF PENNSYLVANIA

Mr. Toastmaster, Mr. President, ladies, and gentlemen, I very much appreciate the kind remarks of my long-time friend, Mr. McCarthy Hanger, who has long been recognized as one of the outstanding business executives in my home State, the Commonwealth of Pennsylvania.

I am more than pleased at this opportunity to meet with you at this, the annual convention of the Association of Limb Manufacturers of America, and to discuss with you one of the most serious and pressing problems of our time—the rehabilitation of America's physically handicapped citizens.

You, whose life's work has been devoted to reclaiming the maimed and to giving mobility and strength to the stricken, are well aware of the tremendous scope and nature of this problem. And you are likewise well aware, I presume, of the uncoordinated, inconclusive, and inefficient manner in which this problem is now being handled.

Today the United States is confronted with the most serious manpower shortage in all its history. The type of war in which we are now engaged requires vast numbers of men—not only for the armed forces but for those numerous other activities which are necessary to sustain and strengthen our forces on the fighting fronts.

Everywhere throughout the Nation, manpower is at a premium. Yet in the midst of this unprecedented demand, there remains within this Nation a huge reservoir of manpower which is virtually untapped.

I speak now of more than 23,000,000 physically handicapped American citizens—the vast majority of whom are now being denied the right to play that full and vital role of which they would be capable—if only their Government would extend the hand of sincere and friendly cooperation.

Up to the present time, notwithstanding the grave aspect of the emergency which we now face, this Government has failed to come forward with any sound, coordinated, or effective plan to rehabilitate these millions of physically handicapped people and to restore them once again to the status of self-sufficient and productive American citizens.

Our present efforts along these lines are indicative of the uncoordinated zeal and the unproductive waste of Federal administration. At the present time, such efforts as our Government is making to cope with this grave and serious problem are being undertaken by 17 different Federal agencies—each with an ill-defined authority—each with a comparable degree of independence—and each without benefit of any over-all coordinating policy or procedure.

A situation such as I have just described to you would be without any defense or justification, even in peacetime. But the continued existence of such conditions as these in an hour of national crisis represents an unwarranted and ominous threat to the very security of this Nation.

A thorough and careful review of present conditions has convinced me that the only way in which we can cope with this problem effectively is through the establishment of a definite, Nation-wide rehabilitation program which will be placed under the complete supervision and control of a single administrative agency.

In accordance with these conclusions, I recently introduced into the United States Senate, Senate Joint Resolution 43, which provides for the establishment of a "Division for the Physically Handicapped Within the United States Employment Service." This measure was developed after close consultation with a number of outstanding leaders in this particular field. One of those men, Paul A Strachan, president of the American Federation of Physically Handicapped, is here with us tonight, and he is actively pressing for the early enactment of this bill.

There are many aspects of this problem of rehabilitation which have never been properly approached in this country:

1. The first of these centers around the matter of registration and statistics.

My years of experience as Secretary of Labor and Chairman of the Federal Board of Vocational Education convinced me that before we could even begin to do an effective job in this field, we must compile a full and complete registration of all the handicapped. But more than that, we must establish a continuous and accessible means of contact between the handicapped and the Government.

Both of these essential features are completely lacking in our present rehabilitation efforts. I am convinced that this Government has no definite information about, or contact with, more than half of its handicapped citizens.

Since the United States Employment Service will, in all probability, be a continuing agency, and since its branch offices are to be found in every section of the country, I believe that the most effective results of any contemplated registration program could be achieved through the facilities of the more than 1,600 local offices of the United States Employment Service.

2. The matters of medical care, training, and placement with respect to the physically handicapped have never been properly coordinated or systematized in the United States.

With the establishment of the division for the physically handicapped which I recom-

mend, each case can be properly and individually treated with, on the basis of the material compiled during the course of the previously mentioned registration.

This would be a continuing and a coordinated process, under which all the steps necessary to the complete rehabilitation of any individual, could be carried out fully and logically within one organization.

3. The employment of skilled and properly qualified experts to carry out the various aspects of such a program.

With all due respect to the high-type personnel which can be found in the various levels of our Federal service, there still remains a grave need for the employment, in this area, of trained men who understand the psychological and practical physical problems which beset the handicapped.

If such a staff as this could be developed, it would represent a tremendous step forward in the entire field of rehabilitation.

4. The development of reciprocal relations with those agencies and industries which are in a position to give employment to qualified physically handicapped individuals.

Needless to say, private industry has done much more effective work in properly utilizing the skills of the handicapped than has the Government. Your own industry, which employs so many handicapped workers, is an outstanding example of what private industry has done in this area.

The maintenance of effective relations with these principal users of manpower would go far toward the establishment of a sound system of placement for qualified handicapped workers. And it would also prove most instrumental in gaining continued and valuable information as to what types of training would yield the best and quickest results for the handicapped worker.

This, then, is the essence of the program which I should like to see put into effect by this Government to fully and properly meet the manifold problems of America's physically handicapped citizens.

My contacts with these less fortunate people have taught that they resent relief and charity, regardless of the title under which they are presented. What these people want is the opportunity to become independent and self-sufficient American citizens. They want the right to work, to earn their own way, and to manage their own affairs.

This Government, if it be a truly responsible and representative government, must inevitably come to recognize the fact that some such plan as I have outlined here must be adopted and put in motion.

Every year, aside from war casualties, more than 700,000 American men are being cast upon the human scrap pile, largely because we have not taken any constructive steps looking toward the effective rehabilitation of those who have been partially disabled through accidents and illness.

How long will this profligate waste of American manpower continue? How long will the physically handicapped citizen of America be denied by his Government the right to take his full and productive place in American economic and political life?

It is to the ultimate advantage of our society that America find useful and productive work for all its citizens. It is to the ultimate advantage of our society that America take definite and sincere action to achieve these necessary and vital ends without delay.

Knowing the members of your association, knowing your deep sincerity of interest in this problem, I am confident that you will join forces with me and those many millions of other American citizens who are sincerely interested in reclaiming the physically handicapped citizens of America—and in building up a more productive and a more progressive order of living not only for the handicapped but for all America as well.

RESPONSE BY CHESTER C. HADDAN, PRESIDENT, ASSOCIATION OF LIMB MANUFACTURERS OF AMERICA, INC., TO AN ADDRESS BY SENATOR JAMES J. DAVIS, OF PENNSYLVANIA, AT THE REGIONAL MEETING OF THE ASSOCIATION AT THE HOTEL BILTMORE, NEW YORK CITY, OCTOBER 6, 1943

Senator DAVIS, it is my privilege to thank you, on behalf of the Association of Limb Manufacturers of America, for the splendid address you have just given us.

We are particularly grateful to you, because we know just how busy you are in Washington; we know of the tremendous responsibility that rests upon your shoulders as a United States Senator; we know that you would not have taken time away from your important duties in our Nation's Capitol were it not for the fact that you, too, recognize that those of us who are engaged in this important business of supplying missing parts of the human body with artificial substitutes are being called upon to play an increasingly important role in the war effort. I assure you, Senator, that it is our determined purpose to play whatever role of service to the American people we may be called upon to play in this great drama to the very best of our ability.

I also assure you that the members of this great humanitarian industry have met and will meet every demand that may be made upon them, provided they are given opportunity to do so, and are afforded proper cooperation by our Government.

It is a well-known fact, Senator, that the United States leads all the world in the making of fine artificial limbs and orthopedic appliances. It is a well-known fact that hundreds of thousands of persons in America are today employed in every vocation known in our great Nation, who have lost one or more of their limbs, yet are able, with the aid of the ingenious products of our profession, to work side by side and compete with their fellow Americans who are not so handicapped on an equal basis. I personally know that at least 20 of the Members of the present Congress are walking about on artificial legs. I know at least one Governor who walks on one artificial leg; a half dozen or so nationally famous movie stars; many leaders in business and industry, and even sports participants of national fame, such as Monty Stratton, of the Chicago White Sox, and many others wear these ingenious devices. Even our own President, Franklin Delano Roosevelt, would be almost completely helpless without the devices developed by those represented here tonight.

Why has this record not been equaled any other place on earth, Senator? The answer is, Not alone the ingenuity of the American limb and brace maker, it is the sytem of free enterprise, the competitive system that has flowered and grown in America as no place else on earth. It is the system under which every man strives to outdo his neighbor in the perfection of his products; it is this system that has made it possible for America to lead all the world in the excellence of its artificial limbs and other orthopedic devices.

May God grant us the strength and the wisdom to protect and nurture this system; to keep it intact for our sons and brothers who are this moment fighting, dying, and losing their legs and arms and eyes and ears—yes; even their minds—to preserve this very American way of life. They will have lived more in a year or two than most people will live in a lifetime. They will have suffered more hardships, withstood more pain, strained longer hours, lived through more horrors, displayed more courage than you or I will ever know, all for $50 a month, but really for preservation of their country.

We must fight just as hard on the home front as he who is fighting on the battle front to keep alive the American system of free enterprise, individual initiative, equal opportunity, and progress.

May God grant us the courage to correct the false starts, the greed, the stupidity that has been all too general on the home front. May He give us the strength to match with unselfishness and moral courage the splendid sacrifices and heroic intrepidity of our fighting men on every battlefield.

RESOLUTION INTRODUCED BY WALTER R. SIEVERS, VICE PRESIDENT, ASSOCIATION OF LIMB MANUFACTURERS OF AMERICA, INC., AND UNANIMOUSLY ADOPTED

Resolved—

That this meeting, representing the artificial limb and orthopedic appliance manufacturers of America, unanimously agrees that it is the duty of the Nation as a whole to do its utmost toward the rehabilitation of the maimed men and women who have emerged, or may emerge, from the active military and industrial fronts of this war, so that they may again assume their rightful places in the social and economic life of our country; and, accordingly

That it is also resolved to impress upon all members of this, the Association of Limb Manufacturers of America, Inc., our desire and the wisdom of making an immediate study to set up a program for the purpose of further cooperating with all agencies of the United States Government for the making, supplying, and technically correct fitting of artificial limbs and orthopedic appliances for the crippled and maimed veterans of this and previous wars, and war-disabled civilians;

That it be resolved by the membership of this association as a whole that in making such study and research all necessary steps will, and must, be taken to supply such veterans and war-disabled civilians with the means to again enter into active participation of our social and economic life at the lowest available cost to them, or to the said Government agencies; or in cooperation with such agencies as shall be determined by the Government, as was the case in 1917; and

That it be further resolved that we are aware, as an organization and as individuals, that it is our duty to produce such artificial limbs and orthopedic appliances for Government and other uses at the lowest possible cost, we pledge that we will do this, recognizing at the same time that we have never failed in responding to official calls upon our industry, and unequivocally stating it to be our belief that we are eminently qualified and equipped, and ready to make available thus our experience, abilities, and facilities in this field, better than any other group or agencies could possibly do.

Be it finally resolved that we are ready to assume, in conjunction with others at interest, a program that will rehabilitate the veterans and war disabled, both physically and mentally, and endeavor to teach them, if need be, to think and act normally, without exploitation and with a view to perpetuating the humanitarian principles of our association and entirely apart from any selfish consideration whatsoever.

Our past record confirms our sincerity and good intent.

This Is Your List of Titles in the Public Affairs Pamphlet Series — and Your Order Form.

Issued August, 1945

PUBLIC AFFAIRS PAMPHLET SERIES

Use Order Blank on Reverse Side

Order Title by Number

1. INCOME AND ECONOMIC PROGRESS
   by Maxwell S. Stewart (10th ed. 1945)
   Summary of Brookings Institution studies.
5. CREDIT FOR CONSUMERS
   by LeBaron R. Foster (Rev. ed. 1945)
   Consumers' use of credit to advantage.
6. THE SOUTH'S PLACE IN THE NATION
   by Rupert B. Vance (9th ed. 1945)
   Toward regional planning.
18. HOW WE SPEND OUR MONEY
   by Maxwell S. Stewart (5th ed. 1944)
   Where the family dollar goes.
25. MACHINES AND TOMORROW'S WORLD
   by William F. Ogburn (5th ed. 1945)
   Effect of technology upon our future.
26. HOW GOOD ARE OUR COLLEGES?
   by Goodwin Watson (4th ed. 1944)
   Some ways to raise their efficiency.
27. WHO CAN AFFORD HEALTH?
   by Beulah Amidon (5th ed. 1945)
   Is good health too costly?
30. SCHOOLS FOR TOMORROW'S CITIZENS
   by Maxwell S. Stewart (4th ed. 1944)
   Changing functions of our schools.
32. COOPERATIVES IN THE U. S.
   by Maxwell S. Stewart (5th ed. 1945)
   Summary of the Cooperative Movement.
34. WHAT MAKES CRIME?
   by Winthrop D. Lane (5th ed. 1945)
   How can we prevent crime?
38. THE FIGHT ON CANCER
   by Clarence C. Little (3rd ed. 1945)
   What you should know about cancer.
39. LOAN SHARKS AND THEIR VICTIMS
   by William Trufant Foster (4th ed. 1945)
   15 ways loan sharks may get you.
42. ADRIFT ON THE LAND
   by Paul S. Taylor (1940)
   Migratory farm labor problems.
43. SAFEGUARDING OUR CIVIL LIBERTIES
   by Robert E. Cushman (5th ed. 1945)
   Where the threat lies today.
45. HOW MONEY WORKS
   by Arthur D. Gayer and W. W. Rostow (3rd ed. 1944)
   Money, prices, and business.
47. AMERICA'S CHILDREN
   by Maxwell S. Stewart (4th ed. 1944)
   Based on White House Conference reports.
50. CREDIT UNIONS — THE PEOPLE'S BANKS
   by Maxwell S. Stewart (4th ed. 1944)
51. READ YOUR LABELS
   by Helen Dallas and Maxine Enlow (4th ed. 1945)
   The Food, Drug, and Cosmetic Act.
53. WHAT IT TAKES TO MAKES GOOD IN COLLEGE
   by Samuel L. Hamilton (5th ed. 1945)
   Why students succeed or fail.
56. WHAT THE NEW CENSUS MEANS
   by Stuart Chase (2nd ed. 1945)
   Implications of the 1940 Census.

62. HOW TO BUY LIFE INSURANCE
by Maxwell S. Stewart (1941)
What kind of insurance should you buy?

65. PROSTITUTION AND THE WAR
by Philip S. Broughton (6th ed. 1944)
National program to check prostitution.

66. HOMES TO LIVE IN
by Elizabeth Ogg and Harold Sandbank (1942)
How to make your home more livable.

67. GOVERNMENT UNDER PRESSURE
by Donald C. Blaisdell (2nd ed. 1945)
How pressure groups thwart democracy.

68. THE CRISIS IN MANPOWER
by Maxwell S. Stewart (rev. ed. 1943)
The need for a national policy.

69. VITAMINS FOR HEALTH
by Henry Borsook and William Huse (2nd ed. 1942)
Vitamins in food, and at drugstores.

70. WHAT'S HAPPENING TO OUR CONSTITUTION?
by Robert E. Cushman (2nd ed. 1945)
In the 20th Century world.

72. HOW TO WIN ON THE HOME FRONT
by Helen Dallas (1942)
What to do at home to win the war.

73. AFTER THE WAR?
by Maxwell S. Stewart (4th ed. 1945)
Preparing for the tasks of peace.

74. HOW CAN WE PAY FOR THE WAR?
by Maxwell S. Stewart (1942)
By borrowing? By taxation?

75. WHERE CAN WE GET WAR WORKERS?
by Sanford Griffith (1942)
Story of Baltimore Manpower Survey.

76. WORKERS AND BOSSES ARE HUMAN
by Thomas R. Carskadon (2nd ed. 1944)
Collective bargaining at work.

77. WOMEN AT WORK IN WARTIME
by Katherine Glover (1943)
War jobs for women; child care.

78. THE AIRPLANE AND TOMORROW'S WORLD
by Waldemar Kaempffert (3rd ed. 1945)
Who will own the air?

79. THE BEVERIDGE PLAN
by Maxwell S. Stewart (2nd ed. 1945)
Based on the original Beveridge Report.

80. FREEDOM FROM WANT: A WORLD GOAL
by Elizabeth Hoyt (3rd ed. 1945)
New world standards.

82. THE KITCHEN IN WAR PRODUCTION
by Helen Hill (1943)
Housewife's war job — food, rationing.

83. WAR, BABIES, AND THE FUTURE
by William Fielding Ogburn. (2nd ed. 1945)
Effect of wartime population changes.

84. JOBS AND SECURITY FOR TOMORROW
by Maxwell S. Stewart (3rd ed. 1945)
America's "Beveridge Plan."

85. THE RACES OF MANKIND
by Ruth Benedict and Gene Weltfish (10th ed. 1945)
Science answers the myth of race superiority.

86. WHEN I GET OUT? WILL I FIND A JOB?
by Maxwell S. Stewart (rev. ed. 1944)
How to meet the needs of ex-servicemen.

87. WHY RACE RIOTS? — LESSONS FROM DETROIT
by Earl Brown (3rd ed. 1945)
How your community can avoid similar disturbances.

Your Public Affairs Pamphlets on:

POSTWAR—Nos. 25, 56, 73, 78, 79, 80, 83, 84, 85, 86, 90, 91, 93, 94, 95, 96, 97, 99, 102, 104, 105, 106.
WAR PROBLEMS—Nos. 65, 68, 72, 74, 75, 77, 82, 88, 89, 92, 94, 102.
ECONOMICS—Nos. 1, 18, 45, 74, 79, 84, 90, 94, 99, 103, 105.
CONSUMER PROBLEMS—Nos. 5, 18, 32, 39, 50, 51, 62, 66, 72, 82, 88.
MANPOWER, LABOR—Nos. 56, 68, 75, 76, 77, 105.
AGRICULTURE—Nos. 6, 42, 89, 100.
HEALTH, NUTRITION—Nos. 27, 38, 65, 69, 80, 82, 89, 98, 101, 104, 106.
SOCIAL WELFARE—Nos. 6, 34, 56, 65, 80, 84, 96, 97, 104.
HUMAN RELATIONS—Nos. 43, 77, 85, 87, 91, 95, 107.
YOUTH, EDUCATION—Nos. 26, 30, 47, 53, 86, 108.
GOVERNMENT—Nos. 43, 67, 70, 90.
VETERANS—Nos. 86, 92, 98, 102, 106.

83. THE SMITHS AND THEIR WARTIME BUDGETS
by Maxwell S. Stewart (Rev. ed. 1945)
What *you* can do to help avoid inflation.
89. HAVE WE FOOD ENOUGH FOR ALL?
by F. F. Hill and F. A. Harper (1944)
The strategy of food in war and peace.
90. THE AMERICAN WAY — BUSINESS FREEDOM OR GOVERNMENT CONTROL?
by Maxwell S. Stewart (1944)
91. WHAT ABOUT OUR JAPANESE-AMERICANS?
by Carey McWilliams (1944)
Problems created by mass evacuation.
92. FACTS AND TIPS FOR SERVICE MEN AND WOMEN
by Dallas Johnson (Rev. ed. 1945)
Their rights and privileges — and their family's.
93. FREEDOM OF THE AIR
by Keith Hutchinson (1944)
How will the international airways be controlled?
94. RECONVERSION — THE JOB AHEAD
by Joseph A. Livingston (1944)
Analysis of the tasks facing business, government.
95. THE NEGRO IN AMERICA
by Maxwell S. Stewart (3rd ed. 1945)
Based on Carnegie Foundation study by Gunnar Myrdal.
96. HOUSES FOR TOMORROW
by Thomas R. Carskadon (1944)
New kinds of houses after the war?
97. SOCIAL WORK AND THE JONESES
by Ruth Lerrigo and Bradley Buell (2nd ed. 1945)
A popular statement of what social work is.
98. EPILEPSY — THE GHOST IS OUT OF THE CLOSET
by Herbert Yahraes (2nd ed. 1945)
Daylight on a "dread" disease.

99. WHAT FOREIGN TRADE MEANS TO YOU
by Maxwell S. Stewart (1945)
How it affects the American standard of living.

100. SMALL FARM AND BIG FARM
by Carey McWilliams (1945)
How to extend democracy in agriculture.

101. THE STORY OF BLUE CROSS
by Louis H. Pink (2nd ed. 1945)
On the road to better health.

102. VETERAN'S GUIDE
by Dallas Johnson (3rd ed. 1945)
Practical handbook of information for returning servicemen.

103. CARTELS OR FREE ENTERPRISE?
by Thurman W. Arnold (1945)
Conflict between "our ideals and our actual business structure."

104. HEALTH CARE FOR THE AMERICAN PEOPLE
by C.-E. A. Winslow (1945)
Principles of a nation-wide health program.

105. THERE CAN BE JOBS FOR ALL
by Maxwell S. Stewart (1945)
Based on "Full Employment In A Free Society" by Sir William Beveridge.

106. STRAIGHT TALK FOR DISABLED VETERANS
by Edna Yost, with Dr. Lillian M. Gilbreth
Ways to build normal lives.

107. RACE RIOTS AREN'T NECESSARY
by Alfred McClung Lee
10-Point action program on what to do if race riots threaten.

108. YOUTH AND YOUR COMMUNITY
by Alice C. Weitz
How to help young people meet today's problems.

IN PREPARATION NOW . . .

(Tentative Titles)

"THE NEGRO WORKER AFTER V-DAY"
by Herbert Northrup
How will the Negro fare in the reconversion period?

"U. S. AIR POWER POLICY"
by John Stuart
Domestic aspects of postwar air power policy.

"GYPS AND SWINDLES"
by William Trufant Foster
Warnings of present-day fakes and frauds.

"TOMORROW'S SCHOOLS"
by Maxwell S. Stewart
Important issues in postwar education.

317 PRINTED IN U.S.A.

ACROSS THE TABLE . . .

★ If we could we'd sit down and talk about the Public Affairs Pamphlets — what they're all about and why they're more needed than ever before as the peoples of the world face the job of building a peace that can be kept.

★ Public Affairs Pamphlets are now in their ninth million, with monthly distribution averaging about 160,000 copies. In 1943 and 1944 the pamphlets dealt with war and postwar problems, with emphasis on full employment in peacetime . . . and decent standards of living, health, and human relationships.

★ In 1945 these 32 page studies, issued monthly, will continue to grapple with major economic and social problems . . . as these issues and facts emerge.

★ Written by authorities, the pamphlets present millions of dollars of research in everyday words, with lively drawings and meaningful charts. These pamphlets make news each month in your favorite newspapers and magazines because they discuss so called technical economic and sociological facts with as little to-do-and-to-what as you might in your office or living room.

★ Men and women who want facts to use now, order the pamphlets regularly. So do a network of groups, agencies, and institutions in every state in the U.S.A. (The Committee also receives regular orders from India, South Africa, China, and 9 other foreign countries.)

★ Libraries, bookstores, and some newsstands carry Public Affairs Pamphlets. But because the pamphlets are notable program and discussion aids the bulk goes to civic clubs and educational groups; churches and religious groups; industry, including management and trade unions; schools and colleges; Government and health-welfare agencies; U.S.O.'s, other war agencies; the Armed Forces, here and overseas.

See Back-Fold for more facts about the Public Affairs Committee

THE PUBLIC AFFAIRS COMMITTEE
INCORPORATED

The Committee is a nonprofit, educational organization. Formed in 1935, the Committee's program: public education on current economic and social problems.

NEGROES IN AMERICA

by

ROBERT C. JONES

(adapted from an article "Negroes in Latin America" by the author published in the September-October 1945 issue of Sociology and Social Research.)

Some twenty years ago I recommended to my friends in the United States who were interested in the study of interracial and intercultural relations that they should observe these in various parts of Latin America as well as in their own country. I felt from my experience that this would help them to develop a more exact understanding of the concept "race". A comparison of the greatly varying situations existing in different countries and regions would assist in making clear the character of race prejudice showing that the prevalent attitudes of different ethnic groups towards each other were the product of conditions which were constantly changing, that they are brought about through historical processes which can be traced and are subject to modification.

It had been my privilege to know personally a number of the Negro elite in the United States during my university days, but it was not until later when I had an opportunity to work for several years in urban communities largely settled by Negroes that I came to realize what a wide variety of background and experience exists among them and how serious a handicap discriminatory practices really are.

Even Negroes themselves and students of "race relations" generally expressed surprise a few years ago when they were told that there were probably twice as many Negroes in Latin America as in the United States. No exact enumeration of Negroes in all of America has, however, ever been even attempted. The great flexibility of the "color line" in some of the countries would make a statistician's nightmare out of such an effort. A very rough guess would be that there are close to forty million Negroes in the Western Hemisphere, located mainly on the coasts of the Atlantic Ocean. According to Census figures there are about thirteen million Negroes in the United States. There is perhaps about an equal number in Brazil. The next largest number is in the Caribbean area, where there may be ten million. The remainder are to be found in the Guianas, in the Pacific low-lands of Peru and Ecuador, with small scattered groups and individuals in all countries. Negroes thus constitute almost 15 per cent of the total population of the American continents.[1]

If we accept the verdict of professional anthropologists, students of the subject, that there are no fundamental differences in the inherent ability or mental characteristics of various races and ethnic groups, the question as to how many Negroes there are in America becomes largely an academic one but for the fact that large numbers of persons do not act on this premise. Subjective attitudes and concepts center themselves around Negroes and their relationships to other groups, and for that reason it is important to them as well as to others interested in their welfare to know their number and status. Race prejudice is to be found in all countries, although in greatly

- -

1 Although Negroes have, in general, settled in areas where the Indian had a low cultural level and the population was small, the two races have mixed to some extent. Such mixed bloods, or zambos, have been included in the present estimate, but many might with equal or greater justification be included in estimates of the Indian population.

varying forms and degrees of emotional intensity. In those places where Negroes are treated almost as equals by other groups, such an enumeration tends to lose its importance and may, in fact, promote the continuation of distinctions rather than be an aid in promoting plans to equalize opportunities. What it is really important to know about ethnic and cultural groups in any country is the extent to which their members vary from the remainder of the population in cultural and economic standards so that practical programs to remove existing disadvantages may be inaugurated on a valid basis and an adequate scale.

As is well known Negroes are not indigenous to America. Millions were, however, brought to America from Africa to furnish labor for tropical and subtropical plantations. They were at first largely restricted to a comparatively small area but have tended to scatter. They made special contributions to the development of sugar and cotton production and later to the cultivation of bananas. They constituted much of the labor used in the building of the Panama Canal and they also made up a large proportion of the port workers in the harbors. Since they were brought in bondage and did not have a good opportunity to transplant their own culture, they have to a very large measure adopted European civilization, adapting it to the social and economic situation in which they have been forced to live. African cultures were much richer, however, than has usually been thought, and Negroes have no reason to be ashamed of their African ancestry.

Although Haiti is the only country in America in which Negroes themselves overthrew their European masters and rulers and founded a state of their own, they have made an important contribution to the independence movement of almost every country in this hemisphere. This was true even in Argentina, where an important contingent of Negro soldiers served under San Martin. Haitain soldiers helped the American colonists win their freedom in the United States.

Relations between races are not yet governed by democratic principles of respect for the individual person and the guarantee of relative equality of opportunity irrespective of ethnic background. Partly for this reason many Negroes have possessed a keen interest in freedom, for they knew that their own welfare was somehow bound up with the general problem of democratic living. As long as certain people are not given opportunities equal to others to possess an adequate standard of economic well-being, to secure an education, and to enjoy the best things which our culture offers because of difference in the color of their skin and other outer physical characteristics, we cannot say that we are genuinely and completely democratic. Even in the countries where the "color line" is most flexible the term "white" is to a considerable extent a designation of status rather than a purely physical classification. It is a concept colored by tradition and prejudice rather than one determined by reason and objective scientific investigation. What the continuing relationship of Negroes is to members of other groups is a test of whether our democracy is real or not in that it will indicate whether a minority group can rise from an exploited and submerged position to one of relative equality without there being a great deal of bitterness and serious conflicts. Responsibility for creating and maintaining a situation where peaceful progressive adjustment is possible must be shared by both minority and dominant groups.

Negroes should be interested not only in their own advancement and that of their group but also in the promotion of democratic processes in our entire society. Self-interest alone should recommend this to them, as studies have shown that the greatest feeling against them exists among the uneducated, underprivileged, and intellectually isolated. Nor have Negroes themselves kept free from racist attitudes as is indicated by the frequent existence of color prejudice within the Negro population itself. Negroes cannot be said to be in any sense unified; those in different segments of society and

in different countries apparently have about as much difficulty as anybody else in understanding each other. A city Negro art group in the United States once asked the author for help in arranging an exchange of art work with Negroes in a Latin-American country such as Cuba or Brazil. It was difficult for them to understand that a collection of art secured from either of those countries would quite likely contain work by Negro artists but that it would not be very politic to ask for an exclusively Negro exhibit. Cuban and Brazilian Negroes are primarily nationals of their country of birth or adoption and are frequently not given to thinking of themselves in terms of their racial background. The general population takes pride in the contribution of outstanding Negroes who are known as eminent citizens of their respective countries on much the same basis as other leaders.

Little more than half of thepopulation of the western hemisphere can even pretend to be of purely European ancestry.[2] Recognition and graceful acceptance of this fact is of importance in determining the character of inter-American relations. Because of the greater tolerance existing in the Latin American countries the discriminatory treatment which Negroes receive in the United States is widely resented. Whites in countries where little segregation takes place frequently criticize such conduct as much as, if not more than, the Negroes themselves. Nevertheless United States tourists and other influences have affected some change in the attitudes and behavior of Latin Americans so that in effect race prejudice has been exported.

Although resolutions have been passed at a number of inter-American conferences favoring the promotion of democracy, better conditions for the working classes, and the abolition of discriminatory practices, the Inter-American Congress of Demography, held in Mexico City in October, 1943, was the first to openly consider the situation of the Negro in America.[3] The recommendations of the Commission on Ethnology and Eugenics of this Congress included the suggestion that the governments of America should enact laws which would promote educational programs intended to improve the condition of life of the Negro people and promote the removal of distinctions because of race or color in all human relationships. It was also suggested that the scientific study of the Negro populations be promoted so that information as to their condition, potentialities, general culture, and their contribution to the national and continental heritage might be adequately diffused in order to bring about better understanding between racial groups. The position was taken that the American governments should completely repudiate all policies and action of a discriminatory character, keeping in mind that the traits of racial classification which are scientifically valid indicate only hereditary somatic qualities without any implications of a psychological or cultural character.[4]

---

2. As has already been indicated, care should be taken in making estimates of the number of persons belonging to minority ethnic groups not to count the considerable number of persons of mixed blood more than once. It should be remembered that in several countries, contrary to the prevalent practice in the United States, persons of mixed ethnic background are considered to be White, particularly if they possess superior economic and cultural status.

3. The Inter-American Conference on Problems of War and Peace held in Mexico City in February 1945 reaffirmed "the principle ---- of equality of rights and opportunities for all men, regardless of race or religion." and recommended "that the governments of the American republics.....make every effort to prevent in their respective countries all acts which may provoke discrimination between individuals because of race or religion." See- Final Act of the Inter-American Conference on Problems of War and Peace- February-March, 1945. Washington, Pan American Union, 1945. p.80.

4. Earle Harrison, "Inter-American Demographic Congress," Monthly Review (Immigration and Naturalization Service), November, 1943. pp.1-2. The complete resolutions of this Congress have not up to the present been made available in an adequate English translation.

As a result of increasing mutual acquaintance among scholars interested in the Negro people in America and of the interest expressed in studies relating to them at the Congress of Demography there was organized in Mexico City in October 1943 the International Institute of Afro-American Studies. It is the purpose of the organization to stimulate the study of the Negro population of America and collect, arrange, and distribute the results of these investigations, make reports regarding activities of other societies and study groups interested in the same subject, and carry on other related work. It is not only to encourage research but also to organize lectures, seminars, exhibits, and other public programs relating to the Negro. Its program is to be educational in character, and it is to serve as an inter-American clearinghouse for scholars interested in the Negro rather than be an action or pressure group. Eventually a magazine[5] may be published and other publications issued from time to time as seen fit. The Institute may also function in an advisory capacity, furnishing information and making recommendations as requested by official agencies, private organizations, or individuals. Headquarters for the Institute were established, for the time being, at the National School of Anthropology of Mexico, located at Moneda No. 13, Mexico, D.F. So far, the Institute has been merely in the process of organization. Whether or not it becomes a vital project depends upon the amount of interest shown.

WILL NEGROES GET JOBS NOW?

BY HERBERT R. NORTHRUP

WILL NEGROES GET JOBS NOW?

By HERBERT R. NORTHRUP

NEGROES have more at stake than any other group in the job outlook for the next few years. They made great gains during the war. For the first time many of them have known what it is to have enough food for health and a little extra money for recreation. Having tasted the good things of life, they are doubly anxious about their future.

Herbert R. Northrup, Ph.D., formerly instructor in Economics at Cornell University and Senior Hearing Officer at the Regional War Labor Board in New York, is Visiting Lecturer in Economics at New York University and author of the book, *Organized Labor and the Negro* (Harper and Brothers, 1944).

Mr. Northrup has drawn material for this pamphlet from estimates by John Davis, Chief of Research Division, FEPC; the study, *Providing For Unemployed Workers in the Transition,* which was prepared by Richard A. Lester for the Committee for Economic Development; the article, "The Impact of the War on the South and the Implications for Postwar Developments," by D. S. Lasseter; and other sources listed on page 31.

Copyright, 1945, by the Public Affairs Committee, Incorporated
—A nonprofit, educational organization—

How will Negroes fare in the years to come? Will they hold their wartime gains or sink back to the conditions of poverty that prevailed before the war? The situation is far from promising. Not only have Negro

PICTOGRAPH CORPORATION FOR PUBLIC AFFAIRS COMMITTEE

workers been concentrated in the industries that were devoted exclusively to war munitions, but as a group they had the least seniority in war plants. They will have the most difficulty in finding new employment. And they are concentrated in areas, particularly the South, and in war production centers such as Detroit where reconversion problems are the most difficult. Taking all these factors into account, it has been estimated that Negro unemployment may exceed one million.* These figures are rock bottom. They assume that a satisfactory program will be developed to care for those who are temporarily un-

*Estimates based on study by John Davis, Chief of Research Division, FEPC.

employed during the reconversion period. If no such program is undertaken, Negro unemployment may grow progressively worse. As we shall see from the following pages, Negroes stand in grave danger of losing the bulk of their wartime employment gains.

NEGRO LABOR DURING THE WAR

DURING the war all America, including the Negroes, enjoyed the benefits of full employment. Nearly ten million more persons sought jobs than ever before. This increase was, however, more than offset by the entrance of 11,000,000 men and women into the armed services. In July, 1944, the total labor force, including those in uniform, stood at 66,600,000—more than 7,000,000 in excess of what it would have been if war had not come.

The majority of the new workers—an estimated 5,500,000—were women. But Negroes also made spectacular gains. For not only did we have 2,000,000 additional Negro workers, but the type of jobs held by Negroes changed drastically, a fact which is of great significance for the postwar period.

Of the 2,000,000 additional Negroes, almost one-half were found in various branches of the armed services. Approximately 1,000,000 took new jobs after 1940, bringing the total of Negro civilian employment to a peak of 5,500,000. This included slightly more than 2,000,000 Negro women.

From Farm to War Plant

The most spectacular shift in Negro employment was from farm to war plant. In 1940, approximately one-half of all Negroes worked on farms; in 1944, less than

one-third were so employed. In round figures, about 300,000 Negroes left agricultural pursuits for the factory. Nearly all these farm migrants came from the South.

PICTOGRAPH CORPORATION FOR PUBLIC AFFAIRS COMMITTEE

Negro employment in war plants rose steadily, especially after early 1943, when the manpower shortage began to become acute. By January 1, 1945, approximately 700,000 Negroes—roughly 7 per cent of the total—were employed in the manufacture of such vital war products as ammunition, ships, aircraft, communication equipment, and basic metals.

Inside industry the position of Negro workers also improved substantially. Between 1940 and 1944 the number of Negroes employed as skilled craftsmen and foremen doubled, as did the number engaged as "operatives" (those performing the basic semiskilled factory operations). The total in both groups rose from 500,000 to 1,000,000.

Gains for Negro Women

Negro women shared in these gains. The total number of Negro women employed in factories increased by one-third. In 1940 fewer than 3,000 Negro women were employed in industries which later engaged in the manufacture of basic articles of war. Four years later fifty times as many held jobs in these industries.

In Government Service

Special mention should also be made of government service. At the beginning of the defense program fewer than 60,000 Negroes were employed in government agencies. The number had increased to 275,000 by April,

PICTOGRAPH CORPORATION FOR PUBLIC AFFAIRS COMMITTEE

1944. This was nearly 12 per cent of all federal workers. Moreover, within the government service Negroes held all kinds of jobs, including many positions of responsibility, instead of being confined to menial jobs as they had generally been before the war. About 59 per cent of the Negro federal workers in Washington were clerical, 40 per cent custodial, and 1 per cent subprofessional or professional. The gains in the clerical field were particularly impressive.

Still Far from Equality

As noteworthy as the advances of Negroes were, they should not be exaggerated. *The basic reason why Negroes gained so much is that they had so far to go.* And it should be stressed that even at the height of the war program, they never had as good a chance at jobs as whites.

Consider these figures! In 1940, one Negro man in every five was employed as an unskilled laborer. Despite their great occupational advancement, this ratio still held true in 1944. The number of Negro men working as proprietors, managers, and officials increased 50 per cent in this four-year period. Yet in April, 1944, less than 75,000 Negroes were found in these upper brackets. After four years of war, over 98 per cent of the clerical and sales force in the country were still white, while 95 per cent of the professional, proprietary, and managerial group also remained white.

The situation was similar for Negro women. Despite their advances, seven out of every ten employed Negro women were in service occupations in April, 1944. True, the number of Negro women working as proprietors, managers, or officials tripled; those working as saleswomen almost doubled; and those engaged as clerical workers rose to a number five times as great in 1944 as

in 1940. But the actual numbers were so small that it made little difference in the picture as a whole.

In government service, moreover, Negroes made their greatest gains in the navy shipyards, army munitions depots, arsenals, and air fields. This is precisely the part of the federal service that is cut the most drastically in peacetime.

Adding it up: The end of hostilities found Negro workers in a substantially improved economic position over their prewar status in both the quantity and the quality of jobs held. But it also found Negroes at the bottom of the economic pyramid, still concentrated in the lowest paying jobs, still far from having reached their goal of economic equality, and in imminent danger of having many of their wartime gains wiped out.

JOBS FOR ALL AFTER RECONVERSION?

ONCE reconversion has been completed, what are the prospects for full employment? To Negroes, this is a vital question. They know that we shall have to have jobs for everyone if they are to have an opportunity to recover from their losses during reconversion. Or, to state it a little differently, they know that if race prejudice is to be kept down and if discrimination is to be curbed successfully, jobs must be provided for all men and women who are able and willing to work. Depression and mass unemployment contain the germs of fascism, with its poisonous race hatreds.

According to the best estimates, full employment will involve at least 56,000,000 jobs. The total labor force will be more than 61,000,000, but 2,500,000 will probably still be in the armed forces and at least 3,000,000 will always be unemployed because of unfitness for work or

seasonal layoffs, or because they are in the process of changing jobs.

12,000,000 New Jobs!

To employ 56,000,000 persons, private industry must provide jobs for 12,000,000 more workers than it did in the relatively prosperous year of 1940. Those who feel that this can be accomplished point to the tremendous backlog of demand for residential houses, automobiles, refrigerators, radios, and other important job-creating goods. They point also to the backlog of maintenance and equipment repairs, to the huge areas in Europe that must be rebuilt, and to the possibilities of new industries rising to the fore as the automobile industry did during the 20's.

If all these bright prospects come true, perhaps private industry can do the job. Yet as a result of technological progress industry can produce more goods with fewer workers than before the war. And many economists believe that some government spending will be necessary in order to make sure that consumers have enough money to buy all that we can produce.

THE OUTLOOK FOR NEGROES IN PARTICULAR INDUSTRIES

THE outlook for Negro labor differs considerably from industry to industry. In some, the prospects for continued employment of Negroes is quite good; in others, the situation is less heartening.

Electrical and Communication Equipment

Outstanding among those in which the prospects are good is the electrical, radio, and communication equipment manufacturing industry. Before the war few Negroes were found in plants making these articles, but during the war this pattern was completely reversed and thousands of Negroes have been employed. Negro employment has been encouraged by such large companies as Western Electric, and by the policies of the United Electrical, Radio and Machine Workers, C.I.O. As most of the employees in this industry are women, and as the industry is an expanding one, there is a comparatively small problem of layoffs because of returning veterans or reconversion cutbacks. Consequently, Negro employees in this field are likely to hold a large portion of their wartime gains.

Iron and Steel

The iron and steel industry provides us with an example of an industry in which the proportion of Negroes has not altered greatly since the war. Negroes have been an important factor in the labor force of the industry since World War I, and today they comprise nearly 10 per cent of all iron and steel workers. Although Negroes have always been concentrated in the

common labor jobs, there have always been a number of Negroes in the top-paying steel production jobs. The war brought an increased number of promotions for Negroes to these top jobs. Partially responsible for this improvement is the United Steelworkers, C.I.O., an organization in which Negroes have played a prominent role. After the war, the demand for steel products for building construction and for durable consumer goods, such as automobiles and refrigerators, is likely to be heavy. Consequently, Negro steel workers should be in a favorable position during reconversion and afterwards.

Rubber

The situation in the rubber industry also failed to change much during the war. But it is quite different from the iron and steel industry. Although at one time Akron employed a high proportion of Negroes; there were not many Negro rubber workers at the outset of the war. The employment of Negroes has increased considerably since then, but remains largely confined to menial work, such as sweepers, or to the more undesirable production jobs. The number of Negroes upgraded to better jobs has been small. And most of these have little seniority and are likely to be displaced by returning veterans. Thus, the postwar gains will be unimportant.

In synthetic rubber plants, Negro employment is higher and there will be few returning veterans, since the industry is a new one. No one knows, however, how long or to what extent the synthetic rubber industry will remain in operation after reconversion.

The Building Trades

Most authorities are confident that the building and construction industry is headed for a boom similar to that which occurred after the last war. Whether Negroes will share in this prosperity is, however, debatable. Besides being employed as unskilled building laborers, Negroes have a long tradition, dating back in the South to slavery days, of being used as skilled building craftsmen. Before the war, 50 per cent of all skilled Negroes were building mechanics. Nevertheless, the Negro's position in the industry is by no means secure. As a result of the discriminatory policies of some of the building craft unions, Negroes have been steadily losing out as skilled building craftsmen for the last forty years. They might have been driven entirely from the industry in many localities if, in 1936, the federal government had not required that Negroes be given their fair share of jobs on all federally financed construction. This policy must be continued on all public-works projects if Negroes are to share in the expected building boom.

Transportation

In no industry is the future of Negroes less promising than in railway transportation. The number of Negro trainmen and locomotive firemen has already been reduced by the anti-Negro policies of the Railroad Brotherhoods. Negro Pullman porters and dining-car waiters are likely

to suffer as a result of declining railroad passenger traffic. And Negro laborers in the railway shops and the maintenance-of-way departments will continue to be displaced by improved machines.

The situation in other forms of transportation varies. The airlines have never employed Negroes except as porters. Whether they will give the Negro Army Air Force men, who have performed so well in combat, an opportunity to use their newly acquired skill remains to be seen. In automobile trucking, Negroes have made some gains which may be held, but they have not broken into the better paying over-the-road and delivery trucking jobs. Prior to the war, one-third of all longshoremen and dock laborers were Negroes. Undoubtedly, a major share of this tough, hard work will continue to be performed by colored labor. Assisted by the National Maritime Union, C.I.O., the proportion of Negro seamen has increased substantially. These gains may be held if the United States, as now seems likely, maintains a large postwar merchant fleet.

Shipbuilding

We come now to the three industries—shipbuilding, aircraft, and automobiles—which manufactured some of the most vital war materials. They necessarily have the most critical reconversion problems.

In March, 1940, only 150,000 workers, 7 per cent of them Negroes, were employed in shipyards. Four years later, shipyard employment reached 1,700,000 workers. One out of every ten among these were Negroes. Even with the necessity of rebuilding our merchant fleet and

maintaining a large Navy, it is difficult to imagine a postwar shipyard labor force in excess of 500,000. Whether Negro employment will decline more than proportionately depends on a number of factors. For example, the chances for high Negro employment are much better if the shipyards in the East remain open and those in the West close, than if the reverse happens. For in the East, the Marine and Shipbuilders' Union, C.I.O., and employers such as the Sun Shipbuilding Company, Chester, Pennsylvania, and the Newport News Shipbuilding Company, Newport News, Virginia, have led the way in using Negro labor. On the West Coast, however, the dominant labor union is the Boilermakers and Shipbuilders, A. F. of L., which confines Negroes to "Jim Crow" auxiliaries and opposes their employment. As a result, Negroes were the last hired in the Pacific yards, and the first laid off.

Even assuming that Negro shipyard employees are being released without discrimination, more than 100,000 will be included among the 1,000,000 shipbuilding employees who will be laid off. Reconversion of this industry thus creates a major unemployment problem by itself. Yet the airplane industry faces an even severer situation.

Aircraft

In March, 1940, only 100,000 employees were engaged in the aircraft industry. Since the industry had what the magazine *Fortune* termed "an almost universal prejudice aganist Negroes," it is not surprising that less than 250 of these workers were Negroes. In March, 1944, more than 2,000,000 workers, including 125,000 Negroes, were working in aircraft factories. But the future of Negro aircraft workers is not promising. Aircraft employment will decline to less than 40 per cent of its wartime figure.

In addition, the industry must make provision for 200,000 of its former employees who joined the armed services. As the last hired group, Negroes will be the first to go. Few are likely to remain.

Automobiles

The converted automobile industry faces a problem similar to that of shipbuilding and aircraft. Prior to the war, automobile plants employed 600,000 workers; during the war these same plants, exclusive of new establishments such as the Ford Willow Run Bomber plant, had 1,000,000 employees. Before the war, Negro automobile employment numbered about 25,000. Then it tripled. Moreover, thousands of Negroes were upgraded to the better paying jobs from which they had been excluded prior to the war.

Postwar automobile employment has been estimated at a maximum of 750,000. Although Negro auto workers will probably be in a substantially better position than they were in 1940, they face the prospect of considerable unemployment and downgrading from their wartime peak.

THE SOUTH IN WAR AND RECONVERSION

WHAT of the South? In 1940, no less than 70 per cent of all Negroes dwelt in the eleven states of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia. But 300,000 of these Negroes left the South for the war production centers of the North and West. Although few of these migrant Negroes will return to the South, that area remains the center of Negro population.

What has happened to the southern economy and what will happen after reconversion are, therefore, of utmost importance to Negroes.

Wartime Gains

We are indebted to Mr. D. B. Lasseter, of the Atlanta, Georgia, Regional Office of the War Manpower Commission, for an excellent summary of what war orders meant to the South.* He points out that wage payments in the region more than doubled between 1940 and 1943. Average weekly wages increased from $18.60 to $30.73. Although long hours and overtime pay account for some of these gains, the bulk was due to the establishment of new war industries in the South. Contrary to popular belief, the South was not neglected in the placing of war contracts. More than $7,000,000,000 in prime contracts had been let by the end of 1943 in the six states of Alabama, Florida, Georgia, Mississippi, South Carolina, and Tennessee alone! But the future is far from reassuring. As Mr. Lasseter comments:

> At first glance, these factors appear as bright prospects, but there is ample cause for anxiety lest this war-inspired prosperity prove only temporary. For while industrial activity and facilities have increased tremendously, there will be great difficulty in maintaining these gains after the war. When the shooting is over the plants responsible for the current boom will shut down entirely, or production will be sharply curtailed. And a glance at the record shows there is a heavy concentration of this type of industry and activity. The South is packed with Army camps, and shipbuilding, airplane, and munitions plants further account for much of our industrial development. None of these offers a rosy future as a peacetime investment.

---

*See page 31 for complete reference.

Soon the army camps, cantonments, supply depots, and the like, which now dot the South, will be abandoned. Thousands of workers will be released from shipyards and airplane and munition plants. Many such plants will close down entirely. Boom towns, such as Pascagoula, Mississippi, where the people working in one shipyard outnumbered the prewar population, will quickly lose their inflated population. The South faces a grave readjustment. Having had its first taste of prosperity resulting from increased industrial activity, it is slated to lose the source of this prosperity.

Negroes Handicapped

Where does the Negro fit in this picture? Despite the shortage of labor in southern war industries, Negro labor has not been made use of to the fullest extent. It is true that the situation improved after the summer of 1943. Many southern shipyards and airplane plants which employed no Negroes whatsoever prior to that date, later employed many. But Negroes continued to be restricted to common labor. Eventually most of the gains made by Negroes will probably be lost.

If during the reconversion period any such unemployment occurs in the South as occurred during the Great Depression of the 30's, the Negro in the South may pay a fearful price. During the dark days of the depression, Negroes lost not only many jobs for which they traditionally competed with whites, but also many others that had always "belonged" to them, particularly in the service trades, such as bellhopping or street cleaning. This may happen again unless adequate safeguards are devised to protect the Negro war workers and veterans who choose to remain in the South during and after the reconversion period.

FAIR EMPLOYMENT PRACTICES

IF prosperous industries and regions can make up for depressed ones, so that private industry can provide full employment, the economic position of Negroes will, of course, be greatly improved. But although full employment is essential, our experience during the war shows conclusively that discrimination does not entirely disappear just because there is a labor shortage. Consequently,

PICTOGRAPH CORPORATION FOR PUBLIC AFFAIRS COMMITTEE

if Negroes are to receive a square deal in employment opportunities in the future, we shall need to continue and strengthen the measures for fair employment practice that were set up during the war.

Setting Up the FEPC

Wartime measures for fair employment practice grew out of a crisis which developed early in 1941. At that time, it first became apparent that the defense program would result in a shortage of white labor and that Negro labor would have to be utilized more fully than ever before. Some employers, for example, International Harvester, Western Electric, and Briggs Manufacturing, took early steps to train and employ large numbers of Negroes. Likewise, certain unions, such as the United Automobile Workers, C.I.O., the United Electrical, Radio and Machine Workers, C.I.O., and the International Ladies Garment Workers, A. F. of L., pushed their campaigns to obtain more and better jobs for Negroes. Many other employers and unions, however, refused to alter their prewar discriminatory practices. This resulted in the absurd situation of a shortage of workers, yet an available, untapped pool of colored labor. Mounting resentment among the Negro population, climaxed by a threatened "March on Washington" by Negroes under the leadership of A. P. Randolph, president of the Brotherhood of Sleeping Car Porters, plus growing concern among government officials about the lags in the defense program caused by the failure to use Negroes, resulted in the intervention of President Roosevelt. In

June, 1941, he issued Executive Order 8802, which "reaffirmed" the national policy of nondiscrimination because of race, color, creed, or national origin, and which created the Fair Employment Practice Committee to administer the Order.

The authority of the FEPC was not based on statute but was derived from the vast war powers of the President. Nevertheless, in many localities with the help of the U. S. Employment Service, considerable success was achieved in obtaining compliance with the Executive Order. Thousands of Negroes received employment or moved up to better jobs after the FEPC intervened.

Difficulties Faced by the FEPC

In many cases, however, the FEPC was unable to secure the fulfillment of its orders. This was particularly true in the South. And it was especially true when unions as well as employers were involved, as in the southern railway cases, where discrimination by the Railroad Brotherhoods was the main complaint. In such cases, compliance could apparently only be obtained if the President had the Army or another federal agency take over the affected properties and put the FEPC Order into effect. Such drastic action occurred only in the Philadelphia Transportation Company matter, and then not until former leaders in an independent union instigated a strike in an attempt to prevent eight Negroes from being upgraded to motormen's jobs.

Since the FEPC did not have enough authority during wartime to carry out all its functions, a postwar agency

charged with similar duties obviously must have stronger powers if it is to succeed in curbing discrimination in employment. This could be accomplished by either of two methods: (1) amending the National Labor Relations (Wagner) Act and the various state "Little Wagner" acts to provide that discrimination by either employers or unions because of race, color, creed, or national origin is an unfair labor practice forbidden by law; or (2) creating permanent national and state Fair Employment Practice Commissions to administer Fair Racial Practice Acts, and providing these commissions with powers similar to those possessed by the National Labor Relations Board so that they can petition the courts to enforce their directives.

Antidiscrimination in the Wagner Act

The first method has many advantages. The problem of discrimination in employment, whether committed by employers or by unions, is essentially a problem of labor relations. The National Labor Relations Board is fully equipped and thoroughly experienced in handling such problems, and the Wagner Act is more easily enforced than vague antidiscrimination laws. In such industries as railway transportation, in which the NLRB has no jurisdiction, authority could readily be granted to it over discriminatory practices by further amendment to the Wagner Act. Efficient curbing of discrimination could thus be effected at little expense and without adding to the administrative complexity of the government.

It is probable, however, that such antidiscrimination laws as are enacted to govern employment relations will be administered by newly created agencies. Bills to create permanent Fair Employment Practice Commissions were introduced in 1945 not only in Congress but in several

state legislatures, including Ohio, California, New Jersey, and Massachusetts. In New York State, a law was enacted after several years' study. It prohibits discrimination in employment by employers or unions because of race, color, religious creed, or national origin, and established a five-man Fair Employment Practice Commission to administer the act. The commission may apply to the courts for enforcement of its orders, and its orders are subject to court review. The New York act is well written and provides the basis for an important experiment in the feasibility of ending discrimination in employment by legislative action. Undoubtedly, the future of anti-discrimination legislation of this character will depend to a considerable extent on the experiences of New York State's new Fair Employment Practice Commission.

Other Suggestions to Combat Discrimination

If the federal and state governments intend to enforce a code of fair employment practice on private industry and unions, they should adhere rigidly to a similar practice in their own operations. Continued provision can be made for the employment of Negroes on public-works projects similar to the provisions contained in federally financed housing contracts which were let between 1936 and the present date. Adequate safeguards can be provided to insure that Negroes are treated without discrimination by all the federal and state agencies that dispense social services. In the past, such equal treatment has not often been adhered to, especially in the South. In public employment there should be no discrimination. The example set by governmental agencies in such matters is of great importance in influencing the conduct of others.

Groups outside the government can also be of real assistance in the fight against discrimination. Local and

state organizations can sponsor educational programs designed to encourage good feeling between races and to expose race-hate propaganda. Other unions and industries can follow the example of the United Automobile Workers, C.I.O., which has established a fair employment practice committee of its own to police discrimination within its jurisdiction.

On the other hand, it would seem best to avoid some of the so-called "remedies" suggested by certain unions and Negro organizations. Most prominent among these are the plans to establish separate seniority lists for Negroes, or to "credit" Negroes with several years' seniority as a means of making up for past discriminatory treatment. Such plans appear to ignore the fact that seniority does not create jobs. Super-seniority will not help the great bulk of Negroes who have been displaced by reconversion. For plants do not operate under the same conditions during peacetime as they do during war. Jobs will have changed, thus by-passing the safeguards of seniority. And the aid it might render to a few Negroes would probably be more than outweighed by the ill-feeling it might engender among white workers with greater seniority, who would be displaced by Negroes with less actual seniority but greater "seniority credit."

Providing for the Transition

Equally important in providing for fair employment practice is the necessity of insuring that jobs are available. Without full employment, Negroes as well as whites will be out of work. As we have indicated earlier, the postwar employment problem has two general phases: (1) the period of reconversion; and (2) the period after the process of reconversion to peacetime production has been completed.

In a research study entitled *Providing for Unemployed in the Transition,** which was prepared for the Committee for Economic Development, Professor Richard A. Lester has set forth a comprehensive plan to prevent reconversion unemployment from descending into depression unemployment.

UNEMPLOYMENT COMPENSATION

Dr. Lester notes, first of all, that neither workers' savings nor unemployment compensation benefits in many states are large enough to tide over workers who will be let out of war jobs and who will be seeking new employment. Since unemployment compensation is the best means of meeting reconversion unemployment, he suggests that present state plans should be vastly improved and equalized. Improvement will mean extending the coverage to such groups as merchant seamen, employees of small firms, and public employees, increasing the benefits from the present average of $13.84 a week to a minimum of at least $20 a week (which is in line with soldier demobilization pay), and providing for the continuation of payments for no less a period than twenty-six weeks. Equalization means the elimination of the present wide variations in state plans. There seems to be no logical reason why unemployed workers with exactly the same wage credits and in exactly the same circumstances should receive maximum benefits of $220 in New York, but only $100 in New Jersey; of $310 in Louisiana, but only $210 in Mississippi. Equalization could be accomplished most readily by bringing the unemployment compensation system under the federal government. The same results might be achieved, however, by establishing a "guaranty fund," from which the federal Treasury would offer grants to exhausted state funds. This would

*See page 31 for complete reference.

make it possible for all of the state compensation systems to meet uniform standards well above present levels.

OTHER MEASURES

Unemployment compensation alone, however, cannot fill the employment gap during the reconversion period. Dr. Lester would, therefore, supplement it by unemployment relief, forward-looking personnel policies (including provisions for severance pay), education and training, and a limited public-works program.

RELIEF

He suggests that relief be designed as a direct supplement to unemployment compensation benefits. Many workers will not have the necessary requirements or will not have built up enough "credits" to receive adequate unemployment compensation. Such relief could be principally work-relief with the costs split between the federal and state governments. Local administration of work-relief would enable the most useful projects to receive priority and would prevent the program from disintegrating into "boondoggling." Care would be taken so as to prevent relief projects from keeping workers in war boom areas which have been deflated by the end of war production. Instead, all possible encouragement would be given to employees in overcrowded communities to depart for areas with substantial peacetime industry.

SEVERANCE PAY

Dr. Lester suggests that private industry can do much to assist in the transition period. Some collective bargaining agreements now call for dismissal compensation or severance pay. These benefits might provide for at least two weeks' pay upon termination. Many employers might also find it feasible to pay traveling expenses to employees

who wish to leave war boom areas, and that practice should be encouraged. Employers would also do well to keep their employees well informed as to the possibilities of layoffs and rehirings. And every effort could be made to concentrate maintenance and repair work during the reconversion period so that layoffs would affect the fewest possible workers. Finally, employers and the unions might well avoid shortening the work week below forty hours. If there is too much dependence put upon the shorter work week, the net result will only be a general decline in purchasing power and, consequently, an increase in unemployment and a general sharing of poverty.

TRAINING AND EDUCATION

Dr. Lester notes that Selective Service examinations have revealed an appalling lack of education, both general and vocational, among the population. The USES could be used to advise and to train returning soldiers and unemployed war workers for peacetime jobs. The cost of this educational program might best be shared by federal, state, and local governments. Such a program could do much to prevent a decline in worker and soldier morale during the reconversion period. The importance of morale in maintaining the will to work and faith in our democratic form of government cannot be overemphasized. Whatever is spent on these educational projects will have been spent wisely and well.

PUBLIC WORKS

Finally, federal, state, and municipal programs of public works could be set up in an effort to maintain purchasing power and thus prevent a decline in the demand for consumer goods. Such programs should be designed to employ large numbers of unskilled workers, not primarily skilled mechanics. They should stress such projects as

highway building, reforestation and conservation projects, and other such construction. Building construction, which requires a high percentage of skilled labor and which requires a long period before peak employment is reached, should probably be avoided until after the reconversion period. Public-works projects during the reconversion period should be flexible so that they can be adjusted easily to meet the needs of the moment. In order to provide maximum employment, planning should already be under way by states and municipalities so that the projects may begin as soon as possible. As in the case of work-relief, care must be taken so that public-works programs do not encourage workers to remain in deflated war boom areas when no longer needed.

Dr. Lester believes that the timing of this entire program is of the utmost importance. Since many state legislatures which meet in 1945 do not convene again until two years later, he believes that Congress must exercise its responsibility and give the go-ahead signal for postwar planning. He recommends that the money—estimated at $700,000,000 a year for two years, the equivalent of what we spent in five days of war—be appropriated at once so that states and municipalities will be encouraged to go forward with their own plans for the transition. The cost seems small when compared to the costs, in money and intangible values, of unemployment and depression.

GOVERNMENT'S ROLE IN FULL EMPLOYMENT

IF the problems of the reconversion are adequately dealt with, private industry should be able to provide the 56,000,000 jobs which full employment will require. Many economists believe that private enterprise should be given the opportunity to do the job. But that does not mean

that the government should necessarily be idle. It could concern itself with developing natural resources, perhaps along the lines of the Tennessee Valley Authority, and with providing housing, public works, and other social services.

Low-Cost Housing Projects

A government program of social services is needed to supplement the efforts of private industry. It should concentrate on the construction of low-cost housing projects —a field in which private enterprise has never had substantial success—along the lines of the program developed by the prewar U. S. Housing Authority; and on sustaining consumer buying power by strengthening the Social Security Act. The results of this program would greatly reduce the fears and uncertainties of our working population and would substantially improve their well-being. Since Negroes are concentrated in the lowest income groups, and among those who are not now within the scope of the present Social Security Act—agricultural labor and domestic service—they would benefit a great deal by these improved social services.

Other Public-Works Projects

If private enterprise proves unequal to the task of providing full employment, then the federal government will undoubtedly be forced to take up the slack with a program of public works. Such programs should be planned now so that if additional government construction is needed, worthwhile projects can be begun without delay.

SUMMARY

1. We shall probably have a minimum of 6,000,000 unemployed during the reconversion period, of whom 1,000,000 will probably be Negroes. Negroes have been hit especially hard because their employment during wartime was concentrated in war industries that are bearing the brunt of the unemployment; because Negroes, as a group, were the last hired, had the least seniority, and therefore were the first laid off; because they are concentrated in the areas, especially the South, as well as in the industries, that suffered the most by the curtailment of war production; and because they may be expected to suffer from discrimination in seeking new jobs.

2. Negro workers made substantial gains during the war both in the quantity and quality of jobs held. Nowhere, however, have they reached their goal of economic equality, and their gains may be all but wiped out during the reconversion period.

3. No one knows whether private industry will succeed in providing full employment after reconversion has been completed.

4. Negro postwar employment prospects in the typical industries surveyed vary considerably. In the South, where a majority of the nation's Negroes still dwell, their economic prospects are not at all bright.

5. In all governmental activities, a nondiscrimination policy should be adhered to as an example to private groups.

6. Our wartime experience indicates that even under full employment Negroes may suffer from discrimination. The experience of the Fair Employment Practice Committee has developed a movement to outlaw racial discrimination in employment. A number of bills are before Congress and various state legislatures providing for the establishment of permanent commissions with authority to prevent such discrimination. In 1945, New York became the first state to adopt such a law. Its experience will be valuable in determining the effectiveness of this kind of attack on discrimination.

7. The job problem has two phases: (1) tiding over the unemployed during reconversion, and (2) caring for the permanently unemployed. A plan suggested by Dr. Lester, which appears to be practical, stresses improved unemployment compensation as the main bulwark to care for the transition unemployed. Once reconversion has been completed, private industry will be given an opportunity to provide full employment. The federal government can make use of this period to develop natural resources, such as regional TVA's, and to provide improved social services. This period can also be used to plan public works and other measures which will be necessary if private industry cannot provide jobs for all.

8. One other thing is needed—the moral will to do the job. One reads pompous editorials in prominent newspapers declaring that full employment is merely "the

wishful thinking of a dreamy-eyed, star-gazing idealist." "Experts" visit centers of war production and solemnly report that race riots are "inevitable." Such statements are without foundation. Of course, full employment will not be easy to obtain. Of course, race relations in some areas are in a critical state. Of course, we are facing problems in this country of the greatest magnitude. But none of these problems is so great that it cannot be solved in the American tradition by prompt action and a little common sense.

FACTS are needed by thoughtful citizens in a democracy. But how is one to get at the facts? Here is a suggestion.

Get the habit of reading ***Public Affairs Pamphlets.*** Over eight million copies have been bought by people seeking facts. Have these summaries of millions of dollars worth of research studies at your elbow on less than one foot of your book shelves!

Special Offer

For $5 you can get all the ***Public Affairs Pamphlets*** in print (see back cover) and new ones as they appear each month, to a total of 70. If you already have some of these pamphlets, check the ones you want, and we'll extend your subscription accordingly to the total of 70. Mail your order today. Simply write: "I want the ***Public Affairs Pamphlet Library***" and mail us your check for $5. (Single pamphlets, 10c.)

The publication of the ***Public Affairs Pamphlets*** is one of the activities of the Public Affairs Committee, Inc., whose purpose as expressed in its Constitution is "to make available in summary and inexpensive form the results of research on economic and social problems to aid in the understanding and development of American policy. The sole purpose of the Committee is educational. It has no economic or social program of its own to promote." The members serve in a personal capacity and not as representatives of their respective organizations. Publication of a pamphlet does not necessarily imply the Committee's approval of the statements or views contained in it.

Racial Con

The Negro in America

HOW WE TREAT HIM AND HOW WE SHOULD

THE NEGRO IN AMERICA

The facts and conclusions presented in the pamphlet, "THE NEGRO IN AMERICA," have been drawn from months of continuous exploration and consultation with individuals of outstanding competence in Negro-white relations, in labor, industry, education and housing.

We have drawn fully on the experience of the Medical Research Division of the Rockefeller Foundation and the Deans of eastern medical schools including Harvard, Columbia, Cornell, Yale and Tufts.

Bankers, housing officials and contract builders, thoroughly experienced in their several fields gave the full benefit of their experience and competence to this study.

Correspondence and inquiry is sincerely invited.

Copyright by Council for Democracy, 1945

AMERICAN FAITH

The contending forces of liberty and oppression, tolerance and hate, are joined in titanic battle that will determine the kind of world in which mankind will live for the next century.

In such a conflict America has no choice. All of our history and our traditions bind us to oppose oppression and intolerance, and to defend that ideal of government which has as its end equality of opportunity for all men without regard to race or color or creed. On this principle the American democracy was founded. And it is to preserve this principle as a vital force in the world that the nation has called its sons to arms.

It is a tribute to our democracy that Americans of every national and racial origin and of every religious faith have responded willingly to that call. On the battlefields of this war the sons of black and white, Jew and Gentile have fallen. And in the growing list of heroes, who have performed deeds of valor far beyond the call of duty, are the names of Polish and Italian and Scandinavian boys from all over the nation, of Jewish boys from New York's East Side, of Negro

boys from Texas and Alabama, who had but one loyalty and that was to America and its ideals.

On the all-important homefront, the same high devotion to our country has characterized our people, whatever their race or color or creed. From the earnings of the Negro worker, as well as the white, the income tax is withheld, War Bonds are purchased. There is no restriction to which he is not subject. There is no task that falls to the lot of his fellow citizens which he can escape. Nor has he tried. Of the American Negro, as of Americans of other racial and national origins, this must be said: He has shirked no duty, evaded no responsibility, imposed no condition on his loyalty or service.

Out of the welter of this war we must plan and work for a better America and a happier world, an America which fulfills its ideal of equality of opportunity, an America and a world where no man shall suffer solely because of his race or his color or his creed.

In the period of transition from war to peace, even more than now, we will be called upon to demonstrate our faith in and our willingness to live according to the principles of democracy. The dreadful alternatives to tolerance and

good-will are misunderstanding, distrust and antagonisms, leading to confusion and violence. America has not been free from manifestations of bitter racial antagonisms in the past. But the American people must resolve that these shameful racial outbreaks which have humiliated our government before the world, shall not occur again.

THE NEGRO IN AMERICA

The Negro in America is struggling to attain first-class citizenship. Great progress has been made in two generations; even more if the history of 75 years is encompassed. Many obstacles remain; some set-backs have occurred, others may be expected.

The degree of attainment and the rapidity of progress vary widely according to the social climate of the particular community and general section of the country. Conditions in the southern states where the issues have been more acute over a longer period of time are being examined and the local issues faced constructively by organized groups of influential white and Negro southerners. What is and is not accomplished there is of profound interest and importance to the rest of the country.

The Council For Democracy believes strongly, however, that this challenge is to be met primarily by southern residents themselves. The Southern Regional Conference, composed of distinguished leaders of both races, has already made significant contributions and is best qualified to carry forward the work

begun there by its joint statements of principles and aims.

The Negro problem in America is not, however, confined to the southern states. The colored population in many northern states, especially in industrial centers, is constantly increasing. The economic and social levels of Negroes in these northern areas is of direct and vital concern to all their inhabitants. These problems break down naturally into three principal inquiries: (1) what kind of jobs do Negroes get and how steady is their employment; (2) what housing facilities are available to them; (3) what educational opportunities do they have and use? These are the foundations of full citizenship, assuming full equality in political and civil rights.

The Council For Democracy has made careful inquiry into these three phases, as found in selected, typical communities of the northeastern states. With due allowance for variations and differences in degree, and disallowing the wholly exceptional, isolated, atypical instances, the Council finds fairly consistent patterns in this particular section of our country which are summarized below. Some of these findings, we believe, will be equally typical of western and northwestern areas.

No attempt has been made to state the elementary moral and political principles of full citizenship; it is assumed that these are known and fully accepted by all responsible white citizens who believe that democracy in America should include blacks as well as whites. The purpose of this statement, largely factual in structure, is to point the way toward further achievements in citizenship by indicating what can next be done, by Negroes themselves, and by whites along with Negroes.

NEGROES IN INDUSTRY

A. *Facts*

1. Negroes' first demand is for steady employment and equal job opportunity with whites in all trades and all levels of skill.

2. Chief bar to equal opportunities in jobs is widespread anti-Negro prejudice among white workers. This takes form of notions such as that:

   Negroes are strike breakers.

   They will become "red-apple" boys for management.

   They are so eager for employment that management can bargain with them and threaten whites with total replacement.

   Plant activities in behalf of workers lead to the question of social association.

   Standards will be lowered because Negroes are easily satisfied.

   The prestige of the white worker will be lowered in the community.

   Organized labor will be under-

mined if dual standards are observed.

Negroes are not adaptable to industrial work.

3. Management on the whole, remains reluctant to offer equal employment opportunities to Negroes. This is due in part to unthinking adherence to past practices of discrimination, in part to overcautious timidity in the face of white worker prejudices.

4. These prejudices and timidities of both labor and management have kept the greater body of Negro workers, where employed, at the lower levels of maintenance workers and common laborers.

5. Organized labor has not, generally speaking, effectively taken up the cause of the Negro in industry. In principle the CIO bars discrimination, but the actual practice differs widely among its constituent unions and even within a single plant. The AFL has 19 member unions which refuse membership to Negroes. Efforts of the government to prevent discrimination in employment against any minority groups by

employers holding war contracts do not have the force of legal sanctions and have often been unsuccessful.

6. White labor's prejudiced notions can be largely dissipated by intelligent leadership in management. There are numerous examples of successful integration of Negroes into levels of skilled labor, by gradual introduction of skilled Negro workers on the initiative of management and by engaging the active cooperation of local white labor leaders in the attempt. Where this process has been carried through, as in many plants, active prejudices and opposition have disappeared, harmonious relations in the work sphere have become established between the two racial groups, and "segregation" lines within the plant have become blurred or dropped.

7. Negro employment, skilled and unskilled, has increased rapidly under pressure of man-power shortages. Proportionate increase in *skilled* employment, however, has lagged; the great majority of 70,000 odd industrial units have not made any pretense of offering

Negroes equal opportunities with whites.

B. *Conclusions*

1. Inability of Negroes to obtain equal industrial opportunity keeps this group at a lower economic level than whites, makes for unrest, and contributes seriously to the present general state of uncertainty and tension among Negroes, and to national disunity.

2. Negroes' fear of widespread postwar unemployment is a further contributing factor to unrest and indifference. The extension to Negroes of the protection of seniority principles should be studied sympathetically by both labor and management. Discrimination in layoffs is as objectionable as discrimination in original employment.

3. Successful integration of Negro workers into the industrial population fabric, where it exists, contributes to mutual understanding in other relationships of Negroes and whites, in addition to placing Negroes on a more solid economic foundation.

4. The active cooperation of organ-

ized labor must be secured to break down existing restrictions. It is not enough to convince labor's high command; lip service is already being paid to the cause of equal opportunity for all. But an educational campaign must be carried on to reach the local leaders in every key community. Techniques similar to those successfully used with foremen and supervisory labor can be adapted to this purpose.

5. The timidity and reluctance of management can be gradually overcome if the way in which resourceful leaders have successfully met the problem is widely publicized, and if community leaders exercise their persuasion on management.

6. An effort must be made to increase community awareness of the Negro's problem. In some cities, groups of leading citizens have formed informal committees to combat discrimination, and these have proved extremely effective. In Detroit such a body has done yeoman service in resolving management-labor disputes which hinge upon discrimination. In

Cleveland, where the Mayor called together a group of distinguished industrialists, a similar group is in process of organization.

7. There is an urgent need for more leadership in Negro labor circles. Negroes are aroused to resentment by cumulative injustice; they are demanding action, and there is need for intelligent, judicious leadership from the Negroes themselves.

8. Continuation and strengthening of present government policy and machinery, such as the Fair Employment Practice Committee (Federal), with judicious handling by officials, will assist in the ultimate break-down of barriers.

9. The progressive opening of equal opportunities in federal, state and municipal government employment and in public services, will contribute materially to the economic security of the Negro and to racial understanding.

EDUCATIONAL OPPORTUNITIES FOR NEGROES

1. In the northern and western states there is little formal discrimination in public education opportunities. Where discrimination does exist, it consists chiefly of providing and maintaining, for schools where Negroes predominate, facilities—buildings, equipment and services — inferior in quality, location and extent to those offered for whites in the same community. Any such differentiation is both indefensible in principle and unwise in practice; it contributes to a natural and justified resentment and to a feeling of group separatism that breeds disastrous consequences on both sides of the color line. It also contributes to keeping Negroes at a lower level of education and citizenship.

2. In schools of mixed white and Negro attendance, mutual understandings and acceptance depend chiefly upon the leadership and wisdom of the school heads and teachers. It is essential that when

these positions are filled, this problem and this opportunity be recognized as major considerations. Prejudices are more easily eradicated, created, or confirmed in childhood than in later life. The stimulus in the right direction can be given most effectively by school principals to the teachers.

3. No substantial discrimination, or want of opportunity, has been observed in northern colleges maintained by public funds.

4. In northern professional schools, public or private, the only category in which there is any sign of lack of equal opportunity is the medical schools. Even here the evidence is inconclusive. In the schools of high standing, such as Columbia, Harvard, Yale, Cornell and Chicago, the proportion of applicants (white and Negro combined) to those accepted may run as high as 15 to 1. The number of Negro applicants is disproportionately low. The number accepted is still lower and thus presents a question whether selection is influenced by color or is determined solely by merit. We have found no evidence of conscious

bias and the disparity may be in fact due partly to inadequate pre-medical training of the Negro applicants. In some medical schools, the Negro students find it relatively more difficult to obtain necessary specialized obstetrical and surgical training and experience. It is exceedingly difficult for Negro medical graduates to obtain internship appointments in good hospitals. Few are open. The same is true as to Negro nurses, both for training and post-graduate hospital experience. Hospital administrators are reluctant to create situations in the close doctor-patient relationship out of which incidents unpleasant to either and to the staff at large may arise. Progress in the broadening of such opportunities will be slow; it depends upon skillful handling by representatives of both races.

HOUSING FACILITIES FOR NEGROES

A. Facts

1. In many or most Northern industrial centers there has been a marked increase, sometimes very heavy, in Negro residents, owing to the attraction of war work and to higher levels of Negro employment.

2. The greater part of these new urban immigrants are from the southern states and are from relatively low economic and educacational levels, less accustomed to city living conditions than older residents.

3. Housing facilities for Negroes have not expanded in proportion to increased demand. This condition is also common among white areas. Negroes are relatively more restricted, however, than whites, due to (a) general desire of white property owners to prevent Negro "encroachment"; (b) the gregarious and protective tendency of Negroes, which is true of any group, particularly new arrivals,

to stick together; (c) general suspension of new building operations during the war; (d) reluctance and timidity of private capital to invest money in housing developments for Negroes. As a result of some or all of these factors, there is heavy overcrowding of Negroes in many cities; this condition ante-dated but is accentuated by the war.

4. Existing housing occupied by Negroes is generally in worse condition at comparable rental levels, as to types of construction and modernity, maintenance, cleanliness, and health. This is due to the fact that, as a group with generally low earning, Negroes have had for a long time to occupy the cheap-level properties of old construction; and to the common belief of white owners or operators that Negroes ruin property, and hence it is useless to spend money to keep it up.

5. Negroes as tenants are no worse —and no better—than whites. Inferior-type property, neglected by owners, will receive indifferent care from low-rental tenants of any group; the opposite is progres-

sively true of better-type property occupied by higher-rental tenants.

6. The Federal Housing Administration does not object to racial restrictive covenants upon the use of land as imposed by private enterprise who apply for mortgage insurance and other assistance.

B. Conclusions

1. The greatest need is for more housing accommodations in urban centers, of modern type, for *all* groups of the population. If there is abundant good housing, many of the disputes which now cause hard inter-racial feeling will tend to solve themselves.

2. There is substantial and persuasive evidence from various centers that Negro tenancy can be and is profitable for private capital venture in modern construction. Private capital, however, will probably not embark widely here until these results are made better known.

3. A lack of cooperative understanding between public housing bodies and private ownership has retarded new facilities open to Negroes. The Federal Public Housing Authority has in many instances pre-

empted or asserted priority rights for building projects previously located and planned for by private builders. Such competition is retarding. Adequate housing for all must be supplied chiefly by private capital; public funds and public enterprises can only supplement, and at times provide the nucleus.

4. The repeated demonstrations in public housing of lower income people—Negroes included—have proved that given adequate housing, tenants exercise a high sense of responsibility for the property. If this becomes better known, it will break down the reluctance of white property owners and of managers of private funds to create equal opportunities to Negroes for good housing.

5. The Federal government should exercise the right of eminent domain where necessary to condemn, remove all racial restrictions from and assemble adequate parcels of land to make possible the development of large-scale coordinated housing programs by public and private enterprise.

PUBLIC AFFAIRS PAMPHLET No. 107

RACE RIOTS AREN'T NECESSARY

By Alfred McClung Lee

AMERICAN COUNCIL ON RACE RELATIONS

More than thirty-five national organizations representing labor, management, service groups, women's organizations, and youth groups were consulted in the preparation of this pamphlet. Their original suggestions and their comments on the first draft of the manuscript are included in the following text.

The American Council is especially indebted to a large number of persons associated with the following organizations for their suggestions and ideas: American Jewish Committee, Anti-Defamation League of B'nai B'rith, Board of Directors of the American Council on Race Relations, Boy Scouts of America, Bureau for Intercultural Education, Chamber of Commerce of the United States, Denver Council on Civic Unity, Detroit Inter-racial Commission, League of Women Voters, Mayor's Committee on Race Relations of Chicago, Mayor's Committee on Unity of New York City, National Association for the Advancement of Colored People, National Association of Broadcasters, National CIO Committee to Abolish Racial Discrimination, National Urban League, Negro Newspaper Publishers' Association, and the War Activities Committee, Motion Picture Industry. Many other organizations not mentioned have also cooperated in the preparation of this pamphlet.

In issuing this pamphlet in conjunction with the Public Affairs Committee, Inc., the American Council on Race Relations again wishes to reiterate its objective which it feels is essential to any long-term solution of the underlying problems which cause race riots. This is *"full participation of all citizens in all aspects of American life; equal rights and equal opportunities."*

RACE RIOTS AREN'T NECESSARY

By ALFRED McCLUNG LEE

In cooperation with the
American Council on Race Relations

What Is a Race Riot?

Everyone knows what a race riot is! It is a dreadful clash in a slum area between gangs of most terrible people.

This description satisfies many "nice" people. It even makes them feel smug. But it does not describe what a race riot is. It leaves out of the picture the chief participants in a race riot. It leaves out the "nice" people, the people who make riots possible.

A race riot is like a child's headache, and it is also like an Atlantic iceberg.

When little Marilyn says, "Mommie, my head hurts awful," Mother is worried. She wants to do something about it. But she doesn't turn to some "old household remedy." She may ease the pain temporarily with a cold towel or a simple sedative, but she

Alfred McClung Lee is Professor of Sociology and department chairman at Wayne University. He is author of *The Daily Newspaper in America,* 1937; co-author, with Elizabeth B. Lee, of *The Fine Art of Propaganda,* 1939; and co-author, with Norman D. Humphrey, of *Race Riot,* 1943.

Copyright, 1945, by the Public Affairs Committee, Incorporated
—A nonprofit, educational organization—

knows that a persisting headache requires the knowledge and skill of a physician. An aching head may be caused by problems in other parts of the body. It may mean a cold, something Marilyn ate, a symptom of a mild or a dread childhood disease, or the result of a bump on the head or of eyestrain.

A race riot, similarly, is part of something much bigger. It is like the small part of an iceberg that juts above the water line. Some eight-ninths of the block floats beneath the ocean surface and offers a much greater hazard to shipping than the part that can be seen.

The breaking of heads and store fronts, the beating and terrorizing of streetcar and bus passengers, the shooting of defenseless and inoffensive women and men, the burning of automobiles —the riot events themselves, whatever they might be—are merely symptoms. They are the head pains that are symptomatic of a dread disease. They are not the disease itself. They are what shocks you as you see them above the surface, but the worst part lies underneath.

What we see on the surface is bad enough—a race riot, a lynching, a tense interracial incident in a plant, a store, or a streetcar, an agreement to deprive Negroes or Catholics or other minority groups of ordinary economic or political privileges. But the real evil is that perverse inhumanity of man to man known as racial intolerance or "scapegoatism." "Scapegoatism" consists of blaming part or all of the ills of life upon some group, chiefly because its members have different customs or racial characteristics. It is born of an alliance of insecurity and ignorance. It formed the core of the diseases called Nazism in Germany and Fascism in Italy. It gave the United States the Ku Klux Klan after the Civil War and after World War I, and in 1943 it produced the Detroit race riot.

Only the minor costs of race friction are to be seen in the dead, the wounded, the wasted manpower, and the damage to property in riots such as occurred in Detroit and Los Angeles. The greater part of the costs cannot be assessed in any statistical sense. They are to be found in heightened dread and insecurity and in the results of increasing fear and distrust between the various racial and cultural minorities.

The disease of "scapegoatism" gives us a kind of creeping moral paralysis. This makes it all the more difficult—even impossible—for whites to appreciate the humanity of Negroes, or for Negroes to appreciate that of whites. It cuts off the growth of mutual understanding among Americans of Anglo-Saxon, Latin, Slavic, Mexican, Japanese, or Negro origin. It undermines democracy as a symbol of hope and of human worth, and weakens democratic processes through the intensification of group hatreds.

Good Planning Prevents Race Riots

There is no substitute for a constructive long-term program of planning and working for better intergroup and interracial relations in every American community that has minorities. That means in *all* American communities, because, as it has so often been said, we are all members of minorities. In our contracting world, white folk are beginning to realize more and more that they are a minority.

The chief objective of a long-term program is to combat what the late Wendell Willkie saw as the cause of the 1943 race riots in Detroit, Los Angeles, and Beaumont, Texas. He called this the "fascist attitude of mind." He denounced attempts to strip some of our citizens of their rights—economic, civic, and political, and contended that the attitude behind these attempts is just as fascist as that which made the Nazis want to lord it over whole peoples and nations.

In *Freedom Is More than a Word,* Marshall Field tells how the "nice, polite majority" overlooks the "manner in which, with our warped ideas of our own superiority and of the alleged inferiority of others because they are somehow different, we help to create and maintain an atmosphere of intolerance." As a result of permitting ourselves to be so self-centered, Mr. Field says, we "rationalize our violation of Christian principle in making it difficult or impossible for Negroes . . . to attend our churches. We treat the jim-crowing of our armed forces and public school systems, in violation of democratic principle and of federal constitutional guaranties, as an unfortunate but 'necessary' adjustment to the 'facts of life.' We find all-too-easy excuses for quotas and even bans in our professional schools, in jobs, in some unions, and in professional bodies, not to mention civic and social organizations. We permit and even demand that our federal government erect barriers against refugees from war-torn countries—the very sort of people for whom America was established as a refuge."

Housing

In the long-term program, housing and employment are the key issues. They do the most to create friction. Solution of these problems can do the most to promote racial understanding. Both must be faced frankly and attacked concretely. The educational work must be practical and tied in with current activities.

Housing involves almost every aspect of minority tensions. The areas in which Negroes, Chinese, or other minorities are crowded by restrictions invariably have high rents and inferior accommodations. This, in turn, is accompanied by economic and po-

litical exploitation, ill health, inadequate schools, and poor hospitals or not enough of them. There is usually a serious lack of recreation facilities, except for bars. And, as Dr. Robert C. Weaver of the American Council on Race Relations has observed, these developments "bring suffering, despair, disillusionment, and frustration. They result in disorganized communities. They encourage adult and juvenile delinquency. They invite and nurture political corruption and cynicism. They foster group antagonisms."

Before World War II, Negroes were segregated into tight Black Belts in most northern cities with large Negro populations. The demands of war brought new thousands from rural districts into those already crowded Black Belts. Pressures from "white areas" prevented the building of new housing units in numbers at all comparable to those provided for whites. New miseries and new inflexibilities of city organization are thus created. And the war effort has been slowed up and damaged immeasurably by these housing handicaps placed upon Negro workers. The American Council on Race Relations takes the position that at least "all *public* housing should be open to qualified applicants regardless of race, creed, or color." It goes further. "Your local housing authority," the Council advises, "should plan to develop projects in which different groups *will* live together. This will require the selection of sites where minorities *will want* to live and in which majority families *will elect* to live. *Equipped with a definite policy of nondiscrimination and aided by the proper location of projects, your housing authority can establish interracial patterns of living.* Existing projects in Pittsburgh, New York, Los Angeles, Seattle, Springfield (Illinois), and Chicago have already done so."

Perhaps private enterprise will make great contributions to breaking down the Black Belt barriers. Enlightened businessmen for the first time are viewing such opportunities for investment in constructive democracy with considerable interest.

Jobs

The employment field, the other crucial problem area in race relations, focuses attention squarely on the anxiety we feel in the face of pressing economic insecurity. Most of us have a tendency

to become hysterical in our thinking when our jobs are threatened. Unemployment is a dreadful threat. When it stalks the land, the heedless do awful things to their fellow men in their mad scramble to preserve a little security. They claw and kick. They become Jew- and Catholic-baiters, Negro and Nisei-beaters.

During the war some Negroes have gained employment in fields for which they were equipped but from which they had previously been barred. These included jobs in the higher grades of factory work and in certain clerical and professional areas. As A. A. Liveright, executive director of the American Council on Race Relations, has stated, "If America does not use its great power to maintain full employment in the United States and elsewhere in the world, it will be almost impossible to prevent interracial strife. Plans must be put into effect to bring together industry, organized labor, the government, and the public in conferences on employment planning to prevent the exploitation of race differences. Efforts can thus be initiated to integrate minorities into nonwar employment. American communities cannot afford the costs in disease, ignorance, crime, and human degradation occasioned by keeping minorities in hopelessly submerged castes, all too similar to the castes of India."

In employment, your interracial organizations should serve to strengthen federal and state Fair Employment Practices Committees. This should involve the re-education of war workers, the interpretation of needs and experiences and techniques to management and labor leadership, and the development of community sentiment in support of fair play in job opportunities.

Emergency Planning Is Also Needed

Few American communities have adequate long-term programs, and even fewer have had such programs in operation long enough to be effective. A great many cities and towns face the danger of trouble for which they are wholly unprepared.

The American Council on Race Relations realizes that the riot squad attitude toward race riot prevention is "too little and too late." The primary job is that of eliminating the causes of race friction. In this there is little place for strong-arm methods.

But if race tension reaches the riot point, suppression is the only possible course. Without regard for race or creed, the rioters must be stopped as swiftly as possible. And this must be done with as little rough stuff as possible. Police squads and state militia, tear gas and armed jeeps can only patch up a truce and drive antagonisms underground, with rankling threats of how "next time" it will all be "different."

To prevent this sort of thing in your town, it is necessary to set up an emergency program of detection, prevention, and suppression of race riots. We all hope that such riots will never occur in our community. But if we are at all realistic, we know that the danger exists in many places. In this pamphlet the advice and plans of many leading national organizations for emergency action have been brought together and summarized. A large number of veterans', women's, men's, service, trade association, trade union, parent-teacher, civic, youth, educational, social work, newspaper, radio, governmental, and religious organizations have cooperated in this venture. These organizations are listed on the inside of this pamphlet's front cover. The author and Dr. Norman D. Humphrey also benefited from similar aid in reporting and analyzing the Detroit race riot of 1943 in their book, *Race Riot.*

THESE ARE DANGER SIGNALS

MOST of us are sheltered from first-hand knowledge of interracial and other community tensions. It is only rarely that we see *and understand* the significance of a Negro-white fist fight in a bus, an American of Japanese descent being refused service in a restaurant or department store, a Jew being given the brush-off by an employment manager, a Mexican-American being discriminated against, or a Protestant or a Catholic being given a lecture on the "value" of residential "restrictions" by a real-estate salesman. Interracial crises shock us into awareness "without warning," it seems, but it is just because we cannot or—more likely —*will not* see the storm signals.

A race riot does not occur without clear-eyed and well-informed observers predicting it in advance, sometimes months in advance. The Federal Office of Facts and Figures (later called the Office of War Information) had a confidential report *fifteen months* before the 1943 Detroit race riot that included this sentence, "Unless some socially constructive steps are taken shortly, the tension that is developing is very likely to burst into active conflict." The day after the rioting began, the Detroit *Free Press* stated, "Two months ago everybody in Detroit familiar with the situation knew that race riots were inevitable."

To make such predictions, level-headed observers want to know as much as they can about (1) the rumor situation, (2) incidents of friction, (3) demagogic groups, (4) delinquency and crime, (5) police attitudes, (6) congestion in housing and transportation facilities, and (7) employment conditions.

RUMOR SITUATION

Long before a race riot begins, stories begin to crop up of alleged insults and discriminations, frequently traceable to subversive groups but with a substantial underpinning of actual events. Then appear stories of imminent violence, of arming by another racial group, of the need to protect one's home and loved ones, of invasion from another part of the city or even from another city. Finally come the crisis rumors, the inflammatory accounts of sex assaults, beatings, gang activities, and murders.

In riots, as in most human activities, particularly those of a criminal nature, the participants reveal a striking anxiety to find justification for their actions. Fever-heightened rumors give rioters that false justification, that anesthetic for their consciences.

As a riot stage approaches, rumors circulate with increasing rapidity in barbershops, beauty parlors, bars, church socials, in lobbies, business gatherings, restaurants, union meetings, and family conclaves, in casual face-to-face and telephone conversations, and even in rare instances over the radio and in the newspapers. Their origins may be obscure, but on the eve of a riot rumors carry more and more obvious earmarks of artificial creation, and they travel with abnormal rapidity.

GRAPHIC ASSOCIATES' FOR PUBLIC AFFAIRS COMMITTEE

INCIDENTS OF FRICTION

Warning incidents occur most frequently in buses and streetcars, subways and "els," in crowds in stores and theaters and on the street. When the cooperation of the police and transportation authorities is obtained, reports of these events can be compiled, compared, mapped, and made into a kind of interracial barometer. In interpreting them, a middle course must be steered between the complacent dismissal of a given report as of no consequence even though it may be significant when related to others, and the hysterical overrating of every report of friction. Such a balance can be accomplished through developing a perspective upon events by comparing them from month to month and from year to year over a period of time.

As evidences of friction increase in frequency, boldness, and violence beyond seasonal expectations, watch out for bloodshed and smashed store fronts. They may come next. And it isn't safe to be satisfied with an "ordinary" seasonal rise in events. Long-term efforts should be smoothing off seasonal upturns.

DEMAGOGIC GROUPS

Typical of the demagogic groups that are always with us are the Ku Klux Klan, the Black Legion, the Christian Front, and the American Mothers. John Roy Carlson's *Under Cover* gave a recent picture of such divisive and subversive organizations. In learning about them and attempting to assess their importance in your community, be sure not to ignore or unduly discount the danger of a given demagogue or his group because he is small-time and nasty. The Austrian housepainter who led millions of dupes to slaughter millions of innocents was at first thought contemptible and insignificant. Every small-time demagogue has something of a Hitler in his makeup.

Fortunately, long before they become effective, demagogues show themselves in public and thus expose themselves to ridicule, analysis, counterpropaganda, and perhaps elimination. They cannot build their organizational power long in secret. They are ham actors who need notoriety. They are highly insecure people who

have to convince themselves of their own importance through swaggering before a public. As a riot condition approaches, they move out more boldly into the open because they think they see greater acceptance for their views.

CRIME REPORTS

Delinquency and crime reports include serious frictions between members of different racial, religious, and cultural groups, but they also yield other valuable types of information. They tell especially about the character of current gang activities.

The war aggravated the general trend toward family disorganization in our cities that has been developing in an alarming manner for many years. This is revealed in part by the high tide in juvenile delinquency. When police reports of arrests of minors begin to climb, when social workers discover more and more children left alone while parents work or play, an explosion is in the making. Gangs of teen-age hoodlums, of potential and actual thieves, prostitutes, arsonists, and muscle-men, train the most vicious types of rioters.

POLICE ATTITUDES

Police attitudes of a dangerous sort, the kind that indicates a riot boiling-point, cannot be detected in official sources to any great extent. For storm warnings in this area, watch for:

(1) a rising distrustfulness of the police by Negroes and other minority members, usually paralleled by mounting arrests of minority members and by increasingly strident headlines in the minority press;

(2) evidence of more camaraderie between police and white hoodlums in the face of "a common threat" to white domination; and

(3) more and more accounts in the newspapers and from informants of third-degree and other police violence and of disciplinary action on a racial basis by police officials.

When the police come into open conflict with Negroes, Mexican-Americans, or members of other minorities, and the minorities

indicate a rising dread of the police—when police-minority relations are reaching a feud-like stage—the danger signals are flying. And these signals are usually hoisted by one or both of two fundamental irritants: overcrowding and unsatisfactory employment conditions.

CONGESTION

Congestion in housing and transportation facilities wears the nerves of everyone to the "jumpy" point, especially during a boom or a readjustment period. Negro housing facilities always lag far behind white facilities in a boom, in war or in peace, and then fail to show much improvement at other times. The tremendous accumulation of pressures within hemmed-in Negro districts is expressed in high rents, wretched conditions, and insolent landlords supported by "white cops." And sharp defensive movements on the part of white "property-owners' " associations, landlords, and realtors strive to keep the Negro community from expanding. Increases in the aggressiveness and urgency of such movements are forerunners of violence. Transportation facilities expand more rapidly in white suburban districts than in white and Negro slum neighborhoods, and, especially as they cross and recross exclusively white and colored slum areas, they become focal points of tension.

A solution to such problems that works amazingly well wherever it is tried is the simple one of permitting people to live wherever their tastes and financial resources, their friends, and desired facilities may lead them. Negroes and whites who lived as neighbors did not fight one another in the Detroit race riots. They had come to know and understand one another as human beings. Whites rioted against Negroes moving into the Detroit Sojourner Truth Homes in 1942. Then both whites and Negroes were amazed at the decline of friction after the Negroes had quietly made themselves at home.

Anti-Negro ideas and feelings have been introduced into many countries during this war for the first time by some American soldiers. Education can even more readily build constructive sentiments.

EMPLOYMENT CONDITIONS

Negroes are the last hired and the first dismissed in industrial employment. Unwise management and union leaders have at times exploited color and religious differences in an effort to strengthen their position. But, as the New York State War Council has noted in its booklet, *How Management Can Integrate Negroes in War Industries,* such tactics usually boomerang. Leading representatives of both management and labor now realize that upgrading, job-tenure, collective bargaining, and such standard considerations as hours, working conditions, and comfort facilities must be granted to all without reference to color, creed, or national origin.

When Negroes or other minorities are being made to feel especially insecure, when unions or bosses are failing to take ordinary precautions for the assurance of basic rights, storm signals are as likely to appear here as elsewhere. Such signals are likely to be seen in confidential and even in public reports by either management or unions or both.

Organize for Immediate Action

You can easily scout around and learn something about one or more of these danger areas. In a great many towns that "something" will be enough to convince you how essential it is for your town to have an emergency program. Just talk to a newspaper reporter who covers police cases, a social case worker with clients in a tough neighborhood, a Negro leader who is not just a bureaucrat but who actually has a personal following, and a police officer with a slum beat. These people see the ragged fringes of interracial relations at first hand. They can give you a bald and accurate picture of what they see daily in their own district.

If that picture is at all alarming, take the leadership in forming an emergency committee on interracial tensions that will have two jobs. These two jobs are: (1) *exploratory,* and (2) *emergency planning.* If your community already has an interracial body with a long-term program and with reasonably realistic leadership, it would be well to work with it. But insist that these

two emergency jobs be handled separately and not be permitted to bog down into long-term projects. An emergency program requires specific and direct reporting and action. There is not time to wait for the more gradual—but in the long run more effective —processes of education, legislation, or administration.

The exploratory job of your emergency committee requires the sort of information that you got at the outset from the newspaper reporter, social case worker, Negro leader, and policeman. This pulse-feeling just needs to be placed upon a somewhat more systematic and adequate basis. Part of the committee should be made up, therefore, of people whose work brings them into daily contact with symptoms of interracial tensions—and who have shown sufficiently sympathetic and yet level-headed insight into interracial problems to understand the meaning of what they see and hear.

The emergency planning job demands the inclusion of leaders who could be helpful in preventing or suppressing a race riot if one occurred. These would probably be the mayor, police chief, head of the local state militia unit, superintendents of the public and parochial schools, outstanding Jewish, Protestant, and Roman Catholic clergymen, and responsible leaders of the commercial interests, veterans' and youth organizations, minority groups, trade unions, women's clubs, and other civic bodies.

Methods of Organization

A small working executive subcommittee, divisible into exploratory and planning groups, would give the whole emergency setup simplicity and effectiveness. On this executive subcommittee or steering body have the "no-nonsense" boys who are used to handling practical problems and to getting results. If possible, depending upon the extent and immediacy of the problem, the part- or full-time services of a paid worker would be a great asset. After the project gets under way, part-time paid aid would probably suffice, except in large cities. This kind of arrangement can many times be made by using part of the time of a staff member in an organization directly concerned with interracial or related matters.

The budget for this emergency committee need not be large. But enough money should be raised to cover foreseeable costs, with a contingent fund to meet unusual demands. Above all, the funds should be available without red tape to meet needs as they arise, needs for extra help during critical periods, telephone calls and telegrams, taxis, and possibly mimeographing, some printing, and mailing.

As soon as possible, the emergency committee should have a clear definition of current and crisis activities. In other words, it should have a good blueprint, with responsibilities assigned to and understood by all. In order to help you and your committee develop such a blueprint, the following ten suggestions are offered as starting points.

IF A CRISIS THREATENS, DO THESE THINGS

LET us assume that an awareness of interracial tensions in your town has led you to establish such a committee as the foregoing suggests. To deal with a possible crisis, it is wise to take these ten additional steps as rapidly as possible:

1. *See that the mayor of your town knows how to bring in the state militia or, better, the U. S. Army with the least possible delay.* Do not take someone's bland statement as adequate assurance on this point. Check it in detail. Also get a firm commitment from the mayor, if possible, that he will call in the militia or the Army the moment that the need becomes at all clear. Few towns can depend upon their local police to quell anything so complicated as a race riot. They too often make common cause with the white rioters. As William H. Baldwin, president of the National Urban League, pointed out in his report on the 1943 Detroit race riot, "From all except official accounts, the police behaved with deplorable stupidity and callousness." The Detroit police are not exceptional; they are typical. Similar testimony exists concerning police handling of frictions in Los Angeles, Boston, Philadelphia, and many other cities and towns.

2. *Prepare constructive radio programs.* Radio station managers will be glad to work out with a responsible citizens' committee a series of announcements and general procedures for the control of news broadcasts during an emergency period, to be held for possible use. And radio men can usually be counted upon, with public support, to go beyond this. They will join in planning and producing programs to counteract the conditions causing riots. To strengthen such programs, source materials should be obtained from local and national organizations. The public service division of national radio networks should be asked for special materials and recordings. Be sure that your station develops a series of spot announcements and interpretive programs ready to use throughout the crisis and also a well-formulated statement of policy for its newscasters on the handling of interracial tension reports.

3. *Plan newspaper coverage.* Newspaper editors, being close to the tensions of a town, can make many helpful suggestions. They will also be willing, in most cases, to work out with your committee emergency steps that their staffs can take if a crisis develops. Newspaper editors have a sense of community responsibility, and visits by citizens' groups are helpful in directing this sense toward the improvement of race relations. Such calls should be made at regular intervals in order to keep the editor informed of your activities. In preparation for tense interracial periods, digests of facts as well as series of front-page editorials and cartoons should be on file in each newspaper office. The cooperation and advice of the Negro and other minority press should be sought both as a means of securing facts, and as a particularly effective technique for reporting facts back to the minority members of the community.

4. *Work out programs with schools.* School superintendents will see the wisdom of drafting and placing in the hands of teachers detailed emergency instructions. Interracial incidents within school buildings are comparatively rare, but teachers and principals can do a great deal to calm excitement, to hold teen-agers in school and release them in a wise fashion, to interpret to them

the gravity of race conflict and the probable consequences of it, and to obtain parent and police collaboration when needed and possible. Dr. Frank W. Hubbard, research director of the National Education Association, points out that "teachers and schools can do much to help the majority of children and youth keep themselves under control. Through the children a great deal could be done to reach the adults at home. We see no reason why in every community, faced by possible race problems, there could not be discussion between local civic authorities, leaders of racial groups, and representatives of the schools as to steps which teachers would take in an emergency. These plans could be put into operation by telephone."

Parent-teacher organizations can also help. They can plan to escort children to and from school. They can insist upon the schools' being kept open; they can stress the value and safety of keeping children in the schools where they normally get along together. And they can put pressure on the schools to emphasize both the short-run and long-range importance of education in promoting intergroup understanding and democracy.

5. *Get cooperation of transport companies.* Transportation officials will recognize the desirability of working out emergency plans for racial crises that their men will regard as routine and not alarming. The bravery and salty common sense of streetcar and bus operators have saved thousands from personal injury in tense racial flare-ups. Such heroism and intelligence should be recognized, dramatized, and rewarded.

The contributions that transportation officials and their employees can make to interracial understanding are great. Operators can be courteous and obliging to passengers without regard for their racial or cultural background. They can challenge passengers who make intolerant remarks or who get involved in disputes with persons of another race. These actions will place an emphasis upon fair play and understanding that will keep an atmosphere of intolerance from developing. Operators can also bring participants in serious incidents promptly to the attention of the nearest patrolman.

6. *Enlist the help of the clergy.* Clergymen should use their moral authority and their courage to disperse rioters where possible and to rescue victims and provide sanctuary for those saved from the mob. Clergymen want to know in advance what they can do. They want to know, for example, how to set up local joint study conferences with the aid of national religious and interracial organizations. And they will want to learn the experience of others who have opened church doors in riot-shaken neighborhods. The chance of a mob pursuing a victim inside a church in a slum neighborhood is slight indeed. Ministers can also plan to show themselves to rioting mobs and to speak to them. This is very effective, and the danger of personal injury to a minister is slight. Whether his collar is reversed or not, a clergyman's presence is quickly sensed by mobsters and respected.

7. *Consult management and labor leaders.* Plant managers and union leaders are not likely to be confronted with more than minor incidents inside plants, but they can do a great deal to carry their influence beyond plant walls. Both can make it clear that they oppose race conflict. Then neither management nor labor can pin the blame or part of the blame upon the other. Union leaders, through shop stewards and educational officials, can mobilize union stalwarts to help avoid rioting. Union patrols, sponsored by the Greater New York Industrial Union Council (C.I.O.), were especially helpful during the 1943 Harlem outbreak. Management can use its plant loudspeakers, bulletin boards, and, when appropriate, announcements through local newspapers and radio stations to strengthen the forces of law and order. Labor-management committees, where they exist, can work out emergency steps in advance and place them in operation with a minimum of delay. Most union leaders know, quite graphically, that race friction is poison to unionism, and management is fast learning that it is just as poisonous to industrialism.

8. *Obtain the aid of veterans' groups.* Veterans' groups can help keep peace by understanding the fundamental issues. They can also aid the civil authorities to enlist emergency patrolmen from the various racial groups. The fact that some veterans'

groups have had their records blackened by the anti-Mexican, anti-Negro, or other anti-minority activities of individual posts should not prejudice minorities or liberal leaders against such organizations as a whole. In a number of communities, local posts of national organizations, such as the American Legion and the Veterans of Foreign Wars, have taken a strong stand for unity. One such example is the Hollywood post of the American Legion, which has admitted a Japanese-American veteran of World War II, and which has championed Japanese-Americans returning to the west coast.

9. *Mobilize youth organizations.* Boy Scouts, Girl Scouts, Campfire Girls, and other young people's organizations can plan to mobilize to aid school officials and parent-teacher groups. They can help to keep teen-agers away from the riot area. They can get the younger children home quickly and safely. Older members can run errands. These groups are naturally even more useful in an effective long-term program.

10. *Make use of civic and service clubs and agencies.* Men's and women's civic service clubs can aid in hundreds of ways to create as much sentiment against rioting and for decent interracial relations as possible. Harlem's uprising of 1943 did not become an *interracial* struggle chiefly because the people of New York City were not, as a whole or to any great extent, moral participants in the event.

IF A RIOT BREAKS OUT, DO THESE THINGS

Get Out the State Militia or the U. S. Army—and Fast!

They can isolate the riot area, arrest and disarm all apparent participants, and patrol the streets. Rioters will battle policemen, but they have no enthusiasm about facing the U. S. Army. The disinterested efficiency of the Army is far more discouraging to white rioters than the anti-Negro tactics of some police departments.

If the mayor hesitates, develop immediate community pressure to force him to act. Previous planning, as outlined above, should

make this a task that can be carried out very quickly. One bad clash, whether or not it results in a death, ought to convince His Honor that a riot is far too close for safety. Don't let the mayor experiment with whether or not his police force can handle the situation. An unusually well-trained and capably officered force may do it, but experimentation in this direction—as in Detroit—may cost many lives, even in a relatively small town.

Set the Publicity Wheels in Motion

Avoid radio utterances or newspaper statements that will make for hysteria, but give the people accurate and frank information concerning the existing threat. Information reported with an authentic air of completeness and candor will help cut down the circulation of unfounded rumors.

If a radio station or newspaper should make a mistake, it will not pay to become impatient and abusive. Newscasters and reporters, when their problems are understood and their abilities are respected, welcome honest and constructive aid from public-spirited citizens.

Check with the School Authorities

If their plans are set up in advance, principals and teachers will turn in an excellent performance. They may need additional aid, however, either from organizations or in the form of publicity. Check with them with these thoughts in mind.

Check with the Transportation Officials Repeatedly

They will probably need help from unions and veterans' groups if the riot is widespread and not well controlled. They will also want cooperation in having messages placed before their off-duty employees and the general public.

Mobilize Organizational Cooperation

The general outlines of this are given in the preceding list. Fortunately most organizations are keyed to the meeting of civic emergencies as a result of their wartime experiences, and will remain so for a number of years after World War II.

Every Organization Can Help

Either in an emergency or in a long-term program, literally every organization can help. The national secretary of a well-known service club emphasizes that organizations should devote "great attention . . . to the underlying causes which might result in race riots, and considerable time . . . (to) . . . the removal of those particular causes. . . . What we need to be doing is to be working on those things which might prevent friction." The Girl Scouts have seen their way to serve by organizing almost five hundred interracial troops, mostly in the Middle West and East, and they are using more and more Negro volunteers and professionals. The 1944 convention of the National Congress of Parents and Teachers took as its theme "All Children Are Our Children." Mrs. Minetta A. Hastings, national president of the Congress, writes that the convention "stressed the fact that we could know no difference in race or creed in thinking of those things which are best for children." The American Management Association, in its pamphlet study of *The Negro Worker,* says that the challenge to industrial management is that it *"must be prepared to back up its policy of nondiscrimination in the face of the new situations which the end of the war must bring."* It promises that "the efforts to consolidate the Negro's position and make him a more productive member of industry will not be relaxed."

These are statements and samples of the activities of a few quite different organizations. They might be multiplied many times. The point, however, is clear: Every sort of organization can do its part in strengthening this important development.

Every organization can make its contribution toward creating an atmosphere of interracial understanding. The more certain it is that the majority of a community is sharply set against racial discrimination, the less likely it is that that community will have interracial incidents.

Every Citizen Can Help

"We are injuring our personalities with arrogance; we are blocking our own emotional growth," wrote the courageous

young editor of *Flat Hat,* student publication at William and Mary College, Williamsburg, Virginia, alma mater of Thomas Jefferson. This young woman, Miss Marilyn Kaemmerle, also noted in the editorial for which the college administration dismissed her that "The most important work . . . must be done in educating ourselves away from the idea of White Supremacy, for this belief is as groundless as Hitler's Nordic Supremacy nonsense. . . . Not until we eliminate Nazi race tactics in our own everyday life can we hope for a victory which will bring peace for the universal Human Race of the One World."

She wrote that for Lincoln's Birthday, 1945. It should be echoed in all American hearts. Race problems are individual and personal as well as organizational. Racism warps personalities in unlovely and hateful directions. It continues Hitler's work in this live, free land. It can best be rooted out by showing each and every American the harm it does to him, to his family, and to his friends. Each American can make himself and American democracy healthier by curing himself of "scapegoatism" or inoculating himself against it through education.

The specific ways in which an individual can help in a tense interracial situation can be summed up in the form of a few simple "do's" and "don'ts." Here are five of each.

Five Dont's

Do not permit intolerant acts to go unchallenged in your presence. When someone sneers at the Catholics or the Jews; at the Negroes or the Japanese-Americans, the Americans of Mexican descent, or other racial and cultural minorities, take a polite but firm issue with him immediately. *An atmosphere of intolerance must not be permitted to grow.*

Do not permit yourself and your friends to do things "unconsciously" that are unfair or injurious to members of the less fortunate minorities. Such minority group members are said to be "touchy," but place yourself in their shoes and try to understand the many ways in which that touchiness is constantly being recreated regardless of their own desire to forget about it. America and the promise of America, and you yourself, must not be sold

short by twisting your personality and making it ill with hostility toward minorities.

Do not permit yourself to become unduly alarmed by rumors of intergroup violence. Trust only responsible sources of information.

Do not pass rumors along. Even when rumors are told to another with the disclaimer, "This is only a rumor and naturally should not be believed," something is quite likely to be believed. A little more hysteria may thus be created.

Do not become an "innocent bystander." Even though you might want to observe a riot for quite good purposes, realize that the mere presence of additional persons in a riot zone helps to build up hysteria. Unless you are helping the authorities at their request, go home and stay there.

And Five Do's

Do "accentuate the positive."

Do praise acts of understanding and courage in interracial relations wherever you might see or learn them.

Do try to treat every human being, regardless of race, creed, and social status, with the understanding and courtesy you would want to receive from him.

Do keep yourself well informed through the radio and newspapers and, in a more general way, through magazines, pamphlets, and books. For example, read *The Races of Mankind,** written by the outstanding anthropologists, Drs. Ruth Benedict and Gene Weltfish. This will help you to place yourself in an intelligent perspective in relation to other racial and cultural groups.

Do, in case of a riot, leave the vicinity of the violence and take as many people with you as possible. Go home. Unless you are a member of an organization with specific tasks to perform in aid of the authorities, stay at home until it is safe to go out on the streets again. Encourage your friends to stay at home unless they are members of appropriate organizations.

---

*Public Affairs Pamphlet No. 85.

AFTER THE EMERGENCY HAS PASSED

AFTER you have carried through your emergency program, after the immediate threat has passed, then is the time to give your thought and your energies once more to the long-term program. It is only the long-term labors of sincere citizens and their organizations, well-informed and firmly dedicated to democracy as the imperative social philosophy, that the roots of racist "scapegoating" can be dug out and the disease destroyed.

A long-term program requires two types of careful organization: (1) The governor or mayor should appoint an interracial commission to coordinate governmental facilities along (a) fact-finding, (b) analytical and planning, and (c) implementing lines. (2) A civic interracial committee—independent of the governmental commission—should be sponsored by leading civic, religious, educational, business, and labor bodies.

The official commission will have the advantages of an "inside" position in focusing governmental activities to correct known ills and to modify governmental policies. It will also make use of the thinking, planning, and work in this area of social workers, police, the courts, investigators attached to other departments, and the administration generally.

The nonofficial citizens' committee has the advantages of flexibility and informality that are usually impossible in a governmental agency. Above all, it can effectively organize citizen pressures behind constructive projects of the commission, against the commission's political enemies, and also against efforts within the commission to turn to a "business as usual" or routinized psychology.

The goals of this long-term program, carried on by the two related organizations, have been outlined early in this pamphlet. Their efforts should be directed toward eliminating the handi-

caps of minority groups in employment, housing, education, churches, and social life generally. This means action, not words. The programs should try to open the way for everyone to participate in American life according to his abilities as an individual and not merely as a member of a certain racial group.

Make Friends

Finally, in your sincere efforts to search out what you can do to help, try this experiment: Develop friendships with at least one member of each of several minorities. And be sure to remember that a friendship is not something you hand down from above. It is a relationship of give and take, of mutual respect and understanding. To make sure that the relationship will be such, it might be well to select persons of other racial groups who occupy approximately the same social and economic place you do. Most people will be surprised that this is possible, but it is.

In such an experiment, you may at first find yourself entering into the affair in the spirit of "what a fine democrat I am." This is a kind of self-flattery that will have to disappear if you are to reach a sound basis of mutual understanding. In fact, that is one of the chief tests of the success of this experiment. When you, as a member of the white group, no longer think you are making concessions by associating with your Negro acquaintance, he has by then become your friend.

When you have one or several Negro, Mexican, or Japanese-American friends, you have a fund of first-hand experiences to pass on to other members of your own group. You can see society and people with more than one set of eyes. You are, more than ever, a force for good in our democracy.

Practice What You Preach

The folly of preaching one thing and practicing something else must be recognized from the outset. To drill interracial democracy into school pupils and then to deny Negroes a chance to teach in any but jim-crow classes is a contradiction apparent to pupils. To have a group of middle-class suburbanites demand

housing for all in the slums without accepting all groups in their own community does more to create antagonism than to achieve a goal. The insecure people who suffer from racial prejudice cannot be helped to cure themselves unless we approach them on an honest basis—and as the lawyers put it, "with clean hands."

Make Race Riots Impossible

America has survived many race riots and many religious, political, economic, and other disturbances. But conditions have changed. The danger to our social welfare inherent in religious and racial clashes increases as we become more and more the members of a world community. We have learned to solve most of our domestic political and industrial disagreements peacefully. Elections and arbitration rather than civil wars and bloody strikes are becoming the rule. The day when Roman Catholic churches were burned in the United States has passed. Let us hope that the growing awareness of our responsibilities will soon rule out open clashes involving racial and religious groups. And then, if we keep at it, even the less overt group injustices will gradually diminish and disappear. Then race riots will not only be unnecessary. They will be impossible.

TO SUMMARIZE, HERE ARE THE STEPS

1. Know that race riots are symptoms of a disease, not the disease itself. The disease is intergroup intolerance or "scapegoatism," closely related to Nazism and Fascism.

2. There is no substitute for a long-term program to promote sound interracial relations. An anti-riot program has value merely to patch up a truce and to give long-term methods a chance to work.

3. Keep your eye—or see that some organization keeps its eyes—on the seven areas in which danger signals of approaching race violence appear. Those who *will* look and *will* see, *can* see a race riot coming. These seven areas are: rumors, frictions, demagogues, delinquency and crime, police attitudes, congestion, employment.

4. Organize for immediate action. Get together an emergency committee of good explorers and good strategists of social action. The explorers will chart the problems, and the strategists will lay out the things to be done.

5. Make certain that the mayor of your town knows how to bring in the state militia or, better, the U. S. Army without delay.

6. Organize the channels of publicity for immediate action. See that they have "canned" materials at hand for the possible emergency.

7. Develop emergency plans with school and transportation officials, clergymen, management and labor leadership, veterans' groups, scouts, and men's and women's civic and service clubs and societies. Make sure that these plans can easily be placed in action.

8. Should a race riot break out, make sure that the state militia or the U. S. Army is on its way as soon as the danger becomes apparent. Then place the rest of the emergency program into immediate operation.

9. Every organization and every individual of good will can help —if only by keeping cool and keeping people off the streets.

10. After the emergency has passed, turn to and help build a substantial and permanent organization for the strengthening of interracial democracy in your community. In this long-term program make the focal points of attack congested housing in segregated districts and the dangerous anxieties that all feel in the face of pressing job insecurity.

FACTS are needed by thoughtful citizens in a democracy. But how is one to get at the facts? Here is a suggestion. Get the habit of reading ***Public Affairs Pamphlets.*** Nearly eight million copies have been bought by people seeking facts. Have these summaries of millions of dollars worth of research studies at your elbow on less than one foot of your book shelves!

Special Offer

For $5 you can get all the ***Public Affairs Pamphlets*** in print (see back cover) and new ones as they appear each month, to a total of 70. If you already have some of these pamphlets, check the ones you want, and we'll extend your subscription accordingly to the total of 70. Mail your order today. Simply write: "I want the ***Public Affairs Pamphlet Library***" and mail us your check for $5. (Single pamphlets, 10c.)

The publication of the ***Public Affairs Pamphlets*** is one of the activities of the Public Affairs Committee, Inc., whose purpose as expressed in its Constitution is "to make available in summary and inexpensive form the results of research on economic and social problems to aid in the understanding and development of American policy. The sole purpose of the Committee is educational. It has no economic or social program of its own to promote." The members serve in a personal capacity and not as representatives of their respective organizations. Publication of a pamphlet does not necessarily imply the Committee's approval of the statements or views contained in it.

RATE YOURSELF!

How good a citizen of a democracy are you?

Today one of the most important tests of an American is his stand on race relations. Here is a questionnaire prepared by the American Council on Race Relations. Figure your own score on it. How good a democrat are you?

For each question check the box which most closely describes your reaction. Add up your score. If you rate between 80 and 100, you are probably making a real contribution to the improvement of race relations. If your score is between 60 and 80, you are not doing enough. If your score is below 60, you are consciously or unconsciously promoting racial and other intergroup antagonisms.

	10 points	5 points	0
1. *Do you think of George Washington Carver, Albert Einstein, and Enrico Caruso primarily as an exceptional Negro, Jew, and Italian—or do you think of them as exceptional* **individuals**, *a scientist, a mathematician, and a musician?*	I think of them as individuals	I think of them as a Negro, Jew, and Italian, but try to evaluate them as individuals	Invariably I think of them as a Negro, a Jew, and an Italian
2. *Do you refer to minority groups or group members as "chinks," "wops," "micks," or "hunkies"?*	Never	Sometimes	Always
3. *Are you training your children to understand that all Americans, regardless of race, creed, and color, have equal rights?*	Certainly	Realize I should	Why should I?
4. *Do you accept racial and religious differences as a matter of course, or do you think that differences imply inferiority?*	Accept them. Think differences make people more interesting	I know the facts of science: differences do not mean inferiority	My ways are better; my group is superior
5. *Do you have the guts to speak up when someone tells a joke that ridicules a whole race or religion?*	Yes, I try to show how such jokes may promote prejudices	I would speak up if it isn't embarrassing to do so	I would laugh
6. *Are you working with others against discrimination in your city, in your union, on your job, in your clubs?*	Yes	I would help if asked	What could I do?
7. *Have you written to your Congressman in support of FEPC, the antilynch bill, the repeal of poll tax?*	Yes—often, and I got friends to write	No. But I intend to do so	What good would it do?
8. *Do you repeat rumors about racial and religious groups?*	No. I investigate rumors and try to stop them	I don't repeat them, but I don't try to stop them	If they're hot, I pass them along
9. *Do you believe in "white supremacy," that "international bankers" are all Jews, that colored groups are made up of people who are all "childish, irresponsible, and lazy"?*	No. Besides being untrue, these catch phrases endanger democracy	I'm not quite sure	Of course I do!
10. *Have you ever bothered to obtain and read authentic and unbiased information about one or more of America's minority groups?*	Yes, and I got facts to use in talking with other people	I listen to such facts when I hear them	I'm not interested

"SEND US HOME SIR" NEGRO TROOPS TELL TRUMAN

PROTEST BEING USED AGAINST FAR EASTERN PEOPLES

In a letter made public through the Southern Negro Youth Congress, 250 men of the 823rd Engineer Aviation Battalion, stationed at Myitkina, Burma, protested the use of Negro and white troops in the Far East.

The letter follows in full:

Dear Mr. President:

We address this letter to you as soldiers to our Commander-in-Chief; as citizens to the head of our government; and we petition your careful consideration of what we say here.

Sir, we left families and loved ones, our professions and our simple jobs of common labor, the harvest still ungathered on our little acres, with patriotic pride, to join the mighty phalanx of the defenders of our country against the rapacious onslaught of the German and Japanese hordes of would be enslavers. It is our pride and glory that we have contributed our mite- toward the liberation of the enthralled peoples of the world who had fallen under the heel of the fascist boot and in the defense of our "hearth and home". We have acted in the best tradition of our fathers and their fathers. We believe in the ideals we have fought for and for which so many of our comrades have died. We would imagine ourselves the jealous guardian of these ideals.

Therefore we cannot contain our anger when we see cynical forces at work abroad outraging the cause for which we have given so much. We would not be true defenders of our country's welfare and democratic purposes if we did not raise our voices in protest against the makers and executors of policy in high places in the military and civil affairs of our country who are presently operating to undermine all that we have fought for. We most emphatically protest the fact that American soldiers have been unwittingly and against their will made accomplices and instruments of designing forces who are striving to stifle and drown in blood the will, just and natural aspirations of the liberated countries and territories of Southeast Asia and China to realize their independence from foreign domination, to determine their own form of government and to choose their own leadership in their own way.

SERVE NO GOOD PURPOSE

MR. PRESIDENT, THIS GROUP OF AMERICAN SOLDIERS DECLARE IT AS OUR FIRM CONVICTION THAT AMERICAN TROOPS AND NAVAL FORCES IN THE CHINA AND INDIA-BURMA THEATERS NO LONGER SERVE A PROGRESSIVE PURPOSE, BUT ON THE CONTRARY ARE BEING USED AS PAWNS IN A DANGEROUS GAME OF IMPERIALIST POWER POLITICS.

Why are we occupying and policing in the countries of our allies? Are we here doing a chore for the British, French, and Dutch imperialist interests- that is, intimidating the democratic and independence movements until these powers are able to arrive in sufficient force to reestablish the yoke of colonial exploitation once again on the necks of these people who strive for possession of their own homelands and liberties? Are we here to facilitate the desires of our own profit hungry world traders to gain a good hunk of the "colonial market"? By what moral or democratic rule do we excuse our crude and shameless intervention in the internal politico-military struggle

now going on in China? Would we tolerate Chiang Kai-Chek sending a corp of political propagandists and "technical experts" to America before the next presidential elections to aid you and the Democratic Party to stay in power? Yet it is widely known that American soldiers and airmen have been killed in battles in China because we have committed our armed forces and "technical experts" to the task of entrenching Chiang Kai-Chek in power and the military destruction of all opposition forces to his unbridled rule. But who are these Chinese Communists that American trained Chinese troops, American planes tanks and guns, American Marines, ships and airmen are so intent upon destroying for the sake of a "United China"? Are they not also men who love China and have proven their patriotism in thousands of battles against the Japanese during the long years of warfare under the most trying of circumstances- or are Lt. Col. Carlson and other renowned reporters of the China scene simply "red" liars?

CHINA SAME AS GREECE

We are helping the "unification of China" in precisely the same way (and for the same reasons) as the British did in Greece and as they are now doing in Indonesia and Indo-China! It is against our American character and heritage to take the field in league with the alien rulers against the freedom revolts of the oppressed peoples. We do not want to be associated with the British imperialist mercenaries in shooting and bombing to death the freedom urge of the peoples of the Southeast Asiatic countries. We do not want to "unify" China with bayonets and bombing planes and American lives. We feel that the Chinese people who fought the invader for ten years alone are fully qualified in patriotism and statesmanship to choose their leaders and form of government.

"WE WANT OUT"

Sir, we of the armed forces have given a good pail of milk in rescuing the peoples of the East from the tyranny of the Japanese militarists. Now we want you to call us home before we are made to kick this pail of milk over, and ourselves become cloaked in the mantle we wrested from the pillaging Japanese oppressors.

We are a group of Negro soldiers. There are a lot of things on our minds that we would like to share with you- troubling things awaiting us back home.. how Bilbo hates us.. the Congress refusing to pass laws to protect our right to a job through an FEPC.. how, throughout the South where most of us live we still won't be able to vote, and all the cruelty of Jim-Crow living is there just as we left it.. and a lot more besides. But these points will have to wait until another time. We just hope you're doing all you can to rectify them, Mr. President.

Yes we are Negro soldiers. We haven't known too much freedom ourselves and that's all the more reason we don't want any part of suppressing the freedom of other peoples.

Send us home, sir.

Thank you. We remain
obediently yours,
Enlisted Men of the 823rd Engineer
Aviation Battalion
Myitkina, Burma
November 29, 1945

NEGROES SUPPORT LABOR

American Negroes, who are mostly workers are solidly supporting the growing strike movement, whether they are union members or not. In Detroit, Chicago, and New York, where the strikes are centered, the interracial character of the picket lines is very much in evidence. And this is what Negroes like to see- democracy in practice!

Negroes comprise about 35 per cent (40,000) of the 120,000 members of the United Packinghouse Workers of America, CIO. While in Chicago, center of the packinghouse industry, the union's Negro members number 15,000 or half its complete membership of 30,000.

With their strike against General Motors now in its ninth week, the 200,000 United Automobile Workers, one third of whom are Negroes, are marching as strongly as ever, and are reaping a good harvest of solidarity from their union's militant policy of equality.

And while of the 200,000 striking United Electrical Workers, only about 5,000 are Negroes, this can be traced directly to the flagrant discriminatory practices of the companies.

OF MAJOR IMPORTANCE TO NEGRO UNIONISTS HAS BEEN THE TOBACCO WORKERS' STRIKE (LOCAL 15, FOOD, TOBACCO, AGRICULTURAL, AND ALLIED WORKERS OF AMERICA, CIO) AGAINST THE AMERICAN TOBACCO COMPANY AT CHARLESTON, S.C.

850 of the 1,150 strikers are Negroes, but they all walked out together and held a mixed meeting in the Negro USO building. It was the first time such a meeting had been held in Charleston.

Over and above this demonstration of democracy though, is the union's fight to break the vicious North-South wage differential practiced by the company in accordance with a general pattern wherein industries move to the South in order to exploit the cheap labor supply-- which is both white and Negro. If the union wins the strike it will be a tremendous economic victory for the entire South, and will prove to the southern workers the benefits of Negro-white unity.

SIGNS OF THE TIMES

The sudden move of Senator Dennis Chavez (Dem. N.M.) that brought the FEPC bill onto the Senate floor, has precipitated a political struggle of deep significance to the American people, although at present their attention and energies are being largely consumed by growing industrial struggles in the basic industries.

Immediately after Senator Chavez's move that irreconciable bloc of Southern near-fascists jumped into action and served notice to the country that they planned a filibuster ad infinitum to defeat FEPC or any other measure designed to help eliminate from the already rotting body of American capitalist society the ever dividing cancerous cells of racial discrimination. They made clear to everyone that the southern ruling oligarchists are and will be the dirty-workers for any American fascist seizure of power- and that just as the Hitlerites divided and conquered the German people with anti-Semitism, so will the American fascists try the same with anti-Negroism.

Many Negroes and their white friends recognize this and are rapidly coming to the conclusion that the fight against fascism cannot be won defensively; that from now on an ever increasing offensive is the order of the day.

This was indicated by the 600 delegates from 12 states that went to Washington last Friday, 18th, to demand from President Truman, and Democratic and Republican leaders some positive action for FEPC.

The delegation, led by New York City Councilman, Benjamin J. Davis, included Hoyt Haddock, National CIO legislative representative; Dr. Clark Foreman, Pres. Southern Conference for Human Welfare; Dr. Max Yergan, Pres. National Negro Congress; Rev. W. Jernagin, Fraternal Churches of America; Magistrate Joseph Rainey, Pres. Philadelphia NAACP; and Rev. David Licorish, representing Congressman Adam C. Powell (Negro Dem. N.Y.) who was ill.

None of the Washington papers or press associations reported the delegation, but it electrified Washington and definitely told the various legislators concerned with FEPC, that it meant business.

Meeting in the Old House Building it proposed the following action:

1. A speedup on securing the needed 70 signatures to discharge the House FEPC bill.
2. More pressure on Truman for some definite action.
3. FEPC picket lines.
4. A march on Albany, N.Y. to demand FEPC support from Gov. Dewey.

A WARNING

The arrogant action of those southern Senators gives warning that it is to the interest of all Americans to attack the system of white supremacy at its roots. The simple fact is that most white Americans are infected by the virus, and the task for those who have any understanding of its danger is to fight it in themselves and in others. For it is practically certain that the coming months will see increasing racial conflicts added to the industrial ones, and they will be caused by the same forces- the power hungry reactionaries who are determined to impose American hegemony on the whole world- but who must first destroy any home opposition.

NEGRO WOMEN ADVANCE

The presence of three Negro women (Miss Thelma Dale, Field Secretary, National Negro Congress; Dr. Charlotte Hawkins Brown, Educator, North Carolina; Mrs. Vivian Mason, National Council of Negro Women) on the American delegation to the recently

held World Congress of Women, in Paris, was an indication of Negro, painful but steady advancement.

In the past the role of the great masses of American Negro women, has been that of domestic slaves. They have suffered the usual prejudice against all women, and they have had the added oppression that hits them as Negroes. But the grim necessities of war loosened their shackles, and many broke away to enter industry, thereby becoming active forces in the development of the American people, and in the struggle for Negro rights.

Negro women have always been towers of strength and inspiration in the everyday struggles of their people. Their self-sacrifice, love, and indomitable courage have produced a strong and vibrant character in American society. Their great resevoir of moral strength must be tapped and put into action against the American fascists and near-fascists who seek to destroy them and all other Americans who might stop them from coming to power.

The planned rape and murder of women in Europe and Asia is a bloody warning of what would happen to Negro women were fascism to come to this country. Black or white it gives no equality to any woman. For fascists a woman is simply a child bearing animal- but they wouldn't even allow Negro women to have children!

The war did many good things for Negro women. It highlighted the utter and senseless drudgery of domestic work. It brought them into contact with the main stream of American economic life. And it gave to many the political consciousness that has unerringly shown them the way to a better life- if they can unite in one common cause. They tasted freedom, and it was good. Let no one think that they will be satisfied to go back to the kitchen!

EDITORIAL TRENDS

THE BLACK DISPATCH, OKLAHOMA CITY: The South, where sub-standard wages prevail, is a fine example of what cheap wages do to the whole social fabric. The South is poor, not because it lacks natural resources, but because the South viciously forces the inhabitants of the section to live from hand to mouth. Ignorance, poor health, poor housing, and everything that retards social growth are the hand maidens of sub-standard wages.

***

THE NASHVILLE GLOBE AND INDEPENDENT: The country has had ample time to study and pass upon the multiplicity of reforms Mr. Truman has thought up and enunciated. There has been no overwhelming demand for any of the Truman reforms. With full knowledge of how successful Mr. Truman was as business manager of a Missouri haberdashery, few Americans are enthusiastic about his ability to recommend policies that will guarantee success and solvency to this great nation of a hundred and forty million people.

***

THE DETROIT TRIBUNE: There is a great concern among Negroes as to what the future holds for them. The outlook is rather bleak if viewed from certain angles. The shortage of available housing and its resultant over crowding; the high crime statistics; the loss of economic power through loss of jobs; the discrimination against Negroes in hiring for new jobs; and a dozen other things that make one feel that the cards are stacked against you from the beginning.

***

THE NEW YORK AMSTERDAM NEWS: We enthusiastically join those who censure and criticise the statements of Lt. Gen. Sir Frederick E. Morgan, chief of the United Nations Relief and Rehabilitation operations in Germany, who sneered at the plight of displaced Jewish persons in Europe.

***

THE PITTSBURGH COURIER: Particularly should the administration strive to integrate Negroes into the diplomatic service in other than the traditional posts in colored countries to which Negroes have customarily been sent.

Nothing could more convince the colored peoples of the world that this government is sincere in its profession of democracy than forgetting race in making outstanding appointments abroad.

TENTATIVE OUTLINE OF TRAINING VETERANS IN AGRICULTURE

I. Types of Programs in Agricultural Education and Training.

Agricultural education and training courses are offered under three main types of programs:

1. Institutional programs offered primarily on the campus of agricultural schools, with some off-campus inspection trips and projects of a supplementary nature sometimes being included.

2. On-the-job training programs offered by employers with some off-the-job instruction of a supplementary nature usually included. The responsibility for for the accomplishment of the training rests with the employer rather than a school. The trainee trains for a position existing in the employer's establishment.

3. Combination training programs offered by agricultural schools, consisting of combinations of institutional instruction and on-the-job instruction, the two being so planned that each supplements the other and both contribute definitely to the accomplishment of the trainee's vocational objective. In this type of training, the responsibility for offering and providing the entire course rests with the school. The school offers institutional instruction and selects or approves the place where the trainee pursues the on-the-job portion of his program. This place is considered an extension of the school's facilities. The school furnishes both portions of the program, and when the job training portion of the program is not under an employee-trainer, the staff of the school offers all of the necessary job instruction.

II. Training Veterans on Farms

1. Wherever possible and practicable training veterans on farms will follow the plan set forth in paragraph number 1-3 above.

   Wherever this is impossible, the training should follow a plan made up of a combination of training described in paragraph numbered 1-2 above, supplemented by courses chosen from the best possibilities available from the types of training described in paragraph I-1 above.

2 In order to secure the best possible guidance and service in technical problems of the program of each veteran, the Veterans Administration through the Senior Agricultural Training Officer will organize state and local committees to be known as the Veterans Agricultural Training Committee. Wherever a state is divided by regional office boundary lines, the regional offices will coordinate their approach to the state agencies. The nucleus of these committees will consist of representatives of Vocational Agricultural Education and agencies of the United States Department of Agriculture active in the area. The membership of the committees will be increased if expedient by adding such other persons as leading farmers and representatives of other institutions operating in the area. The state committee will assist in organizing county committees and, if necessary, community committees with the same agencies represented. All committee members will serve without remuneration from the Veterans Administration.

In order that each agency may make its macimum contribution to the training program of each trainee and in order that the instructor may schedule these contributions into the training program at the time, rate and in the manner to effect maximum results with the trainee, instructors and Agricultural Training Officers will use the services of these committees in an advisory capacity for the following purposes:

a. Coordinating the services and technical information to be offered by the agricultural agencies with the teaching agency

b. Recommending farms as to suitability for training.

c. A ssisting in developing individual training programs for veterans.

The work of this Committee will be closely coordinated with the work of the Veteran's County Agriculural Advisory Committee which has been created by the Agricultural Extension Service pursuant to an agreement between the Veterans Administration and the United States Department of Agriculture (See all Regional Office Letter, with attachements, June 19, 1944.) This coordination may be effected by the Committees having common membership or by holding occasional meetings in common.

III. Training Veterans on Farms under Plan Described in Paragraph I-3 above, Public 16, 78th Congress.

An eligible veteran with employment objective of "farmer" (farm manager or farm operator) will be enrolled with an institution for full-time training when the institution is using as a part of its facilities:

a. A farm under the management of the trainee when requirements of Paragraph A below are met specifically and other applicable instructions are met in general.

b. A farm of an employer-trainer when it has been established, with reasonable certainty, that the trainee will have an opportunity at the end of the training period to enter into self-proprietorship operation of a farm with operational control to be established through ownership, lease, management agreement, or other tenure arrangement which will full protect the welfare of the veteran trainee.

An eligible veteran, whose employment objective as an employee is "farm foreman", "farm manager", or "farm hand", may be placed in training under an employer-trainer when those objectives show that attainment will require sufficient training in agriculture, skills or managerial ability to insure employability, and, as far as possible, to insure a continued demand for the trainee's services at a satisfactory income. The objective of "general farmhand" does not ordinarily meet these requirements.

A. S elf-Proprietorship.

1. Enrollment

Eligible veterans, with employment objectives of "farmer" (farm manager or farm operator) will be enrolled in a full-time course with an agricultural school or an agricultural teaching agency which institution must

provide satisfactory organized instruction in agriculture and related subject matter in the classroom, laboratory, shop or other satisfactory facility and additional operational instruction on the veteran's farm.

2. Training program.

A training program will be prepared by the Veterans Administration training officer with the assistance of the teaching agency, the Veterans Administration Agricultural Training Committee, and the veteran, which program will include organized classroom instruction and operational instruction, both based on a complete farm and home plan. The farm and home plan will be developed, after the trainee's farm has been surveyed, to include:

a. Financial statement.

b. Budget of income and expenses.

c. Schedule of production and disposal of crops, livestock, and livestock products.

d. Inventory of livestock, equipment and supplies.

e. Statement of family living to be furnished by the farm.

3. Farm Requirements

Before approving a farm as a proper place for a trainee to take the on-farm portion of his course of training, the Veterans Administration should be assured of these general requirements.

a. The veteran must have complete control of the operation of the farm through ownership, lease, management agreement, or other tenure arrangement which fully protects the welfare of the veteran.

b. The farm must be of sufficient size and suitability for full-time instruction in all farm management operations necessary to the particular type of farming selected and of sufficient size and suitability so that the operation of it together with the course of training will occupy the full time of the trainee.

c. The size and quality of the farm must indicate that it will be sufficiently productive to insure the trainee a satisfactory income under normal conditions at the end of the training program.

4. Instructional Requirements.

The veteran shall be enrolled with the institution for a full-time course of instruction including:

a. Off-farm instruction of not less than 200 hours per year in agriculture and related subject matter, not less than eight hours of which shall be given in any month.

b. On-farm instruction of not less that 100 hours per year, at least 50% of which must be made applicable specifically to the veteran's individual farm by visits of not less than twice a month.

c. Instruction, guidance and assignments of work and study covering all phases of the operation of the farm between visits of the instructor.

The instruction both on and off the farm must be given at a time, rate and in a manner best suited to the needs of the trainee as indicated by his farm and home plan and the operation of the plan.

In order to properly assist the veteran to organize, interpret and apply instructions and information to his own needs and farm conditions, the instructor who gives the on-farm instruction should also give the off-farm instruction.

5. Supervision by the Veterans Administration.

Veterans Administration Agriculutral Training Officers are required to supervise all veterans in training. This shall include visits to the farm at least once a month and visits as frequent as feasible to the off-the farm classes. The training officer will coordinate his supervision of the trainee with the agriculture teacher, who will assist the training officer in determining the conduct of the trainee and his progress toward rehabilitation. This type of training should be carefully appraised to determine if the instruction:

a. Is timely and is based on the trainee's farm and home plan.

b. Is of a practical nature and in accord with recommended local farm practices.

c. Assists the veteran to solve his current problems.

d. Develops the trainee's ability to make plans and to make managerial decisions relative to the management and operation of the farm.

e. Is making maximum use of the information and services available to the trainee from other agricultural and educational agencies.

B. Training under and Employer-Trainer.

1. Enrollment.

An eligible veteran whose employment objective as an employee is "farm foreman", "farm manager", or "farm hand" will enroll for a full-time course of instruction with an agricultural school or agricultural teaching agency, which institution must provide on-farm instruction and organized instruction in agriculture and related subject matter in the classroom laboratory, shop or other satisfactory facility. In addition, the Veterans Administration will secure under Form 1904 agreement, a successful operating farmer who will train the veteran in all the elements of an adequate individual training program, under his direction, and pay the trainee a wage commensurate with the value of his services under training conditions. The employer-trainer will agree to cooperate with the institution, with which the trainee is enrolled, in order to effect maximum results with the training program.

2. Training Program

A training program will be prepared by the training officer with the assistance of the teaching agency and the Veterans Agricultural Training Committee. The program will provide:

a. Organized classroom instruction.

b. Instruction on the job.

c. Coordination of "a" and "b" by the instructor of the institution with which the trainee is enrolled.

3. Selection of the Employer-Trainer.

Selection of the employer-trainer is the resonsibility of the Veterans Administration and approval will be given on an individual basis with full consideration for the direct relationship to the trainee and his ultimate rehabilitation.

Farmers who have demonstrated their ability as outstanding general farmers or as farmers who have successfully specialized in phases of the occupation pertinent to the trainee's objective and who possess the ability necessary to assist in the training of the veteran will be approved to provide the on-the-job portion of the course. The employer-trainer's farm should be of sufficient size and suitability for full-time instruction.

4. Instructional Requirements.

The veteran shall be enrolled with the institution for a full-time course of instruction, including:

a. Off-farm instruction of not less than 200 hours per year in agriculture and related subject matter, and not less than eight hours of which shall be given in any month.

b. On farm instruction by the instructor of the institution of at least 50 hours per year and not less than one farm visit per month. This instruction will include the relating of the off-farm instruction with that which the trainee receives from the employer-trainer.

c. Instruction from the employer-trainer invarious farm operations, as indicated by the trainee's Training Program Form 1905a.

The instruction both on and off the farm must be given at a time, rate, and in a manner best suited to the needs of the trainee as indicated by his individual training program.

In order to properly assist the veteran to organizw, interpret and apply instruction and information to his own needs and farm conditions, the instructor who gives the instruction on the farm must also give the off-farm instruction.

5. Supervision by the Veterans Administration.

Veterans Administration Agricultural Training Officers are required to supervise all veterans training in agriculture. This shall include visits to the farm at least once a month. The Training Officer will coordinate his supervision of the trainee with the agriculture teacher who will assist the training officer in determining the conduct of the trainee and his progress toward rehabilitation.

This type of training should be carefully appraised to determine:

a. If the instruction is timely, practical, and in accord with recommended local farm practices.

b. If the instruction off-the farm is being related to that which the trainee is receiving from the employer-trainer.

c. If the trainee is receiving compensation commensurate with his services under training conditions.

d. If the employer-trainer is instructing the trainee in all the different phases of his training program as listed on Form 1905a.

e. If the course of instruction is making maximum use of the information and services available to the trainee from other agricultural and educational agencies.

IV. Training Veterans On Farms Under Plan Described in Paragraph I-3 above. Public 346, 78th Congress.

Training under this plan, offered to veterans eligible under Public 346, may follow the same pattern as outlined for veterans eligible under Public 16. In accordance with the Law and Regulations, the following fundamental differences must be observed::

1. The course of instruction will be provided by agricultural schools or other teaching agencies which have been approved by the appropriate state agency for giving this type of training under Public Law 346.

2. Selection of the course which the veteran desires is a matter of his own choice.

3. The length of the training period is determined by the predetermined length of the course and by the extent of his entitlement under the law.

4. Preparation of the training program will be the primary responsibility of the institution offering the course.

5. Approval of the farm and/or the selection of the employer-trainer, where the veteran will receive his on-the-job instruction, will be the responsibility of the training agency.

To George Mitchell - Southern Regional Council

MEMO FROM 5-23-46

Alex Miller

Dear George:—

I thought you might be interested in the attached

Our Guest Column

by Harold J. Gibbons
Director, St. Louis Joint Council
United Retail, Wholesale and Department Store
Employees of America, CIO.

Did someone say Jim Crow?

Certainly, it was no one in the St. Louis Joint Council, United Retail, Wholesale and Department Store Employees of America, CIO. For from the very first, the Joint Council has refused to compromise. Naturally, there was a racial problem -- St. Louis is a borderline city where segregation is in order in most industries and activities but where, unlike the South, the Negro has no definite status. We firmly believed we had to meet the problem head-on -- with no quibbling and no compromise. We insisted on fair employment practices in contracts and fair handling of grievances in the shops. The rule of "no compromise, no quibbling" has won the day.

Our union leader reduced the policy to simple terms when he told a shop meeting: "My President says no-discrimination is right; my priest says no-discrimination is right; my union says no-discrimination is right -- and what's right goes around here." The outright Negrophobes quickly realized that they were under union rules and if they didn't like it they were out of luck. Negroes and whites played on the same softball team. On the newspaper, discrimination went by the board. The Labor Co-op Theater broke the color line for the first time of any little theater movement in St. Louis by casting Negroes and white players from the rank and file of the union on the same bill.

Then came the Health Center. The companies and the union both recognized the need for a comprehensive health and sick care program for the workers. But what about Negroes? There were some doubting Thomases among the white workers, and the Negroes went about in unvoiced apprehension that here was one project to which they would not be admitted on an equal basis.

The medical staff was employed in complete understanding that Negro members and white workers were to receive exactly the same treatment. There is no segregation in the waiting room and Negroes and whites wait their turns in order, without reference to color. When a Labor Health Institute doctor answers a home call or a hospital call, he doesn't check first to see whether or not the patient is Negro or white -- he's there.

- more -

Negroes and whites alike receive the full benefit of the complete diagnosis and treatment -- the same general practitioners and specialists give their service.

The Labor Health Institute is financed by the employers who pay an amount equal to three-and-half per cent of the workers' wages for the health program. The money paid into the health program is not a deduction from wages or a substitute for wages, but rather an added benefit. And the union rule for no-discrimination follows through.

A Negro doctor is on the Labor Health Institute staff -- not to treat Negroes nor as a concession to policy -- but because he fills the qualifications necessary. As a qualified physician, chosen not only for his skill and knowledge but for his understanding of problems besetting working people, he treats white and Negro workers alike and has free consultive privileges with his white colleagues. No one has protested our Negro nurse, who does her work efficiently on the same basis of pay and working conditions as the white nurses.

The Labor Health Institute members are aware that segregation must not exist if our Health Institute is to retain its true democratic spirit, and that good health cannot be limited if our community is to grow stronger. Founded as it was on good will and cooperation, the LHI is one of our greatest achievements, and we fervently hope it marks the beginning of better health for all Americans -- regardless of race, color, or creed.

One of the first principles of the Labor Health Institute has proven even more valuable to Negroes than to white workers -- the principle of health care to prevent illness. Because of the lower salaries paid in the past to Negro workers and the enforcedly low living standards, Negroes frequently live in an atmosphere of more health hazards. Immunizations, vaccinations, and the educational program in proper eating and healthy living are of special value to Negroes -- because previously such a program has been virtually closed to them. The physical examination which detects the first symptoms of illness is doubly valuable -- because in many instances, Negroes haven't known where to go or whom to see.

The Labor Health Institute is set up on a principle of democratic control. The Board of Directors are elected by the membership, and the membership is made up of the rank-and-file who are covered by their Union contract for the LHI. Everyone is responsible to the Board which is, in turn, directly responsible back to the people.

- A P A -

GUILTY OF BEING DIFFERENT

GUILTY OF BEING B

YOU, who read this—criticized by self-appointed judges—have been found guilty. Guilty of being born, where just being born is a crime—if your "judges" don't like your religion.

You're guilty of praying to your own God. You're guilty of having a mother and father whose facial characteristics or color your "judges" don't like and which you inherited.

You're guilty, "they" say of seeking security for your family—something you must not do, your "judges" say, if they don't like your race, creed or national origin.

This is actually the way some persons within our country are working to create dissension. But they don't say it just that way.

They spread lies about people of a race or faith different from theirs. They try in every possible way to make you . . . me . . . all of us hate our neighbors.

This is dangerous . . . treasonable to our democracy. Stop those who would divide us by nailing these falsehoods. Refuse to repeat rumors — destroy forever the work of these self-appointed un-American "judges".

Do *that* and you are defending The American Way of Life.

NOTES ON MEETING TO RELIEVE RACIAL TENSION IN GEORGIA
held at Butler Street YMCA August 27, 1946

Dr. R. L. Russell presided. Dr. Russell said that various civic organizations - Negro, white and Jewish - had been invited to send representatives to the meeting. The meeting was informal, with no particular organization in back or it.

Dr. Trigg said -
The chief thing is to see that the community reamins in control of the "good people", white and Negro. He suggested two things that the group might do:
(1) There should be a group of people who would be responsible for checking on rumors.
(2) There should be people who know where "trouble spots" are and they should be isolated.

Mrs. Tilley suggested -
That we find out plans of other organizations and try to put something together with other groups. She told about a meeting of the heads of sixteen white women's organizations to discuss plans to revive the Women's Society for the Prevention of Lynching. In 1940 the Society got every sheriff to sign a card promising to uphold the law in regard to prisoners; seventy-five thousand women promised that they would educate against lynching. Whenever a danger was sensed, the Society would go to their files and call the women in that area. Mrs. Tilley said that the Southern Regional Council is planning to call a group of Negro and white church leaders of the South together, that they might sit down together and discuss the situation.

Mr. Harper of the NAACP said -
That one of the sore spots would be the matter of organizing the plants in this area. Police officers visit the plants and try to intimidate the organizers as well as the workers. NAACP has been working on a nationwide basis for a Federal anti-lynching law. Mr. Harper believes the Negroes have a pretty good chance of getting justice in Federal courts. He suggested that the white people in the group contact their Congressmen and press for a Federal law against lynching. He said he feels that the problem is a job very largely of the white citizens, that white people and the white churches should make a bold stand. NAACP will join hands with anybody who will do anything to wipe out lynching and to better the State as a whole. Thinks the good Negroes and good white people should get together and can do so much better than the bad Negroes and bad white people.

The representative of the Chamber of Commerce's Committee on Race Relations said -
The committee has been primarily concerned in seeing if something can be done about the housing situation. So far, they have not found any solution. Still trying to evlove some plan to alleviate the situation.

Mr. John Paschall said that he came as a representative of the Atlanta Civitan Club. Suggested that the president of the club, who was present, express his views. The president said that he thinks it would be well to find out what has been done in other parts of the country and how effective it has been.

Dr. Boddie proposed three points-
(1) that the group pass resolutions.
(2) that a public meeting (interracial) be held at which the decent people will speak for unity.
(3) that a continuing committee be formed to see that the proposals are carried out.

A proposal was made by one of the members of the group that the body go on record to abide by the Constitution of the United States.

Mr. Palmer proposed -
That the Georgia Interracial Committee and the Southern Regional Council conduct a study and make down-to-earth recommendations to all civic organizations (Gavel Club) before any public meeting is called.

Mrs. Matthews asked if there is an adequate State anti-lynching law. Mr. Paschall said that there is an adequate State law inadequately enforced.

Mr. Paschall said -
The group should not undertake a long range program, and that it cannot solve the race problem at once, but that it should do anything possible to allay fears, quiet rabble rousers, and get the decent citizens together to take a stand for law and order and justice. Since only two civic clubs out of nine were represented, he thought it would do harm rather than good to pass a resolution at that time in favor of a Federal anti-lynching law. He thought the group ought to get a representative group of citizens together.

Mr. Palmer asked that no publicity go out at this time. He also asked if a report could be compiled about laws and methods that have been used in other places within a fairly short time to go before the Gavel Club.

Mr. Sanford (?) ———— said -
that the problem could be solved only with understanding and respect between the races. He said that his prisoners were acutely aware of the feeling and tension outside the prison walls.

Dr. Borders suggested -
That first within the group the members hsould have sufficient respect for each other to allow each member to express honestly what he feels. He questioned whether the group should make more surveys or put into execution what it already knows. He suggested that in some way the group get in touch with Mr. Talmadge and get him to make a radio talk and do something to help the rpoblem.

Mr. Stoddard of the Atlanta World suggested -
that the only way to stop lynching is to apprehend and convict the people who commit murder. He said that the group ought to see what the status of the Walton County case is and try to bring some pressure to bear to see that it is more vigorously prosecuted.

Mr. Warwick suggested -
That the key to the trouble is law enforcement ant that there have been techniques developed for police training in handling minority problems and group tensions. He suggested that the civic clubs of Atlanta insistantly press for a concerted training of the police force. There have been several cities that have adopted training programs.

Mr. McCallister said -
That there were enough people present at the meeting with influence to put a stop to members of the police force belonging to the KKK. He said until we can get a condition where a police officer cannot belong to the KKK and wear his badge nobody in Atlanta is safe.

In conclusion Dr. Russell made four proposals -

(1) Let the Interracial Committee and the Southern Regional Council make a study and take the findings before the civic clubs of Atlanta.

(2) The group would bring pressure to bear upon the Mayor and officials in regard to police officers belonging to the KKK.

(3) Form a committee of a few (possibly not over three) to go to Walton County and try to find out what is being done. Show that the group is in back of the investigators. (This proposal was objected to from the floor as being useless.)

(4) Somebody contact Talmadge.

Dr. Boddie proposed a resolution that the group is opposed to lynching. It was suggested from the floor that the proposal be amended to make it a resolution against murder. Mr. Warwick said that since the group is not official, has no chairman, is not representative, it is in no position to make a resolution against lynching. Dr. Boddie's proposal was dropped.

Bishop Fountain agreed with Dr. Borders that the group should get in touch with Mr. Talmadge.

Dr. Russell called for the presidents of the civic clubs of Atlanta to meet with him in his office for further discussion before further steps are taken by the group.

THE SOUTHERN NEGRO YOUTH CONGRESS

Summons you to—

The Southern Youth Legislature

COLUMBIA SOUTH CAROLINA

OCTOBER 18, 19, 20 1946

SOUTHERN YOUTH LEGISLATURE

This year the Southern Negro Youth Congress will hold its 7th Conference in the form of a *Southern Youth Legislature*. The very form of the conference will dramatize its central emphasis—the united and unrestrainable will of our youth to gain possession of the ballot, and to wield this weapon of democracy with skill and courage; to secure for ourselves and our people all the rights and opportunities of a full and unfettered citizenship!

SUMMONS TO THE YOUTH OF THE SOUTH

Yesterday's warriors, young workers, farmers and students . . .

Young men and women, Negro and white, from the churches, clubs, schools and trade unions. . .

Generation of victory, who fought a war and dreamed a dream of free citizenship in a free South and a free world. . .

To you, the young, the brave and undaunted; to you, the hope of our people and guardians of the future, this Call is addressed.

OUR SIMPLEST NEEDS—OUR FONDEST HOPES

Our simplest needs for livelihood and our fondest dreams for a secure and happy future are threatened.

The vision of equal citizenship sustained past generations of our people in their tortuous battle up from slavery.

This vision again gave meaning to the million youth of our generation who—though Jim-Crowed and humiliated up to the very point of death on the battlefields—expended themselves hero-

The Administration has shown neither courage nor concern for our well-being. Its record-breaking attempts to pass legislation to shackle labor is only matched by its filibuster against federal anti-lynching legislation, murder of the FEPC bill and indecent conspiracy to forestall the enactment of the anti-poll tax bill.

Our Administration has stationed troops in half the countries of Europe and Asia for the alleged purpose of guaranteeing so-called free elections. How can it qualify as guardian of democracy abroad when it has failed to pass a bill to abolish the poll tax so that the people of the South may vote?

THE TASK OF A GENERATION

We are the sons and daughters of a people of courage. Ours is a history of struggle for democracy.

Each generation has had its historic task: to become the first full-fledged voting generation of Negro Americans is ours.

We can wait no longer.

We are not alone. Our cause is the fight of all Americans who hold democracy and freedom dear.

The great organizing drive of labor unions and the spreading

This year the Southern Negro Youth Congress will hold its 7th Conference in the form of a *Southern Youth Legislature.* The very form of the conference will dramatize its central emphasis—the united and unrestrainable will of our youth to gain possession of the ballot, and to wield this weapon of democracy with skill and courage; to secure for ourselves and our people all the rights and opportunities of a full and unfettered citizenship!

SUMMONS TO THE YOUTH OF THE SOUTH

Yesterday's warriors, young workers, farmers and students . . .

Young men and women, Negro and white, from the churches, clubs, schools and trade unions. . .

Generation of victory, who fought a war and dreamed a dream of free citizenship in a free South and a free world. . .

To you, the young, the brave and undaunted; to you, the hope of our people and guardians of the future, this Call is addressed.

OUR SIMPLEST NEEDS—OUR FONDEST HOPES

Our simplest needs for livelihood and our fondest dreams for a secure and happy future are threatened.

The vision of equal citizenship sustained past generations of our people in their tortuous battle up from slavery.

This vision again gave meaning to the million youth of our generation who—though Jim-Crowed and humiliated up to the very point of death on the battlefields—expended themselves heroically in the defense of our country and the people of the world from the bloody tyranny of the fascist Axis.

Today this vision of democracy, this legacy of our foreparents and our heroes felled in the fight for freedom — our rightful heritage as Americans guaranteed in the Constitution — is being violated.

Before the echoes of our victory cease, the air is filled with the sound of the Rankins and Bilbos hurling their abuse and insult against us.

Before the heroes have all returned from their missions of liberation abroad, bands of Klan-inspired vandals sack their homes and kill their kin in Columbia, Tennessee.

Before the gigantic accomplishments of American industry in the war have been fully recorded, the NO JOBS FOR NEGROES signs appear again in the faces of increasing numbers of unemployed.

Before post-war reconstruction activities have been fairly begun and our wounds from yesterday's battles have mended, high-placed, cynical and greedy men in our country are busily engaged in plotting with imperialists of other nations to push our country into an atomic war against the Soviet Union, our ally in the anti-fascist war, and to crush the colonial peoples now battling for their emancipation.

We who were one with the people of the world in the war against fascist enslavement are determined, even as they are, to succeed in reaching ever higher levels of self-government and democracy. We share with the freedom-loving youth of Europe, Asia, India, Africa and Latin America the common struggle for true democracy just as we shared with them the fight against the common enemy in battle.

The Administration has shown neither courage nor concern for our well-being. Its record-breaking attempts to pass legislation to shackle labor is only matched by its filibuster against federal anti-lynching legislation, murder of the FEPC bill and indecent conspiracy to forestall the enactment of the anti-poll tax bill.

Our Administration has stationed troops in half the countries of Europe and Asia for the alleged purpose of guaranteeing so-called free elections. How can it qualify as guardian of democracy abroad when it has failed to pass a bill to abolish the poll tax so that the people of the South may vote?

THE TASK OF A GENERATION

We are the sons and daughters of a people of courage. Ours is a history of struggle for democracy.

Each generation has had its historic task: to become the first full-fledged voting generation of Negro Americans is ours.

We can wait no longer.

We are not alone. Our cause is the fight of all Americans who hold democracy and freedom dear.

The great organizing drive of labor unions and the spreading influence of progressive thought among the white youth of the South strengthen our fight.

— For the abolition of the poll tax and all barriers to the vote.

— For the enactment of an FEPC law guaranteeing the right to work at all jobs.

— For federal anti-lynching legislation and genuine civil liberties.

— For adequate and equal housing, health and educational facilities.

— For an end to "white supremacy" customs and practices which violate our human dignity and rights.

WE MUST WIN NOW

We must win the battle for the unrestricted right to vote. Our lives, our future, our survival as a people demand that we win it now.

Let us assemble by the hundreds in Columbia, South Carolina. Let the halls of the Southern Youth Legislature ring with our demands. Let us counsel and devise ways and means of winning for ourselves and our people the primary badge of citizenship—the ballot.

The mark of a free citizen is his right of suffrage.

We refuse to accept the verdict of Klansmen and their collaborators that we shall be a voteless and a voiceless people.

We shall be heard.

We are Americans and we shall come into our heritage!

On to the SOUTHERN YOUTH LEGISLATURE!

HOW THE LEGISLATURE WILL WORK

1. House of Representatives

The House of Representatives shall be composed of representatives of youth organizations, youth serving agencies, and organizations interested in youth—other than local clubs and Councils of the Southern Negro Youth Congress.

Members of the House of Representatives shall be elected by their organizations on the basis of one Representative for each fifteen members or major fraction thereof.

2. Senate

Membership in the Senate will be limited to delegates from the clubs and Councils of the Southern Negro Youth Congress.

3. Visitors

Organizations may send as many visitors as they desire. Unattached individuals may attend as visitors. Visitors will be allowed voice but no vote in the affairs of the Legislature.

4. Committees

Legislative committees will hold general hearings on the respective issues before the Legislature. They will draft, discuss and introduce bills for consideration of the full Legislature. The committee hearings will consider the following subjects, and any others which the Legislature may designate:

Jobs and Training — Voting and Registration — Education — Veterans Problems — Agriculture — Peace — Civil Liberties — Social Welfare.

Standing committees will be elected to serve for the duration of the Legislature as follows: Presiding, Rules, Credentials, Resolutions, Constitution, Finance.

5. Presiding Officer

The President and presiding officer of the Legislature shall be the President of the Southern Negro Youth Congress.

6. Cabinet

The President's Cabinet shall be composed of: (1) the chairmen of all legislative committees plus (2) the chairmen of all standing committees plus (3) the executive officers of the Southern Negro Youth Congress.

GENERAL INFORMATION — FEES

1. The registration fee for all delegates (Senators and Representatives) will be $2.50.
2. The registration fee for visitors will be $5.00.
3. Housing accommodations will be made available to all delegates and visitors at a reasonable fee.
4. The first session of the Legislature will begin promptly at 10:00 A.M., Friday, October 18. It will therefore be necessary for all delegates to arrange to arrive in Columbia on Thursday evening, October 17, or early Friday morning.
5. The Advance Registration Blank below is for the convenience of prospective delegates and visitors. In order to guarantee accommodations, you are urged to register now.

Dear Friend:

Enclosed is your invitation to the Seventh All-Southern Negro Youth Conference to be held in Columbia, South Carolina, October 18, 19 and 20. This year the Conference is being held in in the form of a SOUTHERN YOUTH LEGISLATURE in order to dramatically call the attention of our youth and our nation to the foremost demand of the southern people -- the unfettered right of franchise.

All indications are that this year's conference will be an event of greater proportions and importance to the cause of democracy in America and in the South than even those of past years. This will be a gathering of the present and future leaders, white and Negro, of serious thought and action in the South. As in the past leading personalities from the fields of politics, labor, religion, education, civil rights and the professions will be among the reporters and speakers at this Conference.

Read the enclosed announcement and fill out the Preliminary Registration Blank <u>today</u>. If you are a member of the Southern Negro Youth Congress you are entitled to participate in the SENATE. If you are a delegate from another youth or youth serving organization, trade union, church, school or social club, you will serve as a member of the HOUSE OF REPRESENTATIVES.

Start today to interest other individuals and groups in your community to attend the Southern Youth Legislature. Let's make the 7th All-Southern Negro Youth Conference the best yet. On to Columbia, South Carolina!

Sincerely yours,

Esther V. Cooper

Esther V. Cooper
Executive Secretary

SOUTHERN YOUTH LEGISLATURE

American Crusade

TO END

Lynching

A Call to the American People

Join the pilgrimage to Washington, D. C., Monday, September 23rd, for immediate action to end lynchings.

A WAVE of lynchings and mob violence is sweeping across America. Though its roots are in the South, it marks the whole nation with the scourge of lawlessness, violence, and race hate.

Little more than a year after our victory over German and Japanese tyranny, the wanton killings of innocent men and women in our country has become a national disgrace.

The total number of recorded lynchings during the last six months exceeds the number for the entire period of the war. At least 41 have been reported since V-J Day — in Georgia, Louisiana, Florida, South Carolina and Mississippi. The number has mounted monthly.

In almost every instance, the victim was a veteran, recently returned from service in a war to win freedom from fear. The lynchings are intended to strike fear into the hearts of Negro servicemen who have come back to their homes determined to vote and take an equal part in the birth of a democratic South.

These victims were all Negroes. But the pain and the shame of lynching rests upon the entire American nation. Lynching not only flouts and undermines the Constitutional law of our land; it violates as well our deepest religious convictions, whatever our creed. This un-American state of affairs threatens the entire framework of our democracy; the civil rights of all citizens.

It is the duty of all of us to do our part in wiping out this disgrace to humanity.

At this moment, though there have been many victims, not one single arrest, indictment, or conviction of any participant in any of the lynchings has been made. Federal action has been negligible and ineffective. Moreover, experi-

ence shows that action on the part of state and local authorities cannot be expected.

Lynching cannot be permitted to continue unchecked in a nation founded upon principles of justice and equality.

America must rid itself of the crime of unpunished lynchings. Join us in the *American Crusade to End Lynching.*

We, the undersigned, morally indignant over this lawless violence, call on the American people to join us in Washington, D. C., the national capital, Monday, September 23. From all over the land, we will lift our voices, letting the responsible authorities hear and know that Americans want immediate action to end lynchings.

In September, 84 years ago, Abraham Lincoln signed the Emancipation Proclamation to abolish slavery in America. On September 23, 1946, we shall issue a new proclamation voicing our determination to abolish lynching in our nation.

Come to Washington from the cities, towns and farms. Join with the members of your union, church or school or club. Come as an individual. Bring your neighbors. Let us raise our voices in an unchallengeable demand for:

- The apprehension and punishment of every lyncher
- Passage of a Federal anti-lynching bill
- Keeping the Klan out of Senate—no seat for Bilbo

Resolution from:

The Department of Race Relations
as
Recommended by the Advisory Committee

An atrocious mob murder of two Negro men and their wives was committed in Walton County, Georgia, on July 25, 1946. Shortly after the event, the Governor of the state issued a statement condemning the outrage and promising unrelenting action against the criminals. He offered a reward and has repeatedly expressed his determination to press the matter to a conclusion.

In view of the fact that no arrests have so far been made, the Executive Committee of the Federal Council of the Churches of Christ in America views this situation with concern. Unless the forces of law and government demonstrate their effectiveness by action against the perpetrators of this crime, lawless persons and groups in other communities may thereby be encouraged to commit similar crimes. Other lynchings have occurred recently in Lexington, Mississippi and Minden, Louisiana. Negroes have been the victims of mob violence in Athens, Alabama, and Columbia, Tennessee, and threats of mob violence have been used in other localities. This trend toward lawlessness furnishes definite grounds for our apprehension.

THEREFORE, The Executive Committee of the Federal Council commends the church organizations of Georgia who have condemned the lynching and have demanded legal action such as the First Methodist Church at Monroe, Georgia, the Georgia Council of Church Women, the Atlanta Methodist Ministers Association, the Episcopal ministers in Atlanta and the Georgia Synod of the Presbyterian Church in the U.S. We join with the Presbyterian Synod of Georgia in recognizing with penitence our own share "of responsibility for the conditions of society which have made such acts possible in the past, and dedicate ourselves to combat the spirit of hatred out of which such deeds arise."

WE CALL UPON OUR CHURCHES to rally to the support of the people of Georgia who through their churches are insisting upon action by the chief executive of the State and, in the words of the Presbyterian Synod, by "constituted officers of the law, who are concerned, to continue the search for the guilty parties until they are found."

317 PRINTED IN U.S.A.

ACROSS THE TABLE . . .

★ If we could we'd sit down and talk about the Public Affairs Pamphlets — what they're all about and why they're more needed than ever before as the peoples of the world face the job of building a peace that can be kept.

★ Public Affairs Pamphlets are now in their ninth million, with monthly distribution averaging about 160,000 copies. In 1943 and 1944 the pamphlets dealt with war and postwar problems, with emphasis on full employment in peacetime . . . and decent standards of living, health, and human relationships.

★ In 1945 these 32 page studies, issued monthly, will continue to grapple with major economic and social problems . . . as these issues and facts emerge.

★ Written by authorities, the pamphlets present millions of dollars of research in everyday words, with lively drawings and meaningful charts. These pamphlets make news each month in your favorite newspapers and magazines because they discuss so called technical economic and sociological facts with as little to-do-and-to-what as you might in your office or living room.

★ Men and women who want facts to use now, order the pamphlets regularly. So do a network of groups, agencies, and institutions in every state in the U.S.A. (The Committee also receives regular orders from India, South Africa, China, and 9 other foreign countries.)

★ Libraries, bookstores, and some newsstands carry Public Affairs Pamphlets. But because the pamphlets are notable program and discussion aids the bulk goes to civic clubs and educational groups; churches and religious groups; industry, including management and trade unions; schools and colleges; Government and health-welfare agencies; U.S.O.'s, other war agencies; the Armed Forces, here and overseas.

See Back-Fold for more facts about the Public Affairs Committee

9-15-45 No. 1

OPPORTUNITIES FOR QUALIFIED VETERANS IN MEDICINE AND DENTISTRY

To guard against a possible shortage of students in the dental and medical colleges of the Nation, qualified veterans are being given priority in opportunities to study medicine and dentistry.

Believing that among returning veterans are sufficient individuals to meet future needs for doctors and dentists, the War Manpower Commission Procurement and Assignment Service is cooperating with medical and dental associations to interest veterans in these professions. Local Boards are requested to give general information on the opportunities available to veterans in these two fields and to encourage qualified veterans to seek further information from proper sources.

Educational benefits of the G. I. Bill provide up to four years of college for the veteran who was under 25 when he entered service. This includes $500 per year for tuition, books, laboratory fees, etc., $50 a month for a veteran without dependents, and $75 for the veteran with dependents. Any recognized and accredited college or university may be selected. Application for G. I. Bill educational benefits is made directly to the college or through the nearest regional office of the Veterans Administration.

For the veteran who was over 25 upon entering service, one year of education is provided. If his education was interrupted or interfered with by his military service, he is entitled to additional education for as many months as he was in service.

Requirements for pre-professional study are as follows:

1. High school education or equivalent.
2. An aptitude for science.
3. Desire to serve mankind.
4. Ability to work harmoniously with people.
5. Courage and self-reliance.
6. Physical, mental, and emotional stamina.
7. Sufficiently strong desire to be a doctor and to work extremely hard.
8. High scholastic aptitude so as to maintain standing in upper one-third of class.

Pre-professional study usually consumes two years and includes the following subjects:

1. Biology
2. Physics
3. Inorganic and organic chemistry
4. Mathematics
5. Modern languages

The mere completion of these studies does not necessarily indicate a qualification to study the profession. The work is so difficult that experience has shown that students who have not attained a scholastic standing in the upper third of their pre-professional classes have great difficulty in doing satisfactory work. Hence, those who have not shown a relatively high aptitude as students in their pre-professional work should seriously question the advisability of undertaking a medical or dental career as the likelihood of success is not great.

Local Boards and Reemployment Committeemen are requested to make this information available to veterans whom they think are qualified. Family doctors or dentists may be consulted or the veteran may write to P. O. Box 457, Chicago 90, Illinois, for information on medicine, and P. O. Box 688, Chicago 90, Illinois, if he is interested in dentistry.

9-15-45 AIRLINE JOBS FOR VETERANS No. 2

The 22 domestic and international airlines of the United States have announced that they expect to fill a high proportion of new jobs from the ranks of returning veterans of World War II, men and women alike. Hundreds of veterans are needed immediately and thousands more will be needed in the months and years ahead as the air age develops.

The most pressing need at present is for mechanics. A veteran who has experience in installation, maintenance, overhaul, or operation of mechanical devices or mechanical equipment such as aircraft engines, aircraft instruments, radio, radar, automotive equipment, motors, etc., can probably qualify for a position as Mechanic, Junior Mechanic, or Apprentice.

Vacancies also exist among station forces, including passenger agents, reservation agents, ticket agents, and other similar jobs. Applicants should be high school graduates with a special interest in dealing with the public. Preference is given to persons with two years of business experience, or two years of college, or the equivalent.

The demand for co-pilots will provide opportunities for Army Air Forces dischargees with 1000 flight hours, instrument card, and multi-engine experience. Navigators, flight engineers, and flight radio operators are also needed in smaller numbers.

Ground radio operators are especially needed at this time. Qualifications are high school diploma, second-class radio-telephone license, and typing speed of 40 words per minute.

Other occupations which will become available are clerks, accountants, meteorologists, traffic agents, teletype operators, cargo handlers, plane cleaners, porters. etc.

Veterans interested in an airline job should write the Air Transport Association of America, 1515 Massachusetts Avenue, N. W., Washington 5, D. C., for a Veterans Occupational Questionnaire. They may also write the Personnel Director of any airline, giving such specific information as the occupation desired, name, permanent address, civilian experience, military experience including training, number of years high school and college, length of military service and highest rank held, date of availability for employment and present address.

Two points for all veterans to remember before applying for an airline job are:

1. Many airline jobs require men of particularly high qualifications because they are related to that feature of air transportation which is important above everything else,-- safety of operations.

2. While airline wages are not as high as in some other industries, they offer steady employment, with postwar security in an industry whose rapid expansion insures promotion opportunities for qualified veterans.

Some starting salaries are shown below:

Mechanics	$1.00 per hour (about $208.00 per month)
Passenger Agents	$120.00 to $140.00 per month
Co-pilots	$190.00 to $220.00 per month
Flight Navigators	$250.00 to $300.00 per month
Ground Radio Operators	$140.00 per month
Junior Meteorologists	$175.00 per month

Workers' Institute Backed by Unions

Tennessee School Trains Students to Use Strength For Betterment of Their Lot—Courses in Leadership

By F. A. Behymer
A Staff Correspondent of the Post-Dispatch

MONTEAGLE, Tenn., Sept. 25.

AT Highlander Folk School it was night and the autumn moon shone bright. Warmly the windows glowed and from within came sounds of revelry, shuffling of feet and the clear calling of a strong young voice—

Take your lady by the paw,
And lead her around, the lady from Arkansas;
Into the center with a whoa-haw-gee,
And around that lad from Tennessee.

More shuffling of feet and sounds of romping and carefree laughter and again the clear young voice calling—

Ladies join your lily white hands,
Gents your brown and tans;
The ladies bow and the gents know how,
And if that ain't huggin' show me now.

The students of Highlander Folk School had studied while it was day and now, for their reward, they were having a frolic, for this is a school where work isn't all. Square dancers were doing the Tennessee running set, as Ermone Fay Johnson called the figures, and they were all as happy as children at play.

It was not as children that they came to school, for the Highlander bell calls grown folks from factories and fields and they are taught not the ABCs but how to be winners in the strife and gain a better way of life.

Highlander Folk School teaches that in union there is strength and students come to learn how better to use their strength in the workers' unions for the betterment of their lot.

It had been a typical day at the school—typical at least of one important part of its teaching—a workers' institute for union leadership training. Significantly, too, it marked the development of a new phase of the school's program, the identification of industrial workers with farmers, the goal which Myles Horton had set when he founded the school in 1932, only now beginning to emerge.

From Chattanooga and over in Georgia had come that morning a group of 40 hosiery workers, sent by their unions for advanced training in union responsibility and a broader background of some current developments, with particular reference to relations between labor unions and the co-operative movement, a point of contact between the industrial workers and the farmers.

It was one of many such institutes that have been held at the school, many of the workers coming time and again, eager for a day of work and play, knowing that they would be expected to help out with the meals and dishes but not minding that in the least, looking upon it as part of their play.

Happily, like school children, they came, though all of them had left behind the golden rule days and some of them were approaching middle age and a couple of them were grandmas. They rambled or loitered until the school bell rang and then came quickly into the assembly room, where the big fireplace gave welcome warmth, for the September mornings are chill here at the top of the Cumberlands.

William Rafsky of Philadelphia, national educational director of the hosiery workers, welcomed "you kids" and expressed the hope that the scholars would go back to their unions with a little more enthusiasm and a little more knowledge, in which case "we will feel that we have accomplished our purpose."

Some of the students withdrew for a separate discussion of public speaking and parliamentary law. The others, at the suggestion of Myles Horton, gathered around the fireplace. Horton launched the discussion into the relation between labor and the farmers, then gave way to "Cathy."

Catherine Winston, a member of the staff and editor of the Tennessee CIO News, a slight figure with the smoldering fire of a zealot in her slumbrous eyes, spoke earnestly, in a strong voice, of the workers' need of keeping prices down as well as keeping wages up. What good was it, she asked, to get high wages if they had to spend it all for high-priced consumer goods. She explained the working of the co-operative movement that started in England and stressed the need of workers and farmers joining hands in this country.

Ermone Fay Johnson, staff member and educational director of the National Farmers' Union, told of the progress that had been made by the farmers through co-operation.

Horton urged organization of the workers and farmers to set up a short cut from the farmers to the consumers, eliminate middlemen's profits, so that farmers would get more and consumers pay less. He reminded the hosiery workers that there was a difference between what they got for making stockings and what the farm girl paid for them. Politically, if the workers and the farmers pulled together, they could outvote the others. He urged the formation of consumer groups to buy direct from the producers. It wouldn't be easy but neither was it easy when they started their union.

Rafsky pointed out the similarity between the labor union and the co-operative. Both were democratic. Unionists, organized as consumers, could bargain for prices as they now bargain for wages. It would be a slow process but a well-trained group like the hosiery workers could make a start on food and groceries. It was such a start that the Highlander Folk School was trying to bring about. The same spirit that had made the union succeed would make the co-operative succeed.

It was the way, Horton said, to get power. "Unions and co-operatives, if they get together, can run the show."

The discussion ended when the dinner bell rang and Mary Lee Mack, from Ratcliffe College, a student for the summer preparing her thesis, broke in from the kitchen door: "Say, if you want to eat, how about some help setting the tables?"

The students set the tables and brought the food that other students had prepared and the assembly room was quickly turned into a dining room. Afterward they cleared the tables and washed the dishes and sat in groups on the grass in front of the school, waiting for the afternoon classes. Toward the end of the day school was dismissed and the students went on hikes or joined in volleyball on the back campus. The dinner bell called them to the evening meal. When it was dark enough, Rafsky put on a picture show to illustrate the handling of grievances and then the floor was cleared for folk dancing, with Ermone Johnson tireless in calling the figures and the students tireless in stepping to the tunes.

Myles Horton, born and brought up in Tennessee, getting an education at Cumberland University, the University of Chicago and Union Theological Seminary and spending a year in European study, was interested in rural-urban sociology, which seemed to him the most important problem in America and in a synthesis of religion with the larger economic and social problems, especially in the south. He wanted to start a school for the instruction of industrial workers and their ultimate identification with farmers. He needed somebody to go in with him. He heard about Don West, who was teaching in the mountains. They met in North Carolina and found themselves like-minded. Together they set out to start a school.

IT'S NOT ALL WORK AND NO PLAY. STUDENTS PARTICIPATING IN SQUARE DANCING.

A CLASS IN LEADERSHIP. UNDERLYING THEME OF THE SCHOOL IS, "IN UNION THERE IS STRENGTH."

MYLES HORTON, FOUNDER AND HEAD OF HIGHLAND FOLK SCHOOL, MONTEAGLE, TENN.

Dr. Lillian W. Johnson of Memphis had a summer home two miles back in the woods from Monteagle, center of southern conservative culture, and there she had established a community center for the help of the mountain people who did not fit into the Monteagle picture.

Horton told Dr. Johnson what he wanted to do and she liked the idea. She turned her house over to him and West for a year to see what they could do. They didn't get very far that first year. Horton is not sure whether it was four students or six that they had. At the end of the year West, quite understandably, went away, but Horton stayed. Dr. Johnson must have liked his spirit, for she turned over to him the house and 200 acres of rocky land. Horton, knowing that progress would be slow, set himself to establish a school for the building up of more democracy in the south by training intelligent and progressive leaders to organize unions and co-operatives.

As a starter he made the school co-operative. The property is owned by the permanent staff, incorporated as trustees, operating under a policy fixed by an executive council composed of the staff and leaders of organized labor.

When the school was started there were few unions and few progressive leaders in the south. The new school was looked upon with disfavor and distrust. Horton and his associates were called communists. Folks who sojourn at Monteagle Assembly in the summertime still call them that and from here all the way down into Mississippi people can be found who sniff or snort whenever Highlander School is mentioned. Not laboring people though. There are many unions in the south now and they are strong. One of the strongest is that of the Hosiery Workers. They were the first organized group to indorse the school. Now all the unions do. The American Federation of Labor in 1935 declared by resolution that any attack on Highlander School was an attack on labor.

Horton, who always believed that the trade movement was the soundest basis for democratizing the south, beholds what has come to pass and is a happy man. He views it as a part of the growing liberalism of the south.

Growth of the school began when the unions began sending students to be trained in leadership. Now they send more than can be accommodated. This year there have been 120 resident students taking courses of a week to a month. That is the capacity of the school, though it has been enlarged to twice its original size. Conferences and institutes for groups of workers are held at intervals through the year. The school is the recognized union center of the southern area and also has political importance. The Political Action Committee for Tennessee was organized here. Students come from all over the southeast, sent by their unions and with their expenses, $100 a month for room, board and tuition, paid by the unions. More than a third of the school's financial support comes from individual subscriptions of $1 up. Eleanor Roosevelt is top contributor with $125 a year. Other contributions are from unions and liberal foundations. An effort is now being made to raise $65,000 for a dormitory and a library building.

For the teaching there is a staff of seven. Horton's wife, Zilphia, teaches music and dramatics. Ermone Fay Johnson is educational director. Catherine Winston is going to take Horton's place as active director so that he can give full time to building up the relations between the unions and the farmers.

Up to now Horton's biggest problem has been to get the labor and farm groups together. "Now, by golly," he exults, "we're beginning to do it." As state representative of the National Farmers' Union he has unlimited responsibility and opportunity to do things for the farmers of Tennessee.

The day that the hosiery workers came to Highlander School to work and play, to study their problems with earnest faces and trip through the square dance far into the night, Myles Horton looked on and was happy, for this was the kind of a school that he as a pioneer had planned, having no guidance because there never had been such a school, fighting uphill and coming at last to the top.

Doctor Tells Of Good, Bad Side of Golf

GOLF is one of the finest of games from the health standpoint. It has more advantages for the average man than almost any game. Played in the open air and sunshine, with congenial friends, it is most conducive to good health and fellowship. You are getting sound exercise and your mind is devoid of business worries.

The average golfer ruins all these splendid features, however, by the manner in which he indulges in the sport. The rush for the golf course after Saturday noon creates confusion, hurry, fast eating and a tremendous output of energy on the part of the golfer. This doesn't take into account his playing more golf than is compatible with his physical condition or the refreshments indulged in or the late hours at the club. Sunday he is up and at it furiously again determined to make a day of it. The same fast pace is continued, but more of it, and Monday he is feeling fit but awfully tired.

Thus the vast majority of golfers exemplify the wrong side of golf.

Let's look at the right side. Take your time, eat slow, digest well, play nine holes instead of 18, but play the round well and let it be free of irritation and nerves. Don't make the day too long or strenuous. Watch your refreshments, and retire reasonably early. Next day play either in the morning or afternoon, but not all day.

This much is certain about any sport: condition is everything, and without it you are unable to compete with the fellow that has it. Don't fool yourself. Use good common sense, it will always guide you properly. Understand, I am 100 per cent for golf if played wisely. The older you are the more wisely you should play. This has reference to time, exertion, exposure, etc., rather than finesse. At the age of 70 you should either discard the game or play it with such respect for physical disturbance as to make it unattractive.

NEGRO REPRESENTATION ON COURTS MARTIAL REVIEW BOARDS URGED

New York--Promptly upon announcement by Secretary of War Robert P. Patterson that War Department Clemency Boards have started a review of individual cases of 33,500 military prisoners now serving General Court Martial sentences, the NAACP urged the appointment of qualified Negroes, both from the Army and from civilian life, to these Clemency Boards.

The request was addressed to United States Circuit Judge Sherman Minton, Chairman of the War Department Clemency Board, under whose direction the Special Clemency Boards, each consisting of a civilian and two Army officers, will serve. Walter White, NAACP Secretary, informed Judge Minton that "on recent tours to battlefronts in both the European and Pacific theatres of war, I received many reports of court martial proceedings against Negro soldiers which appeared to be unjust. The Legal Department of the NAACP has

reviewed the records of many court martial cases within the United States and from overseas and in many cases has found instances of unfairness of trial and sentence."

The NAACP announced that, whether its request for representation is granted or not, its National Office and Veterans Bureau will to the limit of their ability attempt to present the facts in cases where Negroes have been treated unjustly, particularly where such facts during war time could not be effectively or completely presented. The NAACP invites veterans or relatives of veterans who feel that injustice has been done in courts martial to communicate promptly with the NAACP at 69 Fifth Avenue, New York. It is urged that only bona fide cases accompanied by carefully checked factual material accompany requests for intervention by the NAACP.

APPRENTICESHIP OPPORTUNITIES IN THE CONSTRUCTION INDUSTRY

Because it has been found that there are not enough skilled workers for the expected postwar building needs, the construction industry is seeking an immediate and marked increase in the number of apprentices in the building trades.

The percentage of younger men going into the construction industry in the last few years has dropped considerably and a substantial increase is critically needed if the proposed construction era is to be accomplished.

To meet this situation, the construction industry, through its General Committee on Apprenticeship for the Construction Industry, consisting of leading contractors and union officials, has urged that each local union and employer association in the industry renew and extend its activities to develop more apprentices within their crafts, and that a "uniform, sound policy be developed in handling returned veterans in terms of Public Law 346 (G. I. Bill) and in terms of its application."

The War Manpower Commission has announced that in order to alleviate the critical need it will be necessary to train enough apprentices so that approximately 40,000 will complete their training each year and take their places in the trades as all-round skilled workers.

The employment of veterans in the construction trades apprenticeship program will not only help industry in providing the skilled workers who are needed, but also will provide career opportunities for veterans who qualify.

Nationwide apprentice training programs have been established for the carpentry, electrician, plumber, steamfitter, and painter and decorator trades.

Under the G. I. Bill, subsistence allowance is provided qualified servicemen who enter an apprenticeship program. In addition, a veteran who is accepted for employment as an apprentice earns as he learns. His wages increase as he advances from one step in his learning to another. The advancement takes place at regular intervals - usually every six months. Upon completion of his apprenticeship he receives the wage rate paid all-round skilled workers in the trade.

The qualifications for carpentry, steamfitting, plumbing, and painting and decorating are similar in the following respects: age requirements for veterans are from 16 to 24 at the time the veteran entered service, high school graduates or the equivalent are desired, and applicants must be physically qualified to perform the job. The training includes a probationary period of approximately 500 hours, and a certain number of hours weekly in related classroom instruction. The tenure of apprenticeship for steamfitting and plumbing is five years, for carpentry four years, and painting and decorating not less than three years. Electrician apprentices must have similar qualifications as those mentioned above and the term of apprenticeship is five years. The wages paid apprentices vary with the different trades and localities and are based on the wages paid the all-round skilled workers in the trade in the locality.

For additional information on qualifications under Public Law 16 and the G. I. Bill of Rights, see the Handbook of the Veterans Assistance Program of the Selective Service System, Section 410.0.

Further information on applications, wage rates, and opportunities in other branches of the contracting industry may be obtained at the nearest U.S.E.S. office.

September, 1945

Government Price Support of Dairy Products

FOREWORD

The Dairy Industry Committee, representing:

American Butter Institute
National Cheese Institute
American Dry Milk Institute
Evaporated Milk Association
International Association of Ice Cream Manufacturers
International Association of Milk Dealers
Dairy Industries Supply Association

devotes itself to the consideration of problems which are of industry-wide concern and broad public interest.

During the war emergency, while bending every effort to assist the industry in accomplishing its tasks of production and distribution, the Committee has been mindful of the necessity for preserving the economic health of the industry (producers and processors) as the war emergency recedes.

One of the Government objectives as expressed by statute is to support prices of agicultural commodities for a period of two years after the first January following the close of the war.

The Dairy Industry Committee has given thorough consideration to the possible alternative methods of implementing the Government support price program for dairy products. The Committee has concluded that the most efficacious means of accomplishing the Congressional purpose is one similar to that first recommended for all agricultural products by the Committee on Postwar Agricultural Policy, Association of Land-Grant Colleges, November, 1945, and later subscribed to by Secretary of Agriculture, Claude Wickard, December 4, 1944; the Bureau of Agricultural Economics in their elaboration of Secretary Wickard's position as presented in "Conversion Program for Cotton South," May, 1945; Directors of War Mobilization and Reconversion, Byrnes and Vinson, April and July, 1945; and other groups.

This method of price support would permit the prices of milk and dairy products to find their natural levels in a free market and would involve supplementing farm income by direct Government payments to producers to the extent that free market prices fall below the support price level of affected commodities.

This report tells why The Dairy Industry Committee recommends, if prices fall below support levels, that the support be made effective by free market prices supplemented by Government compensatory payments.

CHARLES M. FISTERE,
Executive Secretary.

I—Statutory Basis

A body of Federal law now in effect directs the Secretary of Agriculture to support prices of most of the important farm products at levels of not less than 90 per cent of parity during the existing emergency and for a period of two years beginning January 1 following the official close of the war.

The various laws dealing with support prices group farm products as follows: (1) The so-called *basic commodities* (corn, wheat, cotton, tobacco, rice and peanuts); (2) The *Steagall Commodities* (which include milk and butterfat, hogs, poultry, soybeans, and several others crops); and (3) *Other commodities* (for which no definite support price levels are specified) but for which it is the declared policy of Congress that prices be kept in fair relationship to the first two groups.

The Steagall Amendment (which includes milk and butterfat) provides for price support at *not less than 90 per cent parity*. Parity is computed only on milk and butterfat as sold by the farmer—not on processed or manufactured dairy products.

The statutes recite various means by which this commitment to support farm prices may be carried out. In the case of the basic commodities (corn, wheat, tobacco, rice, peanuts and cotton), the Stabilization Act of 1942 provides that farm prices shall be supported by producer loans, which in effect is price "pegging.' With regard to products covered by the Steagall Amendment (which includes milk and butterfat), the law provides that prices may be supported "through a commodity loan, purchase, or other operation." The phrase "or other operation" appears to leave wide latitude to the administration as to the method to be used in carrying out the intent of the legislation for the Steagall commodities.

The *marketing* level at which price support mechanisms are operating is left to administrative discretion. Prices could be fixed for milk and butterfat sold by the farmer, or on the manufactured products at any or all stages in the distributing system.

The Steagall Amendment provides that prices shall be supported at *not less than* 90 per cent of parity. Administration discretion to support prices *above* that level is allowed.

Another question is the extent to which seasonal adjustments in support prices may be made. It is the opinion of the Solicitor of the Department of Agriculture that:

> "adjustments in the support price to reflect either normal or otherwise desirable seasonal variations in prices received by farmers constitute reasonable action under the Steagall Amendment."

It is also the opinion of the Solicitor that it is not necessary to support all grades and qualities of a product at the specified levels, regardless of where or

how the farmer markets his product. So long as average National prices are maintained for a product, the provisions of law are met and there can be variations above and below that average for grade and location.

The question as to method—not specifically covered in the legislation, nor (as yet) in an opinion by the Department of Agriculture—is whether a subsidy paid to the farmer is to be deemed a means of carrying out the Steagall Amendment. The legislation refers to support *prices*, maintained by commodity loans, purchases or other operations, leaving wide discretion to the administration as to method. On previous occasions the administration has ruled that benefit payments to producers (in effect, subsidies) are part of the price and are to be so regarded in legislation involving the parity concept.

II—The Effect of Price on Dairy Product Consumption

Dairy products are essential nutritional foods whose consumption is affected by income levels and price. Derived figures from the Department of Agriculture Food Situation, October, 1942, show that in 1942 the per capita consumption of various dairy products by non-farm families with incomes from $2000-$3000 was the following percentage of that by families with incomes less than $1000 (and under moderate depression about 1/4 of our population are in families with less than $1000 income):

Fluid milk	133	Ice cream	336
Fluid cream	133	Evaporated and condensed milk	98
Butter	137	Total milk equivalent	141
Cheese	192		

The accompanying chart shows the relative rates at which various dairy products are consumed per capita at different family income levels. While this relates to consumption by income comparisons, there is considerable evidence that lower income families are much more responsive to price changes of dairy products, as evidenced by their change in consumption, than are higher income groups. This is particularly true of dairy products that have substitutes and as the price of the dairy food changes relative to its substitute.

In the postwar period, if we have moderate depression, it has been estimated that we will have some 85 million people in families of less than $2000 income. The Nation cannot afford to overlook the need and ability of these 85 millions to consume dairy products. With this thought in mind, the following analysis of alternative methods of supporting farm prices for milk and butterfat is presented.

III—Alternative Methods of Supporting Dairy Product Prices

Members of the dairy industry and the general public should be aware of the controversy over our postwar government agricultural policy.

PER CAPITA CONSUMPTION OF DAIRY PRODUCTS BY NON-FARM FAMILIES AS RELATED TO INCOME[1] (1941)

* $5,000 and over

[1] Constructed from "The Problem of Achieving a High Level of Food Consumption in the United States"—doctorate thesis submitted to Harvard University by Willard W. Cochrane—1945.

The main question—assuming that something is to be done—is whether (1) we are to have price fixing, rigid production control and regimentation to agriculture and to industry; or (2) we are to have free markets and abundant production, with agriculture to have any necessary supplement to its income by means of some form of government compensatory payments.

Significance of Support Prices. There seems to be a popular misunderstanding as to the significance of support prices. Prices supported by either production control, price fixing, compensatory payments, or other methods all are designed to bring producers higher returns than they would secure under a government "do nothing" policy. If producers receive more than they would under a government "hands off" policy, someone has to pay the bill, call this subsidy or what you will. If the greater return is in the form of higher prices due to price fixing, market rigging or production control, consumers pay the bill in higher retail prices. If the greater return is in the form of government compensatory payments, consumers pay the bill in the form of taxes. But here there is a distinction. If the purpose of support prices is to make incomes more equal, then payment of the bill in the form of progressive income taxes is the more logical procedure since persons with higher incomes would bear the major burden.

Possible Methods of Price Support

Conceivably, the Steagall Amendment, requiring government support for the farm prices of milk and butterfat, could be carried out by any one, or a combination, of the following methods:

Fixed Prices. A fixed minimum price not less than 90 per cent of parity, which all processors would have to pay to farmers for milk or butterfat—somewhat along the lines of the present Federal milk marketing orders, but greatly extended in scope.

The Dairy Industry Committee disapproves this method because, if it were translated into consumer prices, it would probably curtail consumption so that it would cause products to back up on farms, or at least in storage; be administratively impractical; and create abnormal price relationships between fluid milk and manufactured dairy products, and within the manufactured products group.

Government Purchases. The pegging of a minimum price for manufactured dairy products, by Government purchases of the products in order to hold that price—similar in operation to the prewar DPMA program.

The Committee disapproves this method on the grounds that it would curtail consumption, pile up surpluses which would have to be disposed of, or waste products needed for human nutrition; interfere with seasonal storage movements, or even result in

the Government taking over the storage function; be an unnecessary burden on consumers; and, through decreasing dairy product consumption, increase the use of substitutes.

Two-Price System. A two-price, or export subsidy, system for dairy products in order to maintain domestic prices above world levels.

The Committee disapproves this proposal on the grounds that: (1) historically, the consumption of dairy products and their prices in the United States is largely dependent on the incomes of domestic consumers, and not on dairy products exports; (2) dairy products are essential foods and should be consumed domestically in adequate quantities, rather than having consumption curtailed by artificially high domestic consumer prices and subsidizing foreign consumption; and (3) a two-price system, or export subsidy, is inconsistent with a policy of expanding world trade in that it invites retaliatory measures that lead to international competition in export subsidies or increased tariff rates. Such measures tend to reduce international trade, domestic employment and purchasing power.

Production Control. Price raising by production control. Production control might result in price raising. But it by no means follows that it would result in increased incomes to producers. It would result in less dairy products for consumers; higher consumer prices; less products for transportation, processing and distribution channels to handle, and hence reduced employment and National income. For these reasons the Committee disapproves of such a method of supporting prices.

Surplus Disposal to Low-Income Groups. Disposal of surpluses domestically to unemployed and low-income families.

The Committee believes that, while such a program may be desirable from a nutritional standpoint for the lowest income groups, it would be inconsistent to hold up prices, curtail consumption and, in effect, increase the depressing effects and number of low incomes with one hand, while with the other, dole out money so that people can afford to buy food. The Committee believes that if a food distribution program to low-income families were inaugurated it would be limited in its effect on farm milk and cream prices to the extent that there was consumer participation. If such a policy were adopted, the products should be handled through regular distribution channels, and with a definite proportion of food coupons allocated to dairy products along such lines as would stimulate consumption among low-income groups. In this consideration the effect of support prices on market prices should be taken into account.

Compensatory Payments to Producers. The prices of dairy products, left free to find their level on the basis of supply and demand, coupled with a direct gov-

ernment payment to the farmer in addition to his return under a free market price, if necessary, to maintain the support.

This form of support would tend to promote maximum consumption consistent with demand and supply conditions. If the same form of support were applied to other food products, it would release food purchasing power that could be expected to result in increased dairy product consumption, since with lower relative costs of food people tend to buy more of the protective foods (including dairy) relative to purely energy foods.

Therefore, the Dairy Industry Committee, in reviewing the price support plan originally advocated by the Committee on Postwar Agricultural Policy of the Land-Grant Colleges and later subscribed to by other groups, and after thorough consideration of possible alternative methods of implementing the Government support price program, has concluded: because it would promote maximum consumption of dairy products; because no surplus of dairy products would accumulate in Government hands; because it would not interfere with normal ways of doing business; and because it would be administratively feasible; that, all things considered, the free market price, supplemented by direct payments to producers, is the soundest and most practical program for meeting the intent of the Steagall Amendment from the standpoint of the farmer, the consumer, and the handlers of various dairy products. The Dairy Industry Committee recommends this method to Government and has committed itself to work for its adoption.

IV—Other Groups Who Have Announced Favoring Similar Methods of Price Supports

The method of price support recommended by the Dairy Industry Committee is concurred in or recommended for consideration by:

1. The Director of War Mobilization and Reconversion, James F. Byrnes. Second Report to the President—April 1, 1945.
2. The Director of War Mobilization and Reconversion, Fred M. Vinson. Third Report to the President—July 1, 1945.
3. Secretary of Agriculture, Claude R. Wickard—Testimony before Subcommittee of House Committee on Agriculture—December 4, 1944.
4. Bureau of Agricultural Economics—"Conversion Program for Cotton South"—May, 1945. (An elaboration of Secretary Wickard's position.)
5. Association of Land-Grant Colleges—Committee on Postwar Agricultural Policy—November, 1944.
6. Special Committee of Ten of Potomac Grange—"Federal Postwar Policies with Respect to Industrial Production and Employment, as Affecting the Well-being of Agriculture"—June, 1945—(Walter P. Cotton, Chairman).

REVIEW OF THE MONTH

Since the last issue of the SUMMARY there have been world convulsions on a vast scale. With slowly mounting dismay and even alarm the people of the nation have been learning that they are in the opening phases of a new era and a new kind of world.

The swift series of events began with the ratification of the United Nations Charter, which the Louisville *Courier-Journal* called "only a first hopeful step toward a still cloudy future." This was followed suddenly by the first major social revolution of Europe in the defeat of Churchill by the Laborites which *Time* described as "the greatest electoral upset in British history." Europe began its swing to the left, sharply repudiating the "decayed systems of privilege," and offered, in particular, the promise of sweeping social reforms which included an enlightened colonial policy. The effect on America was as startling as the earlier death of President Roosevelt. Waves

of prompt American reaction appeared in governmental, industrial and labor circles, and they continue to mount.

In Germany the great powers sealed their conquest with a solemn document abolishing all racial discrimination in the defeated country, thus ideologically and morally vindicating their victory in Europe. Then came the unleashing of the atomic bomb, which with one unearthly explosion marked alike a revolution in science and in warfare. It left a startled world the choice of "one world or none." Little cliques of men, wistful for unconquerable sovereign power and domination, saw in the secret formula a new hope of peace. It was the peace of a world held at bay by terror. They were given little comfort by the scientists who had created this wrathful giant of destruction. For it had been created by men of all races and many nations; the secret of its creation could no more be kept within the laboratory of a single nation than could the knowledge of nuclear physics.

Russia declared war on Japan, damming up and reversing one dangerous current of speculation about a next war. Japan capitulated, thus ending a dream of domination of the Orient by Orientals.

Congress was on vacation when the new era was ushered in, and was unprepared for the now present problems of employment, reconversion and social readjustment generally. Of particular interest to this summary, it had taken no action to aid full employment, and had fouled all attempts to continue a Fair Employment Practice Committee. The Wagner-Ellender housing bill, which would aid both employment and housing, had been neglected. The bill to provide federal aid to education was still smothered in Committee. A still surviving but hamstrung FEPC cut its staff from 177 to 51, with 2600 cases pending, an increase of 20 percent over this time last year.

By a strange irony, the new moral leadership of the United States made it necessary for Secretary of State Byrnes of South Carolina, where Negroes are excluded from the white primaries, to protest against the "undemocratic character" of elections in Bulgaria.

In the States, Georgia made history by adopting a new constitution that virtually abolished the poll tax by not mentioning it, and its Governor Arnall, incidentally, came to national attention through an article in *Collier's* in which he denounced lazy southern government, the poll tax, political demagogues and race baiters. "Only the demagogue tries to make political capital of social equality and of racial intermarriage."

Prompt cut-backs following the cessation of hositilities threw 1,500,000 men out of work within the first week. The War Manpower Commission's figures indicated that 8,300,000 faced unemployment. From California came reports of a concerted movement on the part of peace-time industries to eliminate minority workers. The promise of the return of employment services to the states brought apprehension on the part of minority workers, who have had difficulty in many states in spite of the pressure of the Federal government for fair employment.

Against this tide the Chicago City Council passed an ordinance making industrial discrimination on account of race, color, creed, or national origin a misdemeanor; Mayor Lapham of San Francisco supported the right of a Japanese-American to work for the Municipal Railway despite the threat of all machinists in the system to quit. The New England, Boston and New Jersey telegraph companies announced that they would hire Negro girls as operators for the first time; Wright Field in Dayton, Ohio,

revealed that it was employing 8,000 Negroes in branches of civilian employment, ranging from maintenance, semi-skilled and clerical workers to engineers and chemists; and in Memphis the refusal of a cleaning company to recognize its Negro workers as members union brought a strike of white workers, the first in fifty-eight years.

Housing continued an acute problem, but with some prospect of relief. The statement of the National Association of Real Estate Boards that better housing for Negroes is good business was so well supported in Chicago, Milwaukee and Detroit that they wanted to get ahead of the government in doing something about it. Building and Loan Associations which hold 23.4 per cent of the first mortgages on Negro homes showed higher average interest rates for Negro investments despite their lower earning power. Two recent Federal courts in California condemned restrictive covenants.

Most pronounced improvements appeared in the field of education. Sentiment increased in the North and South in support of Federal aid to education; another South Carolina city (York) voluntarily equalized its teachers' salaries; the Kentucky State Department of Education announced that it would no longer support differential pay on the grounds merely that the white teacher faced higher living costs; White Plains, New York, Kalamazoo, Michigan, and Portland, Oregon, put on their first Negro teachers; William Penn College in Iowa added a Negro biologist to its faculty; and the War Department sent orientation and educational documents to 175,000 education and information officers, which included criticism of fascistic tendencies at home, race superiority theories, anti-Semitism and race-baiting in the South. The American College of Surgeons lifted its bar on Negro doctors and sent applications to three of them.

On the political front, the Florida Supreme Court ruled that Negroes must be allowed to vote; Senator Eastland's slur on Negro soldiers and Senator Bilbo's insulting reference to Negroes, Jews and Italians were publicly condemned by 75 percent of the southern editors polled by the Southern Conference for Human Welfare and by an organization of Southern Methodist Women.

In the armed forces, the Navy has abolished its official segregation at the Great Lakes Naval Training Station; the three Negro army officers court-martialled in the much-publicized Freeman Field discrimination and insubordination case, and the three Negro WACs arrested in Kentucky and allegedly beaten by civilian policemen for sitting in the "white" waiting room of a railway station, were acquitted by army court-martial. Minor rioting followed V-J Day celebrations in London.

A Federal Grand Jury in Sacramento, California, returned indictments against a group engaged in terrorizing returning Nisei in California.

The Governor of California appointed Walter Gordon, Negro attorney, to the chairmanship of the California Adult Authority Board, with authority over all male inmates of state prisons. The Governor of North Carolina announced the appointment of a Negro to the new State Recreation Commission; and Secretary of State Byrnes appointed Dr. Ralph Bunch of the Division of Strategic Services under the State Department, a member of the important three-men Caribbean Commission.

The concern of the nation has turned seriously toward the looming wide-scale unemployment of the reconversion period. This is no longer a vague expectation of the future but a present reality. C.S.J.

THE INDUSTRIAL FRONT

THE COMMITTEE ON FAIR EMPLOYMENT PRACTICE:

A Cursory Review of the Defense and War Years

On June 25, 1941, President Roosevelt issued the now famous Executive Order 8802 which "reaffirmed" a national policy against racial discrimination in employment and authorized the establishment of a Committee on Fair Employment Practice charged with the reception and investigation of complaints and with the taking of "appropriate steps to redress grievances which it finds to be valid." The issuance of this order culminated months of pressure brought by spokesmen for Negroes and other minorities against whom much of private industry and many government agencies discriminated in employment policies. The Committee was established as a preparedness (national defense) and continued as a war measure. It constituted a recognition by the national government of the need of seeing that "available and needed workers" were not barred from defense industries "solely because of considerations of race, creed, color, or national origin."

The original Committee consisted of publisher Mark Ethridge, chairman, Alderman Earl Dickerson, CIO President Philip Murray, AFL President William Green, Brotherhood of Sleeping Car Porters Vice President, Milton Webster, and RCA-Victor President David Sarnoff. (John Brophy and Boris Shishkin represented Messers. Murray and Green respectively.) This Committee held hearings in Los Angeles, Chicago, New York, Washington, and Birmingham; and reviewed instances of discrimination involving industries and/or unions in aircraft, shipbuilding, automobile manufacturing, radio, plumbing and numerous other gainful pursuits. Under Executive Order 8802 the technique employed by the Committee was almost exclusively that of bringing recalcitrant employers and unions into line by focusing, in public hearings, the light of public opinion upon discrimination.

The hearings of the Committee were often opposed by persons or firms accused of discrimination. The opposition took the form of bringing political pressure to bear to prevent the holding of hearings, and of refusal by firms cited for violation of the order, to appear at hearings. The Birmingham hearings were once postponed in the face of rumors and veiled threats that they would precipitate violence. When the hearings were finally held (June 18-20, 1942), by now under the chairmanship of Malcolm MacLean, Mr. Ethridge, on opening them, deemed it necessary to deny that the Committee had either the power or the desire to break down segregation. The Louisville publisher went so far as to express grave doubts that the combined armed might of the Allies and the Axis would be able to induce the South to give up segregation. When this respect had been paid to the South's "peculiar institutions" the sessions proceeded without untoward incident.

The acid test of the first Committee came the following winter when hearings were scheduled involving the country's raidroads and major railroad unions. Here the Committee faced a combination of the nation's major railroads backed by vast financial resources, the Big Four Railway Brotherhoods (among America's strongest, most progressive and politically most powerful trade unions with a blind spot on race), and various governmental railway labor agencies which have apparently colluded in continued discrimination against Negroes.[1] FEPC had meantime been transferred to the War Manpower Commission under Paul McNutt, an act which had aroused much opposition. A few days be-

[1]Cf. Herbert R. Northrup, *Organized Labor and the Negro* (1944), pages 48-99.

fore the railroad hearings were to begin, and without prior consultation with or notice to members of the Committee, Mr. McNutt announced that the hearings had been postponed indefinitely. No official explanation has ever been offered.[2]

As far as effectiveness went, this postponement marked the death knell of the FEPC as it operated under Executive Order 8802. Negroes, liberals, Committee members seemed to feel that President Roosevelt's fair employment policy had been sacrificed to political expediency. The result, however, was renewed political pressure on the Administration.

After limping along through the winter and spring, while resentment and pressure accumulated, the Committee's functions were redefined in Executive Order 9346, issued by President Roosevelt on May 22, 1943. The new Committee, again in the Executive Office of the President, was constituted with a full-time salaried chairman and an enlarged staff (The earlier staff had consisted of only thirteen officers and twenty-one clerical workers.) Monsignor Francis J. Haas, formerly Dean of the School of Social Sciences at Catholic University, now Bishop of Grand Rapids, was appointed chairman and director. To serve with him as unpaid members of the body Mr. Roosevelt appointed John Brophy (Director of Industrial Union Councils, CIO), Samuel Zemurray (president American Fruit Company), P. B. Young (Publisher, Norfolk *Journal and Guide*), Sara E. Southall (International Harvester Corporation), Boris Shishkin (Economist, AFL), and Milton P. Webster (Vice President, Brotherhood of Sleeping Car Porters). Mr. Young was later succeeded by Attorney Charles H. Houston, Monsignor Haas by Malcolm Ross, and Mr. Zemurray by Charles H. Horn of Federal Cartridge Corporation. The staff was enlarged from thirty-four to 113 and reorganized into Legal, Administrative, Field Operations, and Review and Analysis Divisions. Twelve field offices were placed at strategic points throughout the country.

One of the first acts of the re-constituted FEPC was the re-scheduling of the Railroad hearings.[3] The holding of the hearings helped to reestablish the prestige of FEPC and set the new regime off to a good start. Much of the effectiveness of the hearings, however, was lost. The unions which had been cited officially, ignored the sessions and refused to make any answer to the charges against them. The excellently prepared evidence of the Committee was largely lost to the public eye, inasmuch as none of the major news services covered the hearings fully, and only a few of the nation's newspapers—aside from the Negro press—gave more than passing attention to the proceedings. The case was finally certified to the President who appointed a committee under Cleveland's Mayor Lausche (now Governor of Ohio) to work out an equitable settlement. This committee's findings or progress thus far have not been made public.

In the case of the Philadelphia Transit Company (PTC) FEPC secured excellent cooperation from the War Manpower Commission and finally met with success, despite a costly hate strike fostered by leaders of a repudiated company union.[4]

Other publicized cases which FEPC has handled with great credit include the auxiliary unions of the Boilermakers, the transit systems of Chicago, Los Angeles, San Francisco, and Syracuse, and several labor disputes involving the infringement of minority rights.

---

[2]An explanation was later proposed unofficially to the effect that such uncreditable evidence as Attorneys Houston and Epstein had collected on racial discrimination in a major American industry might prove embarrassing to Mr. Roosevelt who was conferring with Mr. Churchill at Casa Blanca at the time.

[3]For an account of the hearings and the Committee's findings, see MONTHLY SUMMARY, October, 1943, pages 3 and 4; December, 1943, pages 4 and 5; and January 1944, page 3.

[4]See MONTHLY SUMMARY, December 1943, page 4; findings, see MONTHLY SUMMARY, October, 1943, pages 3 and 4; December, 1943, pages 4 and 5; and January Friends Service Committee number 11, September 1944.

Perhaps of greatest significance has been the quiet negotiation of complaints which never came to public attention. The prime mandate of FEPC has been that of securing a maximum utilization of human resources in a time of national crisis.[5] The effectiveness of the Committee's work in this regard can be best judged by the large number of cases handled and the manner of their disposition. During the eighteen-month period, July 1, 1943 to December 31, 1944, a total of 6,885 cases were docketed.[6] Of this number, 4,801 cases were closed. The following table adapted from the Committee's *First Report* indicates by geographic areas the manner in which the closed cases were disposed:

CASES DOCKETED AND CLOSED BY TYPE OF DISPOSITION—JULY 1, 1945-DECEMBER 31, 1945[a]

Area	Cases Docketed	Total Cases Closed	DISMISSED					
			Satisfactory Adjustment	Withdrawn by Complainant	On Merits	Insufficient Evidence	No Jurisdiction	Other
Total	5,803	4,801	1,723	328	1,505	623	195	427
East	1,885	1,690	679	92	636	182	75	26
South	1,670	1,098	321	59	323	127	43	225
M'west	1,265	1,213	422	89	314	212	50	126
West	983	800	301	88	232	102	27	50

(a. Table 1-F, Appendix E, *First Report*, page 116.)

The variations and similarities in various areas should be noted.

When the fact is considered that FEPC has no enforcement powers of its own the proportion of cases satisfactorily handled or dismissed for valid reasons is amazingly high. When it is further considered that this volume of work was done by field staff of thirty-six examiners—and the negotiations in one case may take weeks—the record is nothing short of phenomenal.

The effectiveness of the agency must also be judged in other terms. There is little doubt that the existence of FEPC served to expedite the integration of Negro workers into war industry. Its job was rendered less difficult by the existence of a tight labor market; but the fact remains that it took the additional fact of a governmental agency armed with a government policy to convince many employers that they should utilize the existing supply of Negro labor.

Another point at which the FEPC has served well is in making the nation fair employment conscious. This fact is reflected on the one hand by the fact that even those persons who disagree with the Committee's continuation as a peacetime agency with enforcement powers (aside from members of the Lunatic Fringe) are careful to explain that they believe in "the principle of the thing." This fair employment consciousness is further indicated by the plethora of state and national legislation offered for permanent agencies. New York now has a strong law administered by an operating full-time Commission. New Jersey has a less comprehensive law administered through the Department of Education. Indiana's law, though quite weak, places the Hoosiers on the "right side of the record".[7] In Congress the Chavez Bill has been reported favorably by the Senate Committee on Education and Labor. Mrs. Norton's version (H R 2232) has been reported out of the House Committee on Labor since February; but is being held in the Rules Committee by a tie vote on the issue of reporting it for debate. Efforts at getting it discharged by petition have thus far met with no success. President Truman has come out strongly for the measure in a letter to

[5]Its jurisdiction includes (1) agencies of the Federal Government; (2) employers and the unions of employees in firms holding government contracts; and (3) employers and unions of employees in firms engaged in war production or in activities necessary for the maintenance of such production whether or not the firms are under government contract.

[6]The figures in this section are taken from *First Report*, Fair Employment Practice Committee (Washington, 1945), page 31 and ff. A complaint is docketed when it is found to possess the minimum characteristics of a valid case and thus placed on permanent record.

[7]It is also significant that, where bills were defeated, the act was usually accomplished by parliamentary subterfuge; e.g., California, Massachusetts, Connecticut.

Chairman Sabbath of the Rules Committee. It was also urged in his recent Reconversion Message.

The status of the present Committee is far from clear. Whether or not the President can or will reconstitute it for the reconversion period is problematical. It is quite clear to students of the subject, however, that a permanent FEPC with power to subpoena witnesses and to enforce its directives as called for in the Norton and Chavez bills is needed. As Mr. Truman has pointed out, we have embarked upon a national policy based upon the right of every American to work without discrimination because of his race, creed, color, or national origin. It would be nothing short of tragic to abandon such a policy in so critical a period of world history as the present.

EMPLOYMENT

War Manpower Commission estimates place the probable peak number of unemployed workers during 1945 as 6.2 million.[8] When it is realized that one of twelve warworkers is a Negro and that black workers are concentrated in the most vulnerable industries we may expect several hundred thousand of the unemployed to be non-white. Added to their concentration in vulnerable industries is the fact that Negro workers have, on the whole, less seniority than whites. Reports reaching the SUMMARY from all over the country indicate that workers are generally being laid off according to seniority and efficiency.

BALTIMORE, MARYLAND

During the week following V-J Day approximately 7,500 Negroes were among the 35,000 workers laid off in the Baltimore area. A survey by the Baltimore Urban League indicates that lay-offs have been impartial on the whole, with seniority and efficiency being the main determining factors. Several industries, including fertilizer, chemical, and sugar, are in immediate need of workers. Others, including textiles, food processing, lumber, furniture, rubber products, and railroad equipment, are expected to enter the field of civilian production within the near future. The imminent closing of aircraft and shipbuilding plants in the Baltimore area is expected to affect several thousand colored workers. (FR)

[8]*The Labor Market*, August 1945, page 2.

CHICAGO, ILLINOIS

Recently the Chicago branch of the Congress of Racial Equality conducted a three-day poll among State Street shoppers as they emerged from various department stores. Persons were asked, "Would you be willing to be served by a qualified Negro sales clerk in this store?" Sixty-nine percent of the persons polled answered, "Yes"; 23 percent replied, "No", and eight percent were not certain. (GP) (FR, ANP)

Chicago became America's first city to pass a fair practices ordinance when a bill drafted by the Chicago Liberties Committee was adopted with only one dissenting vote. The measure forbids discrimination in employment based on race, creed, color, or national origin in all agencies of the City government and by persons operating under city contract. Persons, firms or corporations found guilty of such discrimination will be judged to have committed a misdemeanor punishable by a fine of not more than $200.00. (ANP)

WASHINGTON, D. C.

The steady trek of workers from the coal mines of southern West Virginia in the face of a fuel-short winter has given much concern to officials of the War Manpower Commission (WMC) and the Solid Fuels Administration. The migration of Negro workers from this area has been particularly heavy, for whereas the number of white miners has decreased by 8.4 percent, 38 percent of the Negro workers had migrated from a dozen mines in the area chosen at random.[9]

Mr. Victor Daly, Minority Groups Representative for Region IV of WMC has recently made a study of the conditions in the area which have led to this out-migration. Some of the highlights of his findings follow:

1. The Southern West Virginia Mines are located near the highly industrialized centers of Pittsburgh, Cleveland, Akron, Detroit, and Dayton. Manpower had been greatly needed in these areas and many unskilled and semi-skilled jobs were available to Negroes. In addition to the fact that wages were generally higher and hazards negligible in these centers, there

[9]The number of white miners in these mines had dropped from 8,104 in 1940 to 7,437 in 1945; meanwhile, the number of Negro miners had decreased from 3,382 in 1940 to 2,094 in the twelve mines covered in the survey.

were employment opportunities for wives and older children of Negro workers.

2. Not even the slums and crowded quarters found in Detroit and Cleveland could match the wretched conditions of the rural and semi-rural slums of the coal mining areas.
3. Despite the fact that as many as 680 Negro miners per year have taken advantage of the Mining Extension Service courses offered for them at West Virginia State College, few of those finishing the course have been permitted to advance beyond the back-breaking job of coal loading to better-paying jobs for which they have been trained. The United Mine Workers—traditionally noted for its liberal racial attitude—has been able to do little to implement its national policy in the mines in this area.
4. There is the usual American dream of a better existence for one's children than one has had himself. Many miners feel that life in Northern cities, however rugged, is preferable to the kind of dead-end existence that they have known in the mining communities of southern West Virginia. (FR)

THE SOCIAL FRONT

HOUSING

HAMTRAMCK, MICHIGAN

There years ago Leroy Glenn White, a local Negro resident, filed suit seeking to enjoin the Hamtramck Housing Commission, the Hamtramck city authorities, and the FPHA from barring Negroes from the Colonel Hamtramck Homes, a war housing project of 300 units. A year ago Judge Guy A. Miller granted an injunction which stipulated that 22 units of the homes—a number approximating the proportion of Negroes in the population—be kept vacant, pending a decision in the case. In late July, Circuit Judge Thomas F. Maher ruled that the Commission was within its legal rights, saying that if the all-Negro housing project promised by the Commission were not built within "a reasonable time" the case could be re-opened. Mr. White had charged that the barring of Negroes on racial grounds was a violation of Michigan's civil rights statute and the 14th Amendment of the U. S. Constitution. (FR)

MIAMI, FLORIDA

Recently Negro residents of the Brown Subdivision in Miami were awakened by the burning of a wooden cross—the symbol of the Ku Klux Klan. The cross had been soaked in oil and ignited following a meeting of the Northwest Property Owners League. The latter group objected to the fact that two Negro families had moved into an area which they claimed had been zoned by the city for white persons only. (Actually, the Supreme Court declared city zoning based on race unconstitutional more than a quarter of a century ago.) Earlier the sheriff's office of Dade County had jailed the two family heads on a charge of faulty garbage disposal. A local white realtor secured their release on $500 bail. This is the first public demonstration of the Klan in Miami since 1939 when members rode through the Negro sections of the city warning colored citizens who had registered not to vote. (FR, NP)

BALTIMORE, MARYLAND

Two incidents reported from Baltimore are illustrative of facets of the tension surrounding the housing problem for Negroes. Members of the housing committee of the Frontiers Club, an organization of Negro business, white collar and professional men, called upon the Real Estate Board to (1) formulate a plan for "the orderly expansion" of Negroes into areas continguous to those already occupied by them and (2) develop vacant land sites for the use of persons of color seeking to purchase their own homes. The mildly-worded and polite prepared statement of the committee concluded:

> We believe that the private enterprise system of providing homes must vindicate itself by providing modern housing for all who can afford to pay for it on a self-supporting, self-respecting basis and not complain when the victims of their neglect seek relief in paternalistic (sic) governmental projects.

A week later approximately 800 white persons under the sponsorship of the Fulton Avenue Improvement Association descended upon the Baltimore City Hall demanding that Mayor McKeldin do something about Negro "block busting"[1] in the Fulton Avenue area. William C. Lennert, a member of the Maryland House of Delegates, asked the Mayor if he would sign an ordinance prohibiting the further influx of Negroes into the area. The Mayor replied that he could not sign such an

[1] "Block busting" is a term denoting the initial invasion of Negroes into a block previously occupied exclusively by whites. The "busting" usually gives rise to panic-selling by whites to speculators who, in turn, sell to house-starved Negroes at exhorbitant prices.

ordinance inasmuch as it would be unconstitutional. The Lawmaker promised his disappointed constituents that, if the Mayor would do nothing about the situation, he would see that something is done at the next meeting of the legislature. (FR, NP)

FAYETTEVILLE, NORTH CAROLINA

As in many Southern towns, lines of residential segregation have not been rigidly drawn in Fayetteville in the past. In recent years, however, there has been a distinct trend toward exclusively separate neighborhoods. Recently, after a Negro had purchased a vacant lot in a "white" block, a delegation from the neighborhood came to the Board of Aldermen asking whether or not "there were methods of preventing a colored citizen, purchaser of a vacant lot in a white-occupied street, from building and occupying a residence on his lot." The Board could devise no statutory means of supplying relief to the delegation; however, the City Fathers apparently brought the prestige of their office to bear upon the Negro owner. According to the *Fayetteville Observer* (August 14, 1945), "Members of the Board and the petitioners reached an *accommodation* today with the purchaser, and he *agreed* to sell his lot for several hundred dollars below the original asking price." (Italics ours) (Cf. Baltimore item, above.) (FR, GP)

* * * * * * * * *

Twenty-five of seventy-five war-housing units recently allocated in Fayetteville are being ear-marked for occupancy by Negroes. Fifteen of these are to be for sale or owner-occupancy and the remaining ten are to rent at a maximum of $30.00 per month. These units are under the H-2 program of the National Housing Agency (NHA) and will not be restricted to the use of in-migrants as were those built under H-1. Housing needs in Fayetteville have continued acute throughout the preparedness and war period. (FR)

WELFARE

BALTIMORE, MARYLAND

Cheltenham, the state supported training school for colored boys, received a supplementary appropriation of $51,065 in July to be used in the improvement of living quarters for the boys and staff members. The institution which has been an object of strong criticism for many years, is reported to be improving rapidly under the administration of Royal A. B. Crump, the first Negro superintendent. Under his administration, corporal punishment and detention cells have been abandoned, sanitary facilities improved, and religious and recreational instruction organized. (FR)

HEALTH

NEW YORK, NEW YORK

Three New York Negro surgeons who had previously asked for application blanks in order to apply for fellowship in the American College of Surgeons (ACS) have had blanks forwarded to them. According to the *New York Post* (August 21, 1945) this action represents a reversal of the ACS policy of not conferring fellowship on Negroes "at the present time" (See MONTHLY SUMMARY, June 1945, p. 320). (GP, NP)

ARMED FORCES

HAMLET, NORTH CAROLINA

A Negro WAC, charged with violating the North Carolina Jim Crow transportation laws, was arrested, held in jail for two days and reportedly beaten up in the course of her arrest. Corporal Marguerite Nicholson, of Philadelphia, after two years in the Army was riding on a Seaboard Airline train leaving Raleigh when she was requested by the conductor to move forward from where she was sitting to the coach reserved for colored. The corporal moved forward until she came to a coach in which another Negro woman was seated. Beginning with the porter, almost the entire train crew gathered about her urging her to move further forward. She refused to move. At Hamlet, special officers boarded the train and placed her under arrest for violating the segregation statutes. The special police later turned her over to regular civilian peace officers. The young woman soldier claims that an officer abused, cursed, and struck her before commiting her to a cell. In court she was given a suspended sentence of thirty days in jail or a $25 fine and assessed court costs of $13.25. The provost marshall at Fort Jackson where Corporal Nicholson is stationed has reported that a subsequent investigation substantially confirmed the victim's account. (ANP)

FORT KNOX, KENTUCKY

Private-first-class Helen H. Smith, mother of a grown daughter, was returning from Memphis, Tennessee, to Fort Knox, Kentucky. At Elizabethtown, Kentucky, she decided to transfer from train to bus transportation. At the bus station she bought her ticket and looked about for a seat. Finding the colored section

crowded, she, according to her account, took a seat on the bench nearest to the Jim Crow portion of the station. Other Negro WACs joined Pfc. Smith on the bench. In a few minutes, a local peace officer appeared and, addressing the soldiers of the United States as "niggers" and "nigger wenches," demanded that they move. One young woman resented the words of abuse and protested. At this point the officer began beating the objecting woman with a blackjack. Mrs. Smith intervened to help, and was manhandled, kicked, and struck across the face with a black jack. On returning to the post, Pfc. Smith was charged with violating Kentucky's Jim Crow law and with disorderly conduct. The former charge was dropped when it was discovered that there is no law requiring separate waiting rooms in Kentucky. At this writing neither the results of the court-martial of the Negro WACs nor the response of the Army and Department of Justice to demands of action against the civilian policeman has been made public. (ANP)

LONDON, ENGLAND

Part of America's soldiers in London celebrated victory over Japan by engaging in an interracial brawl. An argument which grew out of the alleged argument between white soldiers and a British Negro civilian turned into a free-for-all. The lines of battle were racial rather than national in character—white American soldiers versus a British civilian and American soldiers of color. Four Caucasoid soldiers were stabbed in the melee; and it is reported that only the intervention of MP's saved the badly outnumbered Negroes from mob action. Arrests by MPs included twenty-three Negroes, two white soldiers and three white women. Two of the Negroes are charged with stabbing the white soldiers who were hospitalized. (ANP)

WILSON, NORTH CAROLINA

A Negro soldier whose breast was covered with overseas ribbons and battle stars boarded a Wilson to Fayetteville bus and took the only vacant seat—about midway in the vehicle. The operator immediately rushed back and said, "You can't sit here!" Two white soldiers rose to the defense of their comrade-in-arms and a white woman passenger asked, "Why can't he? He fights for me." The driver, obviously unprepared for this response, silently resumed his seat at the wheel and the bus moved on peaceably. (FR)

HOUSTON, TEXAS

While boarding a bus at the corner of Congress and Fannin, a busy bus-stop, a white man was seen deliberately to knock a Negro boy down. The operator of the vehicle immediately rose to his feet and demanded that the offending passenger leave the bus. When the passenger refused to do so, another driver was called, and the man was evicted forcibly. (FR, NP)

EDUCATION

TRENTON, NEW JERSEY

The Trenton Board of Education has announced that there will no longer be a segregated junior high school for Negroes in Trenton. The New Lincoln Junior High School has been re-named Junior High School Number 5. It is also announced that transfers of teachers to other schools are already taking place and full utilization is expected by September 1946. This action follows by two years the beginning of successful litigation by which the parents of two Negro children kept them from attending the Jim Crow school. (See MONTHLY SUMMARY, October 1943, page 7 and February 1944, page 8) It also brings Trenton into line with the New Jersey State law. (GP, NP)

GREENSBORO, NORTH CAROLINA

The American Teachers Association (ATA), formerly the National Association of Teachers in Colored Schools, has rejected affiliation with the National Education Association (NEA) on the grounds proposed by the latter. Dr. Willard E. Givens, NEA executive secretary, had presented a proposal whereby the ATA would become a department of the NEA. The rejection was based upon the fact that the departmental relationship proposed was based exclusively on race. The Association voted, however, to continue conversations looking to closer co-operation with NEA. (FR, GP)

RECREATION

WILMINGTON, NORTH CAROLINA

In order to gain access to that section of Wilmington's Carolina Beach "reserved" for Negroes, one must pass the main or "white" section. Local custom forbids Negroes the use of the public highway through the beach and relegates them to the use of a dirt road bypassed. Recently a Negro USO director, following a chartered bus of servicemen and junior hostesses and traveling in a USO club car, was detained by a police officer and not even permitted to use that portion of the main road

leading to the dirt road. The director wrote to Mayor Peay of Wilmington and received a reply which seems to indicate by implication that the barring of Negro citizens from a public highway is part of public policy. The letter which promised that USO personnel should have no difficulties in the future contained the following sentence:

"*Under the circumstances which you mention,* the officer should have used better judgment in handling the case in question, *especially if you had announced the reason for the trip* as you have outlined in your letter." (Italics ours) (FR)

POLITICS

RICHMOND, VIRGINIA

The Reverend W. B. Ball, Negro candidate for one of Richmond's seven seats in the Virginia legislature,[2] received a total of 2,651 votes and placed sixteenth in a field of seventeen candidates. (FR)

WINSTON-SALEM, NORTH CAROLINA

On June 29, the Interdenominational Ministers Alliance of Winston-Salem dispatched telegrams to Senators Bailey and Hoey of North Carolina and Bilbo of Mississippi respectfully urging their support of a permanent FEPC. Mr. Bilbo replied the following day, saying, in part: "I am sorry that so many preachers in one organization could be so ignorant of true democracy. Please let me suggest that you give more time to your Bibles and the proper interpretation of the scriptures and the teaching and training of your flocks and less to governmental questions, laws, legislation and policy of government. . . . May God have mercy on your poor ignorant souls." (FR)

NEW ORLEANS, LOUISIANA

The State Association of NAACP Branches in Louisiana has launched a drive to raise $100,000 with which to secure the ballot for Negroes throughout Louisiana. A suit seeking $5,000 damages and an injunction against further unjust deprivations of the right to vote has been filed against the registrar of voters in St. John the Baptist Parish on behalf of Mr. Edward Hall of Edgard, Louisiana. (FR)

KNOXVILLE, TENNESSEE

According to the Knoxville *News-Sentinel* (August 24, 1945) the first local chapter of the Free White Americans, Inc., an organization dedicated to "freedom from religious propaganda and freedom from compulsory race-mixing", has been formed in Jellico, Tennessee. The "religious propaganda" has reference to moving pictures such as "Going My Way" and "Fighting 69th" which show up Roman Catholic characters to advantage. C. E. Mills, Jellico insurance man and founder of the organization, explained to a *News-Sentinel* reporter that there are sections of the country where white people are "forced" to ride on trains and eat in restaurants beside Negroes, and indicated that he favors a National Jim Crow Law. Mr. Mills states explicitly that his organization is not "a group of hot-heads and emotional screwballs" and adds that it seeks to protect white people against all forms of "bigotry and isms". (GP)

BIRMINGHAM, ALABAMA

The Birmingham NAACP and the Southern Negro Youth Congres are combining their efforts in a drive to secure the registration of 2,000 additional Negro voters in that city. Central in the drive is a registration clinic conducted by the NAACP. Here prospective registrants are instructed in the requirements and procedure for becoming a qualified voter in Alabama. The requirements are simple. One may register to vote if he possesses either of the two following qualifications: (1) read and write any portion of the Federal Constitution in the English language or (2) possess property valued in excess of $300. The Legal Redress Committee of the NAACP says that many reports have been received of persons who are being required to "interpret" the Constitution—a matter on which not even the learned justices of our Supreme Court are in agreement. The Committee is investigating this and other methods of refusing Negro citizens the right to vote, and is planning to take legal action if it is deemed necessary. (FR)

* * * * * * * *

The Boswell Amendment to the Alabama Constitution appears to be an unsubtle attempt to permit the disfranchisement of Negroes (or any one else). Under the provisions of this section on which the registered voters of Alabama are to vote in November the property ownership option would be eliminated. In addition to being able to read and write any section of the Federal Constitution, a prospective voter would be required "to understand and explain" it to the satisfaction of the registrars. (see above) He would also be required to demonstrate—again to the satisfaction of the arbiters of Alabama's courthouses —that he is a person of good character. (FR, NP, GP)
